Our work has suddenly taken a new turn. Altogether a new orientation has come into play. Indian matters, recently come to light, are refusing to own geographical boundaries of the present or ancient India. The Indus script is claiming a world-wide range. It seems that we are on the verge of the conclusion that the script on the seals found at Harappa and Mohen-jo-Daro is closely allied to signs recorded from Elam, Cyprus, Crete and probably further. We see on the horizon a light which seems to have lighted the lands from the Indus up to the Atlantic. And if this is established, the credit of the discovery will be that of an Indian scholar, namely, Dr. Pran Nath. Two years back this was the conclusion already formed by Dr. Pran Nath. Since then, Mr. Piccoli (*Indian Antiquary*, November, 1933) has pointed out the identity of our Indus signs with the undeciphered signs found on ancient pottery and sepulchral remains in Etruria. M. Guillaume de Hevesy, in a paper published in the *Bulletin de l' Association Francaise des Amis de l' Orient* [Nos. 14-15, 1933, Paris, Musee Guimet] has shown that 52 Indus signs occur exactly in the same form on tablets recovered on the Easter Island in the Pacific Ocean. In India itself, we have discovered a long inscription at Vikramkhol, in the district of Sambhalpur, the plates of which have been published by Mr. C. E. A. W. Oldham in the *Indian Antiquary*, 1933, at a great cost, from copies and photographs taken by the authorities of the Patna Museum. This record seems to show a stage midway between the Indus script and Brahmi. It is inevitable that our views on the origin of ancient scripts be radically revised. This much is certain that we have been brought face to face with a very widespread and longstanding civilization extending, at least, from India to the Mediterranean, traces of which have already been recovered from sites in North and North-Western India, Baluchistan, Sistan, Iran, Mesopotamia and westwards. In India itself the terracottas found at Buxar and at Pataliputra seem to extend the area of that culture much eastwards. It seems premature to limit the "Indus Civilization" to the valley of the Indus alone. Possibilities of its discovery in the Western Coast line of Kathiawad are promised by a passage in the Mahabharata which mentions seals which were considered ancient and peculiar when the Mahabharata was compiled. The sands of Rajputana and certain sites in the Central Provinces may yet disclose similar evidence. There lies an immense task of sorting and collating the mass of material recovered and of deciphering the new documents. This task almost ceases to be Indian as we understand it today. Without a broader area beyond the pale of India proper having been brought within the ambit of our inquiry, we cannot attain a solution. Yet, here I may tell you my personal conviction that the solution of race-origins and the identification of this ancient civilization will be found in the Puranas. The Puranas are amongst the most ancient documents on race-history, and the tradition and data embodied therein go back to the Flood and even earlier. The Flood recorded in the *Satapatha Brahmana* is the greatest landmark in the pre-dynastic history of India. The Flood has been proved to be a historical fact by Dr. Woolley's excavations. The area of the Flood was certainly the continuous land from Mesopotamia to Rajputana, and there is the common tradition at both ends of this area, embodied in the ancient literatures of the Semites and the Hindus. Our dynastic history in the Puranas almost begins from the Flood, and the Mohen-jo-Daro civilization is a post-Flood event. Here I may mention the discovery made by Mr. Karandikar that there is a positive statement in the Puranas that the Narmada valley was not affected by the Flood. In the Narmada valley we may, therefore, expect to find evidence of a civilization which may vie with that of the Nile valley in antiquity. The Puranas are the richest documents on the race-movements in India and its adjacent West. They possess a detailed knowledge of the Central Asian geography which goes back at least to the second millennium before the Christian era. The task of properly interpreting Indian texts, in the light of our archæological finds, requires special training in Assyriology and cognate subjects. It is now becoming clear that the history of our own country is intimately connected with the history of the rest of the Ancient East, lying to the west of India, and that the truly Ancient Indian History passes beyond the control of the Indianist. Our Indi n scholars, if they aspire to the glory of interpreting history from this wider stand-point, will have to acquire knowledge of the science of Etamite, Mesopotamian and Western Asian archæology. States and Universities ought to send out and train special students for the task.

Historic Periods

Continuing Mr. Jayaswal said :

Coming down to the historic periods, welcome finds have been brought to light recently. At Mahasthan in the district of Bogra, North Bengal, a small tablet on a piece of white stone has been found. It is a secular document composed in the Maurya Imperial Vernacular. Its letter forms agree with the Sohgaura copper-plate on the one hand and with the early forms of Asokan letters on the other....The document is an administrative order on famine relief, issued by the Council of Ministers at Pundra. In my opinion, it is a sister document to the Sohgaura notification which I have recently read at the request of Dr. Bhandarkar. The Sohgaura tablet is a copy among several copies cast in a mould, thus serving the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

same purpose which is achieved today by printing a hand-bill. This document also provides against drought (*usagame=ushmagama*) when grain was lent out or freely distributed to peasants. Both these notifications, in my opinion, refer to the prolonged or repeated drought occurring in the reign of Emperor Chandragupta Maurya. The Sohgaura order was also issued by a Provincial Council, the Council of Oudh, called the Ministers of Sravasti. These two Provincial Governments to the north of the Ganges were under Maurya Ministers as opposed to Viceroyalties where a prince royal with a Council of Ministers ruled in the name of the Emperor, *e. g.*, at Takshasila, Ujjain, and other places. We further gather an important piece of information that the North Bengal people at the time were called Sam-Vangiyas, *i. e.*, a confederated community like that of the Lichchavis, Sakyas and others, and were evidently a people allied to them, a non-Brahmanical Aryan community. These are the first administrative inscriptions embodying a governmental order that we get of the Maurya times. These two orders carry the Maurya epigraphy to nearly three quarters of a century before Asoka. On the Sohgaura plate there is a royal monogram devised for the name of "Chandragupta Maurya." There is a *chandra* covering the top of a cluster of three arches, two placed side by side and one on the top of these two arches. They are a combination of the Brahmi letters '*ga*' and a double *ta*,' the whole combination giving the name *Chandragutta*. A similar combination is found on the coins of Agnimitra about a century and a half later. By the side of the monogram we have the letter '*mo*' which is the initial of *Moriya*, the vernacular form of the Sanskrit *Maurya*. The same monogram is found at the bottom of the Kumhrar pillar at Pataliputra dug out from the remains of the Maurya palace, where the word *Moriya* is written in full by the side of the same monogram. I have traced the same monogram on all the ten cast coins, found in the Pataliputra excavations at the Maurya level, and one coin found at the base of the Asokan pillar at Sarnath, and on potteries supplied to soldiers in the Pataliputra palisade fortifications found with their swords and other remains. The monogram was, therefore, the Government mark or Rajanka in the language of the Arthasastra of Kautilya.

Maurya Monogram Identified

This last subject of the Maurya Monograms was further developed by Mr. Jayaswal as President of the Numismatic Society of India which sat on December 29. The Numismatic Society discussed the matter again on December 30, under the presidency of Rev. Father Heras who declared himself to be satisfied with the new discovery. While Mr. Jayaswal was addressing on the subject on the 29th, the Numismatists were so much impressed that one among the audience remarked humorously that they were being hypnotized by Mr. Jayaswal's data and illustrations from coins etc. Their mind was overwhelmed. The recognition of the monogram of Chandragupta Maurya was one of the major achievements of the scholars met at Baroda. The system of monograms was found to be this. The King's name was denoted first by a representation of the Moon—in a crescent form—a system which came down to the coins of Chandra Gupta I of the Gupta dynasty. Below the crescent, an artistic combination of letters completed the whole name. It was followed by the Sungas—the dynasty succeeding the Mauryas. Mr. Durga Prasad pointed out in the Numismatic Society's meeting of December 30, that only the coins with this monogram recognized by Mr. Jayaswal as that of Chandra Gupta, tallied in weight and analysis exactly with what was given for silver coins in the *Arthasastra* of Kautilya—the manual of government supposed to have been written for Chandragupta Maurya. This was a clinching confirmation.

Another far-reaching observation in the presidential address was the recognition of the fact that Sanskrit writing was originally Constropedonic, *i. e.*, reading alternately from right to left and from left to right. In noticing the Yeraguddi inscription of Asoka, newly discovered, which is in this system of writing, Mr. Jayaswal drew attention to the method of reciting, that is, reading, the Vedas in its *Jatapatha and ghana-patha* (जटाप ठ—घनपाठ) methods where syllables are read alternately backward and forward.

Fields Which Belong to Us

Turning to the proposition of inviting or allowing outside agencies and learned societies for undertaking and carrying on archaeological excavations at the well-known sites which the law now permits, Mr. Jayaswal very pertinently observed:

> We cannot shut our eyes to what the academic institutions in Europe and America are doing to fit out costly expeditions of exploration in distant lands. The other day we read of a proposed Italian expedition to Nepal. Are our Universities and other institutions merely to sit and look on while others win undying glory in fields which legally belong to us?

In this connection, Mr. Jayaswal cited the examples—how the Allahabad Municipal Museum has been built up, practically without any cost, by one man—Mr. Vyas, Executive officer of the Allahabad Municipality, and how a private body—the Allahabad Historical Society—has been doing valuable excavation work at Gahdwa and other important sites, to illustrate what private enterprise can do in these fields.

Mr. Jayaswal took this opportunity to record with gratitude the valuable services rendered by several Indian States, notably Gwalior, Hyderabad, Mysore and Baroda by their scrupulous conservation of ancient monuments within their States as well as by valuable publication works. He, however, deplored the abolition of the State Museum by the Kashmir Durbar and the spoliation at the hands of certain State subjects, of the magnificent Parvati-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Temple at Nachna, in the State of Ajaigarh, Central India.

Significance of "Bharatavarsha"

The new significance that Mr. Jayaswal revealed of the epithet Bharatavarsha stirred the scholars a great deal. It stands, said Mr. Jayaswal, for Greater India as opposed to Bharata, and Manava Dvipa or India proper. Suvarnari, and Manava Dvipa or India proper. Suvarnari includes Insulindia and Farther India to the South-East and up to the Pamirs and Herat in the North. In this connection Mr. Jayaswal referred to the movement started by his friend and pupil, Dr. Kalidas Nag, through his Greater India Society and declared that it was primarily responsible for impressing upon Indian scholars the importance of Insulindia and Farther India; and the Savant took pride in having himself derived inspiration from Dr. Nag's Greater India movement which he acknowledged with a graceful personal touch.

A Critical Editor of Ramayana

While expressing his satisfaction at the materialization of a critical edition of the Mahabharata through the efforts of Dr. Sukthankar, Mr. Jayaswal pointed out the necessity for an early undertaking of a critical edition of the Ramayana on the basis of its four recensions recently established by Dr. Harichand Sastri at the Oxford Session of the Oriental Congress.

Archaeological Department—Indian Antiquary

A matter referred to with considerable regret by Mr. Jayaswal was the starvation of the Imperial Archaeological Department at the hands of our all-India legislators. He appealed to the enlightened members of the Legislative Assembly for treating the Department with greater consideration than it has hitherto received. This commendable solicitude for the Archaeological Department, however, did not make Mr. Jayaswal shut his eyes to some of the sad shortcomings of the Department. He pointed out with regret that not a single pre-Buddha site of importance has yet been excavated in India. The interest of the late Director-General of Archaeology centred round post-Alexander sites, and it was by a mere chance that Mr. R. D. Banerji lighted upon Mohen-jo-Daro and by his genius realized its significance. History in India does not begin with Alexander, and the sites which are well known and are lying in numbers, crying for the spade, remain untouched. Add to this a number of new sites along the fringe of the Khirthar range, in the Ravi valley, in the ancient Sarasvati-Ghaggar basin, etc., which have been recently traced. It will be a great pity if the present apathy and neglect continues. If steps are not taken to direct our energies to this vast and virgin soil, the result will be that expeditions from foreign countries will possess the fields and crowd us out. We must remember that no inscription in Brahmi has yet been found of a period before the death of the Buddha. This is for the simple reason that no truly ancient Hindu site has so far been excavated, with the consequential result that what is mediaeval in the eyes of the Hindu historians is being treated as the beginning of Indian history. In the eyes of the Hindu historian, ancient history ends with the Mahabharata War, at about 1400 B.C., while the spade knows nothing apart from Mohen-jo-Daro, anterior to 500 B.C. If they dig at Kausambi, I am confident that pre-Buddhan remains and documents will be discovered. The dynasty of the Bharatas after giving up Hastinapura came and settled at Kausambi. Personally, I have not the least doubt, if proper operations are conducted and the right sites selected we shall get at the remains of the family of Satanika and Sahasranika.

Again, while expressing regret at the retirement of Dr. Hirananda Sastri from the post of the Government Epigraphist and the editorship of *Epigraphia Indica*, Mr. Jayaswal further observed:

> One by one, we regret, the old batch of Sir John Marshall is leaving the Imperial Archaeological Department, making it for the time-being at least, visibly weaker. I am, however, sure that Rai Bahadur Daya Ram Sahni, our present Director-General, will maintain the high standard of efficiency for which his Department has been so far noted. In this connection I might quote here the opinion of an Indian scholar of great standing which may prove of considerable practical value. 'The Department should change its policy and enlist extra-departmental co-operation, and this they can do without loss of efficiency or dignity.' I also think that by a policy of exclusiveness, the Department loses much needful assistance. Publication, for instance, of important documents, will not be delayed as they are delayed at present, if a more liberal policy is followed.

The passing away of the sixty-two years old *Indian Antiquary*, which, of late, was being so ably edited by Mr. C. E. A. W. Oldham, drew from Mr. Jayaswal a profound expression of regret at this undeserving end of so useful a career with which men like Bühler, Burgess, Bhagwanlal, Sir Ramkrishna Gopal Bhandarkar, Fleet and Sir Richard Temple were so closely associated.

Towards the end of his address Mr. Jayaswal gave a resumé of the important individual research works done in the various branches of Oriental Studies and Scholars as well as the new and talented entrants came in for a grateful recognition at his hands as did the reputed French, Dutch and other Scholars doing valuable works in connection with Farther India and Insulindia.

History of India By Indians

Mr. Jayaswal concluded his speech with a forcible representation of the imperative necessity for undertaking the preparation of a history of India written from the Indian point of view. With a magnificent elocution both of English and Sanskrit, Mr. Jayaswal went on:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

That every country should write its own history is a settled principle. We have reached a stage where spade-workers have gathered and stacked huge building material. Without architects and builders they are being neglected. The labour spent on them has to become productive. The text-book of Dr. Vincent Smith has, in many portions, become obsolete. That text-book and similarly the one by Prof. Rapson failed to satisfy our wants. In these volumes, Ancient Indian history does not go back beyond 600 B. C., while Indian history, according to Indian historians of the past, stops being ancient at about 1400 B. C. From Parikshit to Maha-Nanda (about 400 B. C.) was their Classical Period, and from Maha-Nanda onwards their Modern or Imperial Period. When they talked of Ancient India they spoke like thus :

Sanjaya to Yudhisthira :

अत्र ते कीर्तयिष्यामि वर्षं भारत भारतम् ।
प्रियमिन्द्रस्य देवस्य मनोर्वैवस्वतस्य च ॥
पृथोस्तु राजन् वैन्यस्य तेषेक्ष्वाकोर्महात्मनः ।
ययातेरम्बरीषस्य मान्धातुर्नहुषस्य च ॥
तथैव मुचुकुन्दस्य शिबेरौशीनरस्य च ।
ऋषभस्य तथैलस्य नृगस्य नृपतेस्तथा ॥
कुशिकस्य च दुर्धर्ष गाधेश्चैव महात्मनः ।
सोमकस्य च दुर्धर्ष दिलीपस्य तथैव च ॥
अन्येषां च महाराज क्षत्रियाणां बलीयसाम् ।
सर्वेषामेव राजेन्द्र प्रियं भारत भारतम् ॥
[भीष्म । ६ ।]

"I say, Now, O Bharata, I am going to tell you the history of your Land Bharata—the land where Indra was worshipped, the land dear to Manu Vaivasvata, the land dear to the first sovereign Prithu, the land of Ikshvaku, the land of Mandhatri and Nahusha, the country of Muchukunda, and Sibi the Ausin ara, of Rishabha, Aila and Nriga, of Kusika and Gadhi, of Somaka, and Dilipa—India of theirs and dear unto them."

There is thus a fundamental difference between the Indian point of view and that of others. To begin Indian history at 600 B. C., is to present a headless body. Imagine an ancient history of Egypt which begins with the Ptolemies and leaves out the Pharaohs! According to Indian historians, they have recorded fully the Dynasty of Manu :

इत्येष कथितः सम्यङ् मन्वंवंशो मया तव।

In view of the new vistas opening before our eyes in the Indus valley, in Mesopotamia and elsewhere, we have to reconstruct our ancient chronology to see where the preceding civilization ends and our own begins. We are extremely fortunate in having a written record of our own.

Mr. Jayaswal also adumbrated a rough scheme for the materialization of this long-felt desideratum. There was no dearth of able scholars to cover the field and there would be no paucity of funds to foot the scheme. "If England can find money for an Indian history, India should and will readily find money for an Indian history"—was Mr. Jayaswal's fervent hope and firm belief.

Its Galvanic Effect

That his hopes were no illusory ones was almost instantly demonstrated. His Highness the Maharaja Gaekwad whose face beamed with enthusiasm, could not help rising to his feet again. In an impassioned speech he welcomed the noble project and gave it his wholehearted approval and offerred to do his mite to make it a success. And the proposition did not inspire His Highness alone. Solid support came from the solid phalanxes of scholars and for the next few days of the Conference nothing loomed so largely in the vision of the scholars of India as this proposition of a History of India by Indians written from the Indian point of view.

WILL THE TORIES SMASH THE EMPIRE ?

By Major D. GRAHAM POLE

(Vice-Chairman of the British Committee on Indian and Burman Affairs)

"What I have, I hold" is a good Tory ...ay. It lost to the British Commonwealth ...Nations the United States of America. It ...but lost Canada. But for Lord Durham's ...e advice Canada would now be linked not ...h Great Britain but with the United States ...America.

The same attitude of mind on the part of ...Tories would have lost South Africa to ...British Commonwealth of Nations. Mr. ...mpbell-Bannerman was wiser in his genera... than they, as has since been abundantly ...ved.

This attitute of mind on the part of our ...y die-hards will go far to making India ...rmined to be independent of any connec... with the British Commonwealth of Nations. ...ere yet time to save it for co-operation ...a larger whole, or must India, like the ...rican Colonies, be driven to take her own ...endent line? These are questions that ...s give pause to anyone who aspires to any ...to statesmanship.

Mr. Baldwin in the House of Commons on ...th March 1933, speaking of the proposals ...Indian Constitutional Reform, said :

> I decided after mature reflection that if we ...forward we might save India to the Empire, ...if we did not, that we would lose her.

The White Paper proposals, at present ...re the Joint Select Committee of both ...ses of Parliament, show the feeble extent ...which even the moderate elements of the ...y Party, led by Mr. Baldwin, are prepared .... It is, to all intents and purposes, a ...osal to lead India forward towards the ...of self-government but to put her in ...cuffs and keep her in handcuffs to show ...that we do not trust her. That method ...progress is worse than a frankly backward ...Confidence begets confidence ; trust ...s trust. If we cannot trust India we ...ld say so plainly, and not pretend to give ...one hand what we cling to with the other.

Sir Charles Innes, who has spent the best part of a lifetime as a member of the Indian Civil Service, and has held such important positions as Commerce Member of the Government of India, and later Governor of Burma, and has only recently retired, may be expected to speak with the voice of the "man on the spot" to whom our die-hard Tories would listen. This is what he told the Joint Select Committee of both Houses of Parliament which is at present considering the British Government's White Paper on the future government of India :

> Incomplete self-government is the most difficult form of government : it is always, so to speak, reaching out to fulfil itself.

He instanced the parallel between Canada and India.

> Canada in the first half of the 19th century offers in some repects a parallel with the India of today. There was an irresponsible executive confronted by a powerful legislature, and Canada had its own communal problem in the rivalry of the French and English Canadians. The effects of these factors were much the same as have manifested themselves in recent years in India. There was a tendency towards irresponsibility on the part of the legislature. The tension between the French and English Canadians increased and there was growing bitterness against the Home Government. Finally there was a rebellion, and it was only Lord Durham's report that saved Canada for the Empire. He recognized that responsibility was the only real remedy for the situation that had arisen. History is repeating itself in India today, and much the same phenomena can be seen. The ferment has been immensely increased by the first instalment of self-government. We have set every person in India who understands the matter at all thinking about political advance. It has become an obsession with almost all educated Indians, and they feel that the honour and self-respect of India are bound up with it.
>
> Politically-minded Indians tend to believe that the British are standing in the way of their legitimate aspirations, and that we do so because in your own interests we are reluctant to give up our hold on India.

Mr. Baldwin, addressing a meeting of the Lancashire, Cheshire, and Westmorland area of the National Union of Conservative and Unionist Associations at Manchester on 29th

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

June 1933, scored some very pointed hits at his own Party, showing how little as a Party it is to be trusted with regard to imperial affairs.

> Your really old-fashioned, hard-shelled Conservative has always been opposed to wide extensions of democratic government, and when responsible government was first given to Canada no language was bad enough, and no prophecies for the Tories of that time could be too bad about it.
>
> We were wrong—our party was wrong—and had we had our way then we should have missed the bus. Looking back we can say that the granting of democratic institutions to South Africa was right. Distinguished Conservatives who voted against it at the time, have since acknowledged that they made a mistake. It was a great act of faith.

As he was speaking in Manchester he dealt with the Lancashire cotton trade with India which has fallen off so much in recent years. He pointed out that since the passing of the Government of India Act in 1919 India had enjoyed fiscal autonomy. We could not now dictate India's fiscal policy from Whitehall, as so many Tories are anxious to do. It was through that dictation that we lost the American colonies. "The day when we could dictate to India what she can buy and where she can buy has gone. It has not gone this year ; it went in 1919."

A bayonet, Mr. Baldwin said, might be a very useful thing with which to open a tin can or to dig with. But it was the worst thing in the world to sit on. We could never sell goods to India by putting cotton streamers on the end of a bayonet.

The Government's White Paper is full of so-called "safe-guards." As the *Morning Post* said, there is a safe-guard in every page—and there are about a hundred and thirty pages !

In addressing the Manchester meeting Mr. Baldwin said :

> Whatever safe-guards you have, the real safe-guard is the maintenance of goodwill.

Sir Tej Bahadur Sapru said much the same thing in a memorandum he presented to the Joint Select Committee in these words :

> The best safe-guard that Lancashire, or for the matter of that England, can have for trade and commerce in India is the goodwill of the people of India.

There is little in this White Paper to evoke that goodwill and there is no organized party in India that does not deplore the restrictions on their self-government contained in the White Paper.

Indians were promised by the Prime Minister on behalf of the National Government at the Round Table Conference that if a Federation of the Indian States and British Indian Provinces were formed, His Majesty's Government would recognize the principle of the responsibility of the Executive to the Legislature subject to certain safe-guards during a period of transition to full self-government. The Prime Minister, however, promised that in making such safe-guards as might be necessary during a transitional period that it would be the primary concern of his Majesty's Government to see that these safe-guards were so framed and exercised as "not to prejudice the advance of India *through the new constitution to full responsibility for her own Government.*"

No one could suggest that the safe-guards in the White Paper do *not* so prejudice the chance of India's advance. There is no possibility of India attaining to full responsibility for her own government through the new proposed Constitution.

At the last Indian Round Table Conference the Secretary of State for India assured the members that the safe-guards were not intended to obstruct a real transfer of responsible power. He assured them that the British Government "fully accepted the fact that there can be no effective transfer of responsibility unless there is an effective transfer of financial responsibility." How little financial responsibility has been transferred may be gathered from the fact that India's Chancellor of the Exchequer will not have control over more than about 20 per cent of the total Indian revenue. All the remainder is retained in the hands of the Viceroy to enable him to carry out effectively the safe-guards.

India is to have no voice in her Foreign Affairs, and this in spite of the fact that as far back as 1917 the Imperial War Conference passed a resolution recognizing *the right* of the Dominions and India to an adequate voice in our Imperial Foreign policy and Foreign relations. If India, equally with the Dominions, has the right to be consulted on the Foreign Relations of the British Commonwealth of Nations as a whole, surely she should not be denied the right to have some voice in her own Foreign Affairs.

India is probably one of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

countries in the world, if wealth is reckoned on a population basis. The average yearly income in India has been stated to be as low as about £2 per head of the population. But even if we put it as high as £5 per head, the great mass of the people are miserably poverty-stricken. Yet India has the highest paid Civil Service in the world, chiefly because its members are recruited mainly in this country at very much higher salaries, with pensions attached, than would be necessary if the Indian Governments were allowed to recruit at home for their domestic Civil Service. Indians for long have felt that this recruitment should be done by the Governments in India for themselves. This view is shared by many Europeans serving with the Indian Civil Service. Yet the White Paper proposes to retain the recruitment for the Indian Civil Service for a further period of five years in the hands of the Secretary of State at Whitehall; and there is no undertaking that even then it will be transferred to India, but merely that there will be a Statutory Enquiry to consider the matter. This denial to India of one of the first essentials of self-government has caused more dissatisfaction than almost any other proposal in the White Paper.

Under the present Constitution the Defence of India is decided on by the Governor-General along with his Cabinet, on which there are three Indian members. The White Paper proposes that Defence shall be entirely reserved to the Viceroy who will be authorized to appoint a Counsellor (not necessarily from India) to advise him with regard to Army matters. Indians will thus lose such opportunities as they have at present of influencing Army expenditure. It is an absolutely reactionary proposal and has brought many protests from India.

India has been constantly told that she is unable to defend herself and therefore cannot have self-government. Yet whenever she puts forward proposals for training in self-defence, she is constantly balked.

These are a few of the more obvious objections to the Government's proposals for the new Indian constitution. One could fill a volume with enumerations of the futilities and shackles on the kind of self-government which it is proposed to offer to India.

If the White Paper proposals go through Parliament in the form of an Indian Constitution Bill and become law there is little chance of Indians co-operating to work it except for the belief that many of them have, and rightly, that our present Tory Government cannot now last for very long. They have seen the signs of Labour's advance to power in this country and they pin their faith to the fact that British Labour has pledged itself to frame a constitution for India, in co-operation with Indians, giving them real, responsible self-government on a basis of equality with the other Dominions of the British Commonwealth of Nations, subject only to such safe-guards as they would agree are "in the interests of India," as was promised to them. This is probably the last chance we should have to save India, by her consent, as a willing partner in the British Commonwealth of Nations. The Tories, by their present policy, would smash the Commonwealth: Labour alone can save it. Let us see to it that we do not fail.

THE FOOL

By SITA DEVI

RAMNIDHI Ghoshal was a rich man through God's grace, but he was not a fortunate one. Death was a regular visitant at his door, and every year he took away one of Ramnidhi's near and dear ones. As soon as Ramnidhi was born, his mother died. His father was somehow bringing up the motherless child with the help of a widowed sister, but he, too, died suddenly, when the boy was only five years old. From that day Ramnidhi had nobody to call his own, except that aunt. But the aunt soon got help in her task of guardianship, from an unexpected and unwelcome quarter. It was from her stepson Jogesh.

Jogesh had hitherto kept his distance from his stepmother for a very good reason. She was poor, and might have asked pecuniary help from him quite legitimately. So he remained discreetly aloof and silent. But as soon as he heard that his stepmother had become the sole guardian of a rich orphan, he could not remain silent a moment longer, and rushed at once to her assistance.

But he was disillusioned very soon. The prospect was not as good as he had thought before. Ramnidhi could hardly be called a clever or an intelligent boy, but he had unbounded trust in his aunt. He was ready to die at her command. Jogesh's stepmother, too, had no illusions left about her stepson, as she had a good memory. She had not forgotten his past behaviour.

Still, Jogesh did not want to give up hope too soon. His stepmother could not last for ever, and Ramnidhi had no other relative left in the world. So Jogesh's patience could not go unrewarded for ever. Jogesh had been married rather early, but his wife remained at her father's house. She was a spoilt child of her mother's, and could not stay away from the maternal fold for long. As long as Jogesh had remained in his own house, he had succeeded in bringing her over once or twice, but after he had settled down here, these short visits, too, had ceased. His mother-in-law did not want to send her daughter to a place where she might be unwelcome. Jogesh also did not dare to press his claim, as he was not sure about his stepmother. She might not like his wife to come, and his wife might be very much offended. She happened to be the only person of whom Jogesh stood really in awe.

Though his wife Radharani did not come herself, she sent for Jogesh, ever and anon. Sometimes he went, but more often he did not. He never had money to spare nowadays. Besides, he was afraid to stay away from Ramnidhi for any length of time, lest his stepmother should steal a march over him. Jogesh had established a certain hold over the boy through dint of perseverance. The boy would now and then bring him small sums of money surreptitiously. Jogesh kept the boy near him, three or four hours every day, on the pretence of teaching him. He was now busy persuading the fool to buy a harmonium. The dealer had promised Jogesh fifty per cent commission if he could take the rotten thing off his hands.

The house in which Ramnidhi lived with his aunt was situated in a suburb of Calcutta. The residents were mostly poor people, who lived in huts. There were only three or four brick-built houses ; these, too, of a very old style. There were wide stretches of field and wood and any number of ponds all around. You could hear jackal's howling even during daytime.

They had much landed property in their native village, and a house too. But they never kept good health there, so neither the aunt nor the nephew liked to stay in the village. They had leased out all the cultivable lands and the aunt went to the village twice every year to collect her dues. Jogesh wanted to help her in the collections but his stepmother ignored all his offers of assistance in this direction.

Days passed on, and Ramnidhi was fast approaching his youth. "I have become old and might die any day," said his aunt one day, in course of conversation, "I would die content, if I could get him married to a suitable girl."

Ramnidhi and Jogesh were having their midday meal then. Ramnidhi was glad but he felt shy, too, and bent down his head. "Why do you want him to be married now ?" said Jogesh. "He is but a boy of sixteen or seventeen, and he has had no education, worth mentioning."

"It does not matter," said his stepmother, "we must not be so particular in his case. It is true, he is rather young, but we could get a young bride too. As for education, he will never have any. And what is the use ? People want education for making money, and he has got enough money. He will never have to earn for himself. On the other hand, he will maintain many idlers always."

Jogesh felt furious at this covert sting, but he remained silent. He felt very anxious all the same. If the old lady really wanted Ramnidhi to marry now, Jogesh must be on his guard. His old stepmother watched over the fool's money with lynx's eyes, and if a bride too appeared on the scene, she would certainly not be less watchful. Between the two, Jogesh would have a bad time. The only thing he could do was to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

look out for a silly girl and get Ramnidhi married to her.

A few days later, Jogesh approached his stepmother with a letter in hand. The old lady was busy in her store-room. "Are you very busy?" asked Jogesh, "I wanted to tell you something."

His stepmother looked up from her work and said, "I must finish these. Can't you tell me what it is, from there?"

"You were talking the other day about the boy's marriage," said Jogesh. "I know of a good party. If you permit me, I may open negotiations."

His stepmother did not look at all enthusiastic. "Who is the girl?" she asked. "Where is their home?"

"Not very far off," said Jogesh. "She is related to my wife, in fact, she is her cousin. She is good looking and just the age for our Ramnidhi. She is quite intelligent too, and would be able to manage everything in time."

Ramnidhi's aunt did not seem much more impressed by this description. "What does the bride's father do?" she asked. "Are they well-to-do people?"

Jogesh lost heart a bit at this cool reception. "Her father is dead," he said. "The girl is an orphan and has been brought up by my mother-in-law. But why do you bother about money? Your Ramnidhi has got enough of his own, he does not need a father-in-law's money."

"Still I don't want the bride's people to be paupers," said his stepmother, "and neither do I want to marry my boy to an orphan girl. He has lost his own parents, and he must have parents-in-law, who would look after him. He is not intelligent enough to stand alone. I won't be there for ever to guard him and his property."

Jogesh made a wry face and moved away. If he could have married Ramnidhi to this girl, it would have improved matters very much for him. His prestige would have been enhanced at his father-in-law's house and the girl too would have been grateful to him. She was quite young and not overburdened with intelligence; so it would have been very easy for Jogesh to manage her. But the expression on his stepmother's face did not encourage him to hope for any good result.

But he was not a fellow to give in so readily. He brought home information about new brides everyday and drew his unwilling stepmother into long consultations with him. He even tried to open direct negotiations with Ramnidhi. But the boy was too much of a fool to understand even his own good. And it was utterly impossible to make him do anything on the sly.

One morning, the old lady went to clean her nephew's room. As she was rolling up the bed, she found three or four photographs under his pillow. All were of young girls and all were fairly good looking.

Jogesh had then gone out for his morning stroll. The old lady sent for Ramnidhi and asked him very sternly, "What are these?"

"How should I know?" he replied in a deeply injured tone.

"You don't know?" asked his aunt, still more sharply, "then who knows, pray? How did they come here?"

"Dada (Jogesh) brought them and gave them to me. He wanted to know which was the most beautiful."

His aunt suppressed a smile, and began turning over the photographs. Then she asked again, "Can you tell me, which is the most beautiful?"

Ramnidhi shook his head violently and made good his escape. His aunt took away the photographs to her own room. Though she did not like the brides whom Jogesh proposed for Ramnidhi, yet she, being a lonely widow, could not arrange a better match. She had no one to help her. So she decided to choose one of these four girls, if she proved even fairly suitable. That none of them would prove entirely satisfactory, of that she was certain. Otherwise Jogesh would never have tried to help them to marry Ramnidhi. But the old lady was ready to accept a girl now who was healthy and who did not come from a very bad family. About everything else, Ramnidhi must take a chance. The names and addresses of the girls were written on the back of the photographs. So she decided to make enquiries about them through one of her own friends.

She finished her midday meal in a hurry and then started for her friend's house with the photographs. Her friend, another widowed lady, named Chandramukhi, received her cordially and looked the photographs over. Then she said, "If you really want a bride for your nephew, why don't you oblige your poor friend then, instead of going for strangers?"

Ramnidhi's aunt was a bit surprised and said, "I knew you had only two sons. Have you got a daughter, too?"

Chandramukhi gave her a playful push and said, "I may not have a daughter, but can't there be a girl in our family? Don't you remember my niece, Susila?"

"Of course, I do, she was a very beautiful child. But would you really give her in marriage to my nephew? You know, he has received no education."

"Oh, it does not matter," said her friend. "He may not be educated, but he has got enough money to feed a family. We cannot have everything, and we are conscious of our own limitations, too. My poor sister has lost her husband and she cannot pay any dowry at all."

Ramnidhi's aunt remained silent for a while. Then she said, "My poor boy is destined to remain without a guardian. Every proposal that came for him proved to be about fatherless girls. Still, this one is better than the others, the girl being your own niece. You two will look after

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the poor boy. But where is the girl? I had seen her when she was quite a child, I must see her once now."

"She is in Calcutta, and you can see her anytime you wish to," said her friend. "It would please us very much if you and Ramnidhi will take your midday meal here on Sunday. I shall ask my sister and her daughter too and you can see her."

"That's the best arrangement," said Ramnidhi's aunt. "I shall try to come early," saying this, she took her leave.

Ramnidhi was lucky enough this time to catch sight of a real flesh and blood bride and not a mere picture. It must be admitted that Jogesh had less wisdom than his stepmother. Ramnidhi fell in love with the girl at first sight. The girl was really pretty, according to Bengali standards. Her complexion was fair, her figure good and she had large, trustful eyes.

Ramnidhi's aunt, too, liked the girl very much. Still she said, "The girl looks too big for my boy. I could have done with a younger bride." "True, my dear," said her friend Chandramukhi. "But don't reject the poor girl for such a slight fault. She is a very good girl. You will understand that as soon as she enters your family. A very young bride would have been too troublesome. She would have cried day and night and disgusted you. My Sushila will help you in everything. She knows all household works and can manage everything perfectly."

So the match was finally settled by the respective aunts of the groom and bride. Ramnidhi looked supremely satisfied with the arrangements.

Jogesh was furious when he heard about it. He rushed to his stepmother and blurted out, "So you are bringing home an orphan girl after all? Then why did you reject the proposal, I brought? Because it was I that brought the proposal, you did not even give it a hearing."

The old lady knew only too well the reason for so much heat. She was going to utter some hometruths, but restrained herself and said, "I liked this match much better, that is why I accepted it. Though she is an orphan, I know her personally from her infancy and I know her to be a very good girl."

Jogesh had many things to say, but he knew that it was fruitless now. The marriage was a settled fact. He could do nothing to prevent it and he could not foment any kind of trouble. There was no question of a dowry, so no trouble could arise through non-payment, which is the most fruitful cause of trouble in Hindu marriages. The bride's people might give her some presents, again they might not; it entirely depended on them. Jogesh's stepmother knew the girl's people thoroughly, so no falsehood about them would upset the match. Many schemes crowded into his brain, but he rejected them all as useless. The day fixed for the ceremony steadily approached.

At the time of the marriage, Jogesh's aunt invited his wife Radharani, but she did not come on the excuse of ill-health. Jogesh's stepmother did not repeat her invitation. She had grown accustomed to Jogesh, but Radharani could never pull on with her.

Ramnidhi's marriage was solemnized in due course, without any hitch. There was no great show, but all the relatives on both sides gathered together on the occasion and blessed the pair. As the bride was departing for her husband's home the girl's mother requested Jogesh to be kind to her girl. Jogesh's lips turned in a crooked smile but thanks to his bushy moustaches, nobody saw it.

Sushila entered her new home. Ramnidhi's aunt had the whole house repaired and repainted as soon as his marriage was arranged. So the house now looked quite new. It was full of people now for the festive occasion and was suitably decorated.

The bride was ceremonially welcomed into her new home and loud blasts of the conch-shell published the news to everyone.

Ramnidhi's aunt first came forward to see the face of the bride. She had a large jewel box in her hand. Jogesh stared at her in dismay. The old lady opened the box and took out a mass of shining gold ornaments and put them on the bride, one by one. Then she looked at the persons, who stood around and said, "Please bless her and wish that she may never have to take off these ornaments."

There was a murmur of admiration from amongst the guests. What a number of ornaments! It must at least have cost ten thousands. The girl was really lucky. She came from her father's house dressed in the cheapest of wedding dresses and with no ornaments, save a pair of thin bangles, and now as soon as she set her foot in her husband's house, she got enough ornaments to suit a princess.

Jogesh had retired to his own room, biting his lip in anger. He knew well enough whence all this money for jewels had come. Ramnidhi's father had lent one of his neighbours a few thousands, who had mortgaged his house to him. The interest had hitherto been accumulating, so a year or two later, the house would surely have come into Ramnidhi's possession. But the old lady had been foolish enough to let the interest go, and had given them back their house in repayment of the capital alone.

Jogesh had strongly been in disfavour of this foolishness, but the old lady had done it behind his back. Else, whence should she get so much money? Jogesh felt as if someone had taken away his own birthright. He had seen a pair of very cheap rolled gold ear-rings as present for the new bride. But so furious was he that he locked these up again in his desk.

When the feast was over and all the guests had departed, he went up to his stepmother and said, "Do you think, you did well by giving up so much money? What was the necessity

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Would it have been better, if I had taken money the poor old Brahmin's house for a large sum of money? And I really wanted large money for the ornaments. Why should she remain without ornaments? So the day she came, I gave her everything a bride her need."

"You could have waited," shouted Jogesh. "What was the urgency? Ramnidhi is a fool, but you should look after his interests better."

His stepmother frowned. "I try my best in that direction, you may be sure," she said. "I have grown old, and I think I know what is best." She went away, without waiting for Jogesh's answer.

Jogesh was fully conscious now of the seriousness of the situation. If he did not look out he would soon be compelled to change his present abode for another. It was not merely a question of eating three meals free, and sleeping in a well-built room, that he was staying on here. He could have had them in his own village home, too. He had left his own wife and his native place, and was putting up with all his stepmother's insolent behaviour, in expectation of gathering a substantial harvest for himself, in the future. If that hope proved futile, then what was the use of his staying on any longer? But the future looked really dark now. Formerly there was only his stepmother to contend against, but now there was Ramnidhi's wife too, backed by all her relatives. The old lady was spending money most foolishly on that chit of a girl. She had not only got jewels and ornaments worth ten thousand, she was getting new dresses, ornaments and what not, everyday. All these were mere wastage. Jogesh had made plans for living in Ramnidhi's money, but he had no claim through which he could claim a share in the bride's jewels or her silks.

The old lady had really got Ramnidhi married in the nick of time, for after this her health began to decline rapidly. Jogesh was a little more hopeful at this, still he was without fears that the old woman would yet steal a march on him. He was very much enraged when he saw that his stepmother was selling off all the village property and making plans for building another big house in Calcutta with the sale proceeds. The new building was to be the property of Ramnidhi's wife.

The time approached for the Durga Puja festivals. Ramnidhi's aunt suddenly made a vow for holding Puja in her own house. Jogesh protested with a sour face, "We never thought of having it in our house. What is the use of this expense. Now that Ramnidhi has married, we must be more careful than ever."

"Oh it is not much of an expense," said the old woman. "My boy won't become a beggar through it. Now that he is married, he must try to please the gods. I always had a desire to do it and am going to do it this time."

Radharani was again invited. She had to come this time, as repeated refusals to come to her husband, might give rise to ugly rumours. She came just before the Puja. She had heard all about the new bride's magnificent ornaments and dresses, so she had to borrow some finery and some jewels from her relatives in order to keep up appearances by the side of Ramnidhi's wife.

Jogesh had hitherto lived alone. So the room allotted to him was rather small. He had not noticed it hitherto, but his wife now pointed it out to him. "What is the use of your slaving away your life here?" she asked, "You have not got even a decent room to live in."

"It is no use getting impatient," said her husband. "We must bide our time. Besides, there are no large rooms available. There are only two in the house, one being occupied by the old woman and the other by the new bride. I cannot ask either of them to vacate it for me."

"That girl is really lucky," said Radharani. "From the dustbin, she gets elevated to the king's throne. And look at me! I am destined to remain a poor dependent for ever, in my father's house."

"Wait and see," said Jogesh.

"Wait indeed!" said Radharani sharply.

"I must wait till my death, I suppose? Did you hear that Sushila is to get some diamonds as Puja presents? I wonder why I came here to look like a fool."

It was night, and Jogesh turned his back to his wife, feigning sleep. He kept awake till the small hours of the morning, but did not venture to speak to his wife again.

The Puja was celebrated with due pomp. Much discussion was caused by Sushila's new and old ornaments, both at home and outside. Radharani could not refrain from trying her sharp tongue on poor foolish Ramnidhi, too. "I say brother," she said, "are all the jewels for your beautiful young bride only? Can't the old and ugly sister-in-law get one or two?"

Ramnidhi felt very much embarrassed. "I have not given her anything," he said. "Aunt has given all."

"That means that," said Radharani. "The money belongs to you and not to your aunt."

Ramnidhi stared foolishly at her, then went away, saying, "Very well, I shall see what I can do."

On the day of the Vijaya, the last day of the Puja, Ramnidhi came to Radharani with a gold chain, and after giving it to her, bowed down to her feet. Radharani pretended to be very much surprised and cried out, "Oh dear, what is this brother? Did you think, I was speaking seriously? I was but jesting."

"How should I know that?" replied Ramnidhi. "I thought you meant it, so I told aunt and she gave me this."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Jogesh called his wife in, and said in a tone of suppressed rage, "Why do you make me appear a fool, like this? Have we got to beg for them, because we cannot afford to buy ornaments?"

"Now then, shut up," screamed Radharani. "The more worthless a man is, the more he tries to tyrannize over his wife. Do you want me to go about looking like a servant of the new bride?"

Jogesh went out of the room in a towering rage. He did not again come in for the rest of the day. In the evening, he sent word that he was going out of town on important business and might be absent for two or three days. Radharani's face turned dark in anger. But she had no one at hand, on whom she could vent her rage, so she had to remain silent. Ramnidhi tried his best to console his sister-in-law, but he did not get much attention from her.

At the end of the protracted festivals, everybody was extremely tired and the whole family was fast asleep by ten o'clock. But they were not destined to enjoy the bliss of peaceful sleep. Suddenly shriek after shriek in a terrified female voice rung out in the night, and woke up the whole quarter. A bewildered crowd soon gathered round Ramnidhi's house. But the thieves had made good their escape by that time after gathering a rich harvest. The whole night was passed in needless lamentations and reproaches. The police arrived with the morning, and Jogesh followed them pretty soon.

As soon as his stepmother saw him, she burst out in rage, "Where have you been, you good for nothing? Can't you even stay in the house? We have been absolutely ruined."

Jogesh's eyes seemed to be starting out of his head. "What has happened?" he asked.

Before his aunt could reply, Ramnidhi cried out, "Thieves came, and took away all the ornaments of your wife."

Jogesh became pale as a corpse. Why was she alone in the room?" he muttered somehow. "Why did not she sleep with mother?"

"I thought, she would feel afraid to be alone in that room," said Ramnidhi, "so we slept in your room, and sister slept in ours."

Jogesh collapsed, rather than sat down on the verandah. Radharani's wails from inside the room seemed to pierce through, to his brain.

After a while, he got up and dragged Ramnidhi to the outer room. "Who told you to be so solicitous about my wife?" he asked sharply. "was it mother?"

Ramnidhi stared at him like a fool and said, "Why, no. It was not aunt. My wife said that there was too much noise in our part of the house, so she would like to sleep for once in your room. She also suggested that sister should sleep in ours."

Jogesh looked at the fool with murder in his heart. Then he began to tear out his own hair by the handful.

KRISHNA CHANDRA BHATTACHARJYA

By RASBIHARY DAS, M.A., PH.D.

A Professor of Philosophy in a certain college in northern India was recently told, in reply to a query of his, that the present Director of the Indian Institute of Philosophy was Prof. K. C. Bhattacharjya. The Professor got little satisfaction from this answer and again asked "Who is Prof. K. C. Bhattacharjya?"

I think professors of philosophy in Bengal know who is Prof. K. C. Bhattacharjya, though they may not know what order of mind he possesses; but many educated people, even in Bengal, know, I imagine, as little about him as the professor I referred to above. This is what should not be. Professor Krishna Chandra Bhattacharjya is the President of the Ninth Session of the Indian Philosophical Congress held in the last week of March last at Poona. It is well that people should know something about this great scholar and teacher.

Krishna Chandra Bhattacharjya obtained as a student, all the distinctions that usually fall to the share of a brilliant scholar. He joined Educational Service and served as Professor of Philosophy in various Government Colleges of Bengal and retired some years ago as Principal of Hooghly College. After his retirement from Government service he served the University of Calcutta for some time. When he resigned his post in the University, he was approached by the Indian Institute of Philosophy (Amalner) with an invitation to come over to the Institute to guide its work. He accepted the invitation and is now at the head of the Institute.

There is nothing very unusual in his academical or professional career. Many other students have obtained the distinctions which he obtained, and in service many other professors have achieved greater popularity

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with the students and obtained greater and quicker advancement in their career. What distinguishes him from other teachers of philosophy is his great originality which is nowhere very common and is certainly very rare in this country. On any philosophical question he has something to say of his own which is highly significant and is not to be found in any books.

In logic, epistemology, metaphysics and even in psychology he holds definite views which are radically different from what we find in current European philosophy. But he has thought out his positions very well and can maintain them with many subtle arguments. When he elaborates any of his own positions or criticizes any views, which he considers inadequate, one cannot but admire his singular dialectical skill and meta-physical insight as well as the logical vigour of his thought. A few years back, he happened to deliver, at the Indian Institute of Philosophy, a course of lectures which have been published afterwards under the title 'The Subject as Freedom'. There was among the audience a gentleman who was himself a philosopher with considerable power of abstract thinking. He said he had not heard another speaker, like Professor Bhattacharjya, who combined such subtle analysis with such depth of thought. The remark was particularly significant as it came from a person who had studied under James Ward at Cambridge and had heard the lectures of J. M. E. MacTaggart and G. E. Moore who are undoubtedly two of the ablest thinkers of England in recent times.

This is not to say that the views of Prof. K. C. Bhattacharjya will be readily acceptable or even intelligible to those whose strong point is mere common sense or who are steeped in the ideas of current European philosophy. One would require some preparation to put himself absolutely in sympathy with his ideas. The ordinary ideas of common sense appear self-evident only because they have not been subjected to adequate criticism. So are many ideas which are derived from the tradition of Western philosophy. So long as our minds are dominated by these notions, it will be difficult for us to understand and accept ideas which involve their rejection. And many of Prof. K. C. Bhattacharjya's ideas have been so formulated as to imply a criticism, or demand the rejection, of our current notions of common sense and of ordinary philosophy.

One may not, therefore, at once accept the views which Prof. K. C. Bhattacharjya suggests. But if anyone, with a proper understanding of philosophy, discusses earnestly any problem with him, he will almost invariably be made conscious of the many inconsequences in his own thought as well as of the deficiency in many of the current concepts of philosophy and common sense. This is exactly the work expected of a philosopher. A philosopher is not there merely to repeat what everybody knows or to say what will be evident even to the commonest understanding. We want light from a philosopher and his light is not worth much if it cannot make us conscious of the darkness in us. If his light only shows what we ourselves can see, why do we then need such a light?

Prof. K. C. Bhattacharjya.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Is Prof. K. C. Bhattacharjya absolutely original? Does he not owe his ideas to any other philosopher? Prof. Bhattacharjya will not himself claim much originality. He will probably say that he is merely trying to interpret, in the modern way, some of the ideas he has learnt from Indian philosophy. But whatever he may say, we know that merely from a study of Western and Indian philosophy one cannot acquire the way of thinking which distinguishes him from other philosophers. His mind surely came into contact with certain materials in Indian and European philosophy, but the reaction to them was peculiarly his own, and its product, the views he has developed, at least their working out, may be said, therefore, to be quite original. Still his views, in some respects, admit of being traced to two main sources. One is the Kantian philosophy of the West and the other is the Vedanta of India. There is, I think, no one else in India who has studied Kant so thoroughly and carefully, and can interpret him in such a novel way. And the Vedantic colour of many of his ideas will be at once evident to any one who will take the trouble of considering them seriously.

I do not know if he owes anything to his teacher the late Dr. P. K. Ray, of whom he was a very favourite student and with whom he kept up his personal contact right up to the end. He also came into intimate contact with Sir Brajendranath Seal, and it is just possible that in his many conversations with him he got some suggestions and ideas.

Is he very learned? His learning cannot at all be compared with that of Dr. Seal. But he is certainly more learned than one would take him to be from his extreme modesty. He has a thorough grasp of all the different systems of Indian philosophy and is fully alive to the significance of different currents of modern western thought. But learned though he is, mere learning is not his strong point. Even a mediocre mind with sufficient industry can amass enough learning to astound and confound the unlearned public. His strong point is his peculiar insight which he brings to bear on any subject he chooses to handle. Whatever may be the system of philosophy he takes up, whether Eastern or Western, he has his own light to throw, which illuminates, as by a flash, the whole body of doctrines connected with the system.

From this we are led to another point in his character which makes him such an admirable teacher. Although he holds very definite and radical views, he is never dogmatic or aggressive in their expression. He is never anxious to win over anybody to his side and never gives the idea that there are no alternatives to his views. On the contrary, he can, and is always ready to, see things from standpoints other than his own. Thus a student who fails to agree with him can yet learn much from him, because he sees further than the student, even from the student's standpoint, and can therefore bring real enlightenment to him. He holds his views very firmly, but is also very catholic to the views of others. This catholicity of spirit has led him to the concept of the manifoldness of truth and to the alternative formulations of the concept of the absolute.

I wish I could give an idea of some of his characteristic philosophical views. But that is not possible in an article like this which is meant for general readers; and his achievements are mostly in the realm of advanced philosophy which cannot be presented without a good deal of technicalities. His analysis of consciousness and its three modes, known as feeling and willing, if generally known, will be considered a distinct contribution to epistemology and psychology. His distinction of speakable, meanable and thinkable is original and highly significant. One or two of his radical views in logic may be mentioned here. They will not, of course, be properly understood without much discussion.

One such view is that distinction is a symmetrical relation. Ordinarily it is supposed that if A is distinct from B, B is distinct from A. This is what is meant by the relation of distinction being symmetrical. Professor Bhattacharjya's opinion, if A is distinct from B, B need not be distinct from A. In support of his view, he suggests that what is definite is distinct from the indefinite, but the indefinite is not in the same way distinguished from the definite, for in that case it would become definite.

The second of his ideas which we wish

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mention here relates to indirect or mediate relations. We generally think that if A is related to B, and B is related to C, then A is related to C. Prof. Bhattacharjya says that it need not be so. Even though A is related to B and B is related to C, there is no necessity that A should be related to C. When A and B are related, and B and C are related, A and C may also be related. But the relation of A and B and the relation of B and C cannot themselves amount to a relation between A and C. In other words, he does not think that two relations can be compounded into one relation or that there can be a relation of relations. A relation combines two contents. Therefore a combination of relations, which are no contents (in the sense that they are relations) is not a relation in the first sense.

He has a host of such ideas which acutely challenge the concepts of our ordinary thought.

If Prof. K. C. Bhattacharjya is such a great thinker, how is it that he is so litttle known? The main reason is that his achievements are in a region which is foreign to popular interest. There are not many people in any country who can be genuinely interested in pure abstract thinking. When the nature of his subject itself is only vaguely known, it is hardly surprising that the nature of his achievements in it is not known at all. But those who can know and understand have always appreciated the merit of his work. Dr. P. K. Ray, and Dr. B. N. Seal, than whom there could be no better judges in the country in philosophical matters, always expressed their high regard for his metaphysical acumen. Besides, he has a few students who really understand him and have unbounded respect for his ideas. Some of them have already made their mark in philosophy.

It must be admitted however that the manner of his writing is to some extent responsible for his failure to attract public attention. His lectures are admirably clear. There is no hurry in his delivery. Words are always slowly and distinctly pronounced, each word standing for a definite meaning. He is never in want of happy examples to illustrate his points, and can always point to parallel thoughts in other thinkers. But his writing is altogether different. As a friend of mine once put it, his writings are mere dry bones of logic with no flesh and blood of literature upon them. Illustrations and references are hardly ever given and so his writings on the whole make very difficult reading.

But this does not explain everything. Kant and Hegel wrote in a difficult language. Even today the writings of Husserl and Whitehead are not less difficult than those of Prof. K. C. Bhattacharjya. But they are read, understood and admired in their country. The real fact is that we have no philosophical public in this country. If we had genuine interest in philosophical ideas and had sufficient respect for the thoughts of our own countrymen we should not mind taking some pains to understand the ideas of this great thinker. So if Prof. K. C. Bhattachajya is ignored, it is because philosophy itself, except perhaps in name, is ignored. Jagadisha and Gadadhara, especially the former, used a language which was a hundred times more difficult than the language of Prof. K. C. Bhattacharjya and yet people read and understood them. There was then genuine passion for learning alive in this country.

Since Indians began to be taught in the Western method, they have not made a single real contribution to philosophy. We cannot point to a single original philosophical theory which can be credited to an Indian thinker of today. We expected much from Dr. Seal and he too thought that the next comprehensive system of philosophy, after that of Wundt, was going to be his. He had, I believe, all the capacity to produce such a system. But his sudden physical breakdown tragically ended his own hopes and those of his countrymen. By the grace of God, Prof. Krishna Chandra Bhattacharjya is still there. Though already nearly sixty, he is still in full possession of his mental vigour. We hope he will be long spared to us and will have time and inclination to embody his views in a systematic work which will be a lasting contribution to philosophy and a matter of pride to his countrymen.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

THE BODHISATTVA DOCTRINE IN BUDDHIST SANSKRIT LITERATURE: *By Har Dayal, M. A., Ph. D. Kegan Paul, Trench, Trubner & Co., Ltd., London, 1932. Pp. XIX+392.*

Having crossed the limits of the land of its birth Buddhism penetrated into different parts of the globe from South Siberia and Manchuria in the North to Indonesia in the South, and from the border of Persia in the West to China and Japan in the East. But what is it in it that attracted the people so much in so many countries? According to its founder himself the truth that he preached was in no way an easy one; for, in his own words, it was very difficult to understand, very difficult to perceive, and as such was intelligible only to the wise. Such being the case, can we ever think that the average people in that time were so wise as to grasp the truth thoroughly? What is it then? It seems that it is the path of salvation shown by the Blessed One, which has the fullest expression in the life of a Bodhisattva 'expirant after the supreme enlightenment.' The first and the most important thing that is to be noticed in the life of a Bodhisattva, is his *mahamaitre* 'great love' and *mahakaruna* 'great compassion.' Here *maitre* is that love for all living beings which a mother feels for her only one and very dear son. And that love which prompts one to offer one's everything including even the body and life to all living beings without any expectation for reward therefrom is *mahamaitre*. And *karuna* 'compassion' is the thought of, or intention for, the deliverance of all sentient beings from the ocean of *samsara*; and that compassion with which a Bodhisattva desires the supreme enlightenment or *nirvana* first not for himself, but for others, is called *mahakaruna*. Actuated by these two great qualities a Bodhisattva prays to become a Buddha for the welfare of the universe (*buddho bhavayam jagato hitaya*), and does not want to attain *nirvana* until every living being is liberated. For the liberation of others he is always prepared to undergo any kind of suffering and is never afraid of any pain. He makes the devout supplication: 'Let whatever sufferings the world has come to me! May the merits of Bodhisattvas make the world happy!'

This ideal of self-imposed suffering for the benefit of others is found also in Vaisnavism, as the following words taken from the *Bhagavata Purana* (IX. 21.12) will show:

'I do not desire the highest state of life from God nor the eight-fold success (*siddhis*), nor the absence of rebirth; but I want the suffering of all creatures being inside them, so that they may be free from it.'

And in this connection the following speech of Prahlada may also be quoted from the same work (VII. 10. 48):

'Almost all gods and saints observe silence wanting their own salvation; they are not devoted to the welfare of others. But I alone do not want to attain my liberation leaving behind all these miserable creatures.'

There is nothing more ennobling, more inspiring than this ideal of life in the whole range of Buddhist literature, and the Mahayana works in Sanskrit or Buddhist Sanskrit are full of it. It should, however, be noted that the Bodhisattva doctrine is found also in Hinayana texts though it is not so much developed here as in those of the Mahayana.

The book under notice is "An important and detailed study of the Bodhisattva doctrine and its place among Buddhist Sanskrit writings." There are seven chapters in it and their names given below will show the subject-matters dealt with in them: (*i*) The Bodhisattva Doctrine; (*ii*) Origin and Development of the Bodhisattva Doctrine; (*iii*) The Thought of Enlightenment; (*iv*) The Thirty-seven Dharmas; (*v*) The Paramitas; (*vi*) The Bhumis; (*vii*) The Last Life and Enlightenment. There are also Notes, Appendix, and Index.

Undoubtedly the present volume is a valuable contribution to Buddhist studies, especially with reference to the Bodhisattva doctrine. It clearly shows its author's deep scholarship and great diligence.

In discussing technical terms the author takes much pain and quotes, though sometimes unnecessarily, opinions of numerous authors, ancient and modern, giving thereby his readers an opportunity for their being acquainted with different views (which are not correct in all cases) in one place. In this connection we may refer one to his discussion on the true significance of the word *Bodhisattva*. It is very

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

interesting, indeed. But here arises the question: how we justified in rejecting a traditional meaning supported by great authorities, without any strong ground? Mere grammars and dictionaries may give us a number of meanings of a word, but it is convention or tradition, or both of them, that can greatly guide us to select a true one. The explanation of the word *Bodhisattva* as given in the *Bodhicaryavatara-pañjika*: (tatra (bodhan) sattvam abhiprayo'syeti bodhisattvah) is rejected by Dr. Har Dayal as is done by another modern scholar. But that explanation is supported by Asanga in his *Mahayanasutralankara-vrtti* XIX. 64 (*bodhan sprhayan khalu bodhisattvah*). Haribhadra in his *Abhisamayalankaraloka*, ed. Trivat. GOS p. 2, follows him when he writes: *bodhan bodhyapayo yesam te bodhisattvah*. This seems to be confirmed by the first thing of the very beginning of the career of a Bodhisattva, *i.e.*, his *bodhicittotpada* or the production of the thought of supreme enlightenment.

The temptation of connecting Pali *satta* in this connection with Sanskrit *sakta* was better suppressed than expressed.

VIDHUSHEKHARA BHATTACHARYA

(1) MANASARA ON ARCHITECTURE AND SCULPTURE, (2) ARCHITECTURE OF MANASARA, (3) ARCHITECTURE OF MANSARA: Plates. By *Prasannakumar Acharya, I.E.S., Professor, Allahabad University. Published by the Oxford University Press.*

These are the three concluding volumes of the monumental work on *Manasara*, by the Allahabad Professor. The first two volumes: (1) A Dictionary of Indian Architecture, and (2) Indian Architecture according to Manasara-Silpashastra appeared a few years ago and have been appreciated by the world of scholars, as proved by the fact that the gifted author is already preparing a second edition.

The third volume of the series, which is No. (1) of the three volumes under review contains the original text of the Manasara, with (*a*) a full alphabetical index, and (*b*) *critical notes*. The original text of the treatise is so notoriously and hopelessly corrupt that credit is due to Dr. Acharya for having provided a readable text. Anachronisms and grammatical anomalies with which the text abounds are the common feature of most Sanskrit treatises on technical subjects,—such as Medicine and Astronomy-Astrology. But the text of the *Manasara* is full of other defects as well. It must have cost the editor immense labour and not a little ingenuity to prepare a neat and readable text. The critical notes bear ample testimony to this.

The *Manasara*, it seems, was not meant by the author, whoever he was,—to be a scholarly and scientific work; it appears to have been meant as a Handbook for the guidance of practical builders and architects. This is the only explanation that we can find for the more than ordinary "barbarous Sanskrit" in which the work has been described as having been written. This is also indicated by the fact that the author's name is nowhere mentioned; and it is difficult to find out who the author was. Like many encyclopædic works, it has been attributed by Pandits to the great Scholar-King Bhojdeva of Dhara.

This leads us on to the second of the three volumes under notice,—which forms Vol. IV of the series, viz. the Preface, we are told in regard to the authorship of the original that—"up till now, no tangible statement or proof has been found as to the possibility of the treatise being the compilation of a number of authors instead of a single individual." There is thus a lot of uncertainty on this point, and the only reasonable view to take at prsent appears to be the one hinted at in this sentence. It is a practical handbook, added to from time to time as experience dictated. This also will account for the diversity of language and style.

This volume contains a complete English translation of the original, with full alphabetical Indices of Sanskrit and English terms. The translation is accurate and at the same time readable by itself, which cannot be said of most of our translations, which lose much of their readability through an attempt at literalness. Dr. Acharya has sailed clear of this difficulty and has succeeded in giving us a translation which can be read and understood by itself.

Some idea of the magnitude of the task to which Dr. Acharya set himself twenty years ago may be formed from the contents of the work. The whole work consists of 70 chapters, dealing with all the minute details relating to house-building, such as, qualifications of architects, selection of site, erection of the Gnomons for the orientation of buildings (a matter which is very badly understood by present-day builders), Site-plans, Village and Town and Fort planning, Dimensions, Foundation, Pedestal, Columns, Roofs, Joinery and general features. All these are dealt with in relation to buildings of one to twelve-storeys—(it seems we had sky-scrapers in ancient times). Next follow chapters dealing with Royal Palaces, Royal Entourage, Cars, Chariots, Furniture, Thrones, Arches, Central Theatre and Crowns. Lastly, there come Temples and Images, separate chapters being assigned to Jaina Images, Buddhist Images, Images of Sages, the comparative measures of Images. Special chapters are also devoted to the casting of Idols in Wax and the chiselling of the Eye. There are penalties also for defective construction.

The last volume of the series supplies elaborate plates providing full illustrations (drawn to scale) of architectural and sculptural objects. These are likely to be extremely useful to the extensive town and village-planning that is going to be undertaken in Bihar. It represents the practical outcome of the experience of centuries, and is likely to be more adapted to the climatic conditions of the country than the ideas derived from experience in other climes and other countries.

While congratulating Dr. Acharya on the completion of his monumental work, one cannot resist the temptation of requesting him to bring out, in course of the present year, if possible (in view of the likelihood of its being useful in the rebuilding of Bihar), a smaller volume containing, in brief, the main conclusions, specially those relating to the planning of villages and towns and the building of houses. This volume should not contain more than 200 or 250 pages. The utility of the work would be immensely enhanced if a Hindi translation also appeared simultaneously with the English version.

GANGANATH JHA.

DAYANAND COMMEMORATION VOLUME: *A Homage to Maharshi Dayanand Saraswati from India and the World in celebration of the Dayanand Nirvana Ardha Shatabdi. Edited by Har Bilas Sarda, M.L.A., Diwan Bahadur (Har Nivas, Civil Lines, Ajmer). Printed and Published by Chandmal Chandak at the Vedic Yantralaya, Qaisarganj, Ajmer, 1933. Pp. 418.*

It is a very good omen that we are thinking of our great men both living and dead, and trying to place

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

before them, or in honour of their memory, our offerings of thanksgiving and tribute. A volume of appreciations, or of articles of literary or scientific value forms a fitting expression of this homage, and for this idea we are indebted to the West. German and other European scholars began the laudable practice of offering a volume of essays to a great man, usually a great scholar or writer, on his seventieth or seventy-fifth or eightieth year, to which all eminent men working in the same field, as well as eminent men in other departments who are his friends and admirers contribute. In India the first tribute of this kind that was paid to a great Indian was the Bhandarkar Commemoration Volume, honouring the life and achievement of the late Sir Ramkrishna Gopal Bhandarkar. Then followed other commemorative volumes—The Golden Book of Tagore, The Madan Mohan Malavya Commemorative Volume, and those in honour of Sir P. C. Ray Professor Dhruva of the Benares Hindu University, Pandit Mahavir Prasad Dvivedi, besides volumes celebrating Pandit Gauri Shankar Hirachand Ojha, and Professor Pathak of Poona which are under preparation. Of these, the Tagore Volume and the Dvivedi Volume represent the high water-mark of book-production in India—the one in English, the other in Hindi. All the above *Festschrifts* are tributes offered to living scholars and writers, who have left their mark in the literary and intellectual life of India during the last two generations.

The Dayanand Commemoration Volume differs from the rest in that it celebrates the memory and the achievement of Dayanand Swami fifty years after his death. It is not a volume of learned and technical papers, it consists mainly of a series of appreciations and appraisements of the personality and the life-work of this illustrious son of India from over 120 men and women of light and leading, mostly from India and some from abroad. The name of Dayanand will go down to posterity as one of the makers of Modern India, and howsoever one might disagree with him in his Vedic interpretations and his opinions on religious matters, one is bound to admire the compelling sincerity and the burning zeal of this great religious reformer. He lashed the inert Hindu community with its passivity of lifelessness and callousness to an active ideal of self-purification and service, of unity and endeavour. We might not accept the bases of his claims for the superiority of his people, but we revere him and think of him with gratitude when we find that his clarion call shattered our tacit assumption of an inferiority complex in our communal existence, in practice if not in theory. Ignorance and Superstition, and Exploitation of these by priest-craft—he was sworn enemy to these; and he strove with his whole soul of a missionary to uplift the submerged masses. It was a most praiseworthy task undertaken by Mr. Har Bilas Sarda to publish so many and so various tributes to the memory of such a great man and he has achieved it very well. He has himself contributed a valuable Introduction with a sketch of Dayanand's career. The Commemoration Volume with its galaxy of contributions viewing the life and work of Dayanandji from many a diverse aspect is a work to keep. The printing and get-up are to be highly commended, considering that the work comes from a provincial press in India. There is a good collection of half-tone pictures of Dayanandji—and of places associated with his name, as well as of some of the more prominent people who came in touch with him.

SUNITI KUMAR CHATTERJI

RIGVEDA UNVEILED (*Double Crown ... xix+1—296. Price Five Rupees only. Supplement to 'Rigveda Unveiled'—Purusha-Sukta ... Rigvedic hymn to the super-personal self, ... with commentary in English and introduction, ... Caste in true Hinduism.' (Double Crown i—... 1—104. Price One Rupee only). By Deijadatta, M.A., A. R. A. C.*

The task that Mr. Datta, an octogenerian, has ... before himself in these pages is mainly to demonstrate that the division of caste and untouchability ... unknown in the Rigveda and that the Rigveda strictly adhered to monotheism in the midst of what seem... to be polytheism and atheism. Of course, these ... no new discoveries and more than one scholar has dealt with or referred to them. Mr. Datta has, however, dealt with these topics with very great detail which occasionally abounds in repetitions. The supplement which is decidedly superior to the original work in point of typography is expected to be of greater use as well for the detailed explanation it gives of the *Purusha-sukta* which the author regards as the 'grandest of the inspired hymns of the world.' He, however, considers as later addition two of its well-known verses (11, 12) referring to the origin of caste-distinction and not the entire hymn as is done usually.

The works contain much valuable material—extensive citations from different parts of the Vedic literature which with proper arrangement and scientific tran... literation would have been of great use to scholars. What strikes us is the sincerity of purpose and earnestness of the learned writer who looks upon the Rigveda not only as the oldest literary remnant of the world but also as divine revelation and has, at this old age, taken upon himself the self-imposed task of writing this book with a view to giving publicity to his own independent views which were not likely to commend themselves to scholars at large. It is for this reason that he does not hesitate to quote both in the preface and also at the end of the supplement, some of the unfavourable opinions about his work. He seems to feel very strongly on the subject dealt with by him and apparently this has frequently led him to attribute motives to his opponents —ancient and modern—cherishing views different from those of his own and refer to them in strong and uncharitable terms. He is particularly unfavourable towards the members of the priest-craft who are ever supposed to be willing to consign the Rigveda to utter loss (Preface p. XIX). Sankara is stated to have never seen the Rigveda (p. 40) and he, along with Sayana, the great Vedic commentator, is accused of lack of moral courage and courage of conviction (p. 42) which stood in the way of their giving the correct interpretation of the vedic texts. He refers to what he believes to be intentional misrepresentation of Sayana (p. 59) and to his 'desire for making himself popular with the priesthood of his day for his interof fame' (p. 60) which was responsible for the Hindu tional tampering, with the 'true sense of the Holy Writ' (p. 60). Prof. MaxMuller's opinion on the Vedic deities is attributed to his desire 'to please his contemporaries' (on whose pleasure perhaps depended his Oxford job!). As a matter of fact, even admitting that Mr. Datta is quite correct in his conclusions regarding the absence of caste-system and prevalence of monotheism in Rigvedic times one really fails to understand how people who cannot look eye to eye with him

THE STORY OF MY EXPERIMENTS ...H TRUTH : *By M. K. Gandhi, Vol. I. ...published in 1927, reprinted 1933. Navajiban ...ngs, Ahmedabad. Pp. iii+602. Price Rs. 5-8.*

...The first volume of Gandhiji's Autobiography has ...en reprinted after being out of market for ... than four years. Considering the demand for it, ...d hoped it would have been issued earlier, but ...s the political turmoils, from which the ...ajan Press has also suffered abundantly, have ...responsible for the delay in its appearance. ...The printing and general get-up of the book are, of ..., as good as they were in the former edition.

NIRMAL KUMAR BOSE

GANDHI : *By P. Brijnath Sharga. In two ..... The Upper India Publishing House, ... Lucknow. Cloth bound Re. 1-8-0 and Paper ... Re. 1 per volume.*

...Mahatmaji's life has been told in many books, but ... has the merit of being a complete and ...ly written biography, bringing the story of his ...n to the 31st January, 1933. The first volume ...with the earlier years from 1869 to 1918, and ...ond dwells upon the emergence of Mahatmaji ...the field of Indian politics when event follows ...in quick succession ; this second volume is ...ovitable, being a running account of his life ... the period whose sounds echo still. The ..., who writes with spirit and, when occasion ... with humour, has ably seized upon the ...phases of Mahatmaji's life, and narrated them with skill, liberally quoting Gandhiji's own words. Gandhi the student, the barrister, the farmer and the spinner, has been drawn with effect and will be enjoyed in the reading.

Mr. Sharga's style is simple, though he is betrayed into an occasional fondness for long words ; the get-up is, however, not quite up to the mark and the typography is sometimes incorrect. In other respects the book is thoroughly commendable and it deserves to be popular.

PRIYARANJAN SEN

REVIVED MEMORIES : *By K. Subba Rao, with Foreword by The Rt. Hon. V. S. Srinivasa Sastri. Ganesh & Co., Madras. Price Rs. 3. Pp. 518.*

The book is a simple narration of the events which happened in the career of a person who led a chequered and varied life. Mr. Subba Rao had been a teacher before he became a journalist and a journalist before he chose to enter the Mysore Civil Service. As a teacher he had sufficient experience of the working of the Education Department of the Government of Madras, an experience which he has faithfully and unostentatiously reprodueed in the columns of the book under review. As a member of the editorial staff of the *Hindu*, he came into touch with men and things about whom he writes freely in these pages. He deals with the contemporary movements only in short but he gives us a good deal about the great men whom he met and had opportunity of studying at close quarters. G. Subramania Iyer, the founder and editor of the *Hindu*, M. Veeraraghavachariar, Justice Ranade, Sir Narayan Chandravarkar are among the galaxy of the great men of India whose memories have been revived in the book. The style is easy, unadorned, and the narration is interesting. Any man who wants to know something of the public life of Southern India in the last two decades of the nineteenth century would do well to go through this work.

NARESH CHANDRA ROY

THE RELIGIOUS FOUNDATIONS OF INTERNATIONALISM : *By Norman Bentwich, Weizmann Professor of the International Law of Peace at the Hebrew University of Jerusalem. Allen & Unwin Ltd., London. Price 10s. 6d. net.*

In this book, which embodies a course of lectures delivered in the Hebrew University at Jerusalem in 1932, the author discusses from the historical standpoint the contributions that the different religions of the world have made towards the development of the idea of internationalism. And his finding seems to be that neither Christianity nor the religions of the East have done so much for the growth of internationalism as Judaism and Islam.

"The Jew in the Middle Ages," we are told (p. 82), "was the 'first European' ; the Jew of today or tomorrow should be the first citizen of the world, spreading from this (?) centre the International of the Spirit, of which the dominant principles are the Fatherhood of God and Brotherhood of Man."

But Christianity, he thinks, has generally erred on the side of nationalism. And "it is doubtful whether, with the exception of Islam, any agency has been so fruitful of wars as the Christian creed" (p. 86). Islam, according to this statement, was more fruitful of wars than Christianity ; but in a subsequent chapter we are told that Islam 'transcends nationalism' and 'aims at being universal' (p. 162). As regards

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Pan-Islamism, Mr. Bentwich thinks that the Great War has 'proved its hollowness' (p. 173).

The author is loud in praise of internationalism. We do not deny that in theory internationalism is a higher idea than nationalism. But when a young nation aspires to attain its full political stature internationalism may easily be a handicap rather than a help. Besides, the Jews who have hardly been a nation but only a wandering race, are not perhaps the people best fitted to hoist the flag of internationalism. Their internationalism is sometimes anti-national, or, else, their expulsion from Germany at the present juncture cannot be explained. And but for the Zionist movement which promised to give them a home of their own, the Jews have been strangers and sojourners in most countries of the world, and hence internationalism was more favourable to them than to others.

The most important constructive idea that the author puts forward is the idea of a *League of Religions* (ch. xii). This is admittedly (*Cf.* p. 265) based on the assumption that the League of *Nations* has been a great success. But since this book was written, there have been many important withdrawals from the League of Nations and it remains to be seen how much longer it will continue to function at all. Is not the scheme of a League of Religions a little premature then ?

We have had at least three 'Internationals' of politico-economic colour and the world is not better than before : Will the 'International of Spirit' professed by this author bring any better result ?

The writer begins his book with praise of Jerusalem as "the place to which half the world looks as the city of peace" (p. 15). But a few months back Jerusalem had been in the throes of a serious communal rioting and the two combatant branches of the Semitic race were kept apart by the arms of Britain as the mandatory power. The most international of the religions of the world—*viz.*, Judaism and Islam,—are at war, and Christianity, so fruitful of wars in the past, is holding the scales of justice.

Whether Mr. Bentwich's scheme is the best or not, the problem, however, of the future of human civilization is certainly there. Either human nature must improve itself, or, if present tendencies are allowed to continue, the future of the world is dark indeed !

U. C. Bhattacharjee

BENGALI

TRIPURA RAJYER CENSUS BIBARANI, *or The Census Report of the Kingdom of Tripura, for 1340 Tripura Era (roughly corresponding to 1931). By Thakur Sri Somendra Chandra Deva Barma, M. A. (Harvard), Census Officer, Senior Nayeb Dewan.*

In Tripura it has been the practice to transact all official business and to write all official reports in Bengali. The Census Report also has been accordingly written in Bengali. It consists of two parts, the first part, the report proper, containing 116 pages and the second part, the imperial and the provincial tables, 181 pages. There are, besides, a map in many colours, other maps in black and white, many diagrams in many colours, several graphs, many half-tone reproductions of photographs of local tribes and castes, etc. It is a very ably compiled interesting and informing volume.

ORIYA

PURNACHANDRA ORDIA BHASHA-KOSHA. *a Lexicon of the Oriya language. By Gopal Chandra Praharaj, M. A., B. L., Vols. I, II and III. To be completed in 3 more volumes. Royal Quarto.*

This encyclopaedic dictionary of the Oriya language has been named after Purnachand Bhanja Deo, the Maharaja of Mayurbhanj, its patron. It gives the English meaning of every Oriya word; Bengali synonyms of Oriya words, wherever possible; quotations and authority to support the meanings of Oriya words; philological, mythological, historical, geographical, biographical, astronomical, medical, scientific and other notes on the lines of modern encyclopaedias; Sanskrit synonyms of Oriya words, as far as possible; and English transliteration of every Oriya word.

It will thus be seen that this lexicon will be of use not only to those whose mother-tongue is Oriya but also to those others who want to learn Oriya, but also to those whose mother-tongue is Bengali or Hindi.

This dictionary shows how close to one another Oriya and Bengali are.

On account of its bulk, it may not be convenient for constant reference. But it will be of great use to scholars. Perhaps when the publication of the work is complete, the author will publish an abridged edition of it, like the abridged editions of Webster's dictionary and Murray's Oxford dictionary of the English language.

We do not know whether it is possible to use smaller Oriya type than what has been used in this voluminous work—much smaller English, Bengali and Hindi types are in use. But if it had been possible to use smaller type, the bulk and price of the work would have been considerably reduced.

The author and his assistants are to be congratulated on their great industry, learning and perseverance.

C.

GUJARATI

JAGAT KADAMBARIO MAN SARASWATICHANDRA NUN STHAN: *By Nanalal Dalpatram Kavi, M. A. Printed at the Kumar Printery, Ahmedabad. Cloth:bound. Pp. 61. Price Re. 1-4-0. (1933).*

Saraswatichandra is a socio-political novel, spread out into four volumes, ponderous and heavy. It has, in spite of it, maintained its premier place in Gujerati literature ever since it was written nearly half a century ago. It is a mosaic of ideas, ideals, precepts, principles, facts and dreams. The well-known poet, Nanalal Kavi, conceived about twenty-five years ago the idea of writing a *critique* of it, and the book under notice is that *critique* or review. It is an attempt to assign this particular production of the late Mr. G. M. Tripathi, the author of this novel, its proper place in the literature of the world, and with that view Mr. Nanalal has passed under his able review the best works of fiction in the languages of the world, English, French, German, Spanish, American, Sanskrit, Arabic, and others. As a bird's-eye view of all these literatures, it presents a picture till now not procurable in our literature, and as such, is a unique production. Saraswatichandra is as yet untranslated into any other language excepting a couple of Indian vernaculars. Therefore, students of the literatures of foreign countries are not expected to know its merits, demerits, or its existence even: consequently they cannot assign it its proper place in any world-wide literature. The only alternative left, in consequence, to people like us, at the other end was to study world literature ourselves and try to assign it a niche, according to our likes, and that is what Mr. Nanalal has done. As to whether the niche assigned is the proper one or is acceptable to the *savants* of the world, we have no means of knowing or ascertaining. That being so, we must follow our own view-point and till dislodged, hold on to it. The book betrays a deep and wide study of the subject, and a very welcome presentation thereof.

K. M. J.

LONDON LETTER

By Major D. GRAHAM POLE

The Government's Failures

Since the War the prestige of Great Britain in world affairs has never stood higher than when Mr. Arthur Henderson was at the Foreign Office. It was he who got rid of Lloyd in Egypt—he who put an end to Occupation in Germany and evacuated the soldier from the Rhineland. His Foreign policy was always positive. Everyone could see what he was aiming at and so he inspired confidence. As a French Cabinet minister said of him, he never finessed for effect. "In negotiating he always went straight to the root of the matter." Foreign statesmen showed the respect they had for Mr. Henderson when they invited him to become President of the Disarmament Conference. Because they had chosen him, he took up the office of President even though his own Government had fallen by that time and he was no longer Foreign Secretary.

It may be crying for the moon to imagine how very different would have been the course of world events in the last two years if Arthur Henderson had been at their heart—instead of Sir John Simon, who can never be at the heart of anything, but must always be "detached." Yet such speculations are inevitable at the present time, when an evil crown has just been set on the failure of our Foreign policy in the Far East.

The Far East

This week Pu Yi, the former Emperor of China, has been crowned Emperor of Manchukuo. He has been crowned by his country's invaders, the Japanese. The new State of Manchukuo has not been recognized by any Power except

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Japan whose creation it is. Japan has annexed it after a successful war, a war which she never declared. In the same spirit she says she has not annexed it—and Pu Yi's part is to be the outward and undeniable evidence of Manchukuo's "independence."

What a situation! Japan has introduced a a new method into international behaviour and we have allowed it to succeed. In vain the Chinese Government has issued a statement that the situation in Manchukuo can be regarded as nothing but one of *armed occupation*. It may be. But possession is nine points of the law—and the Foreign Secretary is a lawyer!

During Sir John Simon's tenure of the Foreign Office we have thrown away our influence in the Far East. We used to be a force to be reckoned with, but now that title has passed to the United States. The National Government throughout has acted as if the annexation of Manchuria were entirely a Sino-Japanese issue and of no consequence to this country. While Japan was invading Chinese territory, they refused to express any opinion whatever or to lift a finger to hinder her. In the best legal tradition they delayed and delayed arriving at any decision. And when at last the League of Nations sent out the Lytton Commission, they used it as a further excuse for doing nothing, because the matter could be said to be *sub-judice*.

The inevitable result, of course, of all this moral cowardice was to rob the Lytton Report in advance of any weight it might have carried with Japan. Japan had been dealing out fire and slaughter in China for months and months and no Great Power (with the solitary exception of the United States) had made even the feeblest protest. So that when the Lytton Report came up for judgment before the League, and the League voted solidly against Japan, Japan merely walked out of the League.

And so Pu Yi is Emperor of Manchukuo!

What Sir John Simon and the National Government overlooked was the fact that quite apart from the Lytton Report, and for years before it, this country had been bound in honour to uphold the territorial integrity of China. In January 1921, at the Washington Conference, we were one of the signatories of the None-Power Pact. By the terms of this Pact we are pledged to "respect the sovereignty, the independence, and the territorial and administrative integrity of China."

Things bad begun make strong themselves by ill. Japan's easy evil success in Manchuria has tempted her to look for more territories to conquer. Every member of the Diet who voted supplies for the war in China has been presented with an imperial decoration and now Japan is preparing to attack Russia. She hopes that this new war will enable her to annex the Maritime Provinces.

Yet when Mr. Lansbury protested in the House of Commons against Japanese agres... in China, he was greeted with howls of "... from the Government benches. Well, the f... of our Government's timidity are not peace... the possibility of a new Russo-Japanese War.

Where We failed

What then might Sir John Simon have do... What, we may ask, would Arthur Hend... have done? given far too much encouragement, especially by the Prime Minister. Their heads were much too close together during all the time that the Four Power Pact was under discussion.

The Four Power Pact was killed just after its birth through the Nazi excesses in Germany and Signor Mussolini then turned his restless ambition to Austria. Austria used to be, in the words of the leader of the Social Democratic Party, "an island of democracy, an island of freedom in the sea of Fascism." Now she is no longer democratic and she may never again be free. She is likely either to lose her identity in Germany or become a Fascist vassal of Italy. Indeed, she seems to be more than half the vassal of Italy already.

The truth about the Austrian tragedy is gradually being unfolded. For some time, it will be remembered, the Constitution had been suspended. The Social Democrats had allowed Dr. Dollfuss to become virtual Dictator in order that Austria might present a united front to Nazi Germany. But it now appears that Dr. Dollfuss, the seeming saviour of his country, in reality sold the pass to Italy last August.

He met Signor Mussolini at Riccione and there struck a bargain with him: Italy would guarantee Austria against German aggression and, in return, Dr. Dollfuss would put the Fascists in the saddle in Austria. Accordingly in September a political crisis developed in Vienna and at the end of it, it was found that Major Fey, the leader of the Austrian Fascists, had become Vice-Chancellor and the real ruler of Austria, while every democratic element had been superseded.

The Fascists soon showed their hand. An order was at once issued establishing Concentration Camps. That same day the Social Democratic Members of Parliament wished to publish a Manifesto—and the Press were forbidden to print it. And yet, according to the figures for the last election held in Austria, the Austrian Fascists polled only 226,000 votes, or *one-third of the individual membership of the Austrian Social Democratic Party.*

Attempts have been made to condone the present Fascist massacre of the Social Democrats on the grounds that the Social Democrats undoubtedly had dome arms and machine-guns. The truth is that both the Social Democrats and the Fascists were armed. The Social Democrats had the Republican Defence Corps, known as the Schutzbund and the Fascists their private army known as the Heimwehr.

It is the crime of Dr. Dollfuss that instead of seeking to disband both private armies, he countenanced and encouraged one of them—and actually employed it against the other. And the one he encouraged had received its arms from Italy. It was already immeasurably better armed than the Schutzbund. But in the September in which the Fascists came into power in Austria, Dr. Dollfuss asked for 16,000 rifles to be given to their Heimwehr

When he did this, he was carrying out the behest of his master in Rome. Foreign Correspondents of newspapers so diverse in tone as the *Manchester Guardian*, the *Morning Post*, and the *Daily Telegraph*, all tell the same story. The Italian Under-Secretary for Foreign Affairs, Signor Suvich, visited Vienna and promised that Italy would occupy Austria if Austria were threatened by Germany, "provided that, in the meantime, Austria got rid of her Socialists and established a Fascist regime on Italian lines."

Thus it came about that on February 11th, the eve of the Massacre, Major Fey, the leader of the Heimwehr and Vice-Chancellor of Austria, told a Heimwehr meeting: "To morrow we shall set to work, and we shall do our job thoroughly…" The "job" was done thoroughly enough. On the plea of searching for illegal arms, the heavily-armed illegal Heimwehr forced its way into every Social-Democratic quarter in Vienna. The Social-Democrats resisted and for the first time in history artillery was brought into action in a city riot. It was turned on the lovely and famous homes built by the Socialist Municipality in Vienna for their workers. Those famous buildings, which so many architects have visited from all over the world were turned into shambles. And all to gratify Italy! The Foreign Correspondent of the *Daily Telegraph*, writing on 15th February, reported that "Troops and Heimwehr, now openly wearing Italian steel helmets, were occupying building after building."

The bloodshed, and the executions which have followed, do not bear thinking on. Always it is the same story, that Social Democrats went to their death happy on the consciousness of having done their duty "in defence of liberty and social democracy." One can only remember with thankfulness the story of an English socialist, many years ago, who, when told that his men had been deported and his cause was dead, replied: "But I believe in the Resurrection!"

What We Might Have Done

And what might England have done to prevent all this? Well, in the first place we might have tried to do something to relieve the desperate plight of Austria. Austria could never be free and independent unless she could join in an economic federation with Germany or with the other countries of the Danube. But some of the Danubian countries follow France and some Italy, so we stood aloof and allowed the matter to become a bone of contention between France and Italy. Meanwhile the depression and the rise of Nazi-ism in Germany gave Austria her *coup de grace*, with the result that Austria threw herself on Italy's protection. Thus it has come about that there is now an Austrian question in Europe, with a strong possibility of war between Italy and Germany. And where would that war end?

Then we have certainly no excuse for allowing Italy to export arms to Austria. Arms are

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

exported under licence and only last year it was pointed out at Geneva that a scrutiny of the returns showed that apparently far more arms were being exported than imported. How could that be explained and where was the margin going? We might have been more alive to that danger while we were drafting Pacts in the company of Signor Mussolini.

But if even the Conservatives are at last beginning to realize the futility of allowing Sir John Simon to remain at the Foreign Office, he is a very difficult person to unhorse. He has thirty-two Liberal Nationals to support him—and if he withdrew with them from the National Government, the last pretence of this Government being "National" would go with him. So, in the interests of electioneering, Sir John Simon will probably remain unless the ruins he has made begin to frighten even his complacency and he goes of his own choosing.

Housing at Home.

Another conspicuous failure of the National Government is the Minister of Health. He has just provoked a storm of indignation by complacently declaring in the House of Commons that "there is no doubt" that the demand for small houses to let at rents of 10/- a week or less is being adequately met. Such an assertion is of course ludicrous. In London alone, at the time of the last Census, 144,802 families were living in one room and 255,484 families in two rooms.

The housing problem has always been, and, until we get rid of poverty, will always be a problem of how to provide houses at rents low enough to be met by workers whose earnings range from 35/- to 45/- a week. But the Minister, as we have seen, denies that the problem exists. And worse still he has made it more acute by repealing the Wheatley Housing Act of 1924 which, as the *Star* points out, "was the means of providing 60,000 houses per annum for letting at standard rents."

A well-known economist, Sir Walter Layton, addressing a meeting of the National Association of Building Societies the other day, estimated that between 1931 and 1951 from 4000,000 to 6000,000 houses required to be built. But what is the Minister of Health doing to catch up on this? His sole contribution has been the 1933 Act. This Act was launched with a flourish of trumpets, but from the beginning it has been ignored or disliked by those who should have put it into operation to—the local authorities, building societies, and private builders. And the one fact that emerges is that since it came into operation, only eighteen local authorities in England and Wales have had anything to do with it.

No wonder the Conservatives are walking up to the indignation that is growing in the country. No wonder there are rumours that the Government may even administer the intolerable snub to Sir Hilton Young of relieving him of part of his duties and appointing instead a Minister of Housing.

But perhaps all that will happen is that the Government will appoint a National Housing Board. There is much to be said for such an idea—and it is worth noting that it has been lifted from the Labour Party's recently published Housing Programme.

Economy by Starvation

If in Foreign Affairs and Housing Policy the Government has been subjected to severe criticism, the severest blow to their prestige was dealt them in the House of Commons a fortnight ago, on the issue of *hunger*. An amendment to the Unemployment Insurance Bill was before the House to increase the weekly allowance to the children of the unemployed from 2/- to 3/-. Such an increase would have cost the country only the relatively paltry sum of £1,000,000 a year. And in any event, who can believe that it is possible to feed a child on 2/- a week?

But the Government rejected the amendment, in spite of the fact it received considerable support from all parts of the House and was in fact introduced by a Conservative member. They rejected the amendment—but their hitherto overwhelming majority dwindled to only 52, and there were even cries of "resign" and "send for the Prime Minister."

This vote for Hunger, and it is nothing less, will take a lot of living down on the part of the Government. It is not even as if we are still in the slough of the Depression. Though even during a Depression, it is hard to see the "economy" achieved by starving children. But it has come at a time when prosperity is returning and there is even a Budget surplus.

It is safe to say that not a single Member of the House of Commons will have to try to feed and clothe a child on 3½*d.* a day. Then how in Heaven's name dare they hand that problem to the unemployed?

With that vote the National Government lost any title it might have to the respect of humane men and women.

Local Government Elections

That the tide is turning in this country against the National Government and all its works has been clearly shown in the recent by-elections. It has been even more strikingly exhibited in the County Council elections that have been held this week. Striking Labour victories have been won all aver the country and now solid Conservative London has fallen to the Labour assault.

This is all the more striking because of the tremendous attack that has been launched against Labour day after day by the Press with its millions of circulation controlled by Lords Beaverbrook and Rothermere. Indeed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Lord Beaverbrook himself had not only used his newspapers, but has been taking part night after night on the Tory platforms making speeches against Labour and the Co-operative Societies and in favour of the Conservatives.

On the London County Council, at the beginning of this week, the Conservatives held 53 seats, Labour 35 seats and the Liberals 6 seats.

Nobody knows what a Liberal is nowadays in this country. There are so many varieties of them and their opinions are in a constantly changing and fluid state, so that it is not surprising that no single Liberal has been returned to the London County Council.

In addition to the 6 seats which they have captured from the Liberals, the Labour Party has captured 27 seats from the Conservatives—so that it has now a clear majority of 14 and will now control the destinies of Greater London, which have been in Conservative hands for the last twenty-seven years without a change.

It is significant that Mr. Ramsay MacDonald's daughter, realizing she would be defeated, did not try to fight her seat. The Tory candidates who were supported by Mr. J. H. Thomas and others of Mr. Ramsay MacDonald's so-called National Labour Party, have all been defeated.

This is a good omen for the next General Election and incidentally for India—as Labour is pledged to give India self-government on a constitution framed in consultation with India, with only such safe-guards as are agreed to be in the interests of India.

March 9, 1934.

FINANCIAL NOTES

BY SAILENDRA NATH SEN GUPTA, M.A.

The Indian Tariff (Amendment) Bill and the Tariff Board Report

THE Indian Tariff (Textile Protection) Amendment Bill was introduced in the Legislative Assembly on February 5, and almost simultaneously, the Report of the Tariff Board "regarding the grant of Protection to the Cotton Textile Industry" was released. The Report was signed about sixteen months ago but was deliberately kept under lock and key till its release. During this period, we have had the Indo-Japanese agreement and the Mody-Clare-Lees pact. The Tariff Bill embodies the essentials of these agreements and the recommendations of the Tariff Board have been virtually thrown overboard.

The Tariff Board Report

For the amount of information contained and the cogency of the arguments adduced, the Tariff Board Report has few rivals. It begins with a chapter on the history of the present Protective Duties followed by another on an export survey of the cotton industry in India and the Indian market for cotton products. The latter chapter contains a sound review of the growth of Japanese competition in recent years of the relative decline of the British share in textile imports and of the achievement of the Indian industry "in expanding and improving its production and in securing a larger share of the Indian market." In the next chapter, on the "Progress of the Indian Industry," we find a detailed treatment of the available raw material, of the condition of Labour and a description of the organization of the Cotton Industry as a whole. In the next chapter, the Report considers some criticisms of the Managing Agency systems and recommends legislative measures for the prevention of the abuses. The Report next determines the extent of assistance required by the Industry by an analysis of average costs and on the basis of the three conditions formulated by the Fiscal Commission, considers the claim of the Industry to Protection. The claim is upheld and in Chapter VII, a scheme of protection is outlined. The Tariff Board recommends that protection should be given for ten years at least and that specific duties should be imposed so far as possible in preference to the *ad valorem* duties. A chapter devoted to the Hand-loom Industry and another to subsidiary Industries, such as the Hosiery manufacture and the manufacture of the Braid (Ghoonsi and Muktakesi). In the last chapter on "Supplementary Proposals," duties on artificial silk goods, raw cotton starch and grey yarn are considered. In this chapter it is held that there is no case at present for the adoption of any special measure to counter the efforts ot the depreciation of the yen.

The principles underlying the recommendations of the Report are mainly these:

1. The protection must be assured for *at least* ten years, and there should be no periodic enquiries during this period.

"In view of the difficulties which face the industry at present and equally of the important national interests which are involved, we do not think that ten years can be regarded as too long a period. Unless protection is assured for a period of at least ten years, the capital required by the better class of mills for further development will not be forthcoming. It is rather the stability than the rate of protection which encourages the investment of capital in a protected industry.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Indian cotton textile industry……has been recently the subject of many public enquiries. Such enquiries repeated at frequent intervals must militate against healthy development. We think that the industry should now be allowed a period of rest from these harassing enquiries" (p. 142).

The recent Tariff Bill, as will be seen, utterly disregards this principle.

2. As regards the medium counts, there should be no discrimination in favour of British manufactures.

"We consider it of the greatest importance for the future of the industry that this rate of progress should be maintained and for this reason we are of the opinion that protection should be granted to the Indian industry against goods imported from the United Kingdom as well as from other countries" (p. 147). Then "as regards goods of medium counts, we have the following," "……it seems to us essential, in order to safe-guard the Indian industry, that these duties should be *equally* applicable to such goods when imported from the United Kingdom" (p. 151).

In the proposed schedule given in Chapter XI of the Report we find that there is no distinction whatsoever drawn between imports from the United Kingdom and those from other countries.

In the Bill, this principle has also been disregarded and in pursuance to the notorious Mody-Lees Pact, the duties on goods imported from the United Kingdom have been reduced for the period up to March 31, 1935.

3. The third principle is that specific duties should be imposed for protection so far as possible.

"It is generally admitted that specific duties are a more appropriate form of taxation where taxes are imposed for prospective purposes than *ad valorem* duties. The amount of protection received by an Industry under a system of *ad valorem* duties tend to diminish when there is a fall in the price of imported articles. On the other hand it is when a fall occurs in the prices of imported articles that the need for protection is greater" (p. 127).

It is the general custom to provide for both specific and *ad valorem* duties in the Tariff Schedule and to levy the higher duty. In the new Tariff Bill also there is provision for specific duties though the rates are slightly different.

It will be instructive to compare the schedule of the new Tariff Bill with that proposed by the Tariff Board.

The Tariff Bill

The new Tariff Bill, as is well known, has incorporated both the Indo-Japanese Agreement and the Bombay-Lancashire Pact. The Bill is at present before the Legislative Assembly but it is almost certain that the Bill will come out of the legislative anvil without any serious alteration.

It is prescribed (ch. 4) that the operation of the proposed bill is to last for five years only till March 31, 1939, as against the period of ten years recommended by the Tariff Board. There is also provision that the rates of duty imposed would be capable of alteration within this period. On the expiry of the period of agreement between the Millowners' Association, Bombay, and the Lancashire Textile Delegation on December 31, 1935, the adequacy of the rate imposed on British manufactures "will be subject of investigation with a view to its revision if necessary." A second investigation and revision will be necessary when the period covered by the Indo-Japanese Treaty expires on March 31, 1937.

We shall now discuss the rates of duties proposed in the Bill confining ourselves to cotton products only. It is to be remembered that according to the Mody-Lees Pact the duties on cotton piece-goods of British manufacture will be reduced to a basic rate of 20 per cent *ad valorem*, or in the case of plain greys, $3\frac{1}{2}$ annas per pound till December 31, 1935. The rates of duties on British manufactures given below, therefore, hold only for the period subsequent to that date.

Cotton Twist and Yarn: The old rate was (with the surcharge imposed in 1931), $6\frac{1}{4}$ per cent *ad valorem* or $1\frac{7}{8}$ anna per lb. whichever is higher. The Tariff Board recommends $6\frac{1}{4}$ per cent *ad valorem* or 1 anna per lb. whichever is higher for counts up to 50 and only an *ad valorem* duty of $6\frac{1}{4}$ per cent for counts above 50. There is no distinction as to the source of import. According to the Tariff Bill, the duties on counts up to 50 are to be $6\frac{1}{4}$ *ad valorem* or $1\frac{7}{8}$ anna per lb. on non-British imports, and 5 per cent *ad valorem* or $1\frac{1}{4}$ anna per lb. on British products, on counts above 50 only the *ad valorem* duties will apply and at the same rate.

Cotton Piece-goods: The old rate was 25 per cent *ad valorem* on British goods and $31\frac{1}{4}$ per cent on others. The new rates will be 25 per cent on British goods and 50 per cent on others. There are also specific rates of duty on grey piece-goods except chaddar, dhuties, saries etc., at $4\frac{3}{8}$ annas per lb. in case of British goods and $5\frac{1}{4}$ annas per lb. in case of others. The Tariff Board recommended specific duties on *all* kinds of piece-goods *e.g.*, 5 annas per lb. in case of Plain grey, $5\frac{1}{4}$ annas for Bordered grey, $6\frac{1}{3}$ annas for coloured and dyed and 6 annas for bleached and other varieties of piece-goods. No discrimination was made in favour of British goods as far as specific duties are concerned.

Cotton Fabric: For cotton fabric in which cotton forms 50 per cent or less, non-British goods will be charged 50 per cent *ad valorem* while the rate will be 30 per cent in case of British goods, specific duties* are also provided for.

Braids: As regards cotton braids (Ghoonsis and Muktakeshis), the Tariff Board recommends

* That is, the *higher* of the two rates of duty will be charged in each case.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to levy a specific duty of 6¼ per cent per
d instead of an *ad valorem* duty of 25 per cent)
s been adopted.

Hosiery: On undervests, socks and
Cotton the new rates will be 25 per cent
ckings or 9 annas per lb. The present rate
valorem or 9 annas per lb. The present rate
5 per cent or Re. 1/8 per dozen in case of
dervests and 10 annas per dozen in case of
ks and stockings. The Tariff Board recom-
ded 25 per cent or Re. 1/8 per dozen of
dervests and 8 annas per dozen of socks and
ckings. The new Bill has clearly adopted the
ddle course between the two.

The Railway Budget for 1934-1935

In presenting the Railway Budget for 1934-35, Joseph Bhore, the Member-in-charge, discussed result of the working of the Railways for 33 and also the revised estimate for 1933-34. year 1932-33 was the worst year for the Railways ring recent times. The gross traffic receipts hed the lowest recorded figure of Rs. 84·43 es and the deficit amounted to Rs. 10·23 crores. deficit was met by a temporary loan from the preciation Fund. When Sir Joseph budgeted an increased earnings for the year 1933-34, re were a good many critics who considered the more hopeful outlook of the Railway ster was not warranted by anything more ssential than a facile optimism. As a matter fact, however, Sir Joseph has proved a better phet than his critics. The revised estimates 1933-34 show total receipts at Rs. 86·5 crores d a deficit of Rs. 7·78 crores as against ·23 crores in the preceding year. The net receipts show an increase from Rs. 21·58 es in 1932-33 to Rs. 28·35 in 1934-35. After adjustments the net revenue is: Rs. 22·68 es in 1932-33, Rs. 24·62 crores in 1933-34 and ·73 crores in 1934-35. The interest charges Rs. 32·91 crores in 1932-33 (actuals), Rs. 32·40 es in 1933-34 (Revised estimates) and Rs. 32·05 es in 1934-35 (Budget estimate). The reduction e to the reduction of the borrowing rate for Government of India. The deficit will there-
be Rs. 5·30 crores in 1934-35 up to March 1935, the total deficit of the Railways will ount to Rs. 37·70 crores. Out of this, contri-
ions to the General Revenues in 1929-30 and ·91 account for Rs. 11·86 crores. To meet the at Rs. 27·96 crores have already been taken m the Reserve Fund and the Depreciation Fund and the temporary loan ·56 crores. Thus, it is from their own resources that the ways meet the deficits. The position of the ways in spite of the deficits is thoroughly d. Had they been run on ordinary commer-
l lines, the Railway authorities would have been a position to declare a dividend of 3·2 per cent during these years of depression.

The yield of gilt-edged securities are at present ween 3·3 to 3·9 per cent. This will be enough to show the secure position of the Railways as a going concern. Ordinarily the amount that is appropriated to the Depreciation Fund is considerably more than the actual amount required to be withdrawn from the fund for renewals and replacements. The total appropriations to the fund since 1924-25 to 1934-35 amount to Rs. 135 crores, whereas withdrawals to meet cost of renewals and replacements amount to Rs. 96 crores so that Rs. 39 crores remain as balance. Temporary withdrawals will amount to Rs. 27·56 crores, so that the closing balance of the Depreciation Fund on March 31, 1935 is anticipated to be Rs. 11·44 crores.

Some important changes have been made in the forms of account. The working expenses from 1934-35 are being exhibited in forms which are new. These forms have been drawn up in consultation both with the Public Accounts Committee and the Standing Finance Committee for Railways and are radically different from the forms so long used. The result has been a more scientific and intelligible statement of the accounts but comparison with previous years has become impossible. Another important change has been to include in the form of the estimates the receipts and expenditure of lines belonging to private companies or Indian States, but worked by State Railway Systems for a percentage of the gross earnings. This change is according to the recommendation of Sir Arthur Dickinson and has been approved by the Standing Finance Committee for Railways. The nature of the change has been explained in the following way by Sir Joseph Bhore in his speech:

"The practice hitherto followed was to deduct both the receipts and expenditure of these lines from the total receipts and expenditure of the system by which they were administered. ... The statistics and accounts should properly be based on the total receipts and expenditure of the entire system. As a result of the change the receipts of the worked lines will be added to the receipts of the State-owned lines, and out of the total the Legislature will be asked to vote the gross expenditure for working the railway system as a whole including the worked lines. The Legislature will also be asked to vote the sums which will be handed over to the owners of these lines as the share of the earnings which, under contract, the working agency is required to hand over to them after retaining the percentage fixed in the contract."

Coming to the details of the 1934-35 Budget we find that total gross receipts from traffic will amount to Rs. 94·25 crores. The Passenger traffic will contribute Rs. 28·40 crores (31 per cent) and Goods traffic Rs. 59·33 crores (63 per cent). Of the total Passenger traffic earnings, the upper class will contribute Rs. 3·13 crores, or only 11 per cent and third class will contribute the rest, that is, 89 per cent.

The major items of working expenses are as follows:

Maintenance of structural works	Rs.	8.93 crores
Maintenance and supply of Locomotive power	„	17·02 „

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Maintenance of Carriage and Wagon stock	Rs.	5·82 crores
Expenses of Traffic Department	„	4·96 „
Expenses of General Departments	„	4·26 „

As against this the Emergency deductions from pay will provide a crore of rupees. Miscellaneous charges will amount to Rs. 1·60 crores and Interest charges to Rs. 32·05 crores. Rs. 13·65 crores will be appropriated to the Depreciation Fund. Thus we have

Gross Traffic Receipts	Rs.	94·25 crores
Less Operating Expenses		52·25 „
Depreciation Fund		13·65 „
Net Traffic Receipts		28·35 „
Less Interest Charges		32·05 „
Miscellaneous Charges		1·60 „
Deficit		5·30 „

As regards Capital expenditure, it is proposed to spend about Rs. 14·27 crores. Out of which about Rs. 70 lakhs will be found by Reduction of stores balances, 7 lakhs from Emergency deductions from pay and 15 lakhs from revenue for Hardinge Bridge works and earthquake damages. We are thus left with Rs. 13.35 crores to account for. Rs. 4·57 crores will go to new works on Capital account and Rs. 8·67 crores will be found from the Depreciation Fund. As regards new works the only item of any importance for which any large provision has been made in the budget are the extension of the Khargpur power house, the remodelling of the Hubli station yard, the rebuilding of the Gorai bridge and the remodelling of the Jamalpur workshops. Out of the 8·67 crores from the Depreciation Fund 1½ crores are required for works in progress, about 4¾ crores for track renewals and 3¼ crores for rolling-stock, which includes the purchase of 2900 new wagons.

Two railways in particular have suffered heavily from the effects of the earthquake and it appears likely that the damage will amount to over 75 lakhs and may well reach a crore. Again, the considerable breach caused to the protective works of the Hardinge Bridge (Sara Bridge) would necessitate the expenditure of a large sum in strengthening and extending the protection and training works. The total cost is estimated to be well over a crore. In the present budget Rs. 1·08 crores have been provided for the Hardinge Bridge protection and training works. Of this, Rs. 60 lakhs will be chargeable to capital and Rs. 48 lakhs to the Depreciation Fund. For the earthquake damages Rs. 62 lakhs have been provided, Rs. 10 lakhs being chargeable to capital and Rs. 52 lakhs to the Depreciation Fund. The sum of Rs. one crore debited to the Depreciation Fund will be repaid out of revenue in annual instalments of 15 lakhs a year until complete repayment. Rs. 38·21 lakhs have been provided for expenditure on amenities for passengers. Out of this, Rs. 2·08 lakhs will be spent for providi latrines and sanitary arrangements and Rs. 2 lakhs for additions and betterments to lo class carriages. It is remarkable that except ½ lakhs to be spent by the G. I. P. Railwa the entire amount budgeted for amenities lower class passengers will be spent by company-managed railways (B. B. C. I., M. S. M S. I., and A. B).

As regards fares, the Railway Member stat that, "On most railways efforts are being ma to recover traffic by quoting specially redu return fares between particular stations and introducing extra services. We are also try an experiment on the N. W. R. on the possibi ties of large scale reductions in 3rd cl passenger fares. . .If no increase of traffic resu it is expected to lead to a loss in earnings about 45 lakhs. It is, however, an experim worth making, for it may well be productive results of real value in determining our fut policy in this matter. It is too early to pronou on the results, but there are indications t traffic is responding, though as yet insufficiently

Experiments in job analysis are being carr on on various railways and it is hoped that results will lead to a substantial saving in operating expenses.

We shall conclude this analysis with s brief comments. The policy of meeting def from the Depreciation Fund is bad in princip This means that when the railways will on more begin to make profits, these loans must repaid first so that for a long time to come general budget will not get any contributi This might seriously embarrass the Federal Gove ment of the future since the Federal Finan Committee hoped that the Railways should able to contribute Rs. 5 crores annually to general budget. Moreover, due to the neces of repaying the loan, it might not be poss to lower the fares for some time to co Secondly, the interests of the lower class passeng have almost been neglected in spite of the that they contribute no less than 89 per cen the total passenger traffic earnings. Thir Indianization has not been proceeding rap enough in the higher cadre of Railway emp ments. The Budget speech gives us no de and no assurances. Lastly, the Railways accused of systematically neglecting the In producers in the matter of stores purchase. this respect also, it was expected that somet would be said in connection with the presen of the Budget. But here also we were appointed and even the persistent demand the members of the Legislative Assembly to elicit any clear formulation of the future p from the Member-in-charge.

INDIAN PERIODICALS

Ideals of Ancient Hindu Education

Dr. Radha Kumud Mookerjee writes in *Buddha Bharata* :

The ancient Indian teacher believed in individual treatment of pupils, in the efficacy of personal touch, for which scope was given in the homes of the teachers which operated like schools in those days.

It may be described as the domestic system of education and may be compared to small production or Cottage Industry in the economic sphere contrasted with large production or the factory. Modern Universities are like factories providing for mass production in education, turning out standardized products mostly devoid of any special marks. Such a system is based on a radical error which ignores the natural differences of individuals and artificially and mechanically forces them into a class for purposes of a uniform treatment. The absurdity of this position may be understood if uniform treatment is meted out to patients in a hospital irrespective of differences in their diseases and their remedies.

And yet if individual treatment is essential for the diseases of the body of which the causes are visible and even measurable, how much more shall it be necessary for a treatment of the defects and differences of mind, intellect and character, which do not lend themselves to any objective treatment? How very difficult is it to observe the intellectual and moral growth of the tender youths consigned to the care of schools based on classes? It was therefore that ancient Indian education was carried on as a matter of principle in small residential schools, hermitages, in the solitude of the woods, in sylvan and rural retreats away from the cities. Indeed the entire civilization of ancient India was the product of the forest, a rural civilization, and not an urban one.

But India also tried her hand in the modern methods of education when they could apply them. The case of Nalanda is an example on point. It was run like a modern University without some of its disadvantages. Nalanda was a regular University town with an enrolment as many as 10,000 students. But these were all post-graduate students. Admission was very severe test. It was dependent on passing a difficult test.

As has been stated by the Chinese pilgrim Hiuen-Tsiang-Chwang, who studied at Nalanda for seven years in the middle of the 7th century A.D. The majority of applicants for admission were sent away and only a few could get it. In this way even the strength of the University was more than 10,000 students. The number of teachers was also high in proportion to the number of the taught.

There were as many as 1510 teachers delivering in the same period 100 lectures to different classes of students on different topics. Instruction was given in commodious and storied buildings, each the gift of kings. Both royal and public patronage of the University was quite generous and adequate. It had the grant of more than 100 villages from the income of which provision was made by the University for the free board, lodging, bedding, medicine and tution for its 10,000 students and a numerous staff. In those days both the teachers and the taught were seekers after truth and not livelihood. The system of life was different. The learned men of ancient India devoted themselves in a thoroughly disinterested spirit to the pursuit of the highest truths and had no concern with what may be called the intermediate truths connected with secular ends.

Above all, a system of education must be judged by the quality and quantity of the output. The whole world now recognizes the highest quality of some of the productions of the Sanskrit literature as also Pali and Prakrit literature which will live for all times as complete justification of ancient Indian education and of its ideals and methods.

The Osmania University

The Educational Review comments editorially :

We have every sympathy with the attempt which is now being made at the Osmania University to impart instruction through the medium of an Indian language, but it must be made plain to everybody at the same time that the language employed for the purpose is not the language of the people, being the mother-tongue of only a small minority of the ruling class which consists of less than ten per cent of the total population. In the course of his recent address at the Convocation of the Osmania University, Nawab Mahdi Yarjung Bahadur maintained that Hindustani—apparently the Urdu taught at the Osmania University—is the only language which can become the *lingua franca* of India. He did not, however, tell the audience that even in the Nizam's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Dominions in which it is the State language and in which it is encouraged by all sorts of ways, it is not spoken by even ten per cent of the total population, and Telugu, Marathi and Canarese are actually spoken by a much larger number! By making Urdu the medium of instruction you give an advantage to a section of the people and handicap others who are subject, as it is, to many other disadvantages. The Nawab does not make any reference to Hindi, the existence of which he does not probably wish to recognize. He will have to make an effort at getting the millions of Hindi-speaking people in Northern India to accept Urdu before he can hope to make the latter the *lingua franca* of India. In recent years the gulf between Hindi and Urdu has been widening steadily and there does not seem to be much chance of their coming together, though in popular conversation it is possible to get on with a common dialect of what may be called Hindustani.

The Musical Genius of Tagore

Mr. Somanath Vellatore writes in *The Indian Review*:

At one of the exhibitions of his paintings held in Europe recently, Rabindranath Tagore is reported to have made a statement that his pictures are his gift to the world, while his gift to India is his poetry. Unfortunately, even in India till 1913 very little of Rabindranath's poetry was known outside Bengal and what little is known later on is only through translation into English prose albeit done by the poet himself. Translations from one language into another, however perfect they may be, make full literary understanding and enjoyment impossible. To understand the supremely spiritual utterances of Rabindranath Tagore, one must read him in the original Bengali because in Tagore 'poem and music are inseparably one'.

In one of his plays the "Phalguny", the Watchman asks Chandra: 'Is it your custom to ask questions in songs?' Chandra replies: 'Yes, otherwise the answer becomes too unintelligible.' Watchman: 'Then do you think your songs intelligible?' Chandra: 'Yes, quite, because they contain music.' (He sings.) Rabindranath's poems and plays are saturated with his personality. They bear the stamp of the experiences of his inner and outer life. Not only that. They are the self-expression of his genius woven into subtle songs of rare charm and melody.

The entire poetic creed of Tagore is founded on the ancient Hindu philosophical doctrine of the immance of the Infinite in the finite and the struggle of the human spirit for freedom. This idea is expressed again and again in a number of his songs set to tunes akin to the folk-music of Bengal. That is the reason why his songs are not confined to neatly published dainty volumes but have gone straight into the life of the people in Bengal and 'are sung by lovers awaiting each other in the dark night, by boatmen rowing on the rivers and by wandering Sannyasins'.

Rabindranath's contribution to Indian music as great as his contribution to poetry. He has popularized the song-form and his wonderful genius has invented several other new forms in musical expression. Tagore himself puts great value on his music. A perusal of his reminiscences shows the antecedents of some of his major musical creations. In these days of cantazz and celluloid symphonies it is a real pleasure to hear Rabindranath's songs at Shanti-Niketan. The Viswa-Bharati University would be doing a great service to the country if they send out groups of students well-trained in singing Tagore's songs to all parts of India giving concerts of Rabindranath's songs and poems.

—

The Work of the League of Nations

The following appears in *India and the World*:

In the economic and financial field there is the most disconcerting contrast at the present time between the actual practice of governments based presumably upon the common will of their constituents, and the possibilities of co-operative action presented by the economic and financial organization of the League, the International Labour Organization and the Bank for International Settlements. These three international organizations provide machinery whereby governments may co-operate if they so wish in commercial and economic policy, financial questions, labour problems, and monetary policy. Superficially perhaps it is a weakness that the machinery for co-operation should be so divided among three institutions. The problems of international co-operation are closely interconnected, so that monetary policy depends upon trading arrangements, wages agreements, public finance, and *vice versa*. But in fact it is not difficult, provided the will to co-operate is there, to develop the necessary liaison between the international groups concerned. The difficulty is not primarily one of machinery but of motive power. It is the will to co-operate and seek common solutions that is lacking—not among the institution, but among governments. And so, at the end, the problem is one of citizenship in every country, of the development everywhere of a civic conscience which seeks the highest expression of national life in international co-operation.

Weak as the will to co-operate has been and feeble as yet remains the consciousness of world citizenship, some results have already been achieved, results by no means commensurate with the possibilities, but even so not entirely negligible. To start first with the fundamental problem, diagnosis and understanding, attention must

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

known to the effectiveness first of the research work of the secretariats in these fields, and, not less important, of the interchange of opinion and information among the responsible administrators who meet on the governing bodies and committees of the international institutions. The formation of an international civil service, exclusively devoted to the service of these institutions, is a great gain in itself. They are, as everyone interested in world affairs knows, a mine of accurate information. Some of their knowledge gets into print; but much of it and particularly that indefinable quality known as experience is available only to those with whom they are in personal contact. This means in practice an increasing circle of responsible civil servants in every country. It is not generally recognized how useful the League machinery has become in facilitating routine co-operation between governments.

All about the Seals

In an important paper on ancient Indian Art in *The Calcutta Review* Mr. Syama Charan Bhattacharyya discusses the various types of seals used in those days in India as follows:

The earliest cradles of Indian æsthetic inspiration are the seals with images of unicorns, bulls, rhinoceroses, etc., and crude ideographic signs. Of the artistic and religious products excavated at Mohenjodaro in recent years, there are none so interesting and important as the seals which throw a flood of light on a hitherto unknown portion of the history of India. We have it on the authority of Herodotus that in his times every Babylonian carried a seal with him. These seals might have been used for purposes which might have been secular as well as religious. In the ancient world seals with certain motifs were always considered to contain certain magic properties. The Egyptians of old extensively used amulets of wood, enamelled clay or metal with figures of gods and kings to secure health, strength, stability, greenness, beauty, vigilance, protection, life, etc. In the talisman was usually depicted a story of a particular adventure of a powerful god. (Amulets with representations of sheep, ram and squirrel have also been obtained in Mohenjodaro.)

The seals which might have their origin in the recognition of private rights or ownership were an indispensable convenience to the merchants of the old, old world. Seals might not have prevented theft, but surely they helped greatly in identification after the arrest of the thief. The men of ancient times without many other suitable substitutes used it to a greater extent than we do. Mr. Newberry in his work entitled *Scarabs* justly remarks: "What locks and keys are to us, seals were to the people of the old world." When a man closed his shop, he put pats of clay on the doors and impressed his seals on them. A householder also did the same thing. They thought that by the impressions of the seals, they made it impossible for anybody to enter the house and the shop without breaking the seals. Deeds, documents and letters also bore the seal of the ultimate owner.

Of the animals on the seals, the unicorn occupies the pride of place with 312 representations. The short-horned bull is a bad second with 22, the rest in order of numerical strength being the elephant 17, the Brahmani bull 14, the rhinoceros and the tiger 7 each, the buffalo and the Gharial 3 each, and the antelope 2. The lion, the symbol of majesty in Mesopotamian art (which depicts the creature always in deadly combat with Gilgamesh, the inevitable conqueror), has not been found in a single seal.

Of the other animals who have found place in the seals, the following deserve mention; the jungle fowl, the duck, the fish, the goat, the serpent and the scorpion. On one seal is depicted a man with bow and arrow and on another a man is sitted in the conventional *yogi* attitude on an elevated platform, on his two sides being two worshippers with cobra hoods behind their back.

Art for art's sake is a phrase which was unknown in the ancient world. The artist's institution was wheeled to the chariot of the prescription of the priest, who wielded enormous power and influence. But there is one fact to remember, the artist believed in the myths of the priest with absolute faith. He did not question the occult nature of the priest's restrictions but made his own fine sensibilities vibrant with life on the material he handled. The unicorns and the bulls are so beautiful because the artists has lived for some time in these.

The spirit of the animals looks through the material representation and the material representation speaks of the spirit. We can even today feel the great strength of the bull and feel the muscles underneath the silky skin. Though standing across many millennia, the bull is to our emotion a reality,—a spark from the flaming forge of the ancient world. It can snort and bleat, create and uncreate an epoch of civilization.

—

Juvenile Libraries

About the Juvenile Libraries in Britain and America Dr. M. O. Thomas writes in *The Modern Librarian*:

Libraries for children, like all other modern library ideas, is Western in origin. Some would claim it to be a purely Anglo-Saxon idea. Although we are not much concerned about origins here I cannot help remarking that the position that all modern library ideas are exclu-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sively Anglo-Saxon in origin is quite untenable, the simple evidence being that of the report of the Select Committee appointed by the British Government in 1849 which states that in library matters not only the United States of America but also several of the Continental countries are far in advance of the United Kingdom. It is true, however, that when once the modern library idea caught the imagination of the Anglo-Saxons, they went ahead and made a more 'through job of it' than any other race. That is perhaps more true of children's libraries than any other phase of library development. There are, no doubt, a few juvenile libraries in France, Germany, Holland, Russia, Sweden, Norway and Czecho-Slovakia yet the system is by no means widespread as in the U. S. A. or in Great Britain. Most of those countries think that school libraries should suffice to meet the requirements of children and hence juvenile libraries seldom form a part of the public library programme, except perhaps in most important cities and towns. Nor are there many children's books available in the languages of those countries with which to stock a juvenile library.

Conditions are entirely different in the United Kingdom and the United States of America. Both these countries began to make provisions for children's reading as early as the last quarter of the 19th century. But such provisions in those days never assumed the importance which they have to-day. As a matter of fact, compared with juvenile libraries of this decade, the early attempts to educate children through libraries seem to be mere mockery.

In America the idea of juvenile libraries originated in the eighties and came first as a report says, as if by inspiration to a lady by the name of Miss Emily S. Hanaway.

Three main features characterise a modern juvenile library. They are, 1. Accommodation and furniture, 2. Reading materials and 3. The librarian.

1. Time was when children used to be accommodated in dingy and ill-ventilated basements with nothing but hard benches without backs to sit on. But library authorities today have recognized the children's claim for better accommodation and furniture.

Children's literature as a work of art takes into consideration its literary merit the wholesomeness of its imagination, the quality of its wit and humour as well as the soundness of its morals.

In the first place juvenile books should have distinct literary merits. They should be written in good style, should have the qualities of wit and humour, accuracy and modernity, simplicity and directness and should be full of short descriptions of quick actions and incidents.

Secondly, juvenile books should help to develop the imaginative faculty of children. It is this faculty which needs most development till the age of fourteen or fifteen and no literature develops it better than stories and novels. Children naturally love to read them more than any other kind of literature. Works of imagination, however, should as far as possible be true to life. The principle has sometimes been carried too far particularly in America where some of the libraries exclude even fairy tales. But most educators and librarians are agreed that fairies though not true to actual life have an actuality for the child mind which does not hinder his real conception of truth. The child lives in a world of imagination all his own and Santa Claus, fairies, talking animals and birds belong to that world. It does not conflict with his actual world.

Thirdly, children should be given not only imaginative works which are mainly recreative in character but also works of an educative and informative nature. Besides fiction which forms the majority of books, juvenile libraries stock a fairly large collection of simple works on history, geography, travel, biography, natural science, sociology, religion, etc.

Lastly, in order that children may be in touch with the latest information about their little world whether informative, educative or imaginative, they are supplied with suitable magazines and papers, the literary quality of which is the same as that of their books.

FOREIGN PERIODICALS

Dr. J. T. Sunderland Busy at 92

Mr. Joseph W. Emsley writes in *The Poughkeepsie Evening Star* for February 10, 1933:

Dr. Jabez T. Sunderland, crusader for the public good, will observe his 92nd birthday tomorrow. Not many of us hope to knock off 92 birthdays and many of us might be a bit leery on approaching such an age, but not Dr. Sunderland! He seems destined to live on for a good many years yet, with passion for work in hand and a certain tranquil attitude toward life mixed in such proportions that he forges right ahead serenely.

I called on him this week at his Poughkeepsie home which is with Mr. and Mrs. William J. Bolton at 214 Union Street. He spends part of his time here, and part of it with relatives in Michigan. A minister of the former Unitarian church here for 14 years, he likes Poughkeepsie and enjoys being with his friends here from time to time.

It was a surprise to learn that Dr. Sunderland who is the author of numerous books including the widely discussed *India in Bondage* is still writing. He is now busy on a book to be known as *Emerson and His Friends* and another, "The Best from All Religions of the World," a spiritual anthology on religion of the world. *India in Bondage* was completed in his late 80s!

Indeed, Dr. Sunderland even now devotes six or seven hours a day to writing, and with it appears to be enjoying the best of health. He is an ardent believer in the school of philosophy which holds that work is one of the principal things that keeps you going. He is not a crank in this respect, however, and probably idles his share of hours; he likes to take automobile rides; and he likes to talk. He still preaches occasionally, and his wealth of knowledge about men and things is such that it is no great effort for him to preach.

I asked him to impart his idea of how a person should live to reach an unusually old age.

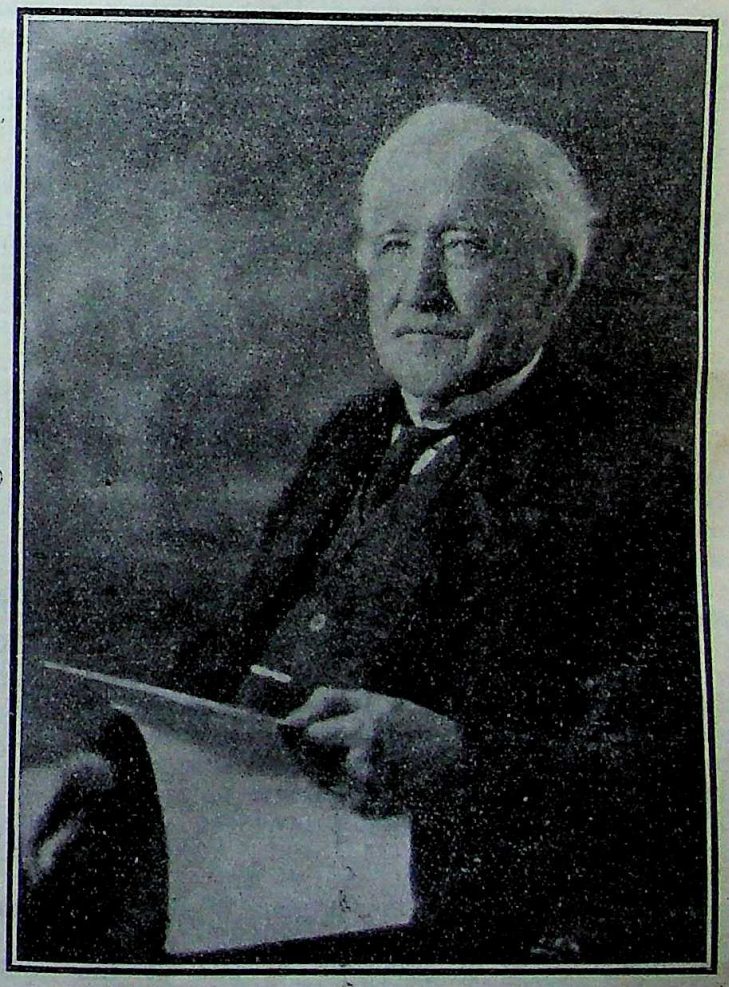
"Take care of your health," he said. "Study the laws of life and obey them. Be cheerful and hopeful. Work hard and have an interest in something and stick to it!"

He eats his three squares, sleeps eight hours a day ordinarily, and when overtired sleeps nine hours.

Dr. Sunderland gave two addresses at the World Fellowship of Religion in Chicago last summer, and about a year ago preached a sermon at the First Congregational church here.

His attitude toward life seems to be summed up in his observation:

"I don't want to live after I cannot be of any more use to humanity."



Dr. J. T. Sunderland

Coming from some people, that assertion might seem to indicate an over-zealous attitude in the interests of others, but from Dr. Sunderland

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it was quite a natural thing to say. He wasn't gilding the lily. In fact, he has a robust sense of humour and appreciates his limitations, enjoys a joke on himself and all that. It is just that he has proved himself to be useful. He has scores of friends in India who keep writing to him. They constantly ask him to write things for Indian publications.

Dr. Sunderland is seriously interested in the welfare of humanity. He has become internationally known as outstanding among Americans in the knowledge of Indian affairs. His book, *India in Bondage*, has been described as one of the most scholarly and truly representative works on the Indian question, from the standpoint of the Indian people themselves. Publication of the book in India has been banned by Great Britain, and that act alone has been taken by some leading thinkers as a reliable indication of the influence of the book.

It is said that whatever side you take on the Indian question, whether you believe that Great Britain is doing right by her subject people or not, a broad understanding of the problem cannot be had without knowledge of Dr. Sunderland's studies in the matter. A native of England himself, he loves and respects his home country, although taking issue with its policies in India.

Dr. Sunderland was born in Howarth, Yorkshire, England. He came to this country with his father, Thomas Sunderland, when he was two, the family settling in Jamestown, N. Y., in the region of the Chautauqua lake. His father died when he was a child, and his mother was left with five children. His lot was not easy, and it was entirely through his own efforts he received an education.

The family moved to Iowa when Dr. Sunderland was a boy. He attended Burlington college institute, Burlington, Iowa, and spent two years at Colgate University. His studies were interrupted by the Civil war; he joined the boys in blue of the Seventh N. Y. Heavy artillery, serving on the Potomac for about a year and a half. He came out of the war uninjured and resumed his studies at Chicago University.

Dr. Sunderland married Eliza Read who was a school principal at Aurora, Ill., and at that time the only woman public school principal in the country. They had three children, two of whom are living. Mrs. Gertrude Safford, a daughter, is the widow of Dr. Safford, who was a physician of Detroit, Mich; she is a former president of the largest women's city club in Detroit. A daughter, Florence, who died eight years ago, was a teacher at one time in the George Washington high school, New York city. Dr. Sunderland's son Edson R. is a professor of law at the University of Michigan.

He received his bachelor of arts degree at Chicago in 1867, completing his training in the divinity school of the same institution in 1870. He then became pastor of the Baptist church at Milwaukee.

Most of his years of service as a minister were with the Unitarian denomination. He served first at the Unitarian parish in Northfield, Mass., and held charges in Ann Arbor, Mich., Chicago, Hartford, Conn., Toronto, Canada, and in London.

Dr. Sunderland spent two long winters in India, in the years 1895-96 and 1913-14, and made special studies of Indian art, literature, philosophy and religion. He has written three books about India. They are *India and World Brotherhood*, *The Causes of Famine in India*, and *India in Bondage*. One or more of these have been published in translated form in India, France, and Japan, as well as America. *India in Bondage* has been in special demand, and has been distributed in 500 libraries in the world. There are 26 copies of it in the New York city library, and 12 in the Boston library. A new and enlarged edition was printed last year in this country. It contains eight new chapters.

The author of 20 or more books, Dr. Sunderland is widely known through his *The Origin and Character of the Bible*, which went into six editions, and was circulated in Russia, Bulgaria and more recently in India. Among his works are a number of pamphlets in exposition of the Unitarian faith which have been in great popular demand.

In all his writings, Dr. Sundreland had been a fighter for peace. "I fought in the Civil war," he said, "but I am a pacifist to the marrow. I have travelled a good deal and wherever I went I never could see why nations should resort to the destructive and demoralizing forces of warfare to settle their differences."

Yes, there will be a simple birthday party tomorrow! Some of Dr. Sunderland's friends are planning to call on him, among them some persons from Vassar college.

—

League of Nations

International peace and economic stability can only be restored if the warring nations adopt the principles of a World Federation. Mr. Newfang's lucid exposition of this fact in *World Unity* should, in the face of a world-wide discontent, be therefore much appreciated.

The nations of the world can have permanent and universal peace whenever they are ready to pay the price. Until they are ready to pay the price there will be wars and rumours of wars, and the peoples of the earth will continue to be heavily burdened by war preparations, murderous wars and the aftermath of war-caused depressions. What is that price? It is the abandonment of international anarchy and the establishment of orderly government in the relations of nations to one another. As long as the nations of the world are unwilling to give up any part of their so-called sovereignty, their right to

exactly as they please without any control whatever, there will be collisions of national policies, international friction and wars.

If the universal history of the human race has taught any lesson at all, it has proved that anarchy and peace cannot co-exist. There is no record in history of any people, however low in the scale of civilization, that has been able to maintain peace within its borders without government. Peace has been possible only by restricting the anarchy or sovereignty of the individual members of the community, their right to do exactly as they pleased without any control, and by establishing justice through laws and compelling compliance with those laws.

The development of the League of Nations into a world federation would in itself remove most of the causes of war. It would gradually abolish the barriers to trade between the members of the federation, allowing all traders of every member State equal access to all the raw materials and to all the markets of the world. It would gradually remove the barriers to migration, thus equalizing the pressures of population in the various parts of the world, and abolishing one of the most deep-seated causes of warfare. It would gradually do away with all restrictions on the movements of capital, thus equalizing investment demands throughout the world; it would stabilize price levels on a worldwide basis; it would make possible a world central bank carrying the world gold reserve as a basis for a world currency and carrying accounts of all national central banks for the clearing of international balances and for seasonal credits to minimize the present disturbing international gold shipments. To put it in a nutshell, a world federation would remove the economic causes of war, which are at the present day by far the greatest war causes.

—

Forest Camps for the Unemployed in U. S. A.

Unemployment impairs the very structure of society and every thoughtful nation is trying hard to cope with this deadly enemy of humanity. Not to speak of others, even rich countries like America has been threatened by this pest of society, to remove which extensive schemes have been suggested. The following extracts from an article by H. Dubreuil in *International Labour Review* may therefore be read with much interest in this country:

Unemployment had been rife for many long months in the United States.

In the countries hardest hit by unemployment this enforced idleness of the young has been viewed with particular concern; unable to find work on leaving school, they have been exposed to grave risks of moral corruption and have at the same time constituted a social problem of the first importance.

In the United States family ties were already weakening, a spirit of brutality was spreading, and the street-corner life to which the young were condemned offered greater moral dangers than in perhaps any other country.

On March 21, 1933, only seventeen days after his inauguration, Mr. Roosevelt, in a special message to Congress, outlined a general plan to help these young people who had never had a chance in life, and at the same time to confer undoubted economic advantages on the country.

The young who were unemployed were in need of a chance to recover, or at least keep, their physical and moral health. The proposed plan offered them the means of improving both by giving them healthy work in the open air of the forests under men carefully chosen for their capacity as educators as well as leaders.

Not least among the various kinds of natural wealth of all sorts of which the United States can boast are the magnificent forests still standing in every part of the country. It is, however, realized that their existence is menaced by the intense commercial demands made upon them.

Besides this danger of destruction by human agency there is the fire danger.

Like other forms of life, trees are subject to specific diseases of a highly destructive nature; they are also often attacked by insects whose invisible ravages may have incredibly disastrous effects.

A systematic campaign against these various dangers was thus in itself enough, in such an enormous country, to provide employment for large numbers.

Instead of receiving cash relief and remaining idle, young men are taken on as regular wage-paid workers; their wages are, it is true, only 30 dollars a month, but in addition they are clothed, fed, and housed under canvas in organized camps. It should be added that special arrangements are made for their families to benefit by this employment, for of the 30 dollars only 5 are paid to the worker, the remainder going direct to the home.

This modern Grand Army received the name of the Civilian Conservation Corps, and is usually known, according to the fashion for abbreviation, as the C.C.C. Men are taken on for six-monthly periods, but are free to leave the camp if they can themselves find jobs in industry.

At the end of the six months the men may sign on again or go home.

The C.C.C. is composed mainly of young men from 18 to 25 years of age; older men with special knowledge of forestry work, who are engaged in order that the campers may have the necessary technical direction, number only 25,000.

On a basis of 200 men per camp, the number of camps at the end of August was 1,440 1,446 in September), 1,301 for unemployed young men and 139 for ex-service men. Each camp has about 15 woodmen whose duty it is to give the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

campers the benefit of their special knowledge and experience and teach them how to work and how to adopt safe methods in operations which may be dangerous.

The War Department's share in the scheme is to outfit the men, transport them, condition them and supervise the construction of the camps. The Army is responsible for the administration of the camps, medical care, the organization of sports, etc.

The only buildings were wooden huts for use as kitchen, dining room, offices for the administrative staff, and tool shed.

The tents, with a plank flooring raised above the ground and a double canvas roof, belonged, it was explained, to what is known as the "tropical hospital" type. Nearby was the line of lorries used to transport the men and materials to the forest workplaces ; twice a week they also carry those who want to go to the movies in the nearest township.

The dining room also acts as a recreation room for the evenings and bad weather. There is a wireless set for the use of campers and a circulating library. The library consists of a packing case, with divisions inside which act as shelves.

Whither Science ?

The attack by Sir Arthur Eddington and Sir James Jeans on materialistic determinism has been aptly defended by Prof. Max Planck, whose expositions are altogether favourable to the main principles of scholastic philosophy. His latest work* which has been prefaced by Albert Einstein is a challenge to the modern English school of mathematical philosophers. The following review by Mr. H. V. Gill appears in *The Month* :

It need hardly be said that Max Planck is the great German scientist whose "Quantum Theory" has revolutionized physics,† for it has been so definitely confirmed by all recent work that it is now a received "law of nature." In all branches of physics Max Planck has distinguished himself, so that today, in his seventy-sixth year, he is one of the leading physicists in Europe. The reasoned words of such an authority must, therefore, have very great weight with those who wish to see modern science in its true perspective, and we need no further warrant for calling attention to them.

Einstein repudiates in the following words that he ever corroborated the theories (that the outer world is a derivative of consciousness of Sir Arthur and Sir James :

No physicist believes that. Otherwise he would not be a physicist. Neither do the physicists you have mentioned. You must distinguish between what is a literary fashion and what is scientific pronouncement. These men are genuine scientists and their literary formulations must not be taken as expressive of their scientific convictions. Why should anyone go to the trouble of gazing at the stars if he did not believe that the stars are really there ? Here I am entirely at one with Planck. We cannot logically prove the existence of the external world, any more than you can logically prove that I am talking with you now or that I am here. But you know that I am here and no subjective idealist can persuade you to the contrary.

The following passage from this well-written book will undoubtedly be of much interest :

There can never be any real opposition between religion and science ; for the one is the complement of the other. Every serious and reflective person realizes, I think, that the religious element in his nature must be recognized and cultivated if all the powers of the human soul are to act together in perfect balance and harmony. And, indeed, it was not by any accident that the greatest thinkers of all ages were also deeply religious souls, even though they made no public show of their religious feeling. It is from the co-operation of the understanding with the will that the finest fruit of philosophy has arisen, namely, the ethical fruit. Science enhances the moral values of life because it enhances the love of truth and reverence—love of truth displaying itself in the constant endeavour to arrive at a more exact knowledge of the world of mind and matter around us, and reverence, because every advance in knowledge brings us face to face with the mystery of our own being.

* "Where is Science going ?" By Max Planck, with a Preface by Albert Einstein. Translated and edited by James Murphy. London : George Allen & Unwin. 1933.

† Towards the end of the last century, and in the beginning of this, difficulties arose which could not be met by the ordinary laws of the wave theory of light. In order to solve them Planck advanced the view that light energy was transmitted in small indivisible units, each unit being a multiple of a certain amount or "quantum"—called after him "Planck's constant." Einstein's contribution was to assert that the energy of each "photon" or light-quantum could be expressed by $h\nu$, where h is Planck's constant, and ν the frequency of the light as measured by the spectroscope. The surprising way in which this theory has been found to agree with experiment is one of the triumphs of intuition. Thus, the present state of the theory of light is that there is one set of phenomena which can be fairly well explained on the wave theory, but which seem incompatible with the quantum theory, and another which can be explained with reasonable accuracy by the quantum theory, but not at all by the wave theory. Much of the ingenuity of modern physics has gone to reconcile these contradictions.

THE AUSTRIAN RIDDLE

By SUBHAS CHANDRA BOSE

THE world conflagration in 1914 started from Austria. So people everywhere are now asking: "What will the Socialist Revolution of 1934 in Austria lead to?"

The European situation is so complicated today that it is difficult to predict the future. About the middle of 1933 in Vienna, I was discussing the Austrian situation with an exceedingly intelligent and well-informed English journalist who had travelled widely. The atmosphere in Vienna was then full of excitement and people were talking of a *coup d'etat*. "No," he said, "there will be nothing of the kind. The Austrians are a genial-hearted people. I have seen matters approaching a crisis several times but on every occasion the storm blew over. This will happen once again." He was right and yet he was not.

Talking of the events of February, 1934, in Vienna the *Manchester Guardian* remarked pithily: 'The Socialists of Austria have been overthrown but unlike their comrades in Germany they have gone down fighting.' The attitude of the *Manchester Guardian* has been sympathetic towards the Austrian Socialists, whom it regards as the upholders of Parliamentary Democracy and Liberty in Central Europe. The tone of the London *Times*, on the other hand, has been distinctly sympathetic towards the present Austrian Government. The victory of the Austrian Socialists would undoubtedly have strengthened the Socialists throughout Europe and a Conservative paper like the *Times* will naturally take up an anti-Socialist attitude. The attitude of the Italian Press has on the whole been in support of the present Austrian Government. It is well known that the Austrian Government are on very friendly terms with the Italian Government and the former are drawing up a Constitution for Austria based on the Italian model. The attitude of the German Press has not been friendly towards the Austrian Government though the latter were engaged in suppressing the Socialists whom the Nazis in Germany regard as their enemies. People say that two factors account for this attitude on the part of the German Press. In the first place, the Austrian Government before attacking the Austrian Socialists, had surpressed the Austrian Nazis and in doing so, had incurred the wrath of the German Press. In the second place, by adopting a friendly attitude towards the Austrian Socialists, the Germans hope to win over to their cause the immense following which the Socialist Party had, and probably still has, in Austria. An additional factor, sometimes suggested, is that since the Austrian Government have been getting the support of France in their efforts to suppress the Austrian Nazis, it is but natural that they should antagonize the Germans, even though they may be engaged at the moment in overthrowing the Socialists.

Twelve months ago, I wrote the Indian papers about three-cornered fight that had been going on between the Socialists, Nazis and Heimwehr and I stated that the ultimate fate of Austria would greatly influenee the future trend of European politics. Today, one of the parties, *viz.*, the Socialist, has gone out of action and the future therefore lies between the other two. If the Nazi Party comes into power then with or without the formal union or Anschluss, Austria will become virtually a part of Germany. This would mean a considerable accession of power to Germany and the three great Powers in Europe are therefore opposed to it. Italy with her population of forty million and odd will not, moreover, like to see a Germany of more than seventy millions stretching from her northern frontier right up to the North Sea. And the German-speaking people in the Italian (now Italian, but formerly Austrian) Tyrol may begin to get restless, particularly when Germany has, time and again, broadcast her intention of unifying the German-speaking peoples in Europe. Therefore, while the Austrian Nazis get the moral support of Germany, the Heimwehr Party who are opposed to them, get the moral support of Italy. But whatever the present position in Europe may be, to an impartial student of History it appears inevitable that after the break-up of the Austro-Hungarian Empire, the German-speaking peoples of Germany and Austria should ultimately be drawn into one political unit. In their extreme vindictiveness, the Allied Powers at the Treaty of Versailles tore up into fragments the old Austro-Hungarian Empire and did not pause for a moment to realize that it was impossible for small countries like Austria and Hungary of today to exist as independent political units. It is only now that thinking men and women in the Allied countries have begun to realize that Austria can exist only as a part of Germany or as a part of a political unit like Austro-Hungary. Nearly a year ago when I was discussing Austrian politics with an American journalist, I ventured the remark that if the Allied Powers really wanted to keep Austria away from Germany, they should encourage, from the point of view of political strategy, a restoration of the Hapsburg Monarchy in Austria and Hungary. I distinctly

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

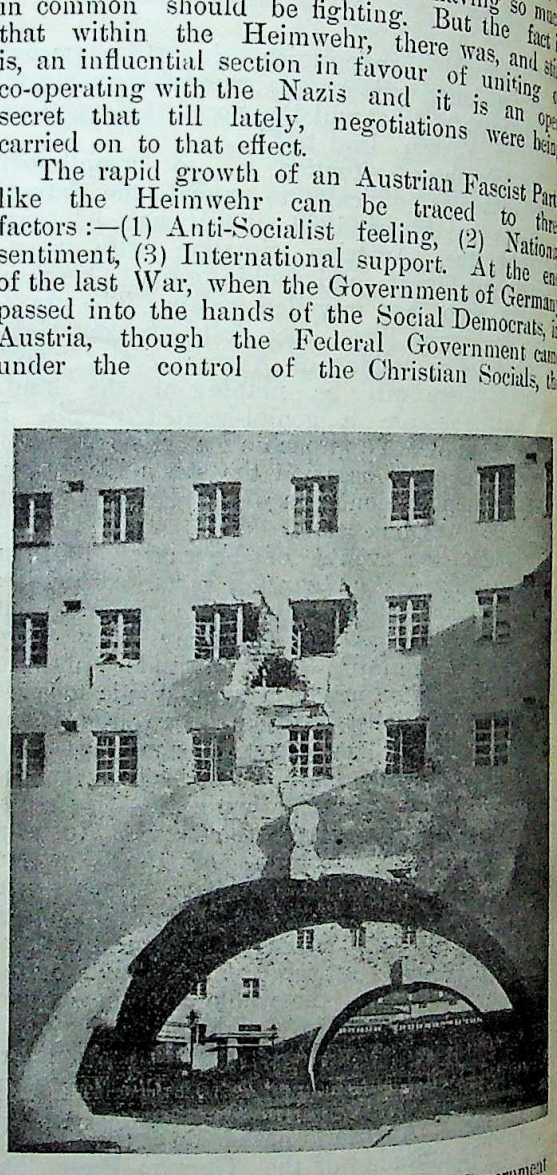
remember that at that time the American journalist looked at me as if I were a political babe—so strange my remark appeared to him. But today when I find that people in different countries are freely discussing the idea of a revival of the Austro-Hungarian Monarchy and when I read in the European Press that the supporters of Monarchy in Hungary and in Austria have recently been meeting in Vienna for discussing common problems, I feel satisfied that my conjecture of a year ago was not altogether wrong. Whatever our own political predilections may be, there can be no doubt that if the Allied Powers really wanted to divide the German-speaking peoples of Central Europe, they should have forgotten their prejudice against the Hapsburg Monarchy and after recognizing the self-determination of the Czechs, Slovaks and other Slav races, they should have left Austro-Hungary intact. As a student of History, to me at least it appears probable that in the long run Austria will have to join with German Reich or she will have to join Hungary in one political unit. The present position is in any case an unstable equilibrium and it cannot last.

To a superficial observer it will appear that the contrary of what I have just said is the truth. Order has been restored throughout Austria. The Austrian Nazis have been checkmated, while the Austrian Socialists completely suppressed. Great Britain, France and Italy have guaranteed the independence of Austria in a public communique and this move has been rightly interpreted as a determination on the part of these three Powers to keep Austria away from Germany. There is also no doubt that these three Powers would also be willing to help the Austrian Government with loans, etc., in order to help her out of the present financial morass. But will that be enough to satisfy the Austrian people and put them on their legs? To answer that question we shall have to go a little deeper into recent Austrian history.

The present Austrian Government has been composed mainly of three parties :—(1) the Christian Socials, (2) the Heimwehr and (3) the Agrarians. The Heimwehr Party are at the moment the most important element and following the example of Russia, Italy and Germany they are trying to have all the other political parties in Austria forcibly dissolved. The latest news goes to show that Herr Dolfuss, the present Prime Minister of Austria and the leader of the Christian Socials, has agreed to the dissolution of his party. If the Heimwehr succeed in the task of suppressing all the other parties, then the future development of Austrian politics will depend to some extent on the internal politics of the Heimwehr Party.

The Heimwehr are the Austrian brand of Fascists who draw their inspiration from Italy. While the Austrian Nazis dress in brown like their German comrades, the Heimwehr dress in green and white and their flag consists of these two colours. They have much in common with the Nazis in their ideas and in their methods. Both are opposed to Parliamentary Democracy and believe in Dictatorship. To an outsider, it appears strange that two parties having so much in common should be fighting. But the fact is that within the Heimwehr, there was, and still is, an influential section in favour of uniting or co-operating with the Nazis and it is an open secret that till lately, negotiations were being carried on to that effect.

The rapid growth of an Austrian Fascist Party like the Heimwehr can be traced to three factors :—(1) Anti-Socialist feeling, (2) National sentiment, (3) International support. At the end of the last War, when the Government of Germany passed into the hands of the Social Democrats, in Austria, though the Federal Government came under the control of the Christian Socials, the



Karl Marx Hof after bombardment by Government artillery

administration of Vienna Municipality and of the Vienna province passed into the hands of the Socialists. The Austrian Socialists have all along had the reputation of being the most radical Socialist Party in Europe and the Conservative elements in Austria did not therefore view with favour the idea that such a radical party should be in control of the most strategic position in Austrian public life. The post-War situation in Austria has all along been one of unstable equilibrium. In a country with a population of six and a half millions the Federal Government has been com-

...ed by the anti-Socialist Christian Socials but ...y have been unable to dislodge the militant ...rian Socialists from the administration of the ...al city and the major province of the country. ...the other hand, the Socialists have been ...le to extend their influence further and ...re the Federal Government of the country ...se in the countryside, as distinct from the ...s they have had less influence than the other ...parties. In such a situation the ultimate ...row of one of the parties was to be ...ted. To entrench themselves more securely, ...ialists had organized a private army called ...hutzbund A purely political party like ...Christian Socials of Herr Dolfuss stood no ...e in an ultimate struggle for power with the ...sts. Therefore, to fight the latter, a militant ...like the Heimwehr had to be born. This ...was anti-Socialist in its objective from the ...beginning and therefore an alliance was at ...struck between the Christian Socials and the ...wehr.

...Some other minor considerations made the ...wehr and the Christian Socials bitterly ...ed to the Socialists. The Austrian Socialists ...on the whole been anti-religious, or at least ...t the domination of the Catholic Church ...s long as the Socialist Party was ruling in ...ny, they were in favour of the Anschluss ...Union with Germany. The anti-religious ...de of the Socialists gave the Christian ...i.e., the Catholic Party, an immense ...ing among the peasantry, who all the world ...are well known for their conservative ...ts. And the danger of ultimate absorption ...rmany under the auspices of the Socialist ...gave the Heimwehr Party an opportunity ...ring the support of the Austrian Aristocracy ...r cause. It should be remembered that as ...Empire, Austria is much older than Germany ...it is Austria that had inherited the halo of ...Holy Roman Empire. As long as Austria ...ained separate from Germany, the Austrian ...racy would have some position in the ...but if Austria were to be absorbed into ...German Reich, then they would be nowhere. ...fore a well-known and wealthy aristocrat ...Prince Starhemberg came forward to lead the ...rder (literally, the Defenders of the Home) ...preserving the integrity of the Austrian State ...the power and influence of the old aristocratic ...ass.

...History was utilized in order to give an ...ge to this party. In June, 1933, when I was ...enna, the Austrian Government celebrated ...250th anniversary of the victory over the ...ks. In 1683, the Turks, after overrunning ...ern Europe, has laid siege to Vienna and ...of those responsible for the ultimate defeat ...the Turks was Starhemberg, an ancestor of the ...ge Starhemberg, the present leader of the ...mwehr. The June celebration naturally had ...support of the entire Austrian population but it was so manoeuvred that one important result of it was to enhance the reputation of Prince Starhemberg and therefore of his party. As a part of the celebration, 40,000 Heimwehr volunteers in their green and white uniforms came to Vienna from the country and had a route march

The Socialist Volunteers (Schutzbundler) in custody at the Police Station in Floridsdorf, Vienna

through the streets of Vienna. Throughout the route march I heard the supporters of the Heimwehr shouting "Heil Starhemberg" while the Nazis in reply shouted "Heil Hitler"—and were chased by the Police for doing so. At the end of the celebration I congratulated a Heimwehr leader on the fine discipline shown by his volunteers, but he did not seem to be at all enthusiastic about the function and he complained that the Viennese public were not on the whole sympathetic to the Heimwehr and that in the working class quarters they had even been pelted with rotten eggs. That was in June last year. But within the next eight months they improved their public position to such an extent as to render it possible for them to make a direct assault on their enemies, the Austrian Nazis and the Austrian Socialists. To follow the steps taken one after another, for undermining their enemies, will afford an interesting study in political strategy.

At the end of the last War it was generally thought that the era of Nationalism had ended in Europe and that of social reconstruction had begun in right earnest. It is now clear, however, that the era of Nationalism has not ended. As long as the principle of self-determination is not consistently applied throughout Europe the nationalist struggle cannot cease. While the Treaty of Versailles did justice to the Czechs, Poles and the Italian-speaking people then under Austrian rule, it did considerable injustice to Germans and Hungarians who were placed under the rule of some other races. This injustice was possible at the time of the Treaty of Versailles because a feeling of extreme vindictiveness inspired the victors at Peace Conference preceding the Treaty. Until this wrong is righted, the era of nationalist

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

struggle cannot end in Europe nor can the possibility of war be averted.

In spite of a favourable soil for the growth of the Heimwehr Party in Austria, and in spite of the fact that the Heimwehr from the very beginning entrenched themselves on national sentiment and tradition, they could not have achieved much progress without the help of another party in Austria and without international support outside. It is here that the help of an able political leader like Herr Dolfuss proved to be invaluable. Under his leadership, the Federal Government has been formed, commanding the support of the Christian Social, Heimwehr and Agrarian Parties and in opposition to the Socialist and Nazi Parties. Without a militant party like the Heimwehr, Herr Dolfuss would not have been able to cope with the militant Nazis or with the militant Socialists who had their disciplined corps of volunteers,

Herr Schmitz, the Special Commissioner appointed by the Federal Government, arriving at the Rathaus to expel the Socialist Mayor of Vienna and take forcible possession of the Municipality

called the Schutzbund. So Herr Dolfuss naturally welcomed the alliance with the militant Heimwehr. The Heimwehr, on their side, stood to gain even more. Through Herr Dolfuss they got the support of an influential party like the Christian Socials and through this party, of the entire Catholic Church. Through Herr Dolfuss again they got the support of the Allied Powers in the struggle against the Austrian Nazis who had the moral support of Germany. Last but not least, the political wisdom and sagacity of Herr Dolfuss was of great help to them. Without his caution and restraint, they would in all probability, have courted disaster by rushing things prematurely.

In 1933 it appeared as if Herr Dolfuss and the Christian Socials were making use of the Heimwehr in their double fight against Socialists and the Austrian Nazis. And is no doubt that much of the internat support which the Austrian Government been getting was because of the impre abroad that they were engaged primarily suppressing the Austrian Nazis The international support would not have forthcoming if it had been then realized the Austrian Government would soon strik brutally at the Socialist Party in Aus The Austrian Socialists had friends in Britain and in France and since they had aside the proposal of the Anschluss or with Germany, since the Nazis got into there, there was no reason for Great Br or France to be enthusiastic in their sup of Herr Dolfuss if he was to strike against Socialists in Austria. Therefore, it was tactics for the Austrian Government to the Nazi Party in Austria and rally the fullest mea of international support doing so. After getting opinion on their side checkmating the Nazis in Au they could safely proceed the task of dealing with Socialists. It would have them in disaster if they attempted to deal with Socialists first. After the throw of the Socialists it agre as if the Heimwehr will use of the Prime Minister Dolfuss more than he will able to exploit them.

In March, 1933, when I came to Vienna the Aus Government had a bare maj of one in the Lower Cha of the Federal Parliament was a precarious position any Government and could last indefinitely. So, t advantage of the resignati the Speaker, the Government, one fine morn March, 1933, suspended the Parliament an gan to govern the country by decree. then, Parliament has been in a state of sus ed animation. In March, 1933, the atte of the Nazis to power in Germany had focu public attention in Europe on Germany. Austrian Socialists did not therefore what was happening in their own home over, since the Parliamentary opposition consis both the Socialists and the Austrian Nazis Socialists were foolish enough to think that Government aimed primarily at the Nazis a at themselves. After the suspension of Pa ment, the Government hurled their attack against the Nazis than against the Socialis and this was largely responsible for t the latter into a sense of security.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

was going on, one could discover sympathy for Herr Dolfuss in his parliamentary activities against the Nazis, part of certain Socialists. In discussing politics with the Socialist rank and those days, one clearly had the impression that they did not realize the gravity of menace that loomed large in front of them. impartial outsider like myself could feel those days that the time was not far off the Austrian Government would turn aside attack the Socialists. It must be said to credit of Herr Dolfuss that on more than one he made it quite clear that Government were fighting on a double i.e., against the Nazis and the Socialists.

When in March, 1933, the Government called Parliament the Speaker who belonged the oppositionist Party, opened Parliament in defiance the Government. Great was curiosity and excitement of people and every one was —What will the Govern- do?" The Government the Police to prevent ment from assembling, but they could arrive on the the oppositionist deputies to get into Parliament and at the appointed hour, proceedings commenced. The leaders and their supporters not present, of course; nevertheless, the action of the nist deputies was not value. The only regret Parliamentarians should have that the opposition did not up their first act of The entire responsibility devolves on the leaders Socialist Party. When the ment found that the nist Parties had taken suspension of Parliamentary down, they prepared for a further on public liberty. The International Day celebration on the first of was banned. Such an order had been made even under the rule of the burg Emperors. Police and military were out in order to prevent the Socialists demonstrating within the City though they allowed to hold a public meeting and a exhibition in the Municipal Stadium. I able to attend this meeting and was pro- very impressed with what I saw. There were at sixty thousand people present. Five and girls and elderly women gave a demonstra- of physical drill. Boys and grown-up men gave a similar demonstration. The element youth present on the occasion was very and it showed clearly that the Socialist Party had a considerable following among the younger generation. The Party leaders spoke with great passion and sincerity; nevertheless it struck me at the time that they were a trifle older than what they should have been. And I remember having remarked to young Socialist friends that their Party should throw up younger leaders. In contrast with the Socialist Party, the Nazi leadership was younger and more virile. On the first of May, the Nazis also had their meeting in a closed arena though they could not demonstrate within the City. Their attendance was nothing like what the Socialists had commanded, but they displayed greater enthusiasm and virility.

After the first of May, the Government did not make any further direct attack on the Socialist Party but directed their attention to the Nazi Party. Thereby they lulled the Socialists into a sense of security and also rallied international support in favour of their anti-Nazi policy. True, the Government banned the Socialist Schutzbund (Volunteers) not long after the May Day affair but the Socialist Party did not appear to be at all excited over the ban. They thought that they could continue to function secretly and they got some consolation in the fact that the Nazi Volunteers had also been banned by the Government. The premier Socialist organ, *Arbeiter Zeitung* was placed under censorship but it was not suppressed, whereas not long after this, the Nazi papers began to be suppressed one by one. Simultaneously, an order was issued prohibiting the Nazis from wearing any uniform in public. And the climax of the attack was the forcible seizure of the Nazi Headquarters throughout the country. While this

Street Scene in Vienna during the February events

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

attack on the Nazis was going on in Austria, they were not idle, nor did they take things lying down. They continued their demonstrations and their activities in spite of the Government ban. The Socialists during this period continued to grumble about the restrictions placed on some of their activities and also about the seizure of some of the funds of the Socialist Municipality by the Government but they did not organize any resistance or opposition. If they had joined hands with the Nazis in a common resistance against the Government of the day, it is difficult to say what would have happened. Unfortunately for them the Nazi menace was looming so large in front of them that they were unable to realize the true dimensions of the Governmental menace. I had sometimes remarked to some Socialist friends that it was not unlikely that the Government was doing for the Austrian Nazis what the Von Papen Government had done for the German Nazis but to that remark no reply was forthcoming. Just as the Socialists had remained quiet while the Government had been attacking the Nazis, so also the Nazis remained quiet when the Government attacked the Socialists this year. The future alone will show whether from the point of view of political strategy the action of the Austrian Nazis was correct. It was idle for the Socialist leaders to have expected last year that the Government would ruthlessly suppress the Nazis but would allow them to exist. Nevertheless there are Nazis who view with perfect equanimity the suppression of the Socialists in Austria this year and who think that the Government have only made their ultimate task much easier for them.

Last year I was of the opinion that the Austrian Government were acting contrary to the laws of political strategy by carrying on the struggle on a double front and that if they wanted to succeed, they should make up with one of the two opposing parties. I must confess that as a student of History, I never expected that they (the Government) would be so successful in overthrowing both the oppositionist parties. The credit for this belongs largely to the political sagacity displayed by Herr Dolfuss. During the last twelve months he has always acted in the fulness of time. He has never shown any weakness in dealing with his political enemies nor has he been guilty of premature rashness in action. I must now refer to two important steps that he took last year in order to prepare for the final knock-out blow that he gave his opponents this year. The first step refers to the arming of the Heimwehr and their absorption in the ranks of the Governmental police. The second step refers to the holding of the Catholic Congress in Vienna last year.

It was said by many people last year in Vienna that while the Government could command an armed force of approximately 30,000 (including soldiers and police), both the Socialists and the Heimwehr could command an armed fo about the same number. The problem fo Government therefore was how to increas armed forces at the disposal of the Govern in preparation for a civil war as took pla February this year. The Government s this problem by taking over large num of the Heimwehr and giving them full mil training. The important part which the Hei Volunteers were called upon to play in figh the Socialist Schutzbund this year, shows helpless the Government forces would have without their assistance. This additional was all the more necessary because co members of the police and of the Military h be dismissed by the Government because of pro-Nazi sympathies. (It is now an open s that Nazi propaganda was active in the r of the Austrian Police and the Military.)

I have already referred to the want enthusiasm on the part of the Viennese p which the Heimwehr and the supporters of Government experienced in June last year. convert the Viennese public, it was necessary impress upon them that the Government h large following. The Heimwehr demonstrati June, 1933 served some useful purpose in connection but it was not enough. Therefore September of last year, the Catholic Congress German-speaking peoples was convened in Vie I was fortunate to be present again in Vienna the occasion. The Government had made el arrangements for Catholic people to visit Vi from different parts of Austria and of German-speaking Catholic countries. His Hol the Pope was prevailed upon to send his Apos Delegate on the occasion. At a modest esti 200,000 people must have visited Vienna for occasion. A fair had also been arranged Vienna at about the same time and special way facilities had been offered for those visited Vienna. The additional crowd co for the Vienna Fair and for the Catholic Con meant more business for the hotels and boarding-houses of Vienna and for the bus community of Vienna in general. This m put into the pockets of the Viennese peop times of financial stringency helped to bu their support, though in an unconscious Further, the colossal crowds of countryside p who had come to Vienna for the Catholic Con at the instance of the Government gave one the impression that the Government h large following in the country and that the Catholic Church, including His Holiness Pope, supported the Government of Herr Do To an outsider like myself who moved in out of the huge crowds, the religious sincerity the people was quite evident. But it was ev evident that the Government were making p capital out of the Catholic Congress, though arrangement was so clever that the ordinary in the street did not probably realize it.

demonstrations were also held in connection with the Catholic Congress demonstrations. The net result of the September ceremonies was to give people, and particularly the Viennese public, the impression that the Government had an extremely strong position, having the support of the Catholic Church, the Army and the countryside people of Austria. And the prestige and reputation of Herr Dolfuss stood higher than it had ever done before.

I remember an incident that took place in Vienna at about this time. In one of the demonstrations that took place near the Rathaus (i.e. the Town Hall where the Mayor holds his office) one of the Heimwehr leaders pointing to the Rathaus said that he hoped that the day would soon come when the Government would turn out the Bolsheviks (meaning the Socialists) from the building and purge Vienna of their party. When I read the other day that the Government and Heimwehr forces had forcibly taken possession of the Rathaus and had made a prisoner of the Socialist Mayor, the speech of the Heimwehr leader appeared to me almost prophetic.

After the September ceremonies, the Government felt strong enough to proceed ruthlessly with its task of suppressing the oppositionist parties. The first few months were devoted to the suppression of the Nazis and when this was almost complete, the Government, with the advent of the new year, prepared for the assault on the Socialists. Looking at recent events in their proper perspective, it seems clear that the Socialists were fighting a losing game. Though they controlled the administration of the Vienna Municipality and of the Vienna province, their position was always weak. Abroad they had hardly any international support, while the ignominious failure of the Social Democrats in Germany had produced a demoralizing effect on Austria. The Catholic Church was dead against them and recent events have demonstrated what a strong hold the Catholic Church still has in Austria. Within Austria, they had to fight two powerful enemies, the Nazis on the one side and the Christian Socials and Heimwehr on the other. In these circumstances, could they have done more? It is quite true, as the *Manchester Guardian* reported, that the Socialists of Austria, unlike their comrades in Germany, have gone down fighting. It is a tragedy of history that a party with such a glorious record of public and social service as the Austrian Socialist Party should be overthrown and crushed in this manner. The only consolation is that they have created history. As Mr. Harold Laski wrote in the London *Daily Herald* the other day, in the history of the Socialist struggle, Vienna will rank alongside of the Paris Commune and of the Russian Revolution of 1905. While admitting all that, I cannot at the same time help thinking that if the Socialist leadership had shown greater political sagacity, events might have taken a different course. From admission made in Socialist circles now, it appears that till the very last, the Socialist leaders were negotiating for a compromise with the Government. There can be no complaint about the character of the Socialist rank and file, because, at the bidding of their leaders, they have shown of what stuff they are made. But were the leaders justified in lulling the party into a sense of security and in putting off the final struggle till the eleventh hour had struck?

While the Socialist Party has ceased to exist in Austria, the same cannot be said of the Nazis. As long as National Socialism rules in Germany, the Nazis will exist in Austria. Germany is putting the fullest economic pressure on Austria in order to bring about the downfall of the present Government. Will the present Government be able to solve the economic problem of the Austrian people? And will the Allied Powers, who are so anxious to keep Austria away from Germany, render adequate financial assistance to the present Austrian Government? If history answers both these questions in the affirmative, then undoubtedly the present Government will have a long lease of life. Otherwise there are only two alternatives for the Austrian people—a federation with Germany or with Hungary.

One of the conclusions to be drawn from the February events is that a comparatively small but well-disciplined armed force as the Austrian Government had, can overpower with the aid of artillery, any well-armed force that may be pitched against it.

Things are quiet now in Austria and will remain so for some time at least. The work of transformation is going on briskly. The green-and-white flag of the Heimwehr is flying on the top of Rathaus in order to proclaim the explusion of the Socialist regime. The triple busts of the leaders who founded the Austrian Republic have been removed and the busts of Herr Dolfuss, Prince Starhemberg and Major Fey (Heimwehr Leader) have been substituted instead. The palatial building built by the Socialist Municipality for the workers and named as Marxhof has been renamed as Dolfusshof. As a substitute for the Horned Cross or Swastika of the Nazis, Herr Dolfuss has designed a new cross as a symbol for his party. All the tactics, methods and devices employed in countries like Russia, Italy and Germany will be introduced in Austria as well. But the main problem on which will depend the future of Austrian politics is the economic problem. Till this problem is solved, there can be no peace in Austria.

A lot of speculation is going on now as to what course Herr Dolfuss will follow hereafter. Will he be able to maintain his independence or will he surrender completely to the Heimwehr? When his party—the Christian Socials—has been dissolved, where does he stand now? What kind of Constitution will he force on Austria?

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Will it be an imitation of the Italian Constitution or a modification of it?

In an exceedingly well-written article in the February (1934) number of the *Nineteenth Century* Elizabeth Wiskemann has pleaded passionately for a rapprochement between the Catholic Church and Socialism in Auatria in order to save the country from going over to the National Socialists. In view of the virtual extinction of the Socialist Party after the February events, the appeal is a belated one. To any outside observer it will appear clear that the Heimwehr have now got the upper hand and it will not be possible for Herr Dolfuss to maintain his independence as against them. The inner politics of the Heimwehr Party will determine the future of Austrian politics. Within the Heimwehr there has been a pro-Nazi group and also a monarchist group. The pro-Nazi section have, for the time being, been suppressed but the monarchist group have gained in importance. The latest news from Vienna goes to show that members of the Royal family are now openly identifying themselves with the Heimwehr Party and that monarchists in Austria and in Hungary have not only become active but have been holding deliberations jointly. Interesting developments may therefore take place at any time. But whatever happens, there is no doubt that for some time at least, the Allied Powers will be able to do much in the way of influencing the trend of Austrian politics. Austria still continues to be the storm-centre of European politics, though outwardly she may appear to be calm. The Vienna Correspondent of the London *Times* seems to think that the best course for the outside Powers would be to back Herr Dolfuss and his Government and he also seems to think that the Constitution which he will give Austria will have only a 'Fascist leaven.' But in view of the influence of the Heimwehr in Austria today and the relations between that party and Italy, it seems more probable that the future constitution will be based on the Italian model. No doubt the earlier declarations of Herr Dolfuss referred to 'a Christian Corporative' State but he was then really under the influence of the Catholic Church and he was probably drawing his inspiration from the Papal Encyclical of 1931 which laid down the views of the Catholic Church on the question of social reorganization. But today it is well-nigh impossible for Herr Dolfuss to do anything in opposition to the Heimwehr and it is extremely doubtful if the latter would go as far as the Prime Minister in following the directives of the Catholic Church. Whatever happens in Austria hereafter will be of interest to the outside world and will have far-reaching repercussions throughout Europe.

Electric Current in Soil Kills off the Bacteria

Home gardens and greenhouse men may now rid soil of disease and pests by sterilizing it with electricity, through the use of apparatus recently developed by a Seattle, Wash, research engineer. Though it resembles electric heating devices previously applied to gardening, the apparatus is not designed to heat the soil by contact but by passing electric current directly through it, between electrodes that are buried in the earth. The mild heating is said to kill all parasites.

NOTES

ducation of Negroes in America and of Indians in India

Literacy and education are not indentical the one should not be confounded with the other. Nevertheless, it is true, broadly speaking, that education cannot be imparted to an adequate extent without literacy. Hence an attempt will be made in this note to give some idea of the progress of education in India, assuming that it can be roughly measured by the percentage of literacy of its population.

The education of the Negroes of the United States of America will be compared with that of Indians in India for the reasons stated below.

Originally the Negroes were not inhabitants of America. Their ancestors were taken from their homes in Africa and sold into slavery in America. Not to speak of any indigenous literature of their own in Africa, they had not even any indigenous alphabet. Lived in America they lived in a state of slavery. So long as they were slaves, they were not given any facilities for education. On the contrary, their education was penalized. So, though before the emancipation of all the Negro slaves in the U. S. A. in December 1865, a certain proportion of the free Negroes and a smaller one of the Negro slaves had become literate, the progress made by the Negroes in literacy and education has been made since December 18, 1865. Even after that date up till now the Negroes there have not enjoyed all the educational facilities which the white Americans have enjoyed.

It has been stated above that so long as there was slavery in the U. S. A., the education of the Negroes was penalized. The exact character of the punishments provided for the absence of Negro education will be understood from the following extracts made from Farmancorth *History of the World*, vol. iv, p. 2814, by Major B. D. Basu in his *History of Education in India under the Rule of the East India Company* :

> "... the education of Negroes was expressly forbidden. Here for instance, are some passages from the Code of Virginia in 1849, 'Every assemblage of Negroes for the purpose of instruction in reading or writing shall be an unlawful assembly. Any justice may issue his warrant to any officers or other person requiring him to enter any place where such assemblage may be and seize any Negro therein ; and he or any other justice may order such Negro to be punished with stripes. Again, if a white person assemble with Negroes for the purpose of instructing them to read or write, he shall be confined to jail not exceeding six months and fined not exceeding one hundred dollars."
>
> "Here is another paragraph from an Act passed in South Carolina in 1834. 'If any person shall hereafter teach any slave to read or write, or shall aid in assisting any slave to read or write, or cause or procure any slave to be taught to read or write, such person, if a free white person, upon conviction thereof, shall for every such offence against this Act be fined not exceeding one hundred dollars and imprisoned not more than six months ; or, if a person of colour, shall be whipped not exceeding fifty lashes and fined not exceeding fifty dollars : And if a slave, shall be whipped not exceeding fifty lashes."
>
> "Simillar Acts were passed in Georgia and Alabama."

When the Negroes were freed in 1865, such laws ceased to be operative. In 1930 in the U. S. A. 16.3 per cent of Negroes were illiterate and 83·7 per cent were literate. This means that mainly in 65 years, from December 19, 1865, to 1930, an orginally uncivilized people, without any indigenous alphabet and literature of their own, had become literate to the extent of 83.7 per cent. This has been possible because of the desire of the Negroes for knowledge, the intellectual atmosphere of America, the facilities provided by the State for their education, though less than those provided for the whites, and the facilities created by the Negroes themselves for their own education.

The facts relating to India will now be stated.

This country possessed scripts and alphabets at least two thousand years ago.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

This date is given in order that it may not be challenged even by those European scholars who are most obsessed with the notion of Indian inferiority. The most ancient Sanskrit literature of India is, according to the same class of scholars, at least three thousand years old. Pali literature is also more than two thousand years old. The literatures of many modern languages of India are at least a thousand years old.

Indian literatures of the pre-British period contain not only poems, dramas, and works of fiction in prose but also valuable philosophical and scientic works of various descriptions.

It is generally admitted that in ancient times Hindus had made great progress in the art of education, though the extent of literacy in those days or in the Pathan and Mughal period cannot be definitely ascertained. But the records, reports and statements of British officers and writers go to show that in the years immediately preceding and following the establishment of the rule of the East India Company there was a greater degree of literacy in India than now. Major B. D. Basu, in his book cited above, quotes the following passage from the late Mr. Keir Hardie's work on *India*, p. 5 :—

> MaxMuller, on the strength of official documents and a missionary report concerning education in Bengal prior to the British occupation, asserts that there were then 80,000 native schools in Bengal, or one for every four hundred of the population. Ludlow, in his history of British India, says that 'in every Hindoo village which has retained its old form I am assured that the children generally are able to read, write, and cipher, but where we have swept away the village system as in Bengal, there the village school has also disappeared.'

Major Basu's book gives extracts relating to the Madras and Bombay Presidencies also.

Mr. Edward J. Thompson, whose worst enemy will not accuse him of overestimating the achievements of India or Indians, has been constrained to admit in *The Reconstruction of India* (Faber & Faber Limited, London, 1930) that in India "there was more literacy, if of a low kind, than until within the last ten years." But this grudging admission is not accurate. For, whereas "official documents and a missionary report concerning education in Bengal prior to the British occupation" mention 80,000 schools in Bengal or one for every 400 of the population, the latest Quinquennial Review on the Progress of Education in Bengal, for the years 1927-1932, mentions only 69,036 educational institutions, including not merely schools, but universities, arts colleges, professional colleges, secondary schools and primary schools, for a population of 5,01,14,002 souls, or one educational institution for every 725 of the population.

Let us, however, not lay stress upon the fact that in pre-British India there was more literacy, "if of a low kind," as Mr. Thompson says, than now. Let us merely record the existing state of things.

Before that is done, it must in all fairness be recorded with profound feelings of appreciation that neither the Government of the East India Company nor the Government of India under the British Crown has ever enacted laws providing the punishment of fines, imprisonment or whipping for Indians receiving education or for Europeans giving education to Indians. In this respect the European branch of the Anglo-Saxon race can claim to be vastly superior to the American branch. It may be objected, that the Negroes of America were slaves, whereas the Indians were and are merely a conquered people and that not all parts of India were brought under subjugation by fighting. But though there is a difference between slavery and political subjection, what really matters is that the British people had the power to make the giving and receiving of education on the part of Indians a penal offence. It was extremely generous and merciful of them, therefore, not to exercise that power in the way that the white Americans did with regard to the Negroes before 1865.

It has been stated above that mainly in the course of 65 years 83·7 per cent of the originally uncivilized Negroes in America have been made literate.

Assuming that the people of India, before being brought under British rule, were uncivilized, alphabet-less, literature-less, without arts and crafts, at least 83·7 per cent of them should have been made literate in the more than 65 years of British rule—at any rate the more than 65 years which have elapsed since the Education Despatch of 1854, commonly, though not correctly, styled the "Intellectual Charter of India," and accurately

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

spoken of as Wood's Despatch after Sir Charles Wood, then President of the Board of Control of the East India Company. As against the 83·7 per cent of American Negro literacy in 1930, may be mentioned the 8 (eight) per cent literacy of the people of India in 1931. So American Negroes are ten times as literate as Indians under British rule. In this respect, therefore, the European branch of the Anglo-Saxon race is vastly inferior to the American branch of the same race. Our observation is strictly limited to literacy. Racial and political treatment should not, therefore, be brought in.

Literacy in India

It does not much matter if some Provinces and States are ahead of others in literacy. For the shameful fact is that 92 per cent of Indians are illiterate and only 8 per cent are literate. Nevertheless, as the Provinces and States will have to make independent efforts to reach at least the American Negro's level of literacy, namely, 837 per mille, the following table taken from the Census of India Report for 1931, showing the number of literates per mille, may be found useful as a reminder :

Burma	368	Central Provinces	66
Cochin	337	Panjab	63
Travancore	289	Assam States	61
Baroda	209	Bengal States	61
Coorg	182	United Provinces	55
Andamans & Nicobars	176	Baluchistan	54
Delhi	170	Bihar & Orissa	53
Ajmer-Merwara	163	Central India	52
Western India States	125	Hyderabad	50
Madras States*	125	N.-W. F. Province	49
Bengal	121	U. P. States	49
Bombay†	111	Gwalior	47
Madras	108	Rajputana	43
Mysore	108	Panjab States	42
Assam	106	Panjab States Agency	42
Bombay States	93	Jammu & Kashmir	40
* *Excluding Cochin & Travancore.*	71	B. and O. States	39
† *Including Aden.*		Sikkim	35
		C. P. States	23

There is a wrong notion that in India some communities are very much advanced in education. The following table taken from the Census Report for 1931, showing the number of literates per thousand, makes it plain that no community has reached the American Negro's level of literacy :

Parsis	791	Indian Buddhists	90
Jews	416	Hindus	84
Jains	353	Muslims	64
Christians	279	Tribal	7
Sikhs	91	*All exclusive of Burma.*	

The Baidyas of Bengal, the Tamil Brahmans of the Madras Presidency and the Kayasthas of the United Provinces of Agra and Oudh are said to be very advanced in education. But they are all far below the American Negro's level of literacy. Among Baidyas 635 per thousand are literate, among Tamil Brahmans 626, and among U. P. Kayasthas about 446.

We have spoken above of the American Negro's level of literacy. Of the native-born American whites, 98.5 per cent or 985 per thousand are literate. The Japanese figure is slightly higher.

"Educationally almost saturated"

The latest official Quinquennial Review on the Progress of Education in Bengal, 1927-1932, observes that "these two communities (Christians and 'educationally advanced' Hindus) are "educationally almost saturated." Perhaps in proof of this statement, this official publication says that "the number of their pupils has not shown much variation during the last decade." As a matter of fact, as the same official report mentions elsewhere (p. 8), "the advanced Hindus have lost ground in the primary and the secondary stages, in which their enrolment was 6,31,531 at the end of the quinquennium as against 6,40,309 in 1926-27."

A substance is said to be saturated with some other substance when the former has absorbed and holds the greatest amount possible of the latter. But can it be said that any Hindu caste, however 'advanced' educationally, has absorbed the largest possible amount of education? If it be found that almost all persons above the age of, say, 5 belonging to any caste are at least literate, or that almost all its boys and girls of school-going age are receiving instruction, then it can be said that it is educationally saturated. But as the Quinquennial Review nowhere says which Hindu castes are officially considered educationally advanced, nor what percentage of the total population is officially held to be of school-going age, the accuracy of the official

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

remark cannot be tested. The only test that can be applied is to see whether any Hindu caste in Bengal is literate to as great an extent as, say, the native-born American whites, of whom 985 per thousand are literate. Now, in the Bengal Census Report for 1931, the most literate castes mentioned are: Baidya, 635 per thousand literate; Brahman, 452 per thousand literate; Kayastha, 401 per thousand literate; Agarwala, 344 per thousand literate; and Shaha 268 per thousand literate. These figures show that none of these castes approach the native-born American whites (or even the American Negroes) in literacy, and that there are numerous adults and juveniles among them who are illiterate. Therefore, it is undoubtedly incorrect to say that the 'educationally advanced' Hindus of Bengal are 'educationally almost saturated.' They are nothing of the kind. The reason why there has been a decrease in the number of pupils from those classes is, not because there has been excessive education among them, but because economic depression and unemployment have struck them hard, and consequently they have become less able to send their children to school than they were before.

Lady Clerks and Soldier Clerks

On the 6th of March last Mr. S. C. Mitra asked some questions in the Legislative Assembly relating to lady clerks and soldier clerks, obviously employed in military offices.

> Mr. S. C. Mitra put a number of questions asking why British soldier clerks and lady clerks were given a higher pay, whereas the pay of Indian clerks was further reduced for future recruitment.
>
> Mr. Tottenham replied that the Government were satisfied that soldier clerks and lady clerks of suitable qualifications could not be obtained at a lesser salary, while Indian clerks could be obtained on rates considerably lower than those they now received. Lady clerks were necessary, as they performed certain duties more efficiently and better than men (laughter).

The Government may be satisfied that soldier clerks and lady clerks could not be got for lesser pay, but Indians think that, as there is much unemployment in Britain, Government could have got white clerks of both sexes on lesser pay if they could have brought themselves to take advantage of white persons' neediness just as they have taken advantage of unemployment among Indian educated men to reduce the pay of Indian male clerks.

> Mr. S. C. Mitra: "May I ask the Hon. Member whether the Government of India have decided to recruit lady clerks for certain classes of work in the civil departments as well?"
>
> Sir Henry Haig: "I must have notice of this question."
>
> Mr. B. Das: "May I take it that lady clerks are employed because they exercise a healthy influence on the conscience of officers which leads to efficiency?"
>
> Mr. Tottenham: "No Sir."
>
> Mr. Maswood Ahmed: "Are they asked to leave service when they get married?"
>
> Mr. Tottenham: "That's so."
>
> Mr. Maswood Ahmed: "What's the reason for employing unmarried girls?"
>
> Mr. Tottenham: "Reasons are obvious. Married ladies have other duties to perform" (laughter).

Do the unmarried lady clerks perform these "other duties" of married ladies while unmarried, so that on getting married they cannot perform them both at home and in office because of the fatigue of reduplication?

> Sir Henry Gidney maintained that there was a considerable scope for reduction of expenditure under overhead charges. He objected to soldier clerks being given a higher pay. He recalled the fact that for ten years he had been urging economy in the medical services, but unfortunately though India had to foot the bill the War Office dictated the policy and insisted on a costly British personnel in the ancillary services. The speaker pleaded for a small army, a unit being raised from among Anglo-Indians and domiciled Europeans who must have a higher pay than Indian soldiers.
>
> Addressing Mr. Tottenham, he added: "They are sons of your own soldiers. Give them a chance of bearing the military burden and taking part in the defence of their own country."

The following "Twilight Twitters" from *The Bombay Sentinel* relate to the foregoing bits from the Assembly Catechism of March 6 last:

> Mr. Tottenham told the Assembly that the Army officials wanted "lady clerks" on higher salaries than Indians, because they could perform "certain duties" more efficiently and better than men.
>
> We believe you, George!
>
> To another Member Mr. Tottenham said that "lady clerks" left the service when they got married because the Army officers had no longer any use for married "lady clerks."
>
> He seems to know something.
>
> The Army Secretary further explained that "married ladies" had other duties to perform at home, which possibly they could not do in the office, though it was admitted that they did not exercise a healthy influence on the conscience of officers leading to efficiency.
>
> We had thought as much. But the bad example of the Army is now being copied by Civil officers who, too, can't be denied the efficiency of their "lady clerks" in performing certain duties.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Sir Henry Gidney made a moving appeal to the Army Secretary to raise a small army unit of Anglo-Indians and Domiciled Europeans, since "they are the sons of your own soldiers." Of course, it had no reference to this Army Secretary's explanation about lady clerks. The Army Secretary wisely refused to commit himself either way, and the parentage of the Colonel's Anglo-Indian wards remained undecided. We must now wait for a further appeal to soldiers by the gallant Colonel—who can never say die in such a good cause.

Commander-in-Chief on Wordy War-path

Sir Philip Chetwode, the Commander-in-Chief, said in the course of his speech during the debate on the Capitation Tribunal's Report in the Council of State that most of the speeches in both houses against excessive army expenditure were in the nature of special pleading in which "an economy of truth was practised." It was perhaps his extreme courtesy which led him to say that he would not like to characterize some of those speeches, in the words of a well known British politician, as "frigid and calculated lies." Was it because they did not want to be outdone in courtesy that the valiant Members of the Council of State referred to did not like to say or even to think that Sir Philip's speech abounded in tepid and effortless "terminological inexactitudes" involving a holocaust of truth? That Sir Philip had no regard for truth will appear from the fact that he has said that the army in India is kept solely for Indian purposes, whereas it is well known and was repeated in the House of Commons on March 7 last by Sir Samuel Hoare and Earl Winterton, a former under-secretary for state, that India is a training ground for the British troops and the army in India had been repeatedly used in the past and would be used in the future also for imperial purposes. The certificate of frugal use of truth which the aforesaid members have received from the Commander-in-Chief should stand them in good stead on the outbreak of the next world war. They should then apply for jobs in the British Imperial War Lies Department.

"Respectful" Co-operation

In giving relief to the sufferers from the earthquake in Bihar, it is not only unobjectionable but necessary that there should be co-operation between the Government and all the non-official agencies engaged in the work of philanthropy in that province. Such co-operation implies mutual confidence and respect. Therefore, Congress workers did nothing wrong to offer their co-operation to the Government unasked. But it would have been enough if simply co-operation or cordial or wholehearted co-operation had been offered. The addition of the word 'respectful' was at the best superfluous. On account of the use of words like 'respectfully' and 'most respectfully' in petitions and the like, the word 'respectful' in similar contexts has come to be associated more with conventional obsequiousness than with any sincere feeling of respect.

It is needless to emphasize that it is not here insinuated that Mahatma Gandhi has been obsequious. Such an insinuation would be absurd.

Reconstruction of Bihar and Hindu Architecture

As many towns and villages in Bihar will have to be reconstructed, all those who are directly and indirectly connected with the work of reconstruction should have their attention drawn to the ancient Indian ideas of village-planning, town-planning and architecture in general. They are to be found in Professor Dr. P. K. Acharya's masterly edition of the ancient standard Sanskrit work *Manasara* in five sumptuous volumes. Those who do not know Sanskrit need not think that the work will not be of any use to them. For Dr. Acharya has given a full English translation of the work with critical notes. There are also numerous plates, which will help architects, engineers and builders in their work.

European architecture has not been a complete success in India either from the artistic or from the economic point of view. We should give a trial to our own architectural rules and plans, which were not crude but scientific.

The eighty chapters of this monumental work deal with various subjects, among which may be mentioned, as of immediate importance, the selection of site, the examination of soil, site-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

plans, the village, town-planning, the dimensions of buildings, the bases and pedestals of columns, the features of buildings one-storeyed to twelve-storeyed, courts, temples, pavilions, mansions, dwelling-houses, royal palaces, etc.

As the Government and non-official relief societies and the Maharajadhiraj of Darbhanga are going to spend lakhs of rupees, they would do well to spend a very much smaller sum to purchase copies of this work, for the preparation and publication of which the author has received encouragement and assistance from the Government of India, the Government of the United Provinces and other governments, and some high officials. The work has been published by the Oxford University Press.

It has been reported in the papers that in Nepal old temples, constructed according to ancient Indian methods, have not suffered so much from the earthquake as more modern buildings. There is reason to believe that buildings on the *Manasara* plans and methods would be durable and beautiful, as well as comparatively inexpensive.

The patriotism of Mahatma Gandhi, Pandit Madan Mohan Malaviya, Babu Rajendra Prasad and other leaders need not be referred to. But it is not to their or anybody else's patriotism that it is necessary to appeal. The appeal is to common sense. And the common-sense view is that an elaborate and practical handbook of architecture, which has come down from antiquity and which embodies the age-long experience of many experts native to the soil and the climate, should at least be given a trial. To dismiss it without such trial, is to insult ourselves as well as our ancestors. Of course, there should be adaptations to modern conditions, wherever necessary.

Sir Abdur Rahim on the Capitation Charges

During the Budget debate in the Assembly, Sir Abdur Rahim moved a token cut in respect of the demand for the Army Department. In the course of his speech he said :

> India had been treated very inequitably in the matter of capitation charges. Only very meagre facts had been placed before the Assembly, but even those were enough to make the assertion that, while the Government of India had fought for fairplay, they had been treated very b... Sin and the Bihar Earthquake

According to the *Associated Press*,

> Patna, March 20.
> Mahatma Gandhi addressed the first pub... meeting at Mangles Tank, Patna City, this af... noon, when large crowds numbering about 40... gathered to hear him. An address on behalf ... citizens was presented to him.
> Gandhiji in the course of his speech sai... terrible calamity had befallen them as a pun... ment for their sins. Their duty after the terr... disaster was to purify themselves.

According to the *United Press*,

> Patna, March. 20.
> "Sin is the cause of this great calamity, th... I cannot say whose sin it is. Sin must be expi... by those who still survive." Thus said Maha... Gandhi addressing a largely attended p... meeting this evening held at Mangles T... Patna City.

Both the news agencies agree in reporti... that Mahatmaji said that sin was the cause ... the Bihar earthquake. The *United Press* ... the words "though I cannot say whose sin is." That perhaps means that Gandhiji does ... know definitely who the persons are whose ... has been punished in this terrible man... But these persons must be either the pres... generation of Biharis, killed or wounded by ... earthquake, or their ancestors. For it is ... well-observed fact that for certain kinds

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wickedness on the part of men and women their descendants suffer, as they likewise profit by the virtues of their ancestors. In the case of infectious or contagious diseases, men also sometimes suffer for the faults of others. Similarly, the good example and the influence of the good character of persons benefit others. All such cases of suffering and benefit admit of scientific explanation.

But Mahatmaji has not explained the laws according to which untouchability, lying, personal impurity, dishonesty, thieving, etc., can bring down strong buildings and thereby kill or wound men, women and children, cause fissures in the soil, spread sand over fertile lands, choke up wells, and so on and so forth. Nor has it been clear to us why God should punish the Biharis alone for the sins of Indians in general, including themselves;—for we are not among those who are in His secrets. It has never been demonstrated or asserted that the Biharis are the most wicked among Indians, or that untouchability, dishonesty, personal impurity, thieving, lying, etc., prevail in Bihar to a greater extent than in any other province or area. Are those in Bihar who have not suffered in life, limb or property by the earthquake entirely sinless or at least more virtuous than those who have suffered? Are those who have suffered most the most sinful? Justice requires that there should be gradation in punishment. Can anybody point out such gradation in the case of the sufferers from earthquake in Bihar? As regards untouchability, in certain parts of the Madras Presidency, for example, this evil custom prevails to a greater extent and in a more heinous form than in Bihar. If untouchability be the cause of the earthquake, why should Bihar be made the scapegoat for the sins of other areas? Of course, according to orthodox Christians, Jesus Christ suffered for the sins of all mankind, so that they might be saved. We do not believe in this doctrine of vicarious punishment or suffering. But even if we did, we do not know that anybody has claimed that the people of Bihar are like Christ and have been punished for the salvation of other Indians.

Somewhat figuratively it is true that all Indians are one family, the inhabitants of Bihar being part of the family. It is true in the same way that all men, including the people of Bihar, are one family. It is also true that sometimes innocent members of a family have to suffer for the faults of others. But if the theory that the Biharis are suffering for the sins of all Indians is to be accepted, it should first be established that the earthquake is really a visitation for sins, the causal connection between sin and the destruction of houses etc. and the like and human lives by earthquake should be established and it should be clearly proved why Bihar should have been chosen to suffer for itself and the rest of India. The Mahatma believes what he says and says what he believes. But mere assertions of even the greatest of men without proof cannot and ought not to satisfy all modern minds.

It is as well known to us as to the most loyal and devout of Gandhiji's disciples and followers that he is incapable of knowingly insulting or being cruel to anybody. But it seems to us that to tell the sufferers from the earthquake that they or their near and dear ones who are dead or maimed were or are sinners is to add insult and cruelty to their losses and sufferings. Not that they or any of us are immaculate. But why *practically* mark them out or brand them as sinners *par excellence*?

If sin be the cause of the havoc wrought by the earthquake, piety must be its remedy. And, therefore, if the people of Bihar be pious again, their ruined houses, lands, wells, etc., should be restored to their former condition without any engineering or other effort on the part of official and non-official agencies. We certainly want that men should be virtuous and pious, but not in the expectation that virtue and piety will prevent the loss and suffering caused by earthquakes, hurricanes, inundations etc.

We have said, we are not in the secrets of God, and we, therefore, profess complete agnosticism regarding the moral and spiritual causes of earthquakes, if any. Scientists may or may not have been able to discover the causes of all cosmical or terrestrial convulsions and disturbances. But of some they have been able to find out the causes. Meteorologists are trying to know beforehand the time of the breaking of storms or the approach of floods. On many occasions they have actually been

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection.

Digitized by Arya Samaj Foundation Chennai and eGangotri

able to give useful warnings beforehand, though so far as earthquakes are concerned scientists have not to our knowledge received or published premonitions. But it is our belief that if anybody were to say that hurricanes and floods were caused by the sins of sufferers from them, he might be instrumental in misleading people to believe that such terrestrial disturbances being caused by human sin, they could likewise be prevented by human piety, and therefore, meteorologists and other similar scientific men need not carry on their investigations or be listened to.

The idea of punishment should not at all be connected with terrestrial phenomena like earthquakes, volcanic eruptions, etc. They have happened in the past and would happen again in the future irrespective of whether particular continents, countries, provinces, districts, towns and villages are inhabited by the most virtuous people or not. Such things happen in consequence of the operation of natural laws, which also are no doubt expressions of God's will, for not even a leaf falls without His knowledge and will. But it is not correct to think that natural phenomena happen directly or necessarily to punish vice or reward virtue. The same forces of Nature which in some places and on some occasions cause loss and suffering are beneficial and cause happiness in other places and times. It is all in the day's work, and we should accept both kinds of occurrences with equanimity. Sudden or untimely death is not worse or more terrible than death of the opposite kind. Nor is death necessarily a punishment. It dissolves the body but not the soul. As for property, we cannot take it with us to the next world.

Moreover, we should bear in mind the fact that the anthropocentric idea of the universe is not applicable in all cases. It cannot be said that the Creator of the Universe does everything solely with a view to either rewarding or punishing men. There are other worlds than our own; aud other creatures, other organisms, other things than man even in this world. Cosmic and terrestrial phenomena have a bearing on all of them, which ought to be borne in mind, if not also studied.

In conclusion, we should like to add that justice requires that punishments should fit and be appropriate to offences. Decades ago Rabindranath Tagore wrote a poem which contains two lines in which, referring to the treatment received by the so-called untouchables and other similar classes in our country, he says: "O my luckless country, to those whom you have humiliated—you will have to be equal to them in your own humiliation." That India is a pariah among nations, appears to us to be a more appropriate and scientifically explicable punishment for the evil customs of untouchability and the like than the Bihar earthquake.

As an example of the opposite kind of thing happening to a nation, take the case of Japan. That country had the *Samurai* as its highest caste whose profession was to fight and to rule, and its *Eta*, who were the lowest caste and were untouchables. The Samurai gave up their privileges of their own accord and the stigma of untouchability was removed from the brows of the Eta. Japan's high place among nations is due in the last resort in part at least to the uplift of the lowly and the relinquishment of privileges by the aristocracy.

Independence for the Philippines

According to a Reuter's telegram,

> President Roosevelt has signed the Philippine Independence Bill already approved by the Congress granting independence within ten to twelve years. The messure is subject to approval by the Philippine Legislature, which must accept the terms of the Bill by October 1, otherwise the Bill lapses.

The terms of the Bill have not yet been cabled. But if the Filipinos get independence or even internal autonomy twelve years hence, they will get after 46 years of American occupation of their islands what India has not got after more than a century and a half of British occupation. Even now, the Filipinos have a far better constitution than what the White Paper *promises* to India.

Lord Willingdon on Lord Irwin

In Shakespeare's *Julius Caesar* Antony begins his funeral oration thus:—

"Friends, Romans, countrymen, lend me your ears; I come to bury Caesar, not to praise him.

CC-0. Prof. Satya Vrat Shastri Collection. Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In unveiling the statue of Lord Irwin, who is happily still in the land of the living, Lord Willingdon might have said :

"Friends, Britons, Indians, lend me your ears ; I come to praise Irwin, though I buried the Irwin-Gandhi pact."

Devanagari As Common Script

The address of His Highness the Maharaja Gaekwad of Baroda as president of the Hindi Conference at Delhi, which was read out for him in his absence, contains the following passage :

"As to the question of a common script for India, I am opposed to Roman for the same reason that I am opposed to English vernacular. It is not rooted in our soil. It is like the esperanto, an artificial product, not admittedly great, dozens of alphabets added to the confusion of tongues. But as in Hindi we can arrive at a Lingua Franca, so Devanagri is our natural common script. Any one who knows the Sanskrit characters can easily learn to read all the derivative scripts. Enlightened patriotism calls for a national tongue and reason urges that we achieve a standard and universal script. Our great neighbour China with four hundred million people is now teaching a common set of characters to all, and producing a new literature in the common tongue. If China in turmoil can do it, we can."

The adoption of Hindi or Urdu or Hindustani as the Lingua Indica does not involve the giving up or the suppression of the other living languages of India. When there is such a Lingua Indica, it will be used by those whose mother tongue it is not, only for interprovincial communication and for All-India purposes ; but at the same time those whose mother tongue it is not will continue to use their mother tongue and cultivate its literature. If, however, there is a common script for India of Indian origin, it must lead to the giving up of all other indigenous scripts. For, otherwise, except in the areas whose script is to become the common script of India, there would be two scripts, *viz.*, the All-India and the provincial. But that would be very inconvenient. In Andhra-desa or Tamil Nad or Orissa or Bengal or Assam, for example, it would be necessary to print Telugu, Tamil, Oriya, Bengali or Assamese books in two scripts. But if the All-India script alone were used in supersession of every other script, it would be necessary to print all books only in one script. That would be very convenient.

But we should be very careful in our choice and adoption of a script. Supposing all provinces of India agreed to have a Sanskritic script, of which we are not sure, though our personal predilection is in favour of such a script, it would by no means even then follow that Nagari would be the most suitable. It is neither the easiest nor the most convenient to read, write or print and perhaps it is not also the oldest.

It is true the Roman script is not rooted in our soil. But it was not rooted in the soil of Turkey, yet Turkey has adopted it. In saying this we are not arguing in favour of the adoption of the Roman script. What we mean is that, if a change has to be made, let us adopt that script which will make reading, writing and printing easiest for our children and children's children. There was a time when the Deva Nagari script did not exist. There were then older scripts which appeared to be rooted in our soil. Yet they have disappeared. If we make a good choice now, it will become rooted in the soil in course of time. It should also be borne in mind that no alphabet, no script, is perfect as a whole ;—some letters may be taken and kept as they are, others may have to be rejected, still others may have to be altered a little and some new ones may have to be added.

If unobjectionable from other points of view, that script would be preferable which would make it most practicable for Indians to have cultural and commercial relations with the largest number of men in and outside India.

Khan Obeidullah Khan Not to be Released.

It is much to be regretted that the Viceroy has refused to intervene in the matter of the suggested release of Khan Obeidullah Khan who is lying seriously ill at Multan jail. No doubt, the matter is strictly within the jurisdictiou of the N.-W. F. Province Government. But the Viceroy could have influenced that Government if he chose to do so.

"Why Not Poison Him ?"

With reference to this same gentleman (Khan Obeidullah Khan) Mr. Maswood

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ahmed, M.L.A., asked the Home Member in the Assembly, "If the Government propose to get rid of the man for ever, why not poison him?" This was to be sure a most astounding question, one the like of which has been, we believe, never asked in any legislative chamber. Does Mr. Maswood Ahmed know or suspect or imagine that the Government ever wanted to get rid of once for all and therefore poisoned any prisoner, internee or detenu, that he asked such a question? The matter arose thus:

New Delhi, Mar. 16.

Replying to Mr. Maswood Ahmed whether any correspondence had passed between the Government of India and the Government of North-West Frontier Province in connection with the illness of Obeidullah Khan, a political prisoner, now confined in Multan Central Jail, Sir Harry Haig stated that the Forntier Government had reported to the Government of India the facts which were subsequently published in a communique. The Government of India did not propose to take up with the Government of North-West Frontier Province the question of Obeidullah Khan's release, as the prisoner was undergoing imprisonment in default of giving security under section 40 of the Frontier Crimes Regulation and the Government of India were not prepared to interfere in the matter of his release, which was a concern of the Frontier Government.

Volleys of supplementary questions were asked from all corners of the House regarding the release and illness of Obeidullah Khan.

Mr. Maswood Ahmed asked whether it was not a fact that Obeidullah Khan has been suffering from tuberculosis.

Sir Harry Haig: I understand that is so.

Mr. Maswood Ahmed: Did he not first contract the disease at Multan?

Sir Harry Haig: I have no information as to when and where the disease was contracted.

Dewan Lalchand Navalrai: Are not the Government of India in view of the prisoner's serious illness and in view of the Frontier Government not taking proper steps prepared to interfere in the matter?

Sir Harry Haig: Certainly not. The prisoner resorted to hunger-strike and in my judgment the Government of India cannot interfere.

Mr. Maswood Ahmed: Is not Obeidullah Khan's case a peculiar one, inasmuch as he has been sent to the Multan Jail by the Frontier Government while responsibility of his health lies with the Panjab Government?

Sir Harry Haig: I don't think there is any serious complication there. The responsibility of his release lies with the Frontier Government.

Mr. D. K. Lahiri Chowdhury: Why did the prisoner resort to hunger-strike?

Sir Harry Haig: Shortly after his deportation he resorted to hunger-strike and this is the fifth occasion of hunger-strike apparently as a protest against his retransfer to Multan Jail.

Mr. Lahiri Chowdhury: Who will be responsible for the prisoner's death?

Sir Harry Haig: If a man resorts to hunger-strike and dies, the responsibility lies with him.

Dr. Ziauddin Ahmed: Obeidulla Khan contracted the disease at Multan, the climate of which place does not suit him. Why, then, has he been sent back there?

Mr. Navalrai: Who will be responsible if he dies?

Sir Harry Haig: The man himself who resorts to hunger-strikes voluntarily.

Mr. Maswood Ahmed: Haven't the Government of India intervened on similar occasions in the past?

Sir Harry Haig: I have no recollection, except in one case, which we do regard as peculiarly our own, namely, the case of Mr. Gandhi. (Laughter).

Dr. Ziauddin Ahmed: As he contracted tuberculosis in Multan is not it an essential part of jail discipline that he should not be kept in Multan?

Sir Harry Haig: He was sent to Multan, as the Government considered it to be in the interest of his health.

Mr. Maswood Ahmed: Will the Government enquire if he had tuberculosis at Multan?

Sir Harry Haig: I don't propose to make any enquiry.

Mr. Maswood Ahmed: If the Government propose to get rid of the man for ever, why not poison him?

Sir Harry Haig: That's not a reasonable way of looking at a hunger-striker who chooses to do so voluntarily, with the result that he has impaired his health.

Mr. Gayaprasad Singh: Are the Government aware that the mother of Obeidullah sent telegrams to the Members of the Assembly stating that the condition of the prisoner is precarious?

Sir Harry Haig: I am quite aware of the pressure that has been brought to bear on the members.

Mr. Gayaprasad Singh: How a telegram appealing for justice and sympathy can be regarded as pressure being brought to bear? (applause).

Sir Harry Haig: Members assume that certain action ought to have been taken. There I differ.

—*United Press.*

The impression in the mind of the public is that in many cases prisoners, internees, deportees or detenus do not get the treatment to which they are entitled even according to the jail code, that they seek remedies through the proper channel, and when they fail to get justice that way, they resort to hungerstrike. And at this stage Government officers refuse to enquire into the matter on the ground that the hungerstrikers want to force the hands of the Government. A sort of vicious circle comes into existence in this way.

It is encouraging to find that members of the Assembly from different provinces and communities interested themselves in the tragic case of Khan Obeidullah Khan. It is to be hoped this attitude would be kept up

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

other cases also. The number of men deprived of their liberty without trial is bigger in Bengal than elsewhere. Some of these men contracted tuberculosis or some other serious illness while in a state of detention, which ended fatally in not a very few cases. To be interested in the cases of such persons, one must remove from one's mind the assumption that they are terrorists (and the assumption that they are terrorists is one that has never been proved), as also the assumption that terrorists are not entitled to humane treatment, for the worst of human beings are entitled to humane treatment.

Vernacularization of Calcutta University Matriculation

The Hon'ble Khwaja Nazimuddin, Education Minister of Bengal, has recently stated that the Bengal Government approve of the vernacular vehicle of instruction and examination being adopted for the Calcutta University Matriculation, and that details are to be settled at a conference to which the University will be asked to send six delegates.

The approval could and should have been given long ago. But perhaps the Khwaja Saheb could not make up his mind until His Highness and Holiness the Right Honourable the Aga Khan, who is not a Bengali and does not know Bengali, gave an unsolicited and unwanted certificate to the Bengali language and literature and asked Mussalman Bengalis to cultivate it.

As for the details of the vernacularization to come to be settled at the Conference, there is some curiosity and much greater apprehension felt. The conference, one may be sure, will consist of at least 13 members, so that, even if all the University nominees were left-wingers, they might be easily outvoted.

"Whither Britain"

Mr. G. B. Shaw gave a broadcast talk in London in February last in the series named "Whither Britain." A summary of his talk runs as follows:

Mr. Shaw said that the instinct not only of the peasant Indian but even of the nearby Welshman, the Irishman, and the Scot, was to resent and repudiate Imperial dominance, so that if we were to preserve the connection, we must make it appear flattering and advantageous to all the parts of the Empire, giving them Home Rule, calling them Dominions instead of Colonies, and putting them on the same footing as what we called the Mother Country, or even on a better one. But let them think what that might lead to. There was only a handful of English-speaking people with pink skins in the Dominions. The Indians outnumbered the rest of the Empire, including England, five to one. Consequently, the effect of making India a Dominion, in the Canadian sense, would be that England would become, in effect, a Dominion of India, and England might not like that. England might break off from the Empire, as the United States did.

He could not feel sure of the permanence of any intimate political combination not based on homogeneity—on the people in the combination being reasonably like one another in their tastes and religious faiths, their traditions and hopes. A combination of the northern States of Europe with the United States of America, and with Australia and New Zealand, would be far more homogeneous than any possible combination of Europeans and Asiatics. If he were a stranger from another planet he would say that an attempt to combine England with India before England was combined with the United States on the one side and with all her Western European neighbours on the other was a crazy reversal of the natural order of things, and could not possibly last. If we did not make the constituents of the Empire so independent of England that England would have nothing to do but support an enormously expensive Navy to protect them, they would break off as the American Colonies did; yet if we granted them that independence, the tail would wag the dog, as it did very vigorously at the Ottawa Conference.

Mr. G. B. Shaw dared to refer to Indians, Welshmen, Irishmen and Scots resenting and repudiating Imperial dominance, because, unlike Pandit Jawaharlal Nehru, he talked in a place outside the jurisdiction of the Calcutta police and Chief Presidency Magistrate! Is it not?

A Gratuitous Jibe at the Bengali's "Babu English."

The following passage occurs in the presidential address of H. H. the Maharaja Gaekwad of Baroda, read at the twenty-third session of the Hindi Sahitya Sammelan held at Delhi last month:

> That Hindi can be made the vehicle of a great literature Tulsidas and Kabir showed. And a Bengali can learn it in a few days—whereas it takes him many years to speak even the Babu-speech which makes him a joke to those whose Macaulayan English he apes.

It is not clear why the Bengali or his "Babu-speech" has been brought in here. Rivalry or professional jealousy, or offended

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

dignity could not have been the cause. For the Maharaja is not an aspirant for clerkships to which Bengali Babus aspire, nor do the Bengali Babus want to become ruling princes. There are numerous Bengalis who speak Hindi as well as the average man whose mother tongue it is. Some Bengalis have written and others continue to write good Hindi. The Maharaja has great wealth and power to serve the cause of Hindi. But some Bengalis, too, have served and continue to serve its cause according to their resources.

The Maharaja's address has appeared in the papers in English. It is not stated whether it was originally written in English. If it was written in English, not in Hindi, which it ought to have been, that would go to show that the Maharaja was lacking in a sufficient knowledge of Hindi.

As for Babu-English, it is no discredit for a foreigner not to be able to speak and write English like Englishmen; but if a Bengali cannot speak and write Bengali correctly, that is discreditable to him. Bengalis are not the only foreigners who cannot speak and write English like Englishmen. And in spite of their Babu-English some Bengalis have attained distinction as writers of English. For example, in a letter to Rammohun Roy, one of the earliest Babus to speak and write English, Jeremy Bentham, the English philosopher, wrote: "Your works are made known to me by a book, in which I read a style, which, but for the name of a Hindu, I should certainly have ascribed to the pen of a superiorly educated and instructed Englishman." In the same letter, he praised the *History of India* by James Mill, but added: "though as to style I wish I could with truth and sincerity pronounce it equal to yours." Rammohun Roy's writings, however, have no place in English literature proper. But perhaps Babu Rabindranath Tagore's writings may occupy a small corner in it, as also those of Toru Dutt and Sarojini Naidu, daughters of Babus.

The Japanese Budget and The Indian Central and Provincial Budgets

For weeks past, newspapers have contained discussions of various items in the Central and the many Provincial Budgets and the council chambers have rung with debates relating to budget allotments and proposed cuts. Whether the Central Budget or any Provincial Budget is considered, one thing must strike the observer, *viz.*, the poverty of India. In spite of the Central and Provincial Governments having taxed the people to as great an extent as they can bear, how small, comparatively speaking, are the amounts budgeted for! One need not consider the budgets of wealthy Western countries like the U. S. A. or Great Britain. Even the budget of a comparatively small Asiatic country like Japan gives evidence of greater wealth than India. The weekly edition of the *Japan Chronicle*, dated February 2[illegible] last, states that the 2,120,000,000 yen budget was passed after feeble debate. According to the normal value of the yen, it is equivalent to 2 *sh.* and 1½ *d.* or say, roughly, Re. 1-8. So the amount budgeted for is Rs. 318,00,00,000 (three hundred and eighteen crores of rupees). The population of Japan proper is 6,44,50,000 (Oct. 1, 1930) and of the Japanese empire 9,03,96,043. The population of British India is 27,15,26,933. If the Japanese budget is the budget for the whole empire, then, according to the proportion which British India's population bears to that of the Japanese empire, *viz.*, 3 : 1, our central and all the provincial budgets combined ought to be for Rs. 954,00,000,000 (nine hundred and fifty-four crores of rupees), *if India were as rich as Japan.* But if the Japanese budget is for Japan proper alone, then as British India's population is more than four times that of Japan, our central and provincial budgets combined ought to be for Rs. 1,272,00,000,000 (twelve hundred and seventy-two crores of rupees). The budget estimates of all the provinces for 1934-35 are not before us. In the *Statesman's Year-book* for 1933 the total revenue (revised estimates) of the central and all the provincial Governments in 1931-32 is given as Rs. 203,72,52,000. It is stated in the same book that the above excludes the revenue of municipalities and district and local boards. Perhaps the Japanese budget does not include the revenues of Japanese municipalities and district and local boards. But if it does, let us add to our central and provincial revenues for 1931-32 the gross

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

income for 1929-30 of all our municipalities —Rs. 37,77,90,999—and the gross income in the same year of all our district and local boards, namely, Rs. 16,36,58,453, which are given in the aforesaid work. The total then comes to Rs. 257,87,01,452. Even this is much less than the amount budgeted for by Japan, and very much less than what our revenues ought to be according to the Japanese scale.

Japan is rich because she can spend much more in her "nation-building" departments than India, and she can spend much more than India because she is rich. So, that which is the cause from one point of view is the effect from the other point of view. From whichever point of view we consider the matter, Japan is able to do what she does, because she is self-ruling. India cannot become wealthier unless more is spent on her nation-building activities, and she cannot spend more on them unless she is wealthier. And it is obvious that she cannot be or do either until and unless she is self-ruling.

Therefore, though discussion of the details of the central and provincial budgets has its limited uses, the essential and main Indian endeavour should be directed towards the attainment of self-rule.

Schools for the Feeble-minded

In the United States of America, with less than half the population of British India, there are 303 schools for feeble-minded children in 1923 with a total of 1,04,021 pupils—58,966 boys and 45,055 girls. So far as we are aware, in the whole of India there is only one school for Indian feeble-minded children at present. One such school is in the Midnapur district of Bengal. It has 8 pupils—7 boys and 1 girl. One of the boys belongs to Hyderabad, Sindh. Even this small school is sorely in need of financial help. Recently Mr. Bottomley, the Director of Public Instruction, Bengal, visited the school and was satisfied with its working.

The Meaning of Austria

Austria is at present a very small State, containing a population of about 68 lakhs. But the political changes which have already occurred there are in importance out of all proportion to this small population. The leading article in *The Inquirer* of London for March 3 last, goes so far as to say that "it may well be that the fate of democratic government in the West has been decided by the crushing of Austrian democracy." According to *The New Republic* of America:

> The meaning of the Austrian tragedy, beneath all the surface complications, emerges. It is but a step in preparation of a new European holocaust, in which the workers, having been defeated at home and absorbed into capitalist states, will be set murdering one another across national boundaries.

From these two brief extracts the reader should be able to judge of the timeliness and importance of Mr. Subhas Chandra Bose's dispassionate and informing article on Austria in the present number of *The Modern Review*.

Bengal, Not "the favoured child"

It is a misfortune that in India there are communal dissensions, jealousies and bickerings, that there have cropped up linguistic jealousies, and that there are provincial jealousies to boot. While it may be a painful necessity to have sometimes to try to remedy injustice and wrong to particular communities and provinces, no Indian should knowingly say or do anything to aggravate the state of tension produced by the afore said jealousies, dissensions and bickerings. Some one has called Bengal a 'naughty child.' He ought not to have used the expression. But it is not necessary to take further notice of it. Others have spoken of Bengal as the "favoured child" of the Government. If Bengal were really favoured by the Government, Bengalis would not be proud of the fact. Sir Bampfylde Fuller spoke of the Mussalman Bengalis as his favourite wife. That expression was not appreciated by sensible Mussalman Bengalis.

As a matter of fact Bengal is not the favoured child of the Government. It is reluctantly and with some pain that in proof of our assertion we have to repeat certain facts which have been published in this *Review* more than once in previous numbers.

The following paragraph is from the Report of the Bengal Government's Retrenchment Committee, 1932:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The total revenues of the Government of India in the same year 1921-22, amounted to Rs. 64,52,66,000, of which Bengal contributed no less than Rs. 23,11,98,000. Its unfortunate position, therefore, was due, not to the natural poverty of the province, but solely to the method of allocating the total revenues of India between the provinces and the Central Government. The difficulties of the Government of Bengal were enhanced by the fact that the sources of revenue assigned to it were inelastic and gave little prospect of expansion in the near future.

Of the sources of revenue assigned to Bengal, excise is one. With more than double the population of Bombay Bengal's excise revenue is less than that of Bombay by Rs. 161 lakhs. With a population smaller than that of Bengal by more than three millions, Madras has an excise revenue exceeding that of Bengal by 336 lakhs. Bengal can, of course, make this source of revenue elastic by greater addiction to drink. But Bengal prefers temperance and inelasticity of this source of revenue.

The paragraph quoted above from the Bengal Retrenchment Committee's Report shows that in 1921-22 the Government of India derived more than 35 per cent of its total revenue from the one province of Bengal. That was not a favour shown to Bengal.

Nor was 1921-22 the only year when the Central Government took an excessive amount from Bengal. It has been a continuous process. Take another year, the year 1928-29, for example. In that year the provinces contributed to the Central Exchequer the sums shown against them in the following table :

	Rs.
Madras	7,14,00,000
Bombay	5,84,00,000
U. P.	7,17,00,000
Panjab	3,46,00,000
B. & O.	5,76,00,000
C. P. & B.	2,25,00,000
Assam	1,27,00,000
Bengal	16,59,00,000

This table shows that in 1928-29, next to Bengal the largest contributors to the Central Exchequer were the United Provinces and Madras. But these two provinces combined contributed only Rs. 14,31,00,000, which was Rs. 2,28,00,000 less than Bengal's contribution! Forced contribution, of course. This was not a favour shown to Bengal.

Our point is, not that more money ought to have been taken from the other provinces, but that less ought to have been taken from Bengal. revenue that That can be done by the Central Govern effecting economies in its expenditure.

The Permanent Settlement

It is usual to assert that, if it were not the Permanent Settlement of land reve Bengal would have got sufficient money for kinds of expenditure. But the existence the Permanent Settlement cannot be a justifi tion for taking an excessive amount in Bengal by bleeding her white.

The Permanent Settlement was not conc ded by the Government with a view to show favour to Bengal. Let us see what Rammoh Roy, who had nothing to do with our presen day provincial jealousies and controversi wrote about it. Said he :

"The amount of assessment fixed on the la of those provinces (Bengal, Behar and Orissa the time of the Permanent Settlement (1793), as high as had ever been assessed, and in m instances higher than had ever before been rea by the exertions of any government, Mohamm or British. Therefore, the Government sacrifi nothing in concluding that settlement. If it h not been formed, the landholders (*Zemind* would always have taken care to prevent revenue from increasing by not bringing the wa lands into cultivation, and by collusive arran ments to elude further demands; while the m of the cultivators would not have been at all be than it is now."

We refrain from quoting Rammohun R further to show how the Government at t time got more revenue by concluding i Permanent Settlement than by periodi settlements, as in this note our object is mer to point out that the Permanent Settlem was not concluded as a piece of favour Bengal, Bihar and Orissa, but as a measure necessity. It should also be borne in mind t as Rammohun Roy was a champion of peasants, he cannot be accused of spe pleading on behalf of the landholders.

If the Permanent Settlement has b beneficial to the landholders, which we do it has benefited solely or mainly that s body of men, not all Bengal or Bengalis general. On account of it, the zemind as a class, with some exceptions, have be indolent and unenterprising spendthrifts, consequence of which hundreds of their est in district after district have been sold fo song owing to their inability to pay the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

As regards the number of men in Bengal who may have got more money from the land owing to the Permanent Settlement than they could have otherwise done, a definite idea can be formed from the number of estates in the province, which is 1,01,594. As landholders generally own several estates each, the number of zemindars can be counted only in thousands, whereas the total population of Bengal is more than fifty millions.

Exaggerated ideas prevail as to the land revenue which Bengal *should* pay. The following table shows the areas in square miles of the bigger provinces of India, and the land revenue in rupees collected from them in 1930-31, the latest year for which figures have been given in the *Statistical Abstract for British India*, 1933 :

Province.	Area in Square miles.	Land revenue.
Madras	142,277	488,61,964
Bombay	123,679	474,45,139
Bengal	77,521	308,93,102
United Provinces	106,248	647,98,933
Punjab	99,200	269,42,631
Bihar and Orissa	83,054	180,03,708
C. P. and Berar	99,920	218,59,292

This table shows that in area Bengal is the smallest of the major provinces, but it is not Bengal which pays the smallest amount as land revenue. Considering area, the United Provinces have to pay an exorbitantly high land revenue, which explains the genesis of the agrarian movement there.

It is, no doubt, true that the area of the cultivated and cultivable land in each province is not in every case proportionate to its total area. So let us see how much such land each province has.

The figures are in millions of acres.

Province	Net Area actually sown	Current fallows	Culturable waste other than fallow
Madras	34	10	12
Bombay	32	10	6
Bengal	23	5	5
United Provinces	35	2	10
Punjab	26	4	14
Bihar and Orissa	24	6	6
C. P. and Berar	25	3	14

In this table also Bengal is found to be at the bottom as regards the net area of land actually sown, as also the total of such land *plus* current fallows and culturable waste other than fallow.

So, from whatever point of view we look at the matter, Bengal should not be expected to pay a very much larger land revenue than she does. It may be that some of her land is very fertile. But that is the case with most other provinces. On the other hand, Bengal labours under two disadvantages ; *viz.*, she has to support a larger agricultural population than any other province, and she does not enjoy to any appreciable extent the advantage of productive Government irrigation works, which most other provinces do.

Statue of Sir Asutosh Mukhopadhyay Unveiled

That men should be known or characterized by their being likened to some lower

Statue of Sir Asutosh Mookerjee

animal or other is not a practice to be proud of. For Man is higher than the highest of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lower animals. But even the ancients in India and foreign countries used to compare some men to lions, tigers, bulls, etc., and even the gait of beautiful women used to be likened to the movements of elephants! So there is no help for it. But for all that, it is not because Sir Asutosh Mukhopadhyay has been styled by his admirers "The Bengal Tiger," that he has deserved a statue—though, of course, if wolves, foxes, jackals and asses have statues erected to their memory, a Tiger among men certainly deserved one. The reason why Sir Asutosh deserved a statue is that he had a high and comprehensive intellectual ideal for the Calcutta University and did great things courageously and sagaciously to realize that ideal.

He was a Swadeshist. And it is, therefore, fitting that his statue should have been made by an Indian artist, Mr. Deviprasad Roy Chowdhury, principal of the Madras School of Arts. It is to be hoped that in future the casting in bronze of such statues would also be possible in India.

Irrigation in the Provinces

The following two tables, taken from the *Statistical Abstract for British India*, 1933, show the advantages of Government canal irrigation enjoyed by some provinces.

PRODUCTIVE WORKS

Province	Mileage	Capital outlay
Madras	3,749	126553942
Bombay	4,986	194475766
Bengal	Nil	6743541
United Provinces	2372	220025636
Panjab	3266	327802051
Burma	354	21221281
N.-W. F. Province	86	7407400

UNPRODUCTIVE WORKS

Province	Mileage	Capital outlay
Madras	716	40394528
Bombay	2832	128287004
Bengal	70	8492053
United Provinces	447	31186812
Panjab	1047	5967198
Burma	140	17030509
Bihar and Orissa	718	62763915
Central Provinces	352	66317678
N.-W. F. Province	138	22014647

These two tables show that in irrigation Bengal has not been treated as a favoured child, though she stands sorely in need of irrigation. Another table is given below to support that conclusion.

Province.	Acres irrigated from Government canals
Madras	3700567
Bombay	3209387
Bengal	77188
United Provinces	3060320
Panjab	10238527
Burma	663356
Bihar and Orissa	775241
N.-W. F. Province	392055

Education: Agricultural and Training Colleges

Bengal is the most populous province. But its educational expenditure from Government funds is less than that of Madras, Bombay, U. P. and the Panjab. The actual figures were given in our last number. This does not show that Bengal is a favoured child.

While there are agricultural colleges in Madras, Bombay, U. P., Panjab, Burma, and C. P. and Berar, of which the expenses were given in our last number, Bengal has no agricultural college. This does not show that Bengal is a favoured child.

The Eighth Quinquennial Review of Education in Bengal, 1927-1932, says:

> "When we consider how many schools there are in Bengal and how few trained teachers, the output of the training colleges seems a mere drop in the bucket; 78 per cent of the high school teachers in Madras are trained, and 81 per cent of the middle school teachers. In Bengal there are only 13 per cent trained teachers in high schools and only 27 per cent in middle schools."

These figures do not show that Bengal is a favoured child.

Revenues Left to Different Provinces for their Expenditure

It has been shown before that the Central Government takes from Bengal a much greater proportion of and a much greater actual amount from the revenues collected within the province than from any other province, with the result that an utterly inadequate amount is left for her provincial expenses. With populations of 21, 23, 48, and 50 millions respectively, Bombay, the Panjab, the U. P. and Bengal are to be allowed by the Central Government in 1934-35 to have for provincial expenditure 1522, 1066, 1150, and 907 lakhs respectively. This does not show that Bengal is a favoured child.

Meston Award and the Provinces

The Meston Award has hit some provinces hard, Bengal being the hardest hit, as shown above. But Bengal has never stood in the way of any other province obtaining justice, nor called it a favoured child of the Government.

Bengal and Jute Export Duty

All this talk of Bengal being the favoured child has arisen out of the fact that the Central Government has been convinced that the appropriation of the jute export duty by the Central Government has been unjust to Bengal, and also to Assam and Bihar. But instead of allowing Bengal, Assam and Bihar to have the whole of what is collected in these provinces, the Government of India has decided to let them keep only half of the proceeds of the duty.

Now, this is not charity, not dole, but only very partial reparation of a wrong. From the year in which the duty was imposed, the Government of India has got from this source some sixty crores of rupees. To this large sum, the Central Government was not at all entitled; as the duty was not an import but an export duty, and the thing exported was a monopoly, mostly of Bengal, and in small part of Assam and Bihar.

If any other province is entitled to get or keep the whole or part of any other tax, it should certainly have it. Bengal will not stand in the way or be jealous or say that that province is a favoured child of the Government.

Excise Duty on Matches, and "Assistance" to Bengal!

The mischief is due in great part, if not entirely, to the language used by Sir George Schuster, the Finance Member, in stating how he would remedy the wrong done to Bengal. By the Central Government's legalized misappropriation of a great part of Bengal's revenues, Bengal has been reduced to poverty. Therefore, if the legalized misappropriation is to cease entirely or in part, the honest thing to do is to repent and to say that there will not be any legalized misappropriation any longer. But instead of doing that Sir George Schuster describes Bengal as a beggar who requires charity. Mark his language. Paragraph 33 of his budget speech is entitled proposal for financial *assistance* to Bengal. First the province is artificially beggared and then there is talk of assisting it!

Then we are told, "the need for some special help to Bengal has been recognized in the White Paper; . . ," because Bengal has been piling up deficits! As the Central Government has been exacting forced contributions, what could Bengal do but pile up deficits?

Not only the people of Bengal but successive Governors of Bengal have protested against the Central Government taking away the proceeds of the jute duty. Moreover, the Aga Khan, in a recent speech of his, has supported Bengal's claim to the whole of the jute export duty, stating that he and those with whom he was associated at the Round Table Conference and the Joint Parliamentary Committee's sittings had throughout supported this claim as entirely just.

It was wrong on the part of Sir George Schuster to state in paragraph 34 of his budget speech that the imposition of an excise duty on matches was meant to *help* Bengal. This led non-Bengalis in particular to think that they were being taxed to give alms to Bengal. It should be borne in mind that, but for the 60 crores of rupees of the jute export duty taken mostly from Bengal, all the provinces would have had to be taxed to a much greater extent, and that Bengal, being the most populous province, would have to pay a greater portion of the matches duty than any other province.

Not that we support the matches duty or sugar duty or any other duty going to be imposed. The Central Government should and could have met all just claims and expenses by wise economy without fresh taxation.

Some Advantages Accruing to Provinces other than Bengal

Many persons have thought and said that Bengal has been greatly favoured by the Government by the Permanent Settlement. We have briefly stated some facts relating to it in a previous note. Let us assume, however, that it has been of great advantage to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bengal. The question is, have not the Government done other things which have benefited mainly provinces other than Bengal ?

Vast sums have been spent on irrigation works. Very little of these have fallen to Bengal's share.

The Government have spent very much less for giving education to Bengal than to many other provinces.

The textile protective duties have brought wealth mainly to Bombay, and Bengal, having few cotton mills, has only had to pay higher price for cloth and yarn. Of course, Bengal may be foolish and wanting in business ability and enterprise, and may be to blame. But we are stating facts.

The iron and steel protective duties have benefited mostly Bombay. Bengal has had to purchase iron and steel goods at a higher price.

The import duty on wheat has benefited mainly the Panjab and the U. P. and next to them C. P. and Berar, Bombay, and B. and O. Bengal has had to purchase wheat at a higher price, cheap Australian wheat having been made dear by the import duty on wheat.

Being the largest consumer of salt Bengal has suffered from the salt duty most, the Government have not helped or encouraged Bengal to manufacture salt, and the Bombay-Aden merchants have gained most.

It may be that it is due to Bengal's lack of ability that she has not gained any advantage from these duties, etc. ; but she has at least refrained from insulting the other provinces by wrongly saying that they are the favoured children of the Government. For the promotion of Swadeshism and national unity Bengal has cheerfully paid higher prices and suffered in other ways, and is prepared to do so in the future also. She does not grudge any province's good luck or reward for enterprise.

"Favoured Child" Indeed !

Bengal, which is mostly a uni-lingual province, has been dismembered three times—once, when some Bengali-speaking areas were tacked on to Assam in the last century ; secondly, when Bengal was partitioned to create the province of East Bengal and Assam ; and thirdly, when in the alleged act of unsettling the Curzonian Partition of Bengal, some Bengali-speaking areas were separated from Bengal and tacked on to Bihar. Hundreds of Bengali youths have been detained for indefinite periods at Deoli, Buxa and Hijli detention camps and in some ordinary jails without trial. Nobody has ever proved or even tried to prove that they are terrorists. In the two houses of the present Central Legislature Bengal has not been given the number of representatives she is entitled to on the basis of population, or on the bases of cultural progress, volume of trade, manufactures, agricultural produce, extraction of minerals, etc. In the White Paper proposals also Bengal has been given a smaller number of seats in the Central Legislature than she would be entitled to on the basis of population or any other basis.

These facts do not show that Bengal is a favoured child.

The Late Princess Kamala Raja Scindia

The accidental death of the Princess Kamala Raja Scindia of Gwalior so soon after her marriage is a great tragedy. She was an educated and accomplished princess—educated

Princess Kamala Raja Scindia

and accomplished not only in the ordinary sense also in the Maratha sense. A brief character sketch of the princess by Professor Hira Lal Chatterjee has to be held over for our next issue on account of want of space in the present number.

Disabilities of "Harijans" in Madras

Mahatma Gandhi has published in *Harijan* of March 9, 1934, a catalogue of the disabilities of 'Adi-Hindus of Tamil Districts' which he has condensed from a memorandum received by him at Coonoor. This indictment of Madras 'caste-Hindus' consists of 17 counts with many more sub-counts, concluding with the 18th count, which runs :

"We feel sorry that your august person has not taken birth in the Adi-Hindu community to realize our practical difficulties."

The list of disabilities is really formidable, Gandhiji says, and reflects the greatest discredit on the Hindu community of South India. In going through it one does not wonder that a person like Mahatma Gandhi, who feels so much for the 'Adi-Hindus', thinks that the Bihar earthquake was caused by the sin of untouchability.

Gandhiji has appended the following remarks to the catalogue :

This is a formidable catalogue. There is no exaggeration in it, if one or two mental reservations are understood. Every statement is true of some place. No disability is universal. Some are rare. And all are being abated by voluntary effort. These reservations should be known in order to get the proper perspective. They do not in any way reduce caste-Hindus' shame or warrant inaction on the part of reformers. The shame of caste-Hindus will continue so long as these disabilities are practised in the name of religion, no matter to how little or great an extent. It is the clear duty of Sanatanists, so-called, to denounce the disabilities in the severest possible language and join hands with the reformers in protecting Harijans from humiliation heaped upon them under the sanction of religious custom. The eighteenth grievance which the signatories have specially underlined I regard as a compliment paid by them to me. Yes, it is quite possible that I would have felt the force of these terrible grievances much more, had I been born an Adi-Hindu. Not having had that luck, I have become one by adoption. There will be no rest for me, nor society, so long as untouchability persists.

The late Pandit Shyamlal Nehru

The late Pandit Shyamlal Nehru, whose sudden death was announced last month, had been recently taking much active part in public life. His activities in connection with Mrs. Besant's Home Rule movement and with the Congress movement, and what he did in addition to the now defunct *Independent* of Allahabad and as an M. L. A., were recalled by several members of the Legislative Assembly when appropriate references were made to him.

The late Raja Sir Motichand

At the public meeting recently held in the Calcutta Albert Hall to pay respect to the memory of the late Raja Sir Motichand of Benares, references were made to the culture and philanthropy of the deceased gentleman. He made a gift of one lakh of rupees to the Benares University, founded and maintained the Anath Ashram and gave regular help to many institutions. He was a champion of the Swadeshi movement and founded the Benares Bank. A memorial meeting in Calcutta in honour of a Benares *rais* must not be considered a formal affair, for cordial relations existed between many men of Bengal and Raja Sir Motichand and his relatives like Babu Shivaprasad Gupta, Babu Gokulchand and the late Babu Mangalaprasad.

The late Babu Nafar Chandra Pal Chaudhuri

The late Babu Nafar Chandra Pal Chaudhuri of Natuda, who was the premier landlord of the Nadia district, died recently in Calcutta at the advanced age of 86. He belonged to a generation of which there are not many survivors in Bengal today. He will be remembered for his educational donations, for having established and maintained a high school, and a charitable dispensary and hospital, and for his work as Vice-Chairman of the District Board. Above all, he will be remembered for having successfully and stoutly fought the powerful European indigo-planters of his district, thereby recovering a great part of his extensive property from their clutches and saved the tenants from their oppression.

The Late R. B. Sundar Das Suri

The late Rai Bahadur Sundar Das Suri, who died recently at Lahore at the age of about 77, was a noted educationist of the Panjab. The last appointment which he held in the public service was that of Inspector of Schools. He was a Fellow of the Panjab University and a Trustee of the Dyal Singh College and Library from their very inception. He had a wide knowledge of economics. His

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

book on "Some Aspects of the Gold Standard" was published in February last. He was a pioneer of the education of girls and women in the Panjab. He introduced co-education in the Dyal Singh College.

Communalism in Education in the Panjab

For some time past efforts have been going on for the introduction of "communal representation" in the Panjab University. Dr. Lucas's recent resolution in favour of so-called adequate representation of different Indian communities in it is a thin (or rather thick) end of the wedge. The idea of communal representation is nowhere more absurd and mischievous than in the sphere of education, particularly when "adequate" is taken to mean, not in proportion to the number of educational institutions maintained by a community, not in proportion to its educational endowments and the number of its educated men and students, but merely in proportion to the numbers of men, women and children, however illiterate, which belong to it. Such attempts are being made in Bengal also. The movement is at bottom one for jobs and more jobs, not the advancement of learning.

The Right to Live

In Bombay, Karachi, and some other places labourers have made demonstrations with slogans like "give us work or give us bread." These betoken the increasing self-consciousness of the masses, and, whatever the "Haves" may think, are welcome signs of the social changes which are inevitable.

Every human being who is born has the right to live. This right to live is more sacred than the right to property. The right to live consists of the right to food, raiment, dwelling, knowledge, health and happiness. No society, no State can be said to be alive to its duties which does not in practice recognize this right. History records numerous instances of unrest and revolutions due to the practical non-recognition of this right.

Alleged Conduct of Soldiers in Midnapur

An Associated Press message, dated New Delhi, March 19, runs as follows :

> During the discussion on the Finance Bill in the Assembly today Mr. S. C. Mitra in the course of his speech read out to the House grave allegations regarding the behaviour of soldiers posted in Midnapore District (Contai Sub-division). He said that the profession of a soldier was respected in India but it was now being disgraced. All instances quoted by the speaker mentioned names of the parties concerned and many cases of alleged included unusually harsh treatment for persons refusing to salute the Union Jack under compulsion and invitations to the people to attend receptions of the District Magistrate and to soldiers under threat that absence would mean disloyalty. A number of offences against women were alleged and wanton destruction of property and stealing of cash and ornaments.
>
> He further related how schools had been forced to receive batches of soldiers at the time of their visit and how tea-parties and 'dallies' or in lieu thereof cash payments were extorted from the public. (Cries of 'shame' 'shame' from the non-official members).
>
> Mr. Mitra complained that the Commander-in-Chief never attended the Assembly now. The speaker said that he was prepared to hand over to Government the complaints he had made. He recalled that he had made similar statements last year, but no information was available as to what action was taken by Government.
>
> Dealing next with the case of detenus Mr. Mitra pleaded that political prisoners should be given better treatment and that detenus kept so long should be released. He felt that the spirit of patriotism once kindled could not be killed by repression but Government could devise means for bringing these men towards constitutional methods of agitation. Yet Government had done nothing in that direction.

Sir Harry Haig, the Home Member, was not present (which he ought to have been when Mr. Mitra made all these allegations). He replied to the charges on March 21. Mr. Mitra had mentioned the names of the parties concerned and had given specific instances. Sir Harry said :

> It was impossible for any Government Member to give a categorical answer to the points raised in the course of a debate and he would ask the Bengal Government to supply the information.

The allegations made by Mr. Mitra had been made previously at a public meeting in the Calcutta Albert Hall and in newspapers, and a public inquiry had been asked for. But no such enquiry has been made. A statement made by a government that allegations are entirely unfounded or exaggerated, do not at all convince the public. For such official statements proceed in the last resort from the very men whose acts are complained against or from their superior officers. Now, just as Sir Harry Haig cannot be assumed to be superior to the public opinion of India in general, so those who complain of the conduct of soldiers, etc. and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

information to M. L. A.s and other public men cannot be assumed to be less reliable than the village chaukidars, constables and other policemen, sepoys, etc. It is only a public enquiry which can supply data for arriving at a correct conclusion. When the conduct of some soldiers in Burma was complained of Lord Curzon had a memorable inquiry instituted and punished the offenders and their blows, for which he became very unpopular with the Army and was hissed at at the Durbar. But he was a strong man and did not deviate from what he considered to be his duty. His example should be emulated by the present-day rulers of India. More recently, in the Hijli affair, even an official inquiry publicly made exposed the untruthfulness of the parties complained against and the false statements which had emanated from the secretariat.

"Monopoly of Patriotism"

Some sentences in Sir Harry Haig's speech in reply to Mr. S. C. Mitra's allegations require a little comment.

Referring to the problem of detenus, Sir Harry Haig was astonished at Mr. Mitra's charges. Mr. Mitra had declared that Government should not imagine that by merely keeping in restraint a few thousand young men they would kill the ideas of patriotism.

Sir Harry Haig asked: Does Mr. Mitra think that we are keeping these young men in order to kill the ideas of patriotism? The problem of detenus is practically confined to Bengal. Are there no patriots in other provinces? Has Bengal the monopoly of patriotism? Or is it not that Bengal has the monopoly of something different (political murder)? What Government are seeking is not to repress patriotism, but the desire for murder. That is the justification for the policy of keeping those young men under restraint. We fully believe that they are terrorists. The Bengal Government check their information by placing it before two Judges. If they proceed on wrong information, it is only in a very small number of cases.

Mr. Mitra, interrupting, stated that the procedure was only in respect of State prisoners.

Sir Harry Haig replied, "As regards State prisoners we follow exactly the same procedure as is followed by the Bengal Government in regard to prisoners under the criminal law. I would invite Mr. Mitra to make it clear whether by expressing his feelings, as he did, he in any way desired to support the murder of Government officials or their friends."

Mr. Mitra immediately answered in the negative.

Sir Harry Haig: I have no doubt that he did not desire to encourage that feeling, but somehow his language was open to that doubt.

Just as Sir George Schuster's statement in his budget speech that the duty on matches was meant to "help" Bengal had the tendency to rouse and did rouse feelings of hostility to Bengal, so Sir Harry Haig's question, "Has Bengal the monopoly of patriotism?" was likely to rouse undesirable feelings against Bengal which would be injurious to the cause of Indian national unity and solidarity.

As Sir Harry Haig and other Government officers of his ilk "fully believe" that all the detenus are terrorists, it is not to be surprised at that he misunderstood Mr. Mitra. But Mr. Mitra's real meaning was quite plain to the non-official public. In Bengal at any rate, the belief (it may be a wrong belief) very widely prevails that the presence of some terrorists in the province has been taken advantage of by the police to bring about the detention of a much larger number of non-violent workers for the cause of freedom. It was understood that Mr. S. C. Mitra must have spoken under the influence of that belief. Neither he nor any other Bengali public man is so foolish as to say or suggest that Bengal has a monopoly of patriotism. Bengal has not. There is patriotism in other provinces, too. The Government's reaction to and treatment of the malady may be different in different provinces.

Sir Harry Haig says that the Bengal Government check their information against detenus and state prisoners by placing it before two Judges. "If they proceed on wrong information, it is only in a very small number of cases." Thanks for that small admission. But the cases may really be much larger. Whatever may be the real state of things, mere examination of information in camera by two Judges (or more) can never be a substitute for a public trial according to the ordinary processes of the law, with the right of the accused to examine and cross-examine the prosecution, to bring forward defence witnesses, to engage counsel and to exercise the right of appeal.

Sir Harry Haig says that Bengal has the monopoly of political murder in India. That is true of recent times but not of all time, as history would tell him.

The Viceroy on Unemployment

In the course of his inaugural speech at the third inter-university conference at New Delhi H. E. Lord Willingdon said:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It is heart-rending that many young men who have fought their way successfully up the educational ladder and have gained high degrees and distinctions, often in spite of many obstacles and handicaps, are yet unable to find means either of maintaining themselves or of serving their fellow men. From the point of view of the country it is disastrous that the labours and initiative of these young men should be running to waste.

Keen and unmerited disappointment, accentuated by irksome inactivity, are apt to lead high-spirited young men into dangerous and unexpected channels.

When, for whatever reasons, high-spirited young men are found to have actually been led into dangerous and unexpected channels but not to have actually committed under or aided or abetted in murder actually committed, the remedy provided by the latest criminal law in Bengal is to hang them.

Inter-University Conference

Eighteen universities for 352 millions of people are not too many, but too few. The number of Indian University students is not too large but too small. Indian Universities teach not too many but too few subjects. If any of them attempt to teach any subjects for which they have not got adequate resources, the remedy is not to restrict their freedom of teaching any subject they like, but to provide them with sufficient resources. If the State cannot or will not do that, neither should the State deprive the Universities of freedom. In Great Britain, in U. S. A., in Germany, and in many other countries, the same subject is often taught in more than one University. If in a large country like India, Universities do the same, it is unnecessary, nay mischievous, to call it overlapping.

If the Inter-University Conference be in official leading strings and want really only or mainly to control and restrict but not to give substantial help and guidance to Universities, it cannot discharge any useful function.

Sudden Coup in Nepal

According to a long *Associated Press* statement, from which we make brief extracts,

> There was a dramatic scene when on Sunday March 18 in the presence of His Majesty the King of Nepal the five senior members of that branch (Class C) of the ruling family which cannot claim "pure descent" were formally deprived of their appointments and of all rights of succession and power as members of the ruling military oligarchy, of which His Highness the Maharaja Sir Jodha Shumshere Jung Bahadur Rana, G. C. I. E., is the head.

The reason for this *coup* is given in p in the following paragraph :

> The three classes of the family are compos of (A) those descended from Bir Sadu or one of his sixteen brothers, of whom present Maharaja is the only survivor, by w belonging to the same caste. Class B is compos of those descendants by wives of high but caste to that of the ruling dynasty. Clas has always been excluded from the succession from the hierarchy of persons composing military oligarchy. Class C, however, descen from women of low caste, had always been tole ed owing to the fact that the children w brought up with their fathers, who were unw to make any invidious distinctions. But as next person in the line of succession belonged this class, trouble was foreshadowed owing to probability that the Nepalese people, who have great regard for purity of descent, might not prepared to accept as the ruling chief a member this class, with the result that the permanency the dynasty might be jeopardized.

As among the senior members of class Rudra had attained the rank of Commande in-Chief and is stated to enjoy great popular with the army, he was obviously a very ab man. Statecraft of a certain character mig have necessitated his and his kinsmen degradation, but the step cannot be defende on grounds of justice. It is fortunate th there has not been any bloodshed.

S. B. Samaj Earthquake Relief Work

The Sadharan Brahmo Samaj has be giving relief on a small scale to perso rendered helpless by the earthquake Monghyr and at Bishanpur near Sitamarhi.

Up to 23rd March, 1934, the relief wo done at Monghyr has been as follows :

> Cloths and blankets have been distributed am the needy people of the *bhadralog* class in the town of Monghyr and some rice given to poorer people living on the outskirts of the t In the village of Mai, Hussanpur and Sandi materials have been issued for the building 75 huts by the poor people without distinction caste and creed on their own homesteads Steps are now being taken to enable these villa to complete the construction of their huts. In work the Government Housing Committee been helping us by selling bamboos to us at a discount on the cost price and the Bihar Co Relief Committee has been supplying us coir ropes at cost price.

But funds being very inadequate it will be possible to continue the good work much longer. The need is great and urgent. Those who want to help, will kindly send their subscriptions to Secretary, Sadharan Brahmo Somaj Office, 211, Cornwallis Street, Calcutta.

THE MODERN REVIEW

MAY 1934

VOL. LV., No. 5 WHOLE No. 329

THE CRIME OF COLOUR

BY NAGENDRA NATH GUPTA

PROBABLY there has never been a time when men have not prided themselves and considered themselves superior to other men for one reason or another: it may be the possession of wealth, the consciousness of greater physical strength or higher intellectual powers, or the membership of a superior race. A distinction has to be made between individual pride and racial pride. A Roman was proud because he was a citizen of Rome even if he had no claim to any individual achievement entitling him to fame. An Israelite was proud because he belonged to a tribe reputed to be the chosen people of God. In such and similar cases pride was looked upon as a birthright.

There were various shades of this feeling of pride. There was the pride of race or national pride, there was class pride, and finally, there was individual pride. This last may be left out of account, because it is scarcely a matter of public concern. When a nation has the misfortune to be subject to another the scornful pride of the ruling race is easily explicable. The pride of class is a different thing. The patricians and plebians were both Romans, both had equal right to call themselves Roman citizens, and yet the plebian grovelled before the patrician. The Brahmin and the Vaishya were both Aryans, but the Vaishya dared not keep his seat on the approach of a Brahmin. Superiority and contempt were expressed in various ways: one proclaimed that he was a Roman, another contemned another as an Anarya; the Greeks prided themselves not only on their valour but on their looks. To them physical beauty was a high cult.

There is no evidence, however, in the ancient literature of any race that the colour, or the absence of colour, of the skin was ever regarded as a source of national or racial pride. The pigment of the skin is due to the sun. Near the equator the fierce heat of the sun tends to darken the skin; in temperate and cold climates the skin becomes light and fair. The whiteness of the skin is no indication of the greatness of a race. If so, the Laplanders should have become a great nation. According to the weight of evidence as collected by European Egyptologists the ancient Egyptians were the oldest of the civilized nations of the world and they were by no means a white-skinned race. On the other hand, the children of Israel, who exceeded the Egyptians in numbers, were a fair-skinned people, but were held in bondage for a long time by the Egyptians. In the end, they did not rise and overthrow the power of the Egyptians, but escaped from captivity and crossed the Red Sea and settled in Palestine. The Israelites themselves claimed all sorts of privileges as a chosen people, but they never prided themselves upon the colour of their skin. They despised the worshippers of idols and the uncircumcised,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

but it is nowhere mentioned that they looked down upon black-skinned races and tribes, nor is there any proof that they were proud of their complexion.

The ancient Romans were not a white race but the world has never known another nation so proud as these ancient people. Combined with all the arrogance and insolence of a powerful nation the Romans had a splendid poise, a superb self-reliance. No nation in Europe or anywhere on the face of the earth today can claim equality with the Romans. Modern Europe lives in the shadow of ancient Rome. The language of Rome is the mother of many European tongues, high academic addresses are still spoken in the language of Rome, the laws of Rome are the model on which the laws of the most advanced countries in Europe are framed. To be called Cæsar would be the highest ambition of any crowned monarch—there are very few now left—in Europe. A proud or an ambitious Italian calls himself a Roman, but it is a memory and nothing more. The blue-eyed, white Saxon was conquered and ruled by the olive-skinned Roman, who regarded the conquest of a part of Britain as a trivial incident. There was no such thing as the pride of skin among the ancient great nations of the world and most of them were not white-skinned.

In the wide range of Shakespeare's creations two black-skinned characters are to be found: the first is Othello, one of nature's noblemen, the hero of the play, which is named after him. He was a moor of Venice and there can be no question as regards the ebon of his skin. Othello was a great captain; he lived and spoke as a great man, and never said or did anything ignoble. His one weakness was his unreasoning jealousy of his white wife, Desdemona. The villain who poisoned his ears and was responsible for the murder of Desdemona and the suicide of Othello was Iago, a white-skinned Greek. The second black-skinned character is the Prince of Morocco, a suitor for the hand of Portia in the *Merchant of Venice*. Portia was not free to choose a husband. Her deceased father had arranged that she should be the prize in a lottery and the man who opened the right casket out of three should have her for wife. The Prince of Morocco, before proceeding to the hazard of the ordeal, addressed Portia in apologetic words while declaring that he was as red-blooded as 'the fairest creature northward born':

> Mislike me not for my complexion,
> The shadow'd livery of the burnish'd sun,
> To whom I am a neighbour and near bred.

Portia was a woman of nimble wit and adroit speech with forensic subtlety that might have put many King's counsel to shame, and she put the Prince at once at ease:

> The lottery of my destiny
> Bars me the right of voluntary choosing:
> But if my father had not scanted me
> And hedg'd one by his wit, to yield myself
> His wife who wins me by that means I told you,
> Yourself, renowned prince, then stood as fair
> As any comer I have look'd on yet
> For my affection.

These are gracious words and courteous; yet when the Prince failed to pick out the casket containing Portia's likeness and so passed out of the running for her hand she gave frank expression to her sense of relief:

> A gentle riddance.···
> * * *
> Let all of his complexion choose me so.

Portia did not want a black husband but if the Prince had opened the right casket she would not have refused to marry him. That was her position. There is no contempt, express or implied, but merely the instinctive reluctance of a white woman to mate with a black man. It is equally true that coloured women of good families do not desire white husbands.

It is after the age of Shakespeare and in comparatively recent times that white races have been displaying an unmeasured contempt for coloured races, specially dark races. The word 'nigger' is full of concentrated venom. Distinguished writers and even a winner of the Nobel prize for Literature have represented coloured people as devils incarnate. I am not in a position to say anything about books written in different European languages but such French, Russian and German books as have been translated are free from any particular prejudice against coloured people. From the works of fiction written by many English writers it is evident that the great crime of the villains of their stories is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

colour of their skin. The almond-eyed, yellow-skinned Mongolian is very often a fiend in human shape; the brown Indian is a liar and a cheat; the black African is a criminal of the worst type. Asiatics and Africans alone are not singled out for this distinction. The Dago, who is either of Spanish or Italian origin, is a favourite villain of the English story-writer. Most of these writers have no first-hand knowledge of the coloured people about whom they write, but they know what will go down with the reading public—the shallow-brained public incapable of reading anything more serious than works of fiction—and they cater accordingly. It is impossible to exclude the inference that writers and readers are equally interested in associating crime with colour. It is true that most of these books are fugitive and are soon forgotten, but even if they belong to the genus ephemera they make up for the lack of durability by a never-ending supply.

A slight incident bearing on this subject may be recalled. When Dadabhai Naoroji was a candidate for election to the House of Commons as a Member of Parliament, Lord Salisbury, who was Secretary of State for India and afterwards Prime Minister of England, spoke scoffingly of Dadabhai Naoroji as 'a black man' in a public speech. Man against man the Parsi had a fairer complexion than the swart Englishman, and if Dadabhai Naoroji and Lord Salisbury were to stand side by side, the latter would have appeared quite dark as compared with the former. But it was undeniable that the English nobleman belonged to a white race and the Parsi politician to a brown one. Lord Salisbury's contemptuous expression could have only one meaning and that was that a black man as such was unfit to represent white man in the legislature. Yet as Secretary of State Lord Salisbury never hesitated to accept his salary from the black people of India.

The contemptuousness for coloured races never assumes that form for the colour of their money is quite good and entirely acceptable. Coloured people are despised by white people in books, in conversation and when they meet, but white races have no objection to trade with coloured races. For many years white traders have carried on an extensive trade with the black African people. It is a matter of common knowledge that large quantities of ivory, elephant tusks, and other valuable articles were obtained from tribes of the Negroid race in Africa by white European traders. Very little money changed hands; the trade was carried on by a system of barter; in exchange for ivory the white traders gave glass beads, cheap prints and worthless gewgaws pleasing to the eyes of the savages. To the white traders this was a perfectly equitable and honest form of commercial business. With equal alacrity white traders sold large supplies of dope and intoxicating liquors to coloured people, either openly or surreptitiously. Can it be denied that the Red Indians of North America and the Maoris of Australia were practically exterminated by alcohol, the 'fire-water' which wiped out whole tribes and which was liberally supplied by white people?

Since white races consider themselves incomparably superior to coloured races it may be very reasonably expected that there should be no connubial relations, far less promiscuity, between white and coloured races. But no such distinction has been observed anywhere. Men belonging to white races have consorted indiscriminately with women of black, brown, yellow and red races, and white women have taken coloured men for their husbands. These men are not always the dregs of society, or wastrels and beach-combers. It has been found necessary to issue strict orders prohibiting alliances between officers belonging to a white race and coloured women. Men of white races may be found living with coloured women in every part of the world.

Wherein, then, lies the vaunted superiority of the white races over the coloured races of the human family? True, several coloured races are at present ruled by white races, but that is merely a turn of the whirligig of time. No race rules for ever, or for long, by virtue of its skin. Some of the most powerful nations of ancient times were not white-skinned and they often conquered white races and held dominion over them. In trade relations with coloured races white people have frequently shown that they have no commercial honesty,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and they are notoriously lax in sex relations with people of coloured races. The claim of superiority as put forward for white races in works of fiction and other books as well as the disparagement of coloured races are unfounded and untenable.

EDUCATION AND UNEMPLOYMENT

Need for a Bureau of Vocational Guidance

By J. M. KUMARAPPA, M.A., PH.D.

THE present problem of the "educated unemployment," which is challenging the attention of most of our thinking leaders, is due largely to the fact that the development of our system of higher education has been determined by the political and administrative exigencies of an alien Government. In fact, the whole system of education, such as it exists today, still continues to be a striking commentary upon the results of associating Government posts with success in University examinations. Sad though it is, it is true, nevertheless, that the Universities in India have been crushed under the burden of a system which diverts their energies from the pursuit of sound learning to the production of candidates for Government clerkships. Students unfit for a University career are driven there to seek a degree or certificate to serve as a passport for service. This policy worked well enough when colleges were few, and the candidates turned out were small in number. But now as the number of young men who graduate from year to year, exceed by far the Government's power of absorption, the country is over-flooded with educated men, and the army of the "educated unemployed" is ever on the increase.

A Doubtful Way-out

How then, one asks, is this problem to be solved? The Nawab of Chattari thinks that it could be solved by not allowing all students to go up for higher education. Likewise Sir H. Suhrawardy maintains that higher education should be regulated and limited. Though there are others who follow this way of thinking, one seriously questions if this is the right method of attack. Higher education is calculated to impart general culture and such culture is essential for success even in business. Any educational policy which tends to limit the democratization of the privilege of culture, must be considered not only as dangerous but suicidal. Further, the method of limiting student admission to the University as a way out of our present problem does not go far enough to be a satisfactory solution. This method of elimination, to use a technical term to describe what happens when educational standards are not meant, illustrates only too strikingly one prevailing evil of the present educational system. Besides, those who are thus eliminated as unfit for one career or type of education come very close to being stigmatized as unfit for any other occupation. They are led unfortunately to regard themselves either as inferior material for the particular occupation in which they would like to engage or as material fit for some occupation of a supposedly inferior sort.

Recently His Excellency Lord Willingdon remarked, in the course of his address while opening the Conference of Indian Universities at New Delhi, that from the point of view of the country the problem of ever-increasing unemployment among the graduates and matriculates was disastrous in that the labour and initiative of young men were running to waste. Keen and unmerited disappointment, accentuated by irksome inactivity, were apt to lead high-spirited young men into dangerous and unexpected channels. It was within the province of the educational authorities so to adjust the general scheme of

CC-0. Indira Gandhi National Tribal University, Amarkantak. Digitized by eGangotri

Digitized by Arya Samaj Foundation Chennai and eGangotri

education that the bent of the students and girls should be turned towards occupations best suited to their conditions and capacities. In this observation the Viceroy, I believe, is right. Colleges must, in fact, seek, not to prevent students from going up for higher education but, to give those better fitted by temperament and natural endowments training in agricultural and commercial occupations, and also advice and encouragement to those competent to undertake independent business enterprises. A system operated in this spirit would, instead of "eliminating," "shift" or "transfer" its students from one social or educational unit to another. But then how are the educational authorities to determine who should be thus diverted from one type of education to another? To determine the fitness of a student for a particular line of work, we need to perfect aptitude tests. The aim of all such tests should be to discover not who are inherently unfitted to pursue any particular occupation but rather better adapted to one occupation than to another. Such tests should be utilized at the end of successive stages of general education to assist the authorities to determine into what subsequent stages the student shall be encouraged to proceed.

How American Colleges Meet this Situation

This important function of giving wise guidance to students in their vocational choice is now receiving more and more recognition in the progressive countries of the West. Within recent years a number of colleges and Universities in the United States, for instance, have undertaken in an organized way to provide more or less vocational guidance service for their students. The nature and the organization for providing such service differ greatly with different institutions. Oberlin started in 1913 with a "vocational secretary for women students." Her business was to investigate vocational opportunities suited to college women, and also conditions of employment; further she was expected to get information regarding vocational schools and to inform herself on the relation of the student's major electives to her choice of vocation. In the same year, a faculty committee on vocational guidance was appointed at Stanford University. Both Oberlin and Stanford, the former in 1917 and the later in 1919, published hand-books descriptive of occupations open to college graduates. The Stanford Committee has also established in the University Library a vocational section and filled it with books, pamphlets and bibliographies relating to all kinds of trades and occupations. It now provides occupational talks on particular vocations, holds vocational conferences on opportunities other than teaching, and arranges individual conferences between students and members of the faculty. When a student enters the University, he is expected to fill out a vocational guidance blank which gives the members of the committee some idea of the student's interests, his physical condition, vocational experience and so forth.

Somewhere about 1920, Dartmouth College appointed an Associate Dean, whose title was later changed to Director of Personal Research, to develop a vocational guidance programme for that institution. It became the duty of this officer to bring together the large amount of information on file in different departments of the college about each individual student. From the registration card of the student, this officer is expected to collect information concerning the student's personal and family life; from the office of the Director of Physical Culture the record of his physical condition; from the Dean's office, his record of prizes, scholarship, honours and delinquencies; from the department of psychology a record of his intelligence rating based on the test given each autumn to the first year class, and from other members of the faculty a personal estimate of the student's capacity and character. With these data at hand, the Director tries to have at least one private interview with each undergraduate. And this interview takes the form of an analysis of the student's scholarship, his physical condition, his general intelligence, his interests and aptitudes, his choice of a life career and his preparation for it. All available facts about the individual are used in ascertaining his fitness for the occupations selected by him. Further, the student's experience up-to-date is considered and analysed, and finally he is urged strongly to take up such work during

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the summer vacation for the purpose of trying himself out.

Occupational Advice for Women

Many women's colleges are also experimenting on these lines. Vassar College, for example, maintains a Vocational Bureau, with a Director in charge, who has the same professional standing as a full professor. The Bureau is, in fact, organized as an essential part of the academic administration of the college. The vocational interests of students and of its alumni are registered in the office, and the Bureau serves as a centre for vocational information and guidance. The Bureau seeks to guide and direct the student along the lines of her greatest development whether it be for further study or actual placement in a given position. A very definite effort is always made to bring before the students a fair and comprehensive picture of useful work to be done during the summer vacations and after the college course is completed. Annually a general Vocational Conference is also held at the college to stimulate the students' occupational interests and to give them a bird's-eye view of different trades and professions open to women. At various times during the academic year representative business and professional men and women are also invited to the college, and interviews are arranged for students to enable them to get first-hand information in a given field. These are only a few of the many American colleges which have inaugurated a definite programme of vocational guidance. There are many other higher educational institutions which are now working out elaborate plans for vocational guidance in the light of the experience gained so far. Here is ample evidence therefore of the rapidly growing interest on the part of American college and University authorities in the problem of vocational guidance.

Vocational Guidance in Indian Colleges

In India also we must follow much the same line of attack. This work of vocational guidance can only be done satisfactorily by a well-organized Bureau of Vocational Guidance whose programme may include the following:

I. *Personal Information Service.* Bureau of Vocational Guidance in an Ind college should seek to bring together as m information as possible concerning each stud for the purpose of study and use in intervie and in placement work. The student's rec in schools previously attended, his physic examination and health record, his gener intelligence, the subjects taken in college w his standing in each, his behaviour a conduct record in college, term reports on l extra-curricular activities, a personality rat by his instructors, his employment record, any, before entering college, his choice occupation with the plans he has made prepare himself for it are among the da which should be brought together. With su information on hand, our educational advise could more easily help the student in h vocational choice or in placing him in the kin of work where he is most likely to succeed.

2. *Vocational Counsel Service.* Though t oldest form of vocational guidance is individu counselling, yet a great majority of thos who make up the adult population of tod received but little counsel from their teacher A solitary pupil gets this sort of help now an then. This sort of individual counselling, it mus be mentioned, is unscientific in that it is near always based upon very meagre knowledge o occupations and of the qualities and spec aptitudes of the one counselled. In the la few years attempts have been made to organi vocational counselling in a more scientif manner as we have already noticed how suc work is being carried on in American colleges. we, in India, also wish to give satisfactory an up-to-date counsel service to all our colle students, a Bureau of Vocational Guidan must be organized in every college. Only th could interviews be given to individu students, as often as conditions warrant, o matters affecting vocational choice and prepara tion. If an occupation has been chosen, th the Bureau would consider its suitability i the light of such information as is availab concerning the nature of the occupation an the aptitudes of the student. It would als give attention to the student's plan f preparation and self-improvement after enter ing the chosen occupation. If no choice o occupation has already been made, the Bure

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ould naturally consider a plan of procedure making a choice, and seek information concerning occupations which have some terest for the student and then give him the cessary guidance.

3. *Vocational Information Service.* Most our students know little or nothing about e opportunities and requirements of various cupations, and even graduates of our iversities know next to nothing about the portunities afforded by the world of affairs the college graduate. Nor do our students ssess any adequate information concerning eir own abilities, special aptitudes and rsonality traits. If the day arrives when y simply must have a job, then they jump the first one that comes their way, regardless their natural fitness for it. This procedure highly irrational since it entails great onomic loss to the individual and society. spite of that terrible wastage involved, our leges have not yet come to realize that one their important duties to their students is to ve them wise guidance in the choice of their cation. We need an agency interested in cational guidance to make a systematic effort give occupational information to our dents. The Vocational Information Service ust provide a library of books, pamphlets d other material concerning occupations of terest to college students, and make rangements for gathering pertinent formation about occupations not adequately vered in the printed material. Some attempt ust be made not only to gather occupational formation but also make such information sily accessible to students. Only a well-ganized Bureau of Vocational Guidance uld give satisfactory help both in the way of bringing together occupational information and giving to students definite help regarding ecific employment opportunities.

4. *Placement Service.* Placement service y be regarded as one of the most important nctions of a Bureau of Vocational Guidance. ecuring a proper start in the chosen occupation is quite as important as choosing it, and there is no more reason to expect the unaided pupil to do the one to the best advantage than the other. He is just as likely to choose unwisely among several opportunities to enter the chosen occupation,—if, indeed, he is so for tunate as to learn of several,—as he is to choose the occupation unwisely in the first place. And the economic waste involved in entering unsuitable occupations applies equally well to unfortunate entry into suitable occupations. A well-managed placement office will have available, or be in a position to obtain much more complete and reliable information concerning the different openings in a given occupation,—where these openings are their peculiar requirements, opportunities for promotion within the organization concerned and the like,—than an individual student can possibly obtain on his own account. The placement office will also have all the necessary information concerning the students who have chosen to enter their particular occupations, and can provide the employer such information better than any other agency. It must be granted that bringing these two together is a service of great value to the prospective student worker and to the empolyer alike when performed in an honest and discriminating manner.

5. *Research Department.* No college or University programme of vocational guidance can be considered comprehensive which does not provide for research. Investigations, which deal with organization and administration of a guidance programme, must be carried on. The technique of counselling and placement calls for extensive study. Occupational information needs to be gathered and evaluated. More scientific study must be made on the significance of intelligence ratings for vocational guidance. We need better methods of determining special aptitudes and also more reliable methods of rating personality traits of students. Some investigation must also be made regarding the possibility of providing vocational exploratory experiences for college students. In fact, the nature of vocational guidance and its relation to business, industrial and professional life are such that no work of this kind could be carried on satisfactorily without cultivating the spirit and methods of scientific research. Indeed, a Bureau of Vocational Guidance cannot do justice to itself without a well-equipped department of vocational research.

Some may oppose a vocational guidance programme of this character, maintaining that college is not a vocational preparatory institu-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tion but one for providing a liberal education. In reality, however, the programme discussed above merely recognizes facts and conditions as they exist. The real need for work of this kind becomes all the more urgent when we ponder over the extraordinary circumstance that so large a portion of our students come up to the end of their senior year in college with little or no plan for the future, with little or no knowledge of their opportunities and with no decision as to the field of work which they will enter. In view of this wasteful procedure and of the prevailing discontent in our country in respect of the present problem of the "educated unemployed," we can ill-afford to ignore much longer this important function of our educational institutions. Our educational authorities must regard vocational guidance as an integral part of education. Nothing is of such great vital interest to college men and women as the question choosing and entering upon a career. cannot solve our present problem of educated unemployed merely by limiting admission of students to Universities. single authority is competent enough to de mine who are qualified to continue education into higher branches. Only careful analysis of the pupil's academic his his intelligence and academic achievement during his school year, his family's vocati history, his character qualities and his pers feeling about vocations, is it possible to g him to choose wisely. Arbitrary prohibi of students is an unwise method. The to put greater meaning and effectiveness the work of the college is to recognize fran and attack scientifically, the problems invol in the transfer of students from colleg vocation.

MANILAL C. PAREKH

By IDA M. GURWELL

ONE of the outstanding speakers from the Orient, who attended the World's Fellowship of Faiths held in Chicago during the past summer, and who took an active part in the Conference, was Manilal C. Parekh.

Mr. Parekh is not a stranger in America as was evidenced by the welcome he received everywhere. We like this calm man. We like his understanding and his deep-seated spirituality.

Mr. Parekh is a follower of Christ. It is rather unusual in the Occident to know a Hindu Christian. A Jain by birth, he became a member of the Brahmo Samaj, and later in 1918, of the Church of England. He lives with his people and is of high caste. For ten years he was a missionary of the Church of Keshub Chunder Sen; and for a year after becoming a member of the Church of England was connected actively with churches and missions. He severed connections later, believing he could do work independently.

The man is a broad religious student an author of several religious books incl translations. Among his religious books biography of Mahatma Gandhi, writte collaboration with the Rev. R. H. Gray, has also written a biography of Ke Chunder Sen, and one of Rammohun Roy, in English. Mr. Parekh knows and India and has contributed much inform concerning its beauty and traditions. chapter in "An Indian Approach to was written by him. Born in Western he is one of the few followers of Christ has asserted the right to adhere to traditional ways of India. This is unique.

The lecture given before the Fellowship of Faiths by Mr. Parekh follows:

CC-0. Prof. Satya Vrat Shastri Collection, Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Dear Brothers and Sisters of the World's Fellowship of Faiths:

I appreciate very much the courtesy of the organizers of this Conference in asking me to be the spokesman of this meeting on the last day of the Conference, and I wish to speak to you on the message that India has to give to this Parliament of Religions, and to the world.

During these days when we, belonging to different creeds and religions, have met together, we have found the Fellowship of Faiths a living reality, and we cannot be too thankful to God for it. You will be interested to know, however, with many of us in India, and in the Orient, that this kind of Fellowship is an integral part of our Religions, and it has been so throughout the centuries. During the last century two great religious movements arose in the Orient; Bahaism in Persia, and Brahmo Samaj in India. Both these have preached the harmony of Religions. Of the latter of these the seed was first sown by the great Hindu Raja Rammohun Roy, whose Centenary we are celebrating on a grand scale in India at this time. It is indeed in the fitness of things that we should hold this Conference so close to this Centenary. He was certainly one of the first prophets of such Fellowships. He was followed in the course of time by Devendranath Tagore, the father of the great poet, and Keshub Chunder Sen. The latter was indeed a great prophet and his life's work was to bring the Religions of the world together. Few men in modern times have done so much to bring the Religions and Races together.

The chief message, however, of the Brahmo Samaj, and through others of India, with its great past is this: That the foundation of such a Fellowship of Faiths must be laid in a close vital Fellowship with God, who is our Father and Mother, Friend and Companion. Fellowship apart from this is a mere intellectual pastime, and is a mockery of the true Communion which should be ours. We who claim to be *Broader* than others, should also be *Deeper* in our realization of God, and should know first-hand the infinite love of Father and Mother. We, in India, know God as the Mother, for we know nothing higher than Motherhood in this world.

We should also have a closer Fellowship with great Teachers and Prophets of the world. In fact we should be greater disciples of Buddha and Jesus, than the Buddhists and Christians themselves are. It is only in this way that we can speak with authority to the world.

This Fellowship with God and Jesus Christ and other Prophets must result in higher moral and spiritual life on our part, and our love for mankind should be a great passion with us. Our righteousness should be greater than that of others, if we lay claim to something higher than the world has found. I shall go farther and say, that we should include not only mankind in this Fellowship, but the whole Universe. Let our love be so great that it includes the entire Creation. It is then we can go to the world and say, we have found something that is great and wonderful, a revelation not only to us but to all.

Manilal Parekh's message to this great Conference that registered the best thoughts of practically every known cult, ism and creed in the world, was received in the devout attitude in which it was given and catalogued as helpful building material for Spiritual Oneness.

Rudyard Kipling said, in speaking of the East and West, "Never the Twain Shall Meet." We who know Manilal Parekh and other high-thinking men of India, and America, feel that the Occident and Orient have met, and in the meeting; because the problems have loomed big on the horizon of the Nations of the World; and because of the serious intent on the part of all to understand; that there is an honest attempt everywhere towards real Brotherhood.

India's age-old Traditions: America's Youthful Contributions. One hopes for a magnetic fusion; a harmonious combination of the best in both, and that the East and West shall join in reaping a harvest of well-sown, tenderly-nurtured, Religious Ideals, that shall benefit all mankind.

LEGISLATIVE PROCEEDINGS AND PRIVILEGE OF THE PRESS

By PARIMAL ROY, M. A.

IT has been in the past a question of considerable dispute whether privilege of the Parliament extends to the publication of Parlimentary proceedings in the Press. There was a time when the Parliament itself repeatedly declared such publications as a breach of privilege.* There were Standing Orders of the Parliament prohibiting such publications; and it was argued with some force, that no privilege could attach to any report which was published in contravention of the Standing Orders. For, then, it was in itself a contempt of the House. Orders are also in record which the Parliament issued from time to time, forbidding the publication of the debates and proceedings of the House, by newspapers. The earliest reports of Parliamentary proceedings were only published in fear and trembling as "Debates in the Senate of Lilliput" with the names of the speakers disguised. And even for such camouflaged reports, the editors had to answer charges of breach of privilege, while Johnson's pen had to withhold completely "those ponderous speeches for Whig dogs"! At a later date, however, the reports began to be published in the form of "letters from an M. P. to a friend in the country" And although after 1752 they were frankly published as reports, the Standing Orders had not even then lost their force, and the initials of the speakers could only be ventured.†

At the present moment, however, the Standing Orders are quite obsolete; and the prohibitions having thus long since fallen into disuetude, it is at once important and interesting to know in what directions privilege attaching to Parliamentary proceedings has since been allowed to develop in Britain It should be noted incidentally that we are not concerned here with the official reports of Parliamentary proceedings which are indisputably protected by the orders of the Parliament,** under which they are prepared, but with such reports as may be published outside the Parliament, beyond the precincts of the Houses and unauthorized by the Legislature.

We can approach this problem to some advantage, through an examination of specific cases in which the question as to whether reports of Parliamentary proceedings are privileged, came in some form or other, under investigation. For, any principle, other than statutory, that may have been established in this matter, can have no better authority than dicta of learned judges having reference to the point in question.

Two remarkable cases have established the "if a member publishes his speech, his printed statement becomes a separate publication unconnected with any proceedings in Parliament." What follows from this is that when a member of the British Parliament himself publishes a speech made in the Parliament, he virtually repeats it outside and must therefore take the consequence as an ordinary citizen on proof of malice. A newspaper, if it publishes such a speech, reported *mala fide*, is also equally liable to action, as the speech in such circumstances will be regarded as a vehicle of slander. The two cases referred hereto are *Rex vs. Lord Abingdon* (1713) and *Rex vs. Creevey* (1813), and the view of law they have established is that the publication in newspapers of speeches made in Parliament, reflecting upon the character of individuals, is actionable. The decisions in these two cases are thus entirely with reference to single speeches, and not to the proceedings of the Parliament, in their entirety, with which we are concerned.

In a later case, *viz*, *Davison vs. Duncan*, the rigour of the above decision was relaxed to a little extent. It was held that while the privilege of publishing a speech made in the British Parliament was certainly limited, "a publication of a report of his speech by a member of the House of Commons, *bona fide* addressed to his constituents would be privileged."† The privilege in such a case would arise simply because such a publication would be regarded as nothing more than a mere communication between a member and his constituents. In the same case the proposition was laid down by Wightman, J., that reports of Parliamentary proceedings are in complete analogy with those of legal proceedings in a court of law so that the principle on which exemption from legal consequences is extended to the publication of the latter is applicable with equal force to that publication of the former.§ It is however needless

to point out that the principle alluded to is that the public interest and advantage of publication must outweigh the private and personal injury, i.e. a few may be injured with impunity for the good of the many.

There is, however, difference of opinion on the propriety of this analogy between legal proceedings and Parliamentary proceedings.

But even accepting the plausibility of the analogy, it must be admitted that the case of *Wason vs. Duncan* does not decide whether an action of libel can be founded on a report of Parliamentary proceedings published in the Press. For the present case arose out of a report of the proceedings at a public meeting,* in which the conduct of an individual was called in question; and the Court was not therefore called upon to determine how far the privilege would extend to a report of the proceedings in the Parliament.

The case of *Stockdale vs. Hansard* leaves us in better situation. In this case a report by the Inspector of Prisons containing defamatory statements "of a most disgusting nature" about the plaintiff (Stockdale) was printed and sold inside the House by the defendants (the printers of the House of Commons) by orders of the House of Commons. The defence pleaded orders of the House and privilege of Parliament, but the Court decided in favour of Stockdale. We need not, however, hastily conclude that this gives us authority to withhold protection from publications of Parliamentary proceedings outside the House. The decision in this case was purely to the effect that the House of Commons cannot by mere resolution, under plea of privilege, change the law, and make legal what is illegal under the laws of the land. No opinion was thus expressed on the subject of the publication of the reports of Parliamentary proceedings in the Press, which was evidently beyond the scope of the enquiry. "The question is not whether the act complained of, being unlawful at law, is rendered lawful by the order of the House and protected by the assertion of its privilege, but whether it is, independently of such order and assertion of privilege, in itself privileged and

We have mentioned elsewhere* that fair and accurate contemporaneous reports of public judicial proceedings, published in a newspaper, are now privileged on statutory authority. This privilege has been granted on two important grounds. In the first place, it has been held that reports of proceedings of Courts of Justice are generally published in newspapers, not for any malicious purpose, but solely with the honest intention of giving information to the public and incidentally for the service of society. The presumption of malice, if any, being thus rebutted, no legal consequence should attend such publications. In the second place, the privilege is justified by the Doctrine of privilege itself, which says that a publication should be privileged if, by injuring a few, it can contribute to the benefit of many.

On the basis of this immunity granted to the publication of proceedings in a Court of Justice and the analogy between a Court of Law and a legislature, a solution for our present problem, may, however, be found in the case of *Wason vs. Walter* of 1867. The facts of the case may be briefly stated. A Mr. Wason presented to the House of Lords a petition in which he prayed for the dismissal of Sir Fitzroy Kelly, lately appointed Lord Chief Baron, on the ground that Sir Fitzroy had in the past deceived a Committee of the House of Commons by a deliberate lie. A debate naturally ensued on the presentation of the petition in the House of Lords, and the charge was utterly refuted by a Committee appointed for the purpose. *The Times* published the proceedings of the House of Lords, together with the reports and the debate, and a leading article described Lord Russell who presented the petition on behalf of Wason, as "an instrument for the circulation of calumnies." An action of libel against the proprietors of *The Times* was brought before the Court, and among other things, the question arose as to whether the publication of proceedings of either House of Parliament in the newspapers, was privileged.

This then is a case in which the position of public Press in respect of the publication of Parliamentary proceedings, was directly in issue. Cockburn C. J., in delivering judgment emphasized upon the allied characters of a Court of Justice and the national Parliament† and declared that whatever would afford immunity to a report of the proceedings in a Court of Law "will equally apply to a report of proceedings in Parliament"§ The publication in *The Times* was, therefore, declared to be privileged; and it was thus established that a faithful report in a public newspaper of Parliamentary proceedings "containing matter

---

these conditions fails, the privilege is qualified. See Salmond: *Law of Torts*, 5th ed. Pp. 498-99 & Odgers: *Law of Torts*, Ed. 8th. Pp. 203-04.

* It is now provided by Sec. 4 of the Law of Libel Amendment Act, 1888, that fair and accurate reports in a newspaper of the proceedings of any public meeting or of any other kind of meeting referred to in that Sec., shall be conditionally privileged, provided that the publication of the matter decidedly advantages to public advantage.

For definition of 'public meeting' *vide* foot-note at p. 499 Salmond: *Law of Torts*, 5th Edition.

† L. R. 4. Q. B., p. 87. Note that the first question submitted in the statement has been met by the Parliamentary Papers Act, 1840 (3 and 4 vict. c. 9.) which extends protection to publications under the orders of the Parliament.

* Foot-note (2) at page 3.

† "The analogy between the two cases is in every respect complete."—L. R. 4. Q. B., p. 93.

disparaging to the character of an individual··· is not actionable at the suit of the person whose character has been called in question!* The privilege was evidently extended on the principle "that the advantage of publicity to the community at large outweighs any private injury resulting from the publication."†

Here, therefore, is a definite judicial decision on the vexed question of the privilege of the Press in the matter of Parliamentary proceedings. The view of law that has been established is that faithful and fair reports of the proceedings of the Parliament, published in newspapers, are definitely privileged. In laying down the law, however, reliance, it will have been observed, was put more on the fundamental principle than on any written law or authority, neither of which was forthcoming at the time. The decision of Cockburn has not admittedly been embodied in a statute even to this date. But the judge-made law has certainly been accepted and acted upon by the British Courts as a precedent, and now stands as a charter for the British Press.

Having thus examined the view of law that has been established in England, we are naturally inclined to examine the nature of privilege that the Press in India enjoys, if at all, with regard to the proceedings of the Indian legislatures.

In February, 1932, the question was put to the Home Member in the Legislative Assembly 'if under any Ordinances, or rules made or orders issued, by the executive authority, newspapers could be penalized for publishing reports of the proceedings of the Legislative Assembly.'§ The Home Member in reply said that "no rules or orders of the kind suggested....have been issued"; and the Honourable Members were assured that the right of free speech in the Legislatures was secured to them by Sec. 67 (7) and Sec. 72D (7) of the Government of India Act, 1919. But it was at the same time pointed out "that the protection afforded···does not extend to the publication of reports by newspapers *of which the liability is determined by the ordinary law.*§ The ordinary law, according to the Home Member, included not only the Press Act of 1931 but also the Ordinances of 1932. This naturally gave rise to a heated discussion in the Assembly as some of the members thought** that the Ordinances, by restricting the publication of the proceedings in the newspapers, affected the privilege of the House granted to it by the Government of India Act of 1919. They put forward a two-fold objection. In the first place, an Ordinance, it was submitted, although a law, is nevertheless not made by the Assembly and should not therefore, for expedience tamper with the privilege of the House; whi secondly, it was argued that a provision (t which the existence is questionable) made by t Sovereign Parliament cannot be affected by subordinate law-making authority. In windi up the debate that ensued the President ask the Home Member if he was prepared to s "that so far as the publication of the proceedin of this House in the newspapers is concerned, Ordinance will affect them."* The Home Membe however, could not make any authoritative sta ment on the question because he was not s what the precise legal effect of an Ordinan was; and indeed the following extract† from t proceedings is not a very happy reflection up the conviction with which he spoke:

> Do I take it that the publication of the repor of this Assembly will be subject to the provisio of these Ordinances and law..... ?
>
> —In certain circumstances it is *possible* tha publication *might* fall within these provisions.
>
> Even though the speech may have been allow by the President and the Hon. the Leader of t House took no objection ?
>
> —I *think* that it is *possible* that that *might* happe

The Home Member having thus failed, t question was then put to the Law Membe 'whether issue of the Ordinances makes an difference in the matter of the publication of th proceedings of this House in the newspapers'. The Law Member, apparently taken by surpris wanted time for his answer, and having presumabl looked up a large number of authorities ove night, declared next day that "the Ordinance have made no change in the ordinary law of th land in the matter of publication in the publ Press or otherwise of the proceedings of th Legislature."§

The ruling of the Law Member thus purport to make it clear that the Press in India enjo no privilege in regard to the publication proceedings of the Legislature. And although th Ordinances** alluded to, increased the possibili of unwittingly committing a breach of law, th possibility certainly existed even before th Ordinances were enacted. It may be incidental pointed out here that the Home Member w wholly irrelevant when, in reply to a ques whether similar provision existed elsewhere, said that the same principle existed also England, referring in surpport to his statement May's *Parliamentary Practice.* This was misle

...ge. For, Erskine May* dealt with the maintenance ...f Parliament of the Standing Orders, and that ...rtainly has nothing to do with the law that ...e are seeking here.

The rigorous view of law is this. The statutory ...rivilege in India is limited to the actual making of ...peeches in the houses of Legislature and to ...fficial reports thereof, in pursuance of Sec. 67 ...) and Sec. 72D (7) of the Government of ...dia Act.† It does not strictly extend to any ...rivate report or publication in the public Press. The fourth exception to Sec. 499 of the Indian Penal Codes affords protection only to publica...ons of the proceedings of a Court of Justice ...d not of the Legislature. The result is that ...ere is no statutory provision to protect news...pers reporting the proceedings of the Assembly ...the Councils.

And yet it is not a fact that proceedings of the Indian Legislature—not infrequently defama...ry—are not published in our newspapers. So ...at we are naturally led to suspect that the ...ess in India does after all rely upon a protec...on which is not as imaginary as it may be ...agined. It will be remembered that we ...proached this problem of the privilege of the ...ess for England through a review of cases ...in which the question in some form or other ...me under investigation. Unfortunately for ...dia there is a total absence of any case in ...hich this question was directly in issue. The ...evance of the Press which may have arisen ...t of this lack of protection, is as yet purely ...eoretical. For, no Court in India has to this ...te been given an occasion to pronounce ...dgment upon this important problem of the ...ess.

But this strange absence of any judicial ...cision over the matter may be accepted with ...ixed feelings of not despair only but also hope. ...For, the very fact that no private individual ...as ever brought an action of libel against a ...wspaper for having published a libellous report of the proceedings of the Legislature, shows (besides pointing to the degree of free-masonary that exists among our people!) that the plaintiff fears, that in the event of a litigation, he would be forthwith put out of Court. And that gives us additional reasons to suspect that the privilege *naturally* exists even though a case like *Wason vs. Walter* is yet to come up for decision in India. We shall state our reasons.

It is a well-known fact that the High Courts in India have always relied upon the principles of English Common Law and equity where there has been no written law or authority to help them. It will be irrelevant to discuss here how far the English Common Law and equity have gone to build up the law and procedure in India. But it will be admitted without ado that the High Courts have exercised the Common Law powers and jurisdiction of the King's Bench for more than a century and a half, and have freely drawn upon its principles for the protection of the rights and liberties of the people in India. Besides, every law-court in India is by statute a court of equity and as such is entitled to decide all doubtful questions of law according to the principles of equity, justice and good conscience.

Having regard to all this, it is not, therefore, open to an Indian judge to say that the protection accorded to the members of the Legislature does not extend to report, other than official, of the proceedings of the Legislature. It is true that there is no statutory protection against anybody aggrieved by a libellous report, bringing an action against a newspaper. But the absence of any specific legislation need not prevent the Court from drawing upon the Common Law powers of England. For, is it not well settled that in the absence of local statutes English Common Law applies to the ordinary original jurisdiction of the High Court in India?* And if so, is not the Cockburn law as valid in India as it is in England?

As a matter of fact, it is this applicability of the Cockburn law that is emphatically the reason why the newspaper-editors in India have so far been left undisturbed by aggrieved parties. The plaintiff is sure to be put out of Court, as the law already exists in spite of its absence in a statutory form. We have mentioned that the fourth exception to Sec. 499 of the Indian Penal Code, extends protection, not to the proceedings of the Legislature, but only to the proceedings of a Court of Justice. That, however, does not show that the exclusion of the newspapers from protection was out of any deliberate design. The Indian Penal Code must necessarily be silent over the question simply

---

* *Parliamentary Practice*, Ch. 4: It used to be argued that no privilege could attach to anything published in contravention of the Standing Orders of the two Houses.

† The Government of India Act provides: "Subject to the rules or Standing Orders affecting the Chamber, there shall be freedom of speech in both Chambers of the Indian Legislature. No person shall be liable to any proceedings in any Court by reason of his speech or rote in either Chamber, or by reason of anything contained in any official report of the proceedings of either Chamber." The provisions with regard to the Provincial legislatures is also the same *mutatis mutandis*.

‡ The protection is from criminal action for defamation, although civil action is in order. But even if a civil action is brought, the plaintiff will be put out of Court as will be shown hereafter (*Cf.* Sec. 3 Law of Libel Act 51 and 52 Vict. c. 64.) The civil privilege will be *prima facie* more and not less than the criminal.

* Quoted in *The Statesman* editorial on 21 Feb. 1932. In the mofusil, however, justice, equity and good consience may help to bring the Common Laws into force.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

because it was compiled long before an Assembly of the present type was contemplated.*

The applicability to Indian cases of the Cockburn law has already been clearly and definitely recognized in the case of *Lala Lajpat Rai vs. The Englishman Ltd.* (*Appeal case*).† The facts of the case were briefly as follows : *The Englishman* published in its Calcutta edition a statement which purported to give an explanation of the 'real reasons' as to why Lala Lajpat Rai was arrested and deported by the Government of India in 1907. The statement was considered libellous, and *The Englishman* having refused an apology which was demanded, the plaintiff brought an action of libel against the proprietors of the paper and was awarded damages to the extent of Rs. 15,000 The defendants appealed and it was argued on their behalf that prior to its publication§ in *The Englishman*, the 'libel' in question was already stated in the House of Commons by the Secretary of State for India. But although the damages were reduced to Rs. 1,500, the appeal was dismissed on the ground that "no authority can be cited for the proposition that a person is entitled to publish Parliamentary proceedings as a statement of his own and in the form of an offending article." "I agree," said Harington, J., "that the defendant was entitled to publish that Secretary of State for India has made in the House of Commons such and such a statement, and as long as he published a substantially accurate account of what was said in the House of Commons, not as a statement of his own, but a statement made in the place, then I think he would be doing nothing unlawful."**

This clearly shows that it has already been recognized by an Indian Court that in the event of an action of libel brought by an offended person against a newspaper for a faithful reproduction of proceedings in the Legislature, damaging to his character, the verdict must always be given in favour of the newspaper, on the authority of the law laid down by Cockburn. The report in such a case will be indisputably privileged and the newspaper "would be doing nothing unlawful," although it would be a wide and undue extension of this privilege if it were to cover any independent statement of facts drawn from the proceedings of the Legislature.

The situation is thus cleared up. As in England, so in India, a faithful report in a public newspaper of the proceedings of either house of the Legislature, containing matter disparaging to the character of an individual which occurs in the ordinary course of proceedings, is not actionable at the suit of the person offended. A faithful report of a *debate*, as differentiated from the proceedings taken as a whole, is also equally privileged on the authority of the same law.* And in both these cases the privilege is of course qualified. As for speeches, the opinion of Mr. D. N. Banerjee is that "there is nothing in the Act to protect a member from being legally dealt with in a Court of Law if he himself publishes his speech which is actionable. In England 'if a member publishes his speech his printed statement becomes a separate publication unconnected with any proceeding in Parliament.' (May, p. 100). In the absence of anything to the contrary it may be presumed that the publication of a libellous speech delivered in either Chamber of the Indian Legislature, otherwise than officially, is punishable."† In the absence of a definite law this is of course the exact legal position. But the point of view from which we have considered the whole of this subject permits us to venture the opinion that in the event of specific cases, laws are sure to be laid down by judicial authorities much on the same lines as in England.

But while the conclusions are thus plain enough, the Indian Government has not so far given to the Press the necessary statutory protection which is indispensable for a democratic country. On the contrary, some of us have watched with dismay the recent encroachments made upon legitimate journalism in India. It is, indeed, time that the law is made plain as well to the Press as to the public through proper channels, without leaving it to its remote chances in a Court of Justice.

N. R. A. (NATIONAL RECOVERY ACT) AND WORLD TRADE

By SASADHAR SINHA

To understand the crisis to which the world until the other day had more or less resigned itself with a philosophic calmness, one must have a clear conception of the fundamental facts as to how the different sources of production and the various developments (industrial, capitalist and imperialist) went through a series of revolutions.

The origin of British foreign investment, as Keynes very ably discusses, was the booty brought by Drake and followed by the formation of the Levant Company. "Largely out of the profits of the Levant Company, there was formed the East India Company—the profits of which during the seventeenth and eitghteenth century were the main foundations of England's foreign connections; and so on." Even as far back as 1600, real wages in England were only half what they had been 100 years ago and during this profit inflation, advantages and fruits of economic progress went to profiteers only. A profit inflation is, according to Keynes, almost certain to bring about a more unequal distribution of wealth and the abnormal growth of capital-wealth always accompanies this profit inflation. It was under such auspices that modern capitalism was born and the root of the evils is, therefore, centuries old. Economists from time to time advanced theories to solve current problems but the gravity of the situation was never realized until lately. The central features of the crisis today are cut-throat competition among capitalist countries, over-production and narrowing down of market, changes in the technique of production, difficulties of further exploitation, contradictions between production and consumption, break-down of the machinery of distributions, etc.

The finances of the world were in a stalemate until the beginning of 1932. England was the first country to protest though very mildly against orthodox economics, but it was left to America to challenge it and shake its very foundation. The American experiments are comparable to the first and second five-year plans of Russia though the respective aims are poles asunder.

England went off the gold standard in September, 1931. A national government was returned by an overwhelming majority under panic conditions and English capitalism was stimulated to restore some of its lost ground. There have been changes but the Victorian structure still remains and added to it, the proverbial characteristic of English people who are always shy of launching bold experiments, may very well be the limit of British sphere of influence in the World recovery—the alternative of which is chaos.

The newspapers with one or two exceptions are all unanimous that the worst is over and that British prosperity is within sight. They forget that the crisis may be over in this country but the depression is certainly not. The economics of these islands are so bound up with the rest of the world and the face of the earth has changed so much since the last war, that Great Britain has been obliged to concentrate all her attention on an area of 89,041 square miles and population of 44,932,884 persons compared with U. S. A., Germany and Japan (to mention only a few of her competitors) with areas of 2973776, 180985 and 147592 square miles, and populations of 122,775,046, 62,410,619 and 64,450,005 persons respectively, all these countries being more favourably supplied with such materials as keep the industrial centres active. The Empire free trade is one of the many counsels of despair and so far the results have shown, they only deserve a lip service.

The British efforts to tide over the depression were not preceded by any plan, they were based on the traditional confidence that Great Britain, given favourable conditions, as a matter of course was entitled to take its old place among industrial nations. Thus

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

did the English capitalists shun an excellent opportunity to give a much-desired lead.

The British achievements during 1931 were essentially safety first though in a short view sane. The Tories put a stop to credit expansion, drastic cuts were made, most of the public and social services were suspended and dole was restricted. There was a controversy in the Press and the Parliaments on Cobdenism, various arguments were set forth for and against and ultimately England became protectionist. For the last two years English trade is doing much better due to mounting and widening tariff and we find factories within customs walls producing articles formerly imported despite trade union exactions. Quotas and agricultural marketing schemes and the recent trade nationalism give one the impression of apparent prosperity but the size and population again are England's greatest handicap.

However much the British market may be steady today, the statistics are not very encouraging and it is very difficult to say how long this progress of upward trend can be maintained in spite of all its soundness, more so in view of the American National Recovery Act and other world factors (we are deliberately excluding Russia from our consideration). Once the N. R. A. (National Recovery Act of the United States of America) succeeds, capitalism will assume an entirely different form and individual capitalism as practised in older countries will be doomed to its logical conclusion.

The crisis had generally come to be regarded as chronic but thanks to Roosevelt, the issue now is simple—we are in the thresholds of a new society and our choice lies between the American and Russian methods.

The statistics of post-War American industry are very interesting. We may not go into details about figures but it will be sufficient to say that before the new experiments U. S. A. had lost $\frac{4}{5}$ of their world trade and the output of iron and steel—the key industry of the country, was reduced by $\frac{9}{10}$. The American exports of industrial machinery were $ 338,027,000 in 1929 and in the first eight months of 1933 were only $ 31,779,967 (with a marked tendency to improvement). The textiles showed a drop during the corresponding period from 135,115,000 to about 23 million dollars. The average receipt of farmers from 1923 to 1929 amounted to $ 11,000,000 but they amounted to 9,000, 7,000, and 5,000 in 1930, 31 and 32. Unemployment stood at 12 millions including 3 millions who can be classed as permanent.

Roosevelt, since he entered the White House, knew his own mind. He had a programme in his sleeves and up till now he is truly and faithfully carrying out (or at least attempting to) that programme item by item even with a fanatic's zeal. He did read the situation clearly and at once blamed the financial instability and the reduced price level with its consequent fall in purchasing power for all the ills of the world in general and U. S. A. in particular. Here a student of Economics may enter into a serious controversy. Fall in prices leads to restriction in production which is identical with reduction of employment. The question arises whether the fundamental cause of a crisis is due to fall in prices or to production beyond the capacity of market.

Artificial respiration to bring back to life a dying system would be useless, nothing but a planned economy could save the American or the world situation. So one of the first things Roosevelt did was to stabilize that part of the economic process wherein lies the final determination of whether or not practically all of the individuals in the nation will be brought the necessities and few of the comforts of life. Planned economy, therefore, cannot ignore the ramifications of the cost of living. Further, a nation exists as a result of productive effort and all productive efforts must, therefore, be disciplined for the benefit of the whole, *i. e.*, the State. Hence the National Industrial Recovery Act and the codes—the colossal magnitude of which can be grasped from the following data of expenditure:

Public Work	$3,000,000,000
Liquidation Corporation	$1,500,000,000
Reconstruction Finance Corporation	925,000,000
State Relief	500,000,000
Miscellaneous	1,275,000,000
	$ 7,200,000,000 or £1,250,000,000

The immediate aim of Roosevelt was to raise prices in U. S. A. and incidentally elsewhere by a redistribution of wealth with

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the States to the advantage of farmers and other debtors. He armed himself with the following powers—(*a*) gold embargo, (*b*) depreciation of dollar in foreign exchange, a process that leads to readjustment of ratio between American and non-American prices, (*c*) inflation, (*d*) processing taxes, (*e*) restriction on farm produce, (*f*) reduction in working hour. The word inflation has a natural prejudice against it and Roosevelt has been very careful to avoid it but this undoubtedly is his last weapon which he will not hesitate to use whenever he thinks the time is most opportune or when the pressure from the farmers becomes irresistible.

The earliest results of N. R. A. were rather encouraging. The yield of the first three months was the largest and during the second and third stages, any progress visible was diminishing. The reasons for such set-backs were complex and many, but they can be explained under the following heads :

(*i*) Buying ahead of commodities and merchandise gradually discounted after the first impetus and stimulus.

(*ii*) Speculation in stocks specially grain, cotton etc. collapsed.

(*iii*) In textile industry particularly, selling prices had doubled, production costs had reached such a point where purchasing of textile and volume of output might be curtailed.

Against all these odds there was an encouraging sign in retail trade. Though we should bear in mind that wages, cost and prices were far from balancing one another, the latest bulletin of the American Federation of Labour states that a 6 per cent increase in wages has been eaten up by an 8 per cent increase in the cost of living. Only in oil production where the scheme conferred a virtual governmental dictatorship, things worked smoothly. Roosevelt knew his was an uphill task and the first disappointments to convert the country from rabid individualism to a faith in reorganization, planning and the rest did not deter him. He instituted his famous codes, the chief object being to win labour's support. The only working conditions of labour were determined but practices for obtaining custom that are to be regarded as improper were specified. This has been one of his greatest master-strokes and the American labour today is said to be behind him to a man, and he can very well defy the brickbats showered on him by Ford and other individualists. Within a few months Roosevelt had some satisfaction at least. Cost of living had risen by 9 per cent higher in September compared with March but 1·7 per cent in September, 1932. Compared with March pay roll increased by 55 per cent and employment by 30 per cent. August indexes revealed that in 14 of 89 industries employment was higher than in 1926 ; on the other hand, employment in 30 industries and pay rolls in 69 were less than $\frac{2}{3}$ of the 1926 level. As regards manufacturing activity, the highest proportionate rise (11 p. c.) was reported in iron and steel group where wages increased by $9 (33 p.c.) and employment by 92,000 (28 p. c.).

In agriculture which is America's most critical problem and where the "farm strike" and other threats are causing Roosevelt greatest anxiety, the effects of N. R. A. seem to be slow and tiring. The entire activity of the farmers had been dislocated through the appreciation of money from 1926 to 1933. Therefore, it is held that to restore their fortune by reversing the monetary process is the only proper way to help the whole nation. The farmer's contention appears to be to "jerk up" prices to cover the cost of production and the prescription of a minimum price below which dealers would not be allowed to buy. Behind the demand is the ultimate object of resorting to the pre-War ratio between agricultural and industrial produce which is obviously impossible of achievement. Roosevelt's remedy is to raise prices by increasing consumer's demand. He has been very liberal in his reliefs. Only recently there was an announcement that for corn and hog raiser alone, Federal Government intends to pour upon them $500,000,000, thereby increasing the farmer's income by 50 per cent. The latest returns show that employment and pay roll in agriculture are well above the level of a year ago (August figures for employment and pay roll record an increase of 7.3 per cent and 11 per cent respectively).

We are now in the fourth and perhaps the final stage of the recovery plans. It is still based on original plans, the whole machine

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is now assembled and upon the success or failure of Roosevelt depends the very fate of capitalism already assailed from many sides. The crux of the whole problem is how to push up price level, that and that alone will bring back prosperity or recovery, whatever one may choose to call and Roosevelt will stop at nothing until he has brought this about and avert the inevitable collapse.

Rise in price means the fall in value of money and this is precisely why Roosevelt wants to buy up gold at higher and higher price until it is dear enough over against other commodities. American price level depends on gold value of dollar, gold would have to fetch more than $40 an ounce before 1926 level is reached. Hence the attempt to raise prices by the control of the gold value of dollar.

One of the most principal functions of the Reconstruction Finance Corporation is to buy and sell gold at predetermined price and thus determine the gold value of the dollar. R. F. C. is fully able to prevent the external depreciation of the dollar going any farther than it desires. Since America went off the gold standard and refused to stabilize the dollar which left the World Economic Conference in the lurch, Roosevelt has been rushing onwards with his monetary policy very shrewdly and carefully backed by the support and advice of Moley, Irving and Warren—the sponsors of the now famous Commodity or Rubber Dollar theory which, in other words, is nothing but the price index fixation of the value of gold. The sacrifice of sound currency at the altar of national exigency does not necessarily mean currency competition. Such competition tends to have a boomering effect and returns to strike at the point from which it started.

The inflationists in U. S. A. are farmers who have been most hard hit by depression. A managed currency which has no fixed value in gold but gives it a new gold content, is the nearest equivalent to a full-fledged inflation that can restore the price level on 1926 level. Roosevelt is extremely reluctant to resort to actual printing press inflation but if his relief measures for the middle western farmers are not successful and their discontent is increased, a limited amount of paper money may be issued backed by a considerable gold reserve that permits a much larger paper money than is now in circulation without inflation.

When Roosevelt took the American situation in hand, the choice was lying between stabilization and inflation with a view to raising of general price level. Prices in November have risen 20 p. c. but is still only 70 p. c. of the average sought to be attained. It is no wonder therefore that the possibilities of an early stabilization are remote. Roosevelt however, prefers credit expansion to inflation.

The secret of Roosevelt's success lies in an intelligent manipulation of dollar and in this past experience is likely to be of greatest help to him. From 1914 to 1928 world's gold stock had increased by 38 p. c. and the world's production of basic commodities by the same percentage; therefore, the world gold supply was just about adequate to support pre-War prices provided all the world returned to the gold basis. But prices in England were 45 p.c. above pre-War and in U. S. A. 41 p. At that time the countries were trying to return to gold, France returned on June 28 1928 and the gold panic was soon on. With the panic, hoarding became inevitable. The moment thrift or hoarding got ahead of enterprise, it positively discouraged recovery of enterprise and set up a vicious circle by its adverse effects on profits, for the vital force of enterprise is not thrift but profit. Therefore less than pre-War prices were to be expected. There were other factors too that aggravated the slump. Shortage of capital in Germany and Central Europe and certain structural and financial maladjustments which were the legacies of the war-time dislocation and other perverse policies left the situation rather hopeless for a natural recovery. We have also to take into consideration the profit inflation in France and the international deflation caused by the drain of gold in France and U. S. A. in 1929. This accumulation of gold the effect of which was scarcity in rest of the world, increased the price of gold in terms of other commodities and decreased the price of other commodities in terms of gold.

Unlike England who was driven off the Gold Standard because she had to send gold abroad to meet her debt charges and an adverse balance of trade and the refusal of American and French Banks to advance

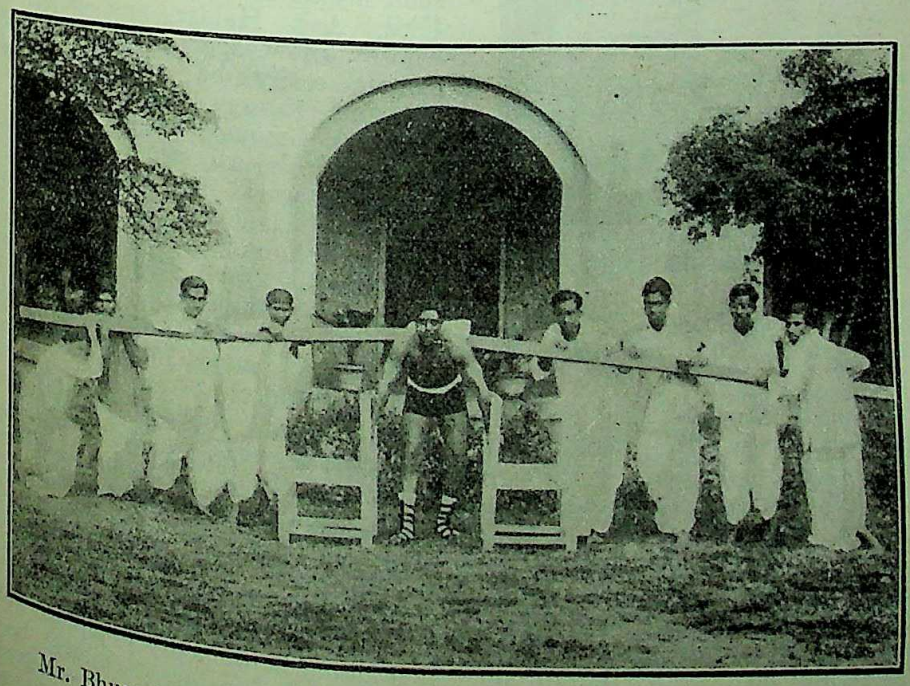
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

more loans beyond £130,000,000 to prevent withdrawal of gold from England by foreign countries; there was no need for the United States to go off gold but she had to do it as the first and immediate of a series of measures for the purpose of raising prices. There was, however, another question—that of liquidating the unbearable burden of internal indebtedness.

As the situation stands today, until the Congress meets one can safely prophesy that Roosevelt's activities will be confined to take control of the international gold market which he believes to be the only way to raise the price level. The effects upon American government bonds and upon other foreign countries even if a cheap dollar reduced their purchasing power, are only matters of secondary consideration to him. By purchasing gold from France he can even drive the Gold Standard countries off the gold and thus remove a major obstacle for the revaluation of the dollar. As it is, franc is today being kept artificially overvalued. The British Treasury is arraigned for forcing a rate of 83 when 100 would be proper. The question now is—can U. S. A. drive its own dollar down without breaking down its own credit at the same time? The reader will do well to observe what Prof. Gregory has to say on the subject. According to him the commodity dollar is only a means to an end, as soon as it is realized that depreciation of dollar is leading to unsettlement in commodity markets and the fall of the dollar is being offset by a fall in world prices, inflation will at once proceed according to plan. Roosevelt is bent upon devaluing the dollar by the full extent of 50 p. c. and he counts upon resultant inflation to achieve the advance in commodity prices.

The British industry must be on its guard because the N. R. A. can react upon it bitterly. The potential dangers of under-cutting from American manufacturers are great in the near future if N. R. A. works according to plan. Repercussions on machinery, electrical goods and automobiles will be greatest. American exports of iron and steel, textiles and chemicals are normally of a specialized character and in these fields Russian market may be closed to England. British-canned foodstuffs, rubber goods, paints, woollen textiles and leather goods will also feel the wind a little but prohibitive customs can spoil the advantages of a depressed dollar.



Mr. Bhupesh Chandra Karmakar, an athlete of Calcutta, is bending an iron rod 18″×3″×4″, two maunds in weight.

KATHAKALI: THE CLASSICAL DANCE ART OF INDIA

By G. VENKATACHALAM

KERALA is a fascinating bit of coastal country in the extreme south-west corner of India. Its wooded hills with vegetations of variegated kind; its green paddy fields running in serpentine curves, flanked by thickly planted plantain and arecanut groves and garden-houses; its backwaters with little islands, and lovely

Rama and Lakshmana
Kathakali dancers in their full costumes.

lagoons reflecting dreamily the blue sky and the fantastically bent palms on the banks; the gray huts and the red-tiled roofs peeping through the rich foliage of garden compounds; the big bare-breasted women working bent all day long in the fields, singing sad songs to forget their hardships; the dark, strong-limbed men at their ploughs and oxen; the white-clad and clean-looking Nairs and their womenfolk of soft, olive complexion, dark eyes and shy looks; the proud exclusive Nambudri with his caste arrogance and social tyranny; the oppressed untouchable and the unseeable with their long drawn

and misery; the magic and mystery that st surround life here; all these exert a strang fascination on a visitor. Kerala is a tropic paradise, with palm-fringed horizons and sun swept beaches, only to be rivalled by Lank or Java.

Kerala is rich in arts too. The old temp and palaces contain fragments of fresco painting as interesting as any in India, and some of t figures and groups on the walls of the Trich temple and Mattancheri palace are not muc inferior in artistic quality to those of Ajanta Bagh. Stone-carvings and bronze images of t gods are also to be seen in abundance. Fol arts here have met the same fate as in oth parts of India, and, of late, some interest being evinced in their revival, especially in t two popular folk-dances of *Kummi* and *Kai tukali*, which are being taught to girls in schoo But by far the most unique and famous art Kerala is Kathakali, the dance art *par excellen* in India.

It is one of the ironies of Indian life and a that real talent and genuine merit are not much recognized and appreciated as spuriou ones sponsored by vested interests. The N Delhi scheme was a well-known instance. W such master-artists like Nandalal Bose, Venkatapp Ukil, Asit Halder and others in the countr whose knowledge and skill in fresco paintin cannot easily be equalled or surpassed, it w amusing to see the Government holding co petitions among school students and third-r artists for the execution of that work, with w result the world now knows! It is the same w the art of dancing. Much of the so-called In classical dances, "performed" by both professio and amateurs, is neither classical nor Indian a quaint jumble of Arabian, Egyptian a Indian dances, with sensuous bodily movement meaningless steps and gestures set to s popular tune.

The even so-called Ajanta dances preposterous impostures, for there is nothing the whole series of Ajanta paintings, excepting single dance scene in Cave No. 2, that can a student of dance art any valuable inspir save certain *motifs* and ideas for costume ornaments, head-dress and, perhaps, some group and dignified poses and postures. And yet h that name is wickedly exploited and what kinds of dances are exhibited under that name A notable exception was the interpretation g by Mrinalini Sarabhai (Mrs. Leila Sokhey), entitled *A*

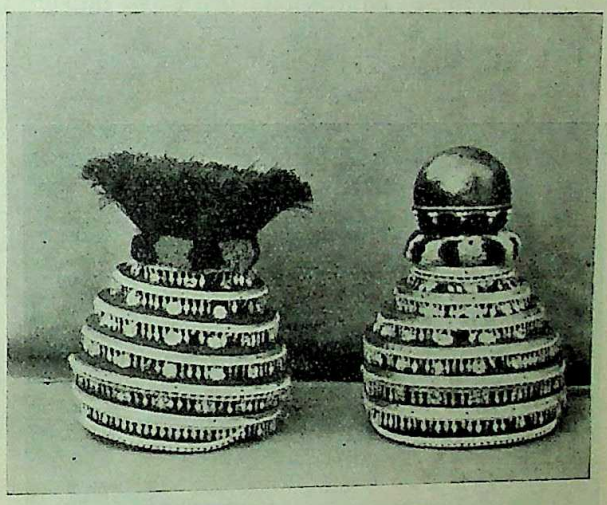
Parishan, which was a sincere attempt to bring to life something of the spirit of Ajanta.

But how many in this country who have seen the so-called classical dances of India have heard of, not to say, seen Kathakali, *the only genuine hundred per cent classical dance art of ancient India*, one of the most highly perfected dance arts in the world? Kathakali is not merely based upon the science of *Bharata Natya Sastra*, but on traditions more ancient than that; and this art has remained, save in its own birth-place, unknown, unhonoured and unsung even by the enthusiastic exponents of Indian cultural renaissance. But thanks to the genius of a poet and its flaming enthusiasm, it refuses to remain any longer in obscurity, and the day is not far off when it will take its place in the world of art as prominently as the Russian *Ballet* or the Javanese *Wayang Wong*, and also considerably influence the future dance art of the world.

Kathakali, in its present form, may be said to date back from the early eighteenth century, and its association with a prince of Travancore may, to a certain extent, be historically correct. But its real beginnings can be traced to a race and civilization much anterior to the Aryan, and its antiquity must indeed be very remote considering that it has certain primitive elements in its rhythm, music, make-up, dress and ornaments, and also that it gave birth, at a distant past, to the Javanese and Kandyan dances. One can also trace elements of Polynesian rhythms and movements in it. It has most undoubtedly absorbed and assimilated the whole of *Bharata Natya*, which gives it its present cultured character.

I have no doubt, whatsoever, that its origin was in magic, and even today its *elemental* nature can be felt by any sensitive person. It must have played a tremendous part in the religious rites of the ancients who knew how to invoke invisible powers, both of evil and good, by symbols of sounds and gestures. Both primitive and civilized nations of the world have recognized and used this symbolic language for communication with subtler worlds and invisible beings. The Egyptian Masonry, the Hindu Vedic Rites, the Chaldean Magic, all these were several forms of magic based on a deeper understanding of the laws of nature and their psychic effects. It was well known to the ancients that sounds and gestures create definite forms and colours in subtler matter, and they have a certain meaning and message to the spirits whose aids are sought by these magical formulas and rites. Some of the sounds and gestures and the accompanying drum-beats in Kathakali, especially as in the opening scene of *Kuchela-vritha* and the like, are distinctly of the spirit-invoking kind. I do not know how far the actors themselves realize the magical quality of their arts—I suppose they feel but do not understand—but I am certain that the powers they invoke and release are tremendous.

Hence I venture to claim for this art an antiquity far greater than is usually assigned to it. To say that this art is only about two hundred and fifty years old is absurd. In the first place it cannot be the work of anyone single individual or a group of individuals, however clever and talented he or they may be; *it is a heritage of a race,* as old as itself. In the second place, it is not humanly possible to evolve and perfect an art of this kind within the short space of two centuries, even if a whole nation had put its whole energy in perfecting it, and we know for certain that this art was dying a natural death during the last two centuries, except for isolated patronage here and there by a few landlords and petty chieftains. I



Head-dress worn by characters like Krishna, Rama or Arjuna.

claim for Kathakali an age anterior to *Bharata Natya* or *Ajanta Chitra* or *Sanchi Silpa;* in fact, this art is as great in its own line as Ajanta frescoes are in painting or Bahrut friezes are in sculpture.

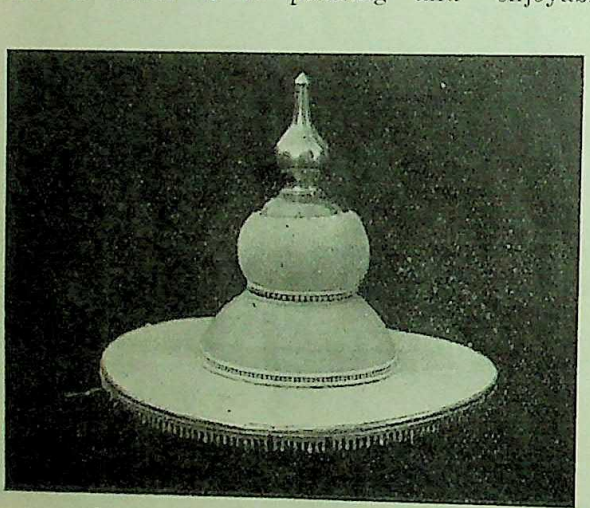
Now what then is this Kathakali, the impatient reader may ask? It is, as its name indicates, Story Play (Katha: story, Kali: play), or the narration of a story in the form of a drama. But in this case the drama is a pantomime or dumb-show, accompanied by music, song and dance. It is a unique dramatic art, as daring in its conception as it is complex in its expression. Even a whole epic like the *Mahabharata* or the *Ramayana* is presented to the public, without a single word spoken by the actors but through an evolved technique of suitable gestures, suggestive poses, clever facial expressions and appropriate song and music. It is more elaborate than a musical play and more exacting than ordinary dramatic acting.

It is an open-air show, meant to be performed in a grove or maidan, and never inside a theatre. It has, therefore, not the usual painted curtains

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and horrid backgrounds of the Indian stage to mar its general effect. Its settings are simple and admirably serve the purpose. Just a *shamiana*, with a high roof supported by four poles; two tall bell-metal oil lamps burning bright all through the night and shedding cool light not trying to the eyes of both the actors and audience; a beautifully-coloured cloth held in front by two dressed-up boys every time an actor or actors make entry or exit, serving as a drop-curtain; and a stool for actors to sit upon or rest their legs as the case may be. The audience sit in front on matted floor, and the singers and drummers sing and play standing immediately behind the actors. The orchestra consists of two singers (or narrators of stories), a *maddalam* player, a *chendai* player, a cymbal and a gong player. Conch is sounded at the beginning of a show. The first impression of this music is rather loud and harsh, but when the ears get used to them it is pleasing and enjoyable.



Head-dress worn by characters like Hanuman, Vali etc.

Certain changes would need to be effected if they are to be played in a closed theatre, as the sound would be deafening, but as far as possible it is wiser to have them in open air.

The play, usually a story or scene from the Indian classics, lasts a whole night, from 9 P. M. to 6 A. M.; at times continuing for several nights. In its own place and among its own people this may be all right, but when it has to be presented outside Kerala and to people with modern tastes and ideas, there must be a time-limit to it, say, two to three hours at the most. This much-needed reform is being introduced by the Kerala Kalamandalam, under the leadership of the poet Vallathol, who is devoting all his time, energy and money for the revival of this ancient art, with a hope that it would be accepted and appreciated by the world at large in its reformed state. He himself is an expert exponent of the science of gesture, and his enthusiasm is contagious. He has a keen and energetic collaborator in this work in Mr. Mukunda Raja of Kunnamkulum, the Honorary Secretary of the Kalamandalam.

The conventional form of presenting a play is as follows:

First there is the announcement to the villages all around, known as *Kelikottu*, drum-beating about sunset time, and this is followed by *Todayam* and *Vandana-slokams* (dance, music and prayers) behind the curtains, a little before the commencement of the play, and after this the first appearance of characters amidst a loud flourish of drums and conch, known as *Purappadu*, and the interval between this and the actual commencement of the story is taken by *Melappadu*, musical contests between the *Maddalam* and *chendai* players and the singers.

The stories interpreted by Kathakali are in poetic forms set to music, which closely resembles the temple music of South India. Several gifted poets of Kerala, some of them princes of the royal blood, have contributed much to this art in the form of poems and plays written for this purpose, which the actors faithfully try to interpret in Kathakali. The singers here, like the *Dalang* in Java, are not possessed with a good voice, which is unfortunate, and even the drummers should be trained to play softer music than they do now. It would not be a bad idea if *Edaka* (stringed-drum) be introduced in certain scenes where solo dances are performed conveying the *Sringara* or *soka rasas*. For a proper appreciation of this art by the world at large, certain innovations and changes need to be effected, and experiments to that end should soon be made.

There are thirty varieties of dances, some simple and some complex, in Kathakali, and they are based on a sound knowledge of rhythmic laws of body movements. There is very little "foot-work," in the Western sense of the term, and some of the steps are obviously primitive and uncouth. The main emphasis seems to be not so much grace or beauty but strength, but still there are a good number of graceful movements and steps in the dance. A student of Indian sculpture can easily trace in this art the varied bends and flexions, poses and postures that one sees in stone and bronze images.

This art is not merely suggestive and interpretative but highly descriptive and realistic too, such as the Peacock Dance. It is an amazingly truthful portrayal of the bird's moods and movements, its vanity and majesty. The composer of this dance was not only a keen observer of nature, and particularly of the life of the peacock, but also a psychologist who understood a little bird's flutterings of heart and mind. This clever imitation and interpretation of animal and bird life is an interesting feature of Kathakali. Knowledge and originality characterize everyone of these interpretative dances, and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mere whim and fancy of the artist as in some of the modern dances.

It is here that tradition helps and keeps in check individual idiosyncracies from running riot. A chief feature of modern art is this supreme conceit and folly in art interpretation and creation without the requisite talent or guidance. Tradition can both help or hinder, it all depends upon the artist and his genius. It is my conviction that the traditional forms evolved in Kathakali can greatly help any aspiring student of dance, and I have no doubt that more and more will go in search of it as Ragini Devi and Uday Shankar have done.

Abhinaya, i. e., interpretation and portrayal of moods, emotions and ideas through hand gestures (*mudras*) and facial expressions, is a particularly significant aspect of Indian dancing, and it has developed into an interesting science and art. Body movements and rhythmic footsteps have their own important place in Hindu dancing but not a primary place as in Western dancing. Bharata, the reputed author of the *Natya Sastra*, has elaborated a system of gestures (*mudras*), and it is in use, though in a corrupt form, in the several styles of dance existing today. But the unknown author or authors of Kathakali, either following a more ancient tradition or creating a new one, have enriched this with a wealth of words, idioms, phrases and expressions nearly as complete as the spoken language and capable of interpreting even abstract ideas. Some of these *mudras* are as descriptive as any picture could be and some as suggestive as any symbol. They are based on a profound understanding of life and nature, and when you consider that the whole of the *Ramayana* or *Mahabharata* can be interpreted successfully by this gesture-language, the achievement becomes almost incredible. And that is what has been attempted in Kathakali.

Kerala Kalamandalam
(Staff and Students) Seated : Mukunda Raja, Hony. Secy. : Ragini Devi, Dancer ; Poet Vallathol, Founder and President ; G. Venkatachalam, writer of this article

Gods, Goddesses and Devas ; Siva, Vishnu and Brahma ; Parvati, Lakshmi and Saraswati ; Indra, Varuna and Cubera ; Rudra, Narasinha and Durga ; Gandharvas, Kinnaras and Kimpurushas ; Vyasa, Narada and Agastya ; sun, moon and stars ; clouds, thunder and lightning ; rain, storm and wind ; earth, sky and ocean ; fire, water and air ; man, woman and child ; friend, foe and lover ; king, queen and prince ; saint, sinner and sage ; teacher, warrior and workman ; trees, flowers and buds ; animals, birds and bees ; peaks, valleys and mountains ; moods, passions and thoughts ; hatred, anger and jealousy ; love, lust and affection ; aspiration, devotion and worship ; subtlety, cunning and greed ; birth, death and growth ; speculation, imagination and introspection ; concentration, meditation and contemplation ; description of scenes, incidents and events ; portrayal of persons, character and conduct ; dialogues, soliloquy and conversation—all these have their appropriate *mudras*. Their description is, at times, true to life. Deer, fish, peacock, elephant, lotus, buds, creepers, etc. are picturesquely illustrated ; verbs, nouns, prepositions and even exclamations have their apt *mudras*.

Being a descriptive language it is naturally much more elaborate and intricate than spoken language and takes time to learn. The memorizing of the twenty-four root-*mudras* and their endless permutations and combinations would itself take a long time, but to be efficient in their exposition and to master simultaneously the nine movements of the head, eight glances of the eye, six movements of the eyebrows, four postures of the neck and other sixty-four movements of the feet, heels, toes, ankles, knees, thighs, waist, sides, back, arms, elbows, shoulders, wrists, palms, lips, nose, chin, cheeks and eyelids, as practised in Kathakali, is indeed a matter of strict and careful training for several years. That is why a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pupil takes six years the least to get some proficiency in the art, and no one is allowed to teach another unless one has learnt it for over twelve years. The discipline and regular practices these pupils have to undergo are very rigorous and exacting, and the course of physical exercises and massage of the body are exceedingly interesting, albeit a little crude and primitive.

What a mockery then it is that after an easy and indifferent training for six months or so, young dancers come forward most brazenly to interpret the classical dance art of India before the public and expect patronage, appreciation and applause! Art is a jealous mistress and the aspirant must pay her price. In the whole of Kerala there are now only two masters of this art, who have been practising it for over forty years, and who now teach at the Kalamandalam, Kunja Kurup of Thakazhi and Narayana Nayar of Kavalapara, both great artists and good men. In any other country their genius would have been proclaimed from the house-tops, but here they live and teach in an insignificant village for no fame or money but for the love of the art and its traditions. All honour to them.

Make-up and *Mask* play a great part in Kathakali. This art is an elaborate process needing years of practice, and there are men who specialize in them. The Kathakali *make-up* ordinarily consists of a white *chutty*, (outline) made of rice paste and cleverly done in relief on the sides of the face from ear to ear, and the face within is painted green, red or black, according to the character, on which one can observe the display of emotions and expressions of the actors. As a *mask* and a work of art this is much more interesting than the artificial paper or pulp *masks* used in dances all over the world. Women characters do not have this *make-up* or *mask*. Personally I should prefer all characters, except the *rakshasas* and demons, to appear without these *make-ups*. To a certain extent they mar the aesthetic effects of the dance; and if any *make-up* needed at all, a little paint of the flesh colour for the face with attenuated eye-brows and slightly emphasized mouth will equally serve the purpose.

This change in the *make-up* will necessarily affect the present costumes and ornaments the actors wear, which are, to tell the truth, barbaric, heavy and cumbersome. The dancers' well-developed bodies and their graceful movements all get lost within the folds of the present long-sleeved blouses and pleated skirts. These dancers, with practically no dress save a piece of loin-cloth, create a far more beautiful impression and reveal more fully their supple form and sinuous lines than in their conventional costumes. The jewelleries too, though picturesque, are not elegant and refined. They are mostly copied from the ornaments of the temple images, and even the crowns (*mukuta*) are heavy and can easily be replaced by a more elegant form of head-dress, like the Javanese dancers.

A bold and courageous reform need to be introduced in this direction; and much of the present misunderstanding about this art, in its own homeland, is due to this barbaric dress worn by the actors and the frightful *raksha* characters presented in their plays. In representing *Bhayanaka* and *Bibhatsa* rasas (fear and grotesque elements) on the stage, the Kathakali actors cannot be excelled by any in the world, and their characterization of *rakshas* is too realistic and terrible. The make-up, costume, gesture, music and the tense atmosphere are all awe-inspiring. This is only one feature of Kathakali, and most unfortunately, it is this aspect that is most emphasized, and hence the misunderstanding that it is inartistic, crude and primitive. This, however, is a mistake. The Kathakali actors are equally experts in presenting *Sringara* and *Soka rasas* (love and grief) or *Vira* and *Karuna rasas* (heroic and compassion), and few actors on the stage can excel them in these. But much of them is really lost in their traditional way of presentment, and it is here the authorities of the Kalamandalam can do much to make this art acceptable by the world. The poet Vallathol and his fellow-workers are eager to accept suggestions and criticisms, and it is for talented dancers and artists like Sri Ragini Devi, Menaka, Shrimati Hutheesingh, Uday Shankar and others to learn the art first and then suggest ways and means of modernizing this ancient and glorious art.

THE FOLK HIGH SCHOOL OF DENMARK

By Mrs. KIRON BOSE

THE agricultural population of Denmark has developed certain qualities of mind and character which have won the admiration of the whole world. These have enabled the people to adapt themselves to economic changes, and, with their intellectual and moral power, they have achieved success in many-sided co-operation.

They have developed these qualities within the last few years. Only recently they were incapable of co-operation, but today they are resourceful, progressive and capable of associated enterprise. This remarkable change is attributed to a group of patriots who saved their countrymen by their teaching and example. Their teaching was sympathetic and their precepts entered into corporate life.

The idea of the Folk High School did not originate in the mind of a college professor; it was conceived by a spiritual genius who understood thoroughly the life and mind of his people and who had a vision of the especial enlightenment that was needed to promote the well-being of his people. The aims and method of the school are in every way determined by the life of the common people which it is intended to serve. The hymns that he heard sung at home had a vital influence over his later life; and the memory of that good Home became a sort of inspiration. He wrote—

"Forward to help in the hour of need
With the treasure you have on store.
With the peoples' stumbling strength and wits
On! peasant! on!

The great personality of Grundtvig, the pastor, poet, and educational reformer, influenced first a group of disciples and ultimately the peasantry of Denmark. His great idea was to open a Danish High School to which the young people from all parts of the land could have access in order to become better acquainted with themselves and where they could receive guidance in all civic duties and relationship, getting to know all their country's needs; the idea being to rouse the love of the country through the mother-tongue, their national history and by Danish songs.

The High School started by Grundtvig gave the essence of a liberal education to farmers' sons and daughters. The school worked a miracle, and the peasantry was transformed. Danish agriculture was hard hit by foreign competition in the grain market. Corn was the chief product of Denmark. But the Danish peasantry instead of asking for protection turned to technical improvements. They turned their attention from the export of wheat to butter and bacon. But for the people of the High School, the agricultural people could not have shown such great adaptability and intelligence. A liberal education had given the peasantry a practical culture. Co-operative dairies sprung up in numbers. Butter and bacon saved Danish agriculture. Behind the swift and new organizations of the most conservative industries were brains, leadership, and unselfish public spirit.

The Folk High School inspired pupils with fresh energy and a new attitude towards labour, and gave them a wide outlook on life. The school awakened in them a yearning for knowledge and a desire for learning. With this culture young men and women of Denmark saved the Danish farming. The aim of the Danish High School has been to become an educational institution for all, for rich and poor, for town and country and especially for the members of the farming community.

During the first half of the nineteenth century, the Danish farmers had carried through some radical land reform legislation. The farmer who was formerly the tenant of the Manor became a freeholder; and the personal dependence of the peasant on the squire ceased. This brought about a great social development. All the soil which had been cultivated by the village peasants in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

common now came into their personal possession. Through this arrangement the danger was avoided of getting on the one hand a numerous and powerful Association of land proprietors and on the other hand a poor country proletariat. This change has been due to an increase in the number of medium-sized farms and the rapid growth of a number of small holders who were of no importance before. The advent of the small holdings has partly been possible by reclamation of health and moors and partly because individual holdings have been reduced in size.

It is especially from the homes of these farmers that the students of the High Schools have been recruited. In the development of Danish life this condition of land-ownership has been of great importance.

The sense of fellowship and the recognition of common interests are still the strongest bonds that unite the Danish farmers.

The distinction between the two groups, the large and small land proprietors, is so small that there is no place for caste feeling and caste struggle. The democratic distribution of property and the spiritual movement among Danish peasants have created a fellowship which, irrespective of class and profession, family and income, unites all.

A COIN OF DASARATHA MAURYA

By K. P. JAYASWAL

In the Pataliputra excavations a huge quantity of coins were discovered. I have recently examined a thousand of these found at the Maurya level. The main symbol of the coins from the Maurya level is the *Moon-on-hill* device which occurs invariably on the thousand cast coins I have examined. On a numerous issue the *Moon-on-hill* monogram stands as the solitary figure on the face of the coin, and either the letter *Mu* (sometimes *Mo*, *Ma*), or an elephant stands on the reverse.

The symbol does not occur on any coin of the pre-Mauryan level found at Patna. And this is the only symbol of the Maurya-level coins which stands by itself on smaller coins of that level. It also occurs on the Kumbrar pillar at its bottom, that is, it is definitely the Maurya imperial symbol. While the initial *Mu* or *Mo* denoted the dynasty *Muriya* or *Moriya*, the moon denoted the name of the king (Chandragupta Maurya). Similarly later the moon on the coin of Chandra Gupta I of the Gupta was marked as the name symbol, and 'fire' (*Agni*) on the coin of *Agnimitra*.

The symbol in later generations of Chandragupta Maurya was retained as the dynastic symbol. This is evident from a number of finds which will be published shortly. In tracing the symbol on coins before 190 B. C., the beginning of the Indo-Greek rule and its coins at Taxila, I found a coin with this Maurya symbol (on the obverse) which on the reverse has a distinct name in Kharoshthi characters. It is coin No. 5 on plate III of Cunningham's *Coins of Ancient India* (opposite p. 60). This coin has been copied by the Indo-Greeks, and therefore its date is before 190 B. C.

I am reproducing the coin here. Cunningham's book has become very rare (only 200 copies having been printed originally).

The legend begins opposite the face of the horse

(Line 1) दशर [थ *faint*] (*Dasara*[*tha*])
Line 2) स्य (*sya*).

The lettering is bold and clear, except for the third letter which has become faint.

Dasaratha was the grandson of Asoka. His cave-buildings with inscriptions are well known (at Barabar Hills, Gaya).

The dynasty which followed shortly after Dasaratha Maurya did issue signed coins. We hope to recover another signed coin of the Mauryas.

The early Mauryas had name-symbols or initials which have been traced for three generations on Patna finds.

MAHAMAHOPADHYAYA KAMALKRISHNA SMRITITIRTHA

By Prof. CHINTAHARAN CHAKRAVARTI, M. A.

From very olden times down to a time not long past, Pandits (Indian scholars of the old type) held important positions in and exercised immense influence on Indian Society. Though their position and influence have considerably suffered with the introduction of the present system of education and modern civilization, they are still held in deep regard by not an insignificant section of the people. They are still holding the torch of ancient tradition burning—often unnoticed and with very little publicity. Owing to the comparative neglect of the people at large this type of scholars is unfortunately fast dying out and accounts of them require to be preserved for the benefit of the future generation, if not for the satisfaction of the present. It is for this reason that the account of a well-known Pandit of Bengal is given here for what it is worth.

Born in March 1870 in a family of Pandits in Bhatpara, not far away from Calcutta,—a place which is still well known as a centre of Sanskrit learning—Pandit Kamalkrishna peacefully passed away after a short illness on January 25, 1934. He had all the characteristics of the old-type Pandit of India—unbounded humour and wit, an extremely simple temperament, immense love for old culture, plain living and high thinking. Like so many others of this type, the Pandit was satisfied with the plainest national dress of Bengal, that is gradually being discarded even by Pandits, not to speak of others. No coat, shirt or shoes but two pieces of cloth—one for covering and the other to cover the upper part of the body with and a pair of slippers—this was all that made up his formal and society dress.

Plain living and high thinking was the motto of his life. But unlike quite a good number of Pandits of the present day, he all along led a busy literary life. Besides teaching students in the orthodox style without charging any fee and sometimes providing them with free board and lodging, he devoted his time and energy to the publication of old Sanskrit texts. He seems to have received his first training in and initiative for this work from the late Mahamahopadhyaya Haraprasad Shastri, whom he accompanied in his Nepal tour of 1897.

It will not be out of place here to give a brief outline of the activities of Pandit Kamal-

M. M. Kamalkrishna Smritititirtha

krishna in this line. He mainly busied himself with the work of editing and translating old Sanskrit texts—specially those belonging to modern *Smriti* (ancient Indian law as codified by later scholars in comprehensive digests) in which he had specialized. He was a quick versifier as well like many others of this type of Pandits and took delight in composing Sanskrit poems mostly of panegyric and topical character. Many of these were full of humour though very few of them have unfortunately been published. He also took a keen interest in old Sanskrit dramas, in the presentation of which on modern stages he sometimes had an active part.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He seems to have made his literary debut by taking part in the translation of some of the Puranas that were published together with Bengali translations under the editorship of Pandit Panchanan Tarkaratna from the Bangabasi Press of Calcutta. He was also responsible for the translation of the second half of the *Rajatarangini*, an historical work in Sanskrit, and for editing and translating the *Agastya-samhita*, both of which were published from the Hitavadi office of Calcutta.

For the last thirty-four years, with occasional small breaks, his principal literary preoccupation was that of editing and revising various old texts published in the *Bibliotheca Indica Series* of the Asiatic Society of Bengal as also the edition of a few works in the Gaekwad's Oriental Series of Baroda.* He was engaged in the work of editing texts for both of these series when the cruel hand of Death took him away from this world. His continued service to the Asiatic Society was partially recognized by his election as an Associate Member of the Society in 1924 and his re-election in 1929.

Besides being the editor of old texts Pandit Kamalkrishna was the author of a number of papers embodying the fruits of his lifelong study, some of which were published in different Bengali monthly journals. One of these—quite a big and comprehensive one—called *Prachin Bharatiya Sakshyavidhi* (Law of evidence in Ancient India) won for him the Jogendra Chandra Ghosh Research Prize for Hindu Law. It was published in the *Journal of the Department of Letters* of the University of Calcutta.

In recognition of his lifelong literary activities the Government of India conferred on him the title of Mahamahopadhyaya in 1926. By his death Sanskrit scholarship has suffered the loss of a devoted worker and Bengal has been deprived of a scholar of the old type that is hard to be replaced.

*Altogether ten works—all digest on *Smriti* belonging to Bengal or Bihar composed between the 12th and the 16th centuries of the Christian era—edited by the late Pandit were published in this series. Of these *Haralata* of Aniruddha Bhatta is the earliest. All these works are highly important for the reconstruction of the social history of the people of Eastern India, as they deal with topics like rites and rituals, jurisprudence, criminology, etc.

"The ancient practice, derived from the Orient, of eating meals in a recumbent posture. Among the Greeks at the time of the Homeric poems this practice had not yet been adopted; but in historical times it obtained in general among both Greeks and Romans, and it is illustrated in

Eating meals in a recumbent posture

early vase-paintings. It was customary to eat reclining diagonally toward the table, resting on couches, either flat on the breast or supported on the left elbow in a semi-sitting position. Cushions were provided to relieve the strain upon the elbow and the back. The table was usually a little lower than the couches, for convenience in reaching the food."

"The royal cook humbly feeding a native King of Uganda. To touch the teeth of this African monarch would mean punishment by death for the cook."

RURAL RECONSTRUCTION WORK AT SRINIKETAN

By SUKUMAR CHATTERJEE, M.A.

The Poet's Dream

A poet lives in the dreamland of his own creation. That is the proper sphere of his existence. This does not mean that the idealism of the poet is of no practical importance to human life and civilization. The God-gifted vision of the poet sees unity in apparent diversity. He can sift the permanent from the transitory. With a clarity of vision and a keenness of perception, not possessed by ordinary mortals, the poet gives expression to our highest aspirations and ideals.

But this gift itself removes him from the ken of ordinary human beings. He seems to belong to a separate species. When he does come into contact with every-day life, he is apt to get out of his bearings and to fail to appreciate the practical side of things. He is therefore not quite the fittest person to think about and solve the problems of the field, the factory and the changing mart.

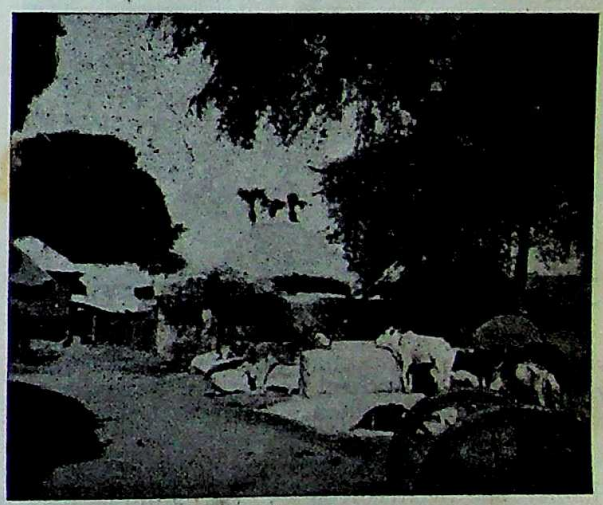
Dr. Tagore is one of the few exceptions which perhaps prove this general rule. Early in life he realized the risk of being completely wafted into dreamland on the wings of fancy, and sounded a note of warning to himself. Of the many characteristic poems in which this mood of the poet found expression, the most striking is the one entitled *Ebar phirao more*—now let me take a turning. The wail of the down-trodden and the destitute masses as well as the stern call of duty has seldom been expressed in nobler and more forceful language.

His mind was particularly well-equipped for the task. In his early youth, when he was employed in the work of managing his paternal estate, when to all outward appearances he was turning into verse of exquisite beauty the play of moonshine on the water, the murmur of the southern breeze and the fragrance of the mango blossoms, the other side of his nature could not remain idle. He was gathering experience of Rural Bengal and making a first-hand study of its problems, and the poet's mind was dreaming dreams of a prosperous "happy peasantry."

The Sriniketan

When the time came for him to take up practical and constructive work, he had to turn his attention to the school which had been growing up at Santiniketan, which later on developed into the Visva-Bharati or the Institute of International Culture. This is not the place to dilate on the distinctive features of this Institute and its message to the world, torn asunder by the conflict of self-interest, particularly the post-War world. The earnestness, devotion and sacrifice with which the Poet applied himself to the task of building up the Institute in the face of tremendous difficulties, are well known. Any man might be reasonably proud of this splendid achievement and feel a satisfaction that his time in God's vineyard has not been spent in vain.

No such sense of satisfaction and complacency came to Dr. Tagore's mind. He knew no peace so long as the dreams of his early youth were not realized, and at a time of life when most



Typical Scenery of village Islampur in Birbhum District

men would lay down their tools and seek the comfort of the armchair "to husband out life's taper at the close," he found it necessary to turn to "fresh fields and pastures new." He founded the Sriniketan, the Institute of Rural Reconstruction.

A site was selected for this purpose at Surul, a village about two miles to the south of Santiniketan. Raipur, the seat of Lord Sinha, is about four miles away. Surul itself was a centre of industrial activity in the early days of British administration and Babu Bholanath Chandra, visiting the place in 1854, found "the deserted and desolate premises used for the silk filature of the East India Company."

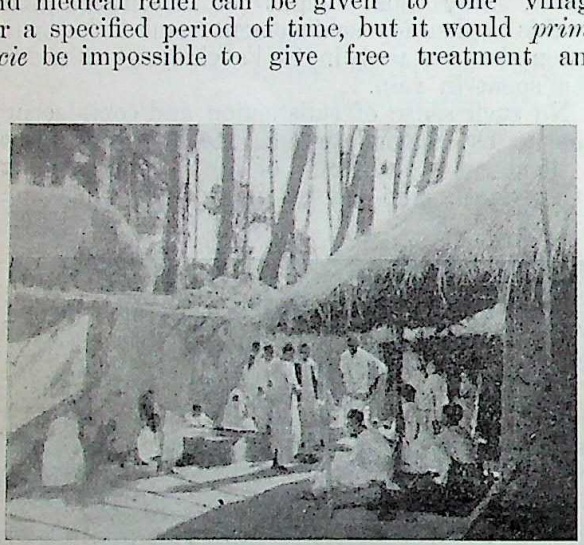
The working of the Institute

(*a*) Medical Relief

Whenever deterioration sets in in any part of our social organism, things move like a whirlpool, in a vicious circle. Such is the case with the question of medical relief. Because the people are poor, they cannot afford the cost of medical treatment, and because they cannot afford the cost, they suffer from Malaria and other diseases and cannot make a sufficient income. Therefore, ever since the establishment of the Institute attention has been focussed on the question of medical relief.

The problem is not quite easy of solution, because the people are so poor. Free medicine and medical relief can be given to one village for a specified period of time, but it would *prima facie* be impossible to give free treatment and



The workers of Sriniketan collecting information from the farmers and peasants of Islampur, Birbhum District

medicine to all the villages and for all time. The difficulty has been solved by the application of the principles of co-operation.

The Co-operative Dispensary

The area of this organization is three or four adjacent villages where a sufficient number of men are available. The minimum number of members with which an organization of this type can work without extraneous aid, is 200.

Contributions are realized mainly in kind and each member is required to pay, at the time of the annual harvest, one-and-a-half maund of paddy, the price of which, on the basis of the present market rate, is about Rs. 2. He has to pay in addition a monthly subscription of anna one only.

With the money thus collected, the society is able to maintain a Sub-assistant Surgeon. Medicine is supplied to the members at cost price. A small fee is payable when the doctor is required to visit the members at their houses. Any amount paid on this account goes to the funds of the society.

In addition to the services of the Sub-assistant Surgeon maintained by the Dispensary Society, the members have the benefit of consulting the Medical Officer of the Sriniketan in all serious cases and of having their blood, sputum, etc., examined at the clinical laboratory of the Institute.

Three organizations of this type have been formed and are working at their centres, namely, Ballabhpur, Bandgora and Goalpara.

(*b*) Rural Education

In respect of primary education, work has been started among the Santals and the depressed class Hindus, and ten schools have been established with a total of 235 boys.

More attention is directed to the development and training of Brati-Balaka. This organization is being built up on the model of Boy Scouts but it has some distinctive features. In addition to physical development and drill, the boys receive regular training in social service. They are expected to help in village sanitation, to nurse the neighbours in sickness and to make *musti* collections (handfuls of rice). Their training includes first-aid, gardening, and observation of plants and soils and an attempt is also made to train them in weaving, carpentry and other suitable handicrafts which might help them to earn a livelihood in later days.

The total number of boys at present enlisted is about 400. There can be no doubt that the organization is suitable for rural Bengal and provides excellent means for early training in the requisites for citizenship.

A start has also been made with a Circulating Library for the villages lying in the sphere of the Institute's activities. The central library consists at present of 519 volumes. There are also four branch libraries. The total number of volumes issued during the year 1932-33 was about 1,5 which were taken by about 600 individuals in different villages.

During the year about eighty lantern lectures were delivered embracing a variety of subjects of popular interest.

(*c*) Economic Uplift

The activities of the Institute in the sphere of economic uplift of the rural population have followed the lines along which improvement is mainly required. A farm has been run for experiment and demonstration, from which the cultivators in the neighbourhood are supplied with improved seeds, seedlings and cuttings. There is also a poultry farm in charge of an expert in which experiments are being made with different breeds. The industrial department of the Institute, maintained with the help of a substantial annual subsidy from the Bengal Government, has been trying to improve and resuscitate

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

industries like weaving and lac and to introduce suitable new industries like *durrie* making and leather works. The villagers are taking a keen interest in *durrie* making and already frames have been established in families.

Co-operative Organization

No scheme of rural welfare is complete without arrangements for the introduction of co-operative organizations. A reference has been made to the co-operative solution of the problem of medical relief by the establishment of Dispensary Societies. In order to promote credit facilities to the rural people, a co-operative Central Bank was established at Sriniketan in the year 1927. There are 21 primary societies affiliated to it—most of them are of the rural credit type.

There are some co-operative irrigation societies. These societies are a special feature of Western Bengal where the undulating nature of the country renders the conservation of water a matter of primary importance for agriculture. The workers of Sriniketan recognize this necessity and have included the organization of co-operative irrigation societies in the programme of their work.

There has also been an attempt to organize associations among women. Some such associations (Mahila Samiti) have been formed at Surul, Ballabhpur, Bandgora village and Bandgora bazzar. They are regularly visited by the lady worker of the Institute, who gives practical lessons in cutting, sewing and embroidery and also imparts instructions in hygiene, maternity and child-welfare.

Rural Survey.

The work of the Institute has so long been mainly centralized at the Sriniketan Institute. Those engaged in rural welfare work recognize the practical difficulties in respect of expansion counsel on one hand by the inherent and deep-rooted conservatism of the people and on the other by the distrust of all philanthropic activities from outside. In respect of the latter, the rural people of Bengal are hardly to be blamed. Whenever they have come in contact with the educated *bhadraloks* of the town, whether in the shape of landholders, money-lenders or lawyers, they have often been victimized. It was, therefore, necessary in the beginning to proceed cautiously and to confine the activities to some adjacent villages where the first experiments might be conducted under most favourable auspices in an atmosphere of confidence and goodwill.

In the meanwhile, the workers of the Institute have not remained inactive. They have been conducting a careful, exhaustive and scientific study of the conditions prevailing in the adjacent villages. The survey of two villages has been completed by Babu Kalimohan Ghosh, Superintendent of the Institute, and the information has been published in the form of booklets. They are full of interesting informations and well worth a perusal.

A survey camp

The writer had the good fortune of witnessing the survey of four villages in another centre which was made in the first fortnight of March, 1934. The party consisted of several workers from the Institute; a batch of boys from the Visva-Bharati and a group of Brati-Balaka boys from the Sriniketan school. The party pitched three tents on the bank of a tank on a plot of high land, bare of any vegetation, except for a couple of banyan trees, which marked the ghat of the tank.

The workers of Sriniketan collecting information from the farmers and peasants of Islampur, Birbhum District

The day began with prayers, drill and breakfast. The party then proceeded to an adjacent village where the workers of the Institute began to collect information according to a questionnaire previously decided upon. In the meanwhile, the boys under the leadership of the Superintendent proceeded to clear the jungles and clean the roads and lanes of the village.

The party returned to the camp at midday, when after bath, meal and rest, they met in the afternoon and discussed the information collected in course of the morning. The special feature of these discussions was the keen interest taken in the practical problems of rural uplift by the educated students of the Visva-Bharati, some of whom hailed from the farthest corners of Bengal.

The information collected in the course of the survey is of great importance, especially as it goes deep into the most pressing problems of rural Bengal. It is hoped that the data thus obtained will enable a practical reconstruction programme to be prepared. The present proposal is to put a wholetime trained worker at this centre to guide the villagers on proper lines under the supervision of the experts of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Institute, and it can be confidently expected that if the work is carried on in the manner in which it has been started, a great step forward will have been taken in rural welfare.

The Poet takes a keen and personal interest in all the details of the work. He is naturally impatient of the difficulties which make it impossible to accelerate the progress as much as his enthusiasm and eagerness would require.

It is a great thing for him to feel in the evening of his life that close at hand a band of sincere workers are employed in the task of translating the dream of his youth from the realm of fancy to the sphere of solid practical work.

RAJNARAIN BOSE ON THE MIDNAPUR PUBLIC LIBRARY

By BRAJENDRA NATH BANERJEE

THE name of the celebrated Rajnarain Bose is associated very closely with Midnapur. No less than fifteen years of his life were spent there as Head Master of the Zilla School. His activities were not, however, confined to the seminary he was in charge of, but were spread in many other directions as well. While there, he acted also as the Secretary of the Midnapur Public Library and rendered important services to the institution. I have recently had access to a Memorandum drawn up by him, giving a short history of the Midnapur Public Library. This document is now in the possession of Sj. Rathindra Nath Samaddar and, with his kind permission, is reproduced here, probably for the first time.

MEMORANDUM

History of the Establishment of the Library

The Midnapore Public Library owes its origin to the cordial wish of Mr. H. V. Bayley for the improvement of the inhabitants of this Town which he expressed in various ways while Collector of this District. Through his zealous exertions, subscriptions were raised from the Zemindars and other influential persons of this District to the amount of 2400 Rs.; the sum of 1658 Rs. 15 Ans. 7 Pies was expended in the erection of the Library building and the remainder devoted to the purchase of Books, Maps, and furniture of the Library and the printing of its Catalogue and Rules. The piece of land on which the Reading Room stands was presented by the Zemindars of the Town, Nuzurally Khan, whose agent of the time, Mr. W. Terry, exerted himself highly in procuring the gift. Baboo Kartickram Ghose, the Mo Moonshee of the Collector, who is now Hon Treasurer of the Library, was entrusted by M Bayley with the superintendence of the build work, and Mr. Bayley, in his MSS. Memorandu on the Midnapore collectorate, speaks favourab of the manner in which he discharged that tas Before the building was completed, Mr. Bayl was transferred from this District to Hooghly The inaugural meeting of the Friends of th Library held after the completion of the buildin in September 1852 for starting the Institutio was numerously and respectably attended, almo all the covenanted and uncovenanted officers the station, Agents to the Zemindars, Vakee and Amlahs of the Courts were present on t occasion. In this meeting, a Committee wa appointed consisting of three Hindoo and thr Mahommedan gentlemen with the Collecto Mr. G. F. Cockburn as President for th management of the Library. At the ne meeting of subscribers held in October of th same year, a Librarian was appointed on salary of 10 Rs. per month, rules we framed for the management of the Libra and a speech delivered in English by native resident of the Town on behalf of th native community of Midnapore speaking highly eulogistic terms of the exertions Mr. Bayley for the establishment of the Institu tion, and evincing a warm appreciation of h services thereby done by him to them. Th Library is also deeply indebted to Mr. G. Cockburn, the present Collector, the success of Mr. Bayley. He, by procuring gifts of boo from the Bengal and Agra Governments a the Calcutta Public Library and pecunia assistance in the shape of monthly contribution from different parties, by personal exertion manifesting a tender solicitude for the welfa of the Institution, has largely contributed to present prosperity and usefulness.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

By What Funds it is Supported

The funds by which the Library is supported are the monthly subscriptions and a small sum is also received on account of the rent of the bank adjoining it which belongs to the Jail but the right to the fishery was made over to the Library by Mr. Schalch, the then Magistrate of the District, in consideration of the Committee having it kept clean and repairing it and reserving to the Jail Darogah, the right of taking an occasional fish in order to preserve the Government right in the tank.

The Rules

A copy of the Rules is herewith enclosed. The meetings of the Committee are held on the first Monday of every month, besides which there are half-yearly General meetings of the subscribers.

The Present Subscribers

The present subscribers are all the Civil and some of the Military officers of the station and other European residents not connected with Government, the uncovenanted officers of the District, and the principal vakeels and ministerial officers attached to the Courts and other Residents of the Town. There are two classes of subscribers, the first paying one rupee per annum, and the second eight annas. The first class enjoy the privilege of keeping four sets of books at a time and the second only two. The present number of European subscribers is 14 and that of native subscribers 31. The following statement will shew the amounts raised from subscriptions for 13 months from Oct. 1852 to Oct. 1853.

		Rs.	Ans.	Pies
1852	Oct.	15	12	0
,,	Nov.	25	0	0
,,	Dec.	22	1	3
1853	Jan.	29	8	0
,,	Feb.	24	7	3
,,	March	17	0	0
1853	April	14	8	0
,,	May	19	8	0
,,	June	18	8	0
,,	July	28	8	0
,,	Aug.	24	0	0
,,	Sept.	17	0	0
,,	Oct.	29	8	0

The Sources from which are derived the Books now constituting the Library

The majority of the Books in the Library were presented by Mr. Bayley, some of the rest were presented by the Bengal and Agra Governments, the Calcutta Public Library, Mr. G. L. Young, the Agent of Mr. Abbott in this Town, Mr. G. F. Cockburn, His Highness Takajee Row Holkar, Baboo Radhanath Gangooly, the Deputy Collector, and Baboo Rajnarain Bose, the Hd. Master of the School and the others were purchased from the Government Book Agency, the Vernacular Literature Committee, and other sources with the original funds of the Library. Four months ago, the Book Club of the station lent a good collection of Magazines and Reviews for circulation to the subscribers of the Library. Newspapers are given to the Library by the President and some native gentlemen connected with the Institution. The total number of volumes in the Library is 1870.

Rajnarain Bose
Secretary
M. P. Library.

Midnapore,
15th Dec. 1853.

A CLOUD THAT'S DRAGONISH

By VERRIER ELWIN

The swift flame, swift as panther's stroke,
Struck at its victim silently;
Till all that little world awoke
To cries of agony.
The baby's tiny arm was charred;
His tiny face with torment marred;
And I must stand all helplessly
To gaze upon that misery.

O heart of mine, alive to heal,
Why didst thou stand, abashed, afraid?
Cloud of my sin arose to steal
The love that pity made.
And to my heart a whisper came:
'Alas, the sorrow and the shame,
The torment that has never end,
Only the pure of heart can mend.'

THE WATERS OF DESTINY

By SITA DEVI

I

THE small village Jamral stands on the bank of the Bhairabi, the ruthless. This river is regarded with awe by the people who live on either side of it, on account of the havoc caused by it every year. Villages on both sides are inundated, causing alarming loss in life and property.

One evening, a palanquin, gaily decorated with leaves and flowers, was seen being carried to the riverside, through the village lanes. Behind it came one phaeton and two hackney carriages. The villagers stared at the party in surprise. An old woman came forward and asked one of the palanquin-bearers, "For whom is the palanquin? And why are you taking so many carriages to the river ghat? Are you going to fetch a bridegroom? For whom?"

The leader of the party replied in a deep voice, "You shall know, when we bring him back with us."

The higher castes lived in the interior of the village. The riverside was peopled chiefly by some of the lower castes, mainly boatmen and fishermen. It was difficult to enter or to leave the village, except with the aid of boats. So some boats were always present at the ghat. These were small ferry boats, very simple in construction. When much show or pomp was desired, large boats were requisitioned from other villages.

A small crowd soon collected behind the palanquin and the carriages. The people of the party did not try to turn these folk back, but neither did they reply to any of their questions.

The party came to a halt at the ghat. Then an old gentleman came out of one of the carriages and looked at the broad expanse of the river. "You see the lights on those boats," he said to the attendants. "That is the bridegroom's party arriving. Bring out the torches from inside the carriage and light them."

The torches were lighted, serving to make the darkness all around darker still. The people came out from the huts on the bank of the river and surrounded the party, pelting them with questions. "For whom is the bridegroom?" everybody cried. "It is strange that we do not know—we who live in the same village." The crowd was composed of men, women and children, almost in equal numbers.

"Here they come," cried out the old gentleman, who seemed to be the man in charge. "Now then, ask the band to come out and play with all their might."

The door of the other carriage opened at once and four or five people came out, carrying musical instruments, and set to, with a will. The horses reared and plunged and neighed at this sudden noise. The coachmen were able to pacify them with a good deal of difficulty.

A large house-boat was seen gradually approaching the ferry station. It was full of people, and decorated with festoons of light. The nearer it came the louder and louder did the band play, and more and more loudly did the people bearing the torches shout.

The boat at last came to a stop and about twelve people got down on the bank. The old gentleman hastened forward to welcome them. The leader of the bridegroom's party was a fat bald-headed man, who led a boy of sixteen or seventeen by the hand. This boy was the bridegroom. The remaining ten persons, who formed the party, were of various ages and appearances. The young groom was gaily dressed. He wore a long tunic of pink silk, a *dhoti* of very fine texture, and garlands of flowers. His forehead was besmeared with white sandal paste, and he wore a "topor" (bridegroom's crown) on his head. He was smiling shyly.

The old gentleman received them with a great show of courtesy, crying, "Welcome, Jadab Babu, welcome. Many thanks for your punctuality. Here, my dear boy, get into this palanquin."

Jadab Babu was the bridegroom's uncle, and leader of their party. "Why should we be unpunctual?" he said with an air of importance. "We are only a few in number, merely those whose presence is indispensable. It is only a crowd which is usually unpunctual."

The old gentleman, too, was not the bridegroom's father, he was a sort of maternal uncle. He was all politeness and sweetness to the guests. "Yes, this is a flaw, no doubt, but it could not be helped, under the circumstances. Let the marriage pass off quietly, then we can celebrate the occasion with all the pomp we want. We can invite as large a number then, you know. This way, sir, this way. What are you gaping at, you fools? You there, hold the torch straight, and you, play your loudest. How much there any strength in your arms? How much rice do you eat? Drive on now, it is all right."

The party started forward. This time it was quite a large crowd, as the whole village followed in their wake. Village folks are simple and can seldom conceal their thoughts.

bride's party came in for plenty of caustic remarks from them.

"How strange!" cried an old woman, "Our Subarna is getting married, and they never told us! What a miser the woman is. That is her only child, and look how she is treating her. For whom is she keeping her money?"

Madhu, the boatman, was following the party with his *hookah* in hand. "Don't talk of these gentlefolks, aunt," he said. "They don't recognize us as human beings at all, because we are poor."

"But they have not invited the gentlefolks either," said his younger brother Sadhu. "Don't you see, how everybody is staring at them?"

It was true. All the village people were staring at the marriage party with wide open mouths. The menfolk were hurrying out to have a better look, the women remained mostly in their houses, giving vent to their resentment from there.

The name of the bride's father was Pratul Chandra Mitra. A string band was already playing before his house. Pratul Babu's wife, Narayani, was an invalid. But as it was her only daughter's marriage, she was working hard. For some private reasons, they had not been able to issue invitations before. Now she and her old mother-in-law were offering their excuses to the neighbours and asking them to come and grace the occasion with their presence. There can be no wedding without proper witnesses, and there must be some ladies for the women's ceremonials. From Narayani's family had come two persons;—one, her widowed sister, and another, her cousin, the old gentleman, whom we had seen as the leader of the reception party.

There was much talk and excitement in the inner apartments. The bride, Subarnaprabha, was after a child of eight. She had been out playing, and had been captured and brought back to the house, by main force. She was very glad at first, seeing so many people, the guests and the music. But when one of the old ladies present told her to sit down quietly and not to jump about like a tomboy, as she was going to be married, Subarna became furious. She made a face at the old lady and said: "Marriage indeed! I am not going to marry. Father has said that marriage is a rotten thing." The old lady laughed aloud and called out to Narayani, "Do you hear what your daughter says? Her father has told her that marriage is a rotten thing and she is not going to marry! But did not your father, too, marry, my clever miss?"

"Certainly not," said Subarna. "Why should he marry? He knows so much—he has read heaps of books." Saying this, she ran away, her anklets tinkling musically.

Narayani sighed deeply. "She is a madcap," she said. "I wonder how I am going to manage it all. I hope God will not put me to shame before so many people. Please go, sister, and coax her back here. We have not got much time left. We must dress Subarna up quickly and keep her ready. Please see that she does not run straight amidst the bridegroom's people in that guise. I must go and see to the cooking. The keys of my boxes are with my elder sister. Please ask anything you want, of her."

Narayani hurried to the kitchen, and the old lady went in search of Subarna. She was easily found. She was standing in the courtyard, gazing at the people who were making some preparations for the wedding. The lady knew how to get round the wayward child. "I say, Subarna dear," she said, "why are you going about in that dirty dress? Don't you see, how all the people have dressed up? Let's go, and I shall deck you out properly."

Subarna loved dressing up; so she followed the lady very quietly this time. They entered the large room where Narayani used to sleep and where she kept all her things.

Subarna's aunt made over the keys at once to the lady and said: "The wedding dress and the ornaments are in that big box. You know I am an unfortunate one (a widow) and should not look at auspicious things. So I am going away to the kitchen. Call me, if you want anything."

A number of girls and young women crowded into the room, to help in dressing the bride. Some did her hair, some began to prepare sandal paste, and some began to put the bridal dress and ornaments on the small person of the bride.

The bridegroom's party had arrived. There was not much pomp, but the bride's party made up for everything with an excess of politeness. The whole village had gathered there by that time. Some had been invited, some had come uninvited. The latter were determined to avenge the insult at the time of the wedding feast and were biding their time.

The women's ceremonials began, as it is the first part of a Bengali wedding. Narayani looked at the boy bridegroom and thought, "The boy looks nice, he will never ill-treat my child. He will make up for all the troubles I had to undergo on account of this marriage."

"What a pity that Subarna's father is not here," said one of the women present. "She is an only child." She looked at Narayani and said, "I don't think you did well in keeping everything from him. You should have informed him after you had settled everything finally. He would not have objected then to the marriage. After all, there is such a thing as social custom. Besides, the bridegroom is quite a nice boy. Why should your husband object to him?"

Narayani wiped her eyes. "You don't know him, sister," she said, "he is hard like a stone,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

you would call him scarcely human. If he knew about it even now, he would not hesitate to carry away Subarna by force from before the bridegroom. Why else should I behave like this? I have to think of my caste and my religion. It was only because my mother-in-law approves of the marriage that I dared to do this. You will see, how he punishes me, when he comes to know of it."

"May your child be happy," said the woman. "She is all that you have. If your husband behaves very badly, you can take shelter with your daughter and son-in-law."

"Don't say that," said Narayani. "I have no happiness in this world. As my husband does not want me, I do not want to be a burden on anybody else. I have decided on going away to Benares with my old mother-in-law, after the winter."

The women's ceremonials were over. Loud blasts on the conchshell rang up to the evening sky. The bridegroom was led out to the outer courtyard, where the real and formal wedding was to take place. Narayani looked at Subarna with tearful eyes. She was dressed in red silk and gold ornaments and was smiling. She silently invoked Heaven's blessings on the innocent child.

Suddenly a hackney carriage rolled up to the front door. Narayani's blood ran cold in fear. Who was the unwelcome and belated guest? Were all her plans going to be frustrated at the last moment? She ran to her bedroom, and peeped out through the half open window. No, it was not her husband. But she was not pleased on recognizing the new-comer. It was a cousin of her husband's, named Shibchandra. He was devoted to Pratul Chandra and Narayani was sure that he would look on this secret wedding with extreme disfavour.

Shibchandra walked straight in, without looking at anything or anybody and came to a stop before Narayani's door. "What are you doing, sister?" he asked. "If I could have arrived an hour earlier, I would have prevented this marriage somehow. Are you mad? You know my brother hates child-marriages with all his heart, and yet you are bringing about that very thing behind his back?"

Narayani remained silent for sometime. Then she said, "What else can I do, brother? You have all become *Sahibs*, since you went to the city; but we have not changed in the same way. We must observe our social laws. Else, nobody would even touch our dead bodies."

"So you are giving away a child of eight in marriage?" cried Shibchandra hotly, "and securing a passport for Heaven? Could you not have waited a bit longer? Was it already too late?"

"I shall give my explanations to the man who can demand it of me, but not to you," said Narayani bitterly. "Since you have come, try to help in the ceremony. If you stand here the whole day and abuse me, that won't prevent the wedding now."

"Even to look at such a marriage is a sin," cried Shibchandra, and walked out as quickly as he had come in. Narayani stood there for a long time, as if petrified; then she wiped the inauspicious tears from her eyes and went back to the store-room.

Her old mother-in-law sat there guarding the sweetmeats. "Is the wedding finished?" she asked, as Narayani came in.

"Yes, mother," said Narayani. "Brother Shibchandra came and took me to task very severely."

"They are a family of 'good-for-nothings'," said the old lady. "Has he gone away?"

Narayani nodded in affirmation.

But she had no time to spare, as the wedding ceremony was over, and the guests had to be fed. So she hurried off at once to make preparations as she knew that the bridegroom's party might be easily offended.

The ladies led the bride and the groom to the largest room of the house. They indulged in all kinds of witticisms, and peals of laughter rang through the house, reaching Narayani's ears now and then. But her heart was gradually filling with misgivings. She had done this deed hastily, without proper thought of the consequences. Would she be able to weather the storm that was sure to break? True, her mother-in-law would back her, but Narayani would be the chief culprit in her husband's eyes. In trying to give a husband to her daughter, she might have lost her own husband for ever. She could not suppress the tears that welled up in her eyes, even though it was considered inauspicious.

But Subarna, who was the centre of this ceremony and all these heartaches, remained absolutely free from fear or care. She was talking and laughing and making counter-attacks on the playful ladies, who surrounded the couple. The bridegroom was sitting silent and shy, and rather amazed at the behaviour of the bride. The ladies humorously proposed now and then to dress up the bride as the groom and the groom as the bride. This made the boy blush and feel still more shy.

The feast was over and the turmoil was gradually subsiding. The ladies began to leave the room one by one and the few who remained sank into sleep on the carpeted floor. The bridegroom looked around him. His newly wedded wife was sleeping quietly, clasping one of her friends round the neck. He sighed and moved off to the bed prepared for the pair and laid himself down.

Next day, the bride had to start for her new home. But Subarna refused to go and cried and shrieked with all her might. The bridegroom's uncle began to frown ominously at these proceedings of the bride. Narayani felt ready to sink into the ground through sheer nervousness. She ...

Pratul Chandra Mitra was the scion of an ...odox Hindu family in a village. Before him ... member of his family had ever entered the ...es of a college. Most of them had looked ...r their landed property and had stayed in ... ancestral village content with its simple ... A few, more ambitious, had gone out in ...rch of money, and had entered the railway or ... postal services. Most of them had become ...l-to-do. They were all devotees of Lakshmi, ... Goddess of Wealth, but very few had any ...erence for Saraswati, the Goddess of Learning. So it was a matter of wonder, how Pratul ...me to be such a lover of learning and so modern ... his ways of thinking. His relatives paid ...mage to social laws, the orthodox religion, ... Bramhins, the police inspector, etc., but ...ratul had a way of his own which was quite ...erent. After passing the Entrance examination, ... refused a post in the railway service and went ...ay to Calcutta to continue his studies, depending ... a small scholarship. While he was still a ...dent, he married Narayani. His parents ...ssed him to do it, and he, too, must have ...en carried away a bit, by the sight of the ...l's pretty face. That was the only thing he ...er did against his principles. Himself having ...ried a child-wife, he began to understand ... defects of child-marriage more than ever, and ...d his best to expiate his error, though rather ...ate. But in a Hindu family, a young husband's ...thority is very much limited. His parents, if ...ive, are always the heads of the household. ...o Pratul was not listened to, specially as ...Narayani too was not of his way of thinking. ...e loved and respected her husband of course ...d never contradicted him. But in her heart of ...arts, she thought him wrong and her parents-in-...e right. Pratul wanted to give Narayani a ...per education and for that purpose he wanted ...e her in a boarding school. He was averse to taking her to live with him as his wife, before she had completed the age of sixteen at least. But his parents refused stoutly to allow such an heterodox course, and Narayani, too, refused to go with her husband to Calcutta against the wishes of the old people. Pratul next asked them to let Narayani remain in her father's house for a few more years. But this, too, could not be, as the girl was thirteen, and could not, it was thought, be left in her father's house any more. So she was brought over. Pratul was so much annoyed that he left off coming to his village home for a few years. When he had finished his studies, and had accepted service as a professor, he came back to the village for the first time in many years.

Narayani was already twenty years old then. She thought herself a forsaken wife and was very sad and depressed in consequence. Still she could never make up her mind to follow her husband, renouncing her orthodox way of thinking. Seeing her husband after such a long interval, she began lavishing all the treasures of her heart on him, but she could not prevent his feeling her inmost thoughts. He, too, could not help loving his charming young wife, but he understood that he could never have her as a partner or a helpmate. After this he went back to his work and came to the village but rarely, just like a guest. His connection with the family all but ceased and he became more and more alienated from Narayani.

When Subarnaprabha, their only child, was born, he made one more attempt to bring Narayani over with him and lead the life of a family man. But this time, too, Narayani refused. Pratul's widowed mother, too, protested stoutly against the proposed arrangement. Pratul went back alone. He carried the determination in his heart to give his new-born daughter the best of educations.

He had decided to bring away the child to Calcutta, when she became older. Narayani never opposed him in words, but she knew she would never be able to live away from her daughter. She was the only child, Narayani had, and if she too went off to Pratul Chandra, for whom would she live in this world? She talked to her mother-in-law frequently about this. Both were of the opinion that Subarna must be married off pretty early, in order to foil all Pratulchandra's efforts.

When Subarna was five years of age, another attempt was made by her father to take her away. But the child, never having lived away from her mother and grandmother, shouted so lustily at this cruel proposal that her father went back alone once more. A few more attempts were made afterwards year after year, but all in vain.

Narayani's health was breaking down and her mother-in-law, too, was growing old and infirm. So both of them were becoming increasingly anxious to settle the matter once for all. But it was everything must be done in secret, it was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a difficult thing to do. They could not arrange a match for Subarna in the village, for it would become speedily known to Pratul. If they arranged it in some other village, the chances of being caught were very much less. But how were two Hindu village women to do it? They could not even go out of the village unescorted.

But luck favoured them. A lady whose birthplace was Jamral had been married into a village situated on the other bank of the Bhairabi. She could not come over to her father's house very often, but her son Shribilas came to Jamral every now and then as a guest in his uncle's house. Narayani had seen him several times. Shribilas was not bad to look at and he was about to finish his school course. His family, too, was known to her to be a good one. But Shribilas's mother Nistarini was a notorious shrew. This was the only flaw. But where could Narayani get a flawless match? Nearly every girl had to suffer a bit in her early married life from this sort of trouble, but they became happy, too, in after life. On the whole, Narayani liked the boy. She told her mother-in-law that she wanted to marry Subarna to Shribilas. She, too, consented, as her anxiety to get her grand-daughter settled in life had become acute. She regarded her son as a heretic who was intent on bringing the family's name into disgrace. As long as she was alive, Narayani had a sort of protection. She could even venture to marry Subarna off, secretly, secure in the knowledge that her mother-in-law was backing her. But once the old lady was dead, Narayani would be totally helpless. Considering everything, Shribilas was not a bad match.

Negotiations and correspondence went on in secret. The other party liked Subarnaprabha for various reasons. The girl was very pretty and came of a good family. She was the only child of her parents. Pratul Chandra might be very angry, if the girl was married off without his knowledge; but ultimately he was sure to relent. Subarna would inherit everything he had. Shribilas's father was dead and had not left much behind. Some paddy fields and a homestead were all they had. So a patron like Pratul Chandra was not to be slighted. He might be of immense service. So the match was finally settled.

Narayani kept the matter a close secret from everyone If anybody came to know about it, he or she would at once inform Pratul Chandra. The only other person who knew about it, was her old mother-in-law. She sent word to her own father's house, asking her sister and cousin to come and help her. She could not manage a wedding single-handed, no matter how simply and unostentatiously she celebrated it. There was no man in the house to help her. So, as soon as the day for the ceremony was fixed, she sent a messenger for her sister and cousin. They came and arrangements for the wedding commenced in secret. The bride's dresses and ornaments were purchased from the city. Narayani had kept by some money in case of contingencies, like this, arising. But she saw now that it would not be sufficient. She wrote to her husband, asking him to send her some money on the pretext that she was ill. Pratul never had any money to spare, as he spent all his salary during the first week of the month, buying books, paying subscriptions to various associations and institutions and helping needy people. But fearing that his wife might really be in difficulties, he raised some money somehow and sent it to her.

But as the fateful day drew nearer and nearer Narayani became increasingly nervous. If something untoward happened and the match were broken off, it would spell disaster. But luck again favoured her and the secret remained a secret to the day of the wedding. The marriage ceremony passed off smoothly. Shibchandra's unexpected and unwelcome arrival gave her a score, but he too did not try to prevent the marriage. And it was too late then to prevent it, even had he wanted to.

So Subarna was married, and next day went away to her new home with her husband. She cried and made a scene, which upset Narayani very much. She felt totally exhausted and did not rise from her bed for twenty-four hours. The child's wails resounded in her ears continually. The poor girl had clung to her mother's bosom so confidently, but cruel hands tore her off and sent her away. Narayani wondered what she would do, how she would behave in that strange place amongst strangers. If they looked at the child with the stern eyes of judges, they would discover countless flaws in her. She prayed to God that Subarna might find favour with her new relatives. She had sacrificed her own life's happiness, hoping to make the child happy. She prayed to God that her sacrifice might not be in vain. Her heart palpitated with fear, whenever she thought of the unenviable reputation of Shribilas's mother.

Though her mind was full of Subarna's thoughts, yet she was intently listening for something, perhaps half unconsciously. She hoped for someone's arrival, yet she feared it. The person for a sight of whom she was ready to give the world away, was strangely also the man whose presence she feared like that of the King of death. What punishment awaited her at his hand, she did not know.

Pratul arrived next day in the morning. Narayani had just finished her bath and was preparing to enter the kitchen. She had gone without food the last twenty-four hours. Her mother-in-law had gone out on some business. Hearing foot-steps near the door, Narayani looked up and saw her husband standing.

Husband and wife gazed at each other silently for a minute. Narayani had nothing to say, she was praying for strength in her mind to bear

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

calmly whatever befell her. Pratul did not know how to begin.

After a while, he said, "You did this knowing full well that I had the strongest of objections to marrying our daughter in her childhood."

"I could not help it, I had to do it," whispered Narayani.

"Why, may I ask?" said Pratul bitterly; "was there no one to look after the girl, or was she dead?"

Narayani's body shivered in horror at the very thought of widowhood. "Say what you will," she said, "I am ready to bear any abuse."

"What would I gain by abusing you now?" asked her husband. "But how did you dare do this? Did you think of the consequences? If the girl becomes unhappy, will you take the responsibility?"

"That does not lie in human hands," said Narayani. "Happiness and unhappiness are ordained by fate."

"Certainly not," said her husband. "In this case, you will be responsible and not fate. If you had tried your best to make the girl happy and still she had become unhappy, then you might have laid the blame at the door of fate. But you have sacrificed the girl knowingly. The bridegroom is a mere boy, he has no culture, no education, worth speaking of. His mother is a reputed shrew and a skinflint. If you have sincerely believed that your daughter can be happy in such a home, then you are either mad or a fool. Besides, who asked you to decide the girl's fate for her? What do you know of the world? Your whole life is passed, circumscribed by four walls. You cannot walk a single step alone, you cannot shoulder your own burden for a single day, and yet you dared to seal that girl's fate! Why?"

Narayani stood weeping and made no answer. Pratul's mother now spoke from behind. She had returned quietly by this time. "Don't be so angry, my dear boy," she said, "your wife did this with my approval. Now-a-days you think you are free to do anything, but that is not the custom of the land. In our days the old people decided everything and the young ones obeyed. That is right."

"And the result is what you see in the wretched plight of society," said Pratul. "But since you think you are right, you must try to bear up against the consequences. Though the girl had a father, you have treated her like an orphan. Let her not harbour any grievances against me. Your daughter-in-law has acted according to her will, proud of her superior knowledge. Let that knowledge bear her up through life. The duty that was mine had been denied to me. So I tell you that I am free from this duty, I have no duty towards anyone."

Seeing that he was advancing towards the front door, his mother rushed to him. "Where are you going away?" she cried, "Sit down and be calm. Let the newly-married pair come back. See them and bless them. Your anger won't dissolve the marriage now."

"I have not come for sitting down and chatting," said Pratul, "and I shall never come again. Whom do you ask me to bless? You have tied the noose round the girl's neck and to my utter shame I could not do anything to prevent it. I won't mock her with any blessings now."

He went out with rapid strides. The women cried out aloud. Narayani sank down in a faint on the floor of the kitchen.

III

It was a gloomy evening of July. The only sound that reached the ear was the roar of the river Bhairabi. The villagers cowered in fright. They feared to be swallowed up every moment by the hungry waters of the ruthless river in flood. Everybody sat within closed doors; they did not dare to look at Nature in her fearsome mood. They had finished their work as early as they could. Their fragile shelters, built of a few pieces of bamboo and some straw, guarded them against all the perils that awaited them outside.

But even on such a day, a man had come out of his house and was standing on the banks of that very river whose furious roar was striking terror into the hearts of the other people. His face could not be clearly seen in the gloaming, but sometimes flashes of lightning lit up his features. He looked haggard and careworn.

The river had already overflowed its banks. The place where the fishermen and the boatmen used to live had long been swallowed up. The ferry station, too, had disappeared under the fast advancing waters. The earth shook and trembled against the terrific impact of the furious flood, as if in mortal terror. Now and then huge masses of earth were torn out and disappeared under the muddy stream with deafening crashes.

The man was Pratul Chandra. Nearly five years had passed after that fateful marriage—and he had not been here once. After he had left in anger, his mother too left the village for ever and settled in Benares. She had passed away in that holy city nearly two years ago. Narayani lived with her part of the time and part she spent in her own father's house. But every year she came to Jamral and stayed there for two or three months; for it was only from here that she could obtain any news of Subarna. It was difficult for a woman to live alone in a house. Still she did it for the love of her child. Sometimes she persuaded her widowed sister to accompany her, sometimes she stayed alone.

Her health was growing worse steadily. Her husband's anger stuck to her heart like a poisoned arrow. Her home, too, broke up after her daughter's marriage. Pratul left his home for ever and his mother went off to Benares. Subarna, too, never returned to her mother's arms after

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

she had gone back to her husband's house for the second time. Narayani had hoped to get Shribilas as a son, by marrying Subarna to him; but that hope, too, proved futile. Shribilas's mother wanted her daughter-in-law to stay with her and look after the household. When Narayani raised a timid objection, saying the girl was too young, she met with a scornful rejoinder from the lady, who said, "Do you call her young? Do you want to send the girl here when she is fifty? And how will she learn discipline then? I am not for these things. We, too, were married early and came to our husband's homes when quite young and we are alive yet." So Subarna and her mother had to part company for ever.

And these two or three years, Narayani had sent repeated messages and entreaties asking her to let Subarna come once to her, but all had been in vain. She never even got any reply. If she sent a messenger, he came back almost at once and reported that he had seen Subarna, but had not been permitted to speak to her, as her mother-in-law and sister-in-law had stood guard over the girl all the while. Subarna was not looking well. Narayani could only weep. She was now alone in the world and helpless. Pratul Chandra had cut off all connection with his home. He only remitted some money to her regularly. His ominous words had come too true. Narayani's pride had fallen to the dust, she knew that she had consigned her own child to lifelong suffering through sheer folly. This knowledge tormented her all the time. She could not even tell her sufferings to anyone, least of all to her husband.

She knew that her death was drawing nigh apace. So she wrote to her sister and made her come over to her. These two women passed lonely and monotonous days in their village home. Messages were sent to Subarna about her mother's illness, but there was no response. Narayani knew she was dying, but she could not bear the thought of passing away without seeing the face of her child once more. But there was no one to whom she could unburden herself.

At last she became totally bed-ridden. The rains aggravated her illness. Her sister did not dare any longer to bear this burden alone. Narayani might die any day and then she would be held responsible. It was better that her lawful guardian should come and take charge of her. She wrote to Pratul Chandra, informing him about his wife's serious condition and asked him to come down, forgetting and forgiving all her previous faults.

A few days passed off. Then suddenly Pratul arrived without any notice. Narayani's sister was preparing some milk in the kitchen. She burst into sobs, as soon as she caught sight of him.

"Am I too late?" he asked, taken aback at this.

"She is waiting just for a sight of you," she replied, still weeping, "else she would have passed off long ago."

Pratul sat down on a wooden seat and asked, "Has Subarna come?"

"No, they did not send her," said his sister-in-law. "You are an intelligent man and you knew better than we. She has not been married into a gentleman's family; they are nothing but butchers."

Pratul got up with a sigh, then picking up his suitcase, he advanced to the bedroom. Narayani had heard them talking and was waiting. Her eyes, full of eagerness, were fixed on the door. As she caught sight of him, blood rushed into her pale face. But next moment she lay back on her pillows, totally exhausted.

Pratul Chandra sat down by her, stroking her hair and asked, "How are you now?"

Narayani clasped one of his hands in both her own and murmured, "Say once that you have forgiven me, and then I can die content. I want nothing more."

"You must not die," said her husband with tears in his eyes. "You are too young yet. We shall cure you."

"It is beyond any man's power," said Narayani, "my heart is pierced through and through. I am not afraid of death, but I cannot forget that I have sacrificed my innocent child. Try to help her, don't be cruel to her for my sins."

Pratul saw that Narayani was panting. He tried to place her more comfortably on the bed and said, "Don't speak of those things now. First get well, then we shall see to that. Don't be so anxious about Subarna. I shall write at once to them, asking her to come." Narayani was about to say something, when Pratul silenced her with a gesture and went out.

He informed Shribilas's mother in a letter about his wife's condition and asked her with many entreaties to let Subarna come once to see her mother. If Shribilas, too, could come, it would be still better. He despatched the letter at once through a trusted servant.

As the boat carrying the man left the shore he came back and sat down by his wife's side. His sister-in-law made him bathe and take some food, but he did everything mechanically. He was feeling very much upset. Narayani was growing more and more restless. She was moaning constantly, calling on her daughter. Pratul did not know how to comfort her. He sat silent by her side, holding her by the hand.

Night was fast approaching. The last ray of light disappeared from the cloud-laden sky. The wind shrieked more dismally and the roar of the mighty river grew louder. "They won't let my child come," sobbed out Narayani suddenly. "I shall die without seeing my darling."

Pratul got up. He called his sister-in-law and said, "Sit by her for a bit. I am going to the riverside."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

She sat down there and Pratul went out. He stood for a long time by the side of the river. There was no sign of a boat anywhere, only the mighty river rushed along, before his eyes, with thunderous roar. Scenes of destruction met his eyes in all directions. It seemed as if Rudra, the great destroyer, had begun his cataclysmal dance, and the universe was crumbling into ruin under the tread of his mighty feet. He wanted to go back to his dying wife, but how could he do so, without any news of the messenger he had sent? How would he answer the eager strained look in her eyes? He retraced his steps twice, but came back again to the riverside.

At last a white speck appeared on the dark waters. It was gradually approaching the spot where he stood. Pratul strained his eyes—it was really a boat. His heart trembled within his breast; perhaps he would see his child once again after so many years!

But as the boat touched the bank, all hopes died within him, like a candle blown out by a cruel blast. Haran, the man he had sent, was coming alone in the boat. He had a letter in his hand, and was looking very gloomy.

As he got down, Pratul asked in a voice full of despair, "They would not let her come, Haran?"

Haran held out the letter to him, saying, "Here, take your letter, Sir. You have got strange relatives, you must pardon my saying so. I don't call them gentlefolks. They did not even ask me to sit down and did not offer me even a glass of water. I was not permitted to speak to your child. I saw her standing at a distance, and weeping. Her mother-in-law is more like a tigress than a woman, you must pardon my saying so, Sir. I have never heard a voice like hers, not even amongst the fisherwomen. I told her about our mother's illness, but she did not seem to believe it. "Oh, we have heard of such illnesses before," she said with a sneer, "that is nothing but a ruse for taking the girl away."

Pratul was not paying much attention to the man, he was busy reading the letter from his highly esteemed relative. It ran thus:

"My most kind sir,

Your daughter is now a member of the Guha family of Bhatgram. She must behave in a way suited to her new position. She is not a servant of Pratul Chandra Mitra of Jamral, and cannot rush away at his behest. If you want to take your daughter home, you must come for her yourself. I can consider your request then. But I cannot give you my word that I shall certainly send her. My son has come home after his examination for a few days only. This is the first time he has met his wife, after a long interval.

I hope your wife's illness is nothing more serious than an ardent desire to see her daughter.

With due respect,
Shribilas's mother."

Pratul stood with the letter in his hand, like one stunned. Then he advanced slowly towards his home. His legs refused to move, he went on by sheer force of will. What could he say to his dying wife? She was living only on the hope of seeing her child once more. Her only child! And this was her fate! Pratul Chandra himself had cherished great hopes about Subarna, and all had been reduced to dust and ashes. Subarna was nothing more now, than an animal to be sacrificed to the Moloch of social cruelty. He felt intense bitterness against Narayani for a while. But she was dying. What was the use of being angry with her? She had passed beyond the range of human love and hatred long ago.

Pratul entered his house. Narayani's sister came out anxiously and asked, "Won't they send the girl?"

"No," said Pratul shortly. A moan of intense agony was heard from inside. Pratul ran in at once to his wife and stood by her bed. Narayani was sitting up, supporting herself on her pillows and panting heavily. Her eyes were starting out and her ribs rose and fell with her breathing.

"Please go yourself," she cried out. "They won't be able to say 'no' to you. Go and bring home my darling."

"I won't go," said her husband.

"This is my last prayer to you," wept Narayani. "I won't live to make another."

"How can I leave you in this state?" he asked. "I won't see you alive when I come back."

"Yes, you will," she moaned in a hoarse voice. "I won't die before I see her sweet face once more."

"All right," said Pratul. "I shall go. But do you notice what sort of a night this is? And do you hear the roar of the river? How can I cross over in such weather, in that small boat?"

"Go early in the morning," said Narayani.

"I shall try," said Pratul. The air of the sick room seemed to stifle him and he went out.

The night advanced apace. A light was burning in the bedroom, and another in the kitchen. Unfathomable darkness enveloped the village, not a streak of light could be seen anywhere. The roar of the current sounded like that of a furious monster. Pratul sat in another room like an image of stone. Narayani's sister moved about restlessly. She could not sit by her sister. The very sight of her face made her nervous.

Suddenly somebody knocked at the outer door, very loudly. Pratul got up with a start and cried out to his sister-in-law, "Please, bring

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that light here, let me see who has come in such weather."

She hurried out with the light. As Pratul Chandra opened the door, a small slight figure, flung itself at his feet and cried out, "Is mother still alive?"

Pratul looked at his daughter with a keen piercing glance. Was this Subarna? Was this his darling child? But the girl was looking at him with wide open and fearful eyes, awaiting his reply. "Yes, she is alive. Come in," he said.

The boatman stood outside the door, holding aloft a hurricane lantern. "Will you pay me my fare, Sir?" he asked in a beseeching voice.

Pratul took out a rupee from his pocket and flung it at the man. He left, satisfied.

Subarna followed her father into the sickroom. Narayani sat up in great excitement and stretched out her arms, crying, "Come, my darling, come."

Subarna rushed into her mother's arms. Narayani trembled violently, then fell back on her bed, quite senseless. Pratul Chandra dragged back the girl hastily. Narayani's sister rushed forward anxiously, holding the lamp aloft and cried out, "What is the matter, brother? Has she fainted?"

Pratul Chandra bent down over her face, felt her pulse and her heart. Then he moved back from the bed silently.

Subarna shrieked out aloud in fear.

Narayani never woke up again.

(To be continued)

PRINCESS KAMALA RAJA OF GWALIOR

By Prof. HIRALAL CHATTERJEE, M.A.

I

THE Royal Wedding at Gwalior made everyone agog to participate in the festal arrangements.

There had been no such event to stir the hearts of the people for over a quarter of a century. A thousand workers were busy to keep the streets gay—a thousand artists began devising scenic effects to capture the imagination of the royal guests. The palace grounds were a feast of wonder. The decorator's skill was shown to the greatest advantage. It was poetry to the vision. Thousands flocked into the spacious compound to gaze upon a paradise of lights. Prometheus had put forth his highest efforts to illumine the royal seat, "where the air sweetly recommends itself and the heaven's breath smells wooingly" all around. The precincts are as clean as the courts of a temple. There are no avenues where abhorred deeds have been done, no bowers with unsavoury legends clinging to them. There are no subterranean cells stifling the groans of unjustly condemned prisoners, nor halls haunted by Banquo's ghost. There are no secret cupboards hiding uncanny skeletons—no dark chambers holding weeping maidens in duress—no corridors stained with the blood of rival claimants.

Everything is healthy and wholesome. There is romance and art—and culture—and courtesy—and lavish hospitality—and all the glowing ideals of youth.

As one wandered in the well-laid-out park with the artistically arranged bulbs along the palace walls and on the tree tops, memory seemed to catch the glamour of Bagdad in the golden prime of Harun Al Raschid.

> The fourscore windows all alight
> As with the quintessence of flame,
> A million tapers flaring bright
> From twisted silvers look'd to shame
> The hollow-vaulted dark and stream'd
> Upon the mooned domes aloof
> In inmost Bagdad, till there seem'd
> Hundreds of crescents on the roof
> Of night new-risen.

But the fates all the while were weaving an ultra-sombre pattern—within a brief month the suppers and serenades were tumbled into irrevocable ruin. It seemed as if the fairy scene had only been laid upon the frowning edge of a volcano which burst forth in all its violence when joy was at its height. And, to adopt Stevenson's language, when the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

universal music had led the lovers into the paths of dalliance, confident of nature's sympathy, suddenly the air shifted into a terror and death made a clutch from his ambuscade below the bed of marriage.

The late Princess Kamala Raja Sahiba Scindia was born in November, 1914. His Highness the Maharaja Madho Rao Scindia began to train her on certain well-thought-out lines so that she might not adorn a doll's house but infuse her spirit and stamp her personality wherever she moved. He perhaps took his inspiration from the Rani of Jhansi, whose sanctified ashes seventy-five years ago were flung into the air within a stone's throw from the Palace, and made the Princess undergo a course of military training. She and her brother, the present Maharaja, who was born two years later, were both enrolled on Rupee one per month as ordinary sepoys in the State regiment to acquire the necessary momentum—to run the exalted race set before them.

Next, Prospero-like, the late Maharaja took care that she should spend most of her impressionable days amidst scenes of natural beauty, that she should ride along sea-coasts and over hills and through dense forests and escape from the cobwebs which Court-life is so apt to weave to befog the brain. The Princess became a fearless rider and a keen hunter.

Nor was the cultural side neglected. She began to grind at the set books and passed with credit the Matriculation Examination of the Women's University and won many prizes and medals for her excellent painting, embroidery and needle-work.

Thus she became the idol of the populace and when the special train steamed out at 11 a. m. on Sunday the 11th March, conveying the Princess and her royal spouse to Kolhapur, everyone from the highest to the least memorable felt the pang of separation. Before a fortnight had passed the terrible news was flashed on the 19th March last that all was over. She who had been so nobly trained, she who could so marvellously wield the sword, so accurately handle the gun, so delicately use the brush, so delicately sweep the strings—she had been snatched away in the bloom of life. Everyone was stunned and that day there was dole at Gwalior.

Her popularity could be measured by the presents offered by the humbler folk. When two royal families are linked in matrimonial alliance, only barbaric silver and gold flow into the bridal bower in unending streams, only the costliest articles of jewellery are heaped upon the bride—gems with all the concentrated lustre of the mines—pearls with all the shade and the shine of the sea—but among the richest offerings, it was noticed that on the table properly arranged were ordinary things :

(*i*) a riding saddle complete with accessories,
(*ii*) a finely wrought scarf,
(*iii*) a decent tray with tea-cups and saucers washed with gold,
(*iv*) a neatly made cash-box,
(*v*) a handsome dressing-case,
(*vi*) an artistically designed boat with ink-wells and pen-stands,
(*vii*) several albums of pictures by European and Indian painters,
(*viii*) a tannis racket.

But the Princess took a special interest in the paintings of the Bengal School and so Chatterjee's albums and a selection of the pictures by Tagore, Bose, Haldar, Ganguli and Sen with the following lines

"May Hymen, God of marriage, and Ceres, Goddess of Agriculture, bend their double aureole over the royal houses of Gwalior and Akalkot"

were also there.

A souvenir volume in Marathi entitled *Madhu Milan* was presented to the Princess on the wedding day. It opens with a letter addressed by His Highness to his august sister. It will now be read with a melancholy interest. Translated into English it runs thus :

"We have lived together in loving companionship for eighteen years under the same roof and have been nursed upon the self-same hill. We have quarelled many times. We often left each other in a huff. But all these differences were due to excess of love. And now the moment of parting has arrived and I cannot keep back my tears. May you live melodiously and long !

Your affectionate brother."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Princess dashingly spent her life and cheerfully hazarded it and has now shot up and become a constellation !

May God grant strength to the stricken Maharani Sahiba and to the bereaved brother to bear the loss.

II

Such then was the Princess who has been so cruelly removed from the earthly scene where she would have played a memorable part, comforting those in affliction and bringing a ray of light into many a darkened home. Her form had been so moulded that she was vibrant with energy and athrill with the noblest impulses, and her august parents had nurtured her into a fine flower of culture and courtesy. Then Nature said :

Myself will to my darling be
Both law and impulse : and with me
The Girl, in rock and plain,
In earth and heaven, in glade and bower,
Shall feel an overseeing power
To kindle or restrain.

When the routine of life so rudely disturbed is resumed, when normal conditions so ruthlessly breached by the blind furies are again restored, when sorrow clothed in black from head to foot recedes from the forefront of the stage and time pours balm into the sorest places of the bruised and bleeding hearts, steps are likely to be devised to perpetuate the memory of the illustrious Princess. Perhaps it will not be utopian to suggest that a University named after her should be established. The late Maharaja Madho Rao Scindia, with that fine vision of the new generation which would come forw to rear the structure of society blown smithereens by the great war, appointed committee to go into the question thorough so that the aftermath of the fateful ye might not obstruct the growth and develo ment of the State, whose interests ha recently become so closely interwoven wi the rest of the country. But before t committee could bring its labours to a sat factory conclusion His Highness fell ill a passed away in Paris in 1925. Since th the scheme has been in abeyance. The ti is now ripe for its revival. In two years t Kamala Raja University can be an accom plished fact ploughing up the old traditio obliterating the ancient unprofitable landmar eliminating the monstrous outgrowths on t body-politic, arresting all digressions of t national genius which eventually lead disintegration, decadence and defeatism, maki the young men and women have new fa flushed with high hopes, and enabling them speak a language with an emphasis new heard before. And just at the psychologic moment His Highness, the present Maharaj will step on to the scene, eager for all progres exulting in strength, action, achievement— all heroic enterprises his heart like thi tempered steel, his blood an incandesce flame.

The present writer has not the shadow a doubt that His Excellency the Viceroy who is so keenly interested in the welfare the State, would facilitate the grant of charter.

THE MENACE TO THE HARDINGE BRIDGE AND ITS LESSONS

By G. C. MUKERJI

THE public is now aware that the Hardinge Bridge over the Ganges which was opened in 1915 with great gusto and was hailed as one of the greatest engineering feats of the world is very severely threatened by a change in the course of the river. A huge sum of four crores of rupees was spent in its construction. The magnitude of the disaster is probably not fully appreciated by the public. It not only means that the capricious river has refused to be tamed and threatens to break the iron chain and the guide banks which were designed to keep it permanently within its channel, but it may also seriously interrupt the traffic with North Bengal thus disorganizing the whole transport system. It is reported that a band of engineers under the guidance of Sir Robert Gales who was responsible for the construction of the bridge are trying their best to fight with the river and we have nothing but sincerest sympathies with the engineers in their heroic efforts. But at the same time it will not be out of place to dwell a little on the history of this undertaking which illustrates the point of view put forward by Prof. M. N. Saha in his pamphlet *On the Need of a Hydraulic Research Laboratory in Bengal* published in Sir P. C. Ray Commemoration volume, and further in his Presidential Address to the Indian Science Congress of 1934. The two points emphasized are :

1. That in all engineering undertakings which deal with the river system of India, the problem of the country as a whole should be borne in mind. Commercial interest alone should not be allowed to get the better of agricultural and sanitary considerations.

2. Before a gigantic project of this type is undertaken the problem should be discussed thoroughly in a Hydraulic Research Laboratory with the aid of models and sufficient data.

Responsibility lies with the Government and not with the Engineers

To do justice to the engineers who are responsible for the design of the bridge and carrying out of the project, it must be said that they made a very honest and thorough-going attempt for studying the problem in all its aspects. If in spite of their attempts, however, the disaster, apprehended by them, has actually come to pass, it is entirely due, to quote Prof. M. N. Saha, "to lack of imagination on the part of those who have taken upon themselves the task of Government and their failure to devise a proper scheme of co-ordinated work in which scientific study in suitable laboratories should form an essencial part of the organization." Nothing illustrates the wisdom of these words better than the impending tragedy of the Sara Bridge.

Short History of the Bridge

A short history of the Sara Rridge which I have gathered together from the official records will illustrate the point. The idea of the bridge dates as far back as 1889 when it was first felt necessary to construct a bridge over the lower Ganges in order to open the North Bengal and Assam valley to better trading facilities. For the Ganges was not crossed by any bridge below Benares, and the need of some bridge at Mokameh Ghat and another further down somewhere in Bengal which would stimulate quick transport between regions lying north and south of the Ganges had long been felt. In response to the feeling, a number of engineers including Sir F. Spring were asked to make a preliminary survey, and report upon a suitable site for the lower Ganges bridge. Sir F. Spring has recorded his investigations in several technical papers, and was the first to realize the immensity of the task.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The conclusion to which I have come is that the task of bridging the lower Ganges is an exceptionally formidable one. Of this class of work, nothing approaching it in difficulty has been attempted in India, or indeed so far as I know, anywhere else. The difficulty to which I refer, is not in the building of the bridge which is the usual straight-ahead bridge work, but in the training of the river so that it may not desert the bridge when built."

He was also the first to emphasize the necessity of studying the problem in a River Physics Laboratory before actual construction was decided upon.

In spite of these discouraging circumstances Spring proceeded with his task with great courage. He studied the discharge (the volume of water flowing per second) of the Ganges and found that the discharge varies from 80,000 cusecs in March to about thirty times as much in August when the river is in full flood. The public may not be knowing that, though the Ganges is a much shorter river compared to the Nile or the Mississippi, its total discharge of water is only second to that of the Amazon, and seven times that of the Nile, exceeding that of the Mississippi by a small amount. Such a large volume of water flowing through a country which is built up by its mud deposit is liable to cause dangerous erosion, and wash out whole villages and even districts. The problem of bridging such a river is therefore extremely difficult. Spring surveyed the river-banks from the celebrated pass of Sakrigali where the Ganges enters Bengal, right up to Saraghat in search of some tract of hard soil which could be expected to resist erosion by the river during floods. Altogether three types of sites were found. The Ganges at Sakrigali flowed between banks which consisted of hard rock on the south side and hard clay on the north side. Therefore, both the banks were permanent. This site was discarded because the main consideration was to provide a short-cut to the jute districts of North and East Bengal, and this site was too far to the West. Lower down Spring found a place where the north bank was of hard red clay called Barind while the other bank consisted of sandy soil which was liable to erosion. This site (Mirgunj-Isabpur) was also discarded because the railway line had to be taken too far to the west. Then came the site near about Sara where an examination showed that the river was wandering in a most erratic fashion within a bed about seven miles in breadth. The banks on both the sides were non-permanent though there was some hard clay deposit on the south side. Spring was not very enthusiastic about this site for two reasons. First because the banks were very *kuchcha* and he found that they must be protected by linings of stones and concrete (technically known as the guide banks) so that the river may flow permanently through the channel over which the bridge is built. But he was afraid that all these precautions might prove useless because the river here flows in the shape of an inverted S and takes two sharp bends. Due to these bends powerful eddies and dangerous scours are produced in the river specially during the floods and these may injure the guide banks.

Besides, the river might change its course and make a short-cut through the peninsula leaving the bridge on dry land, or it may revert to one of its old channels taking the guide bank on the flank or the rear. Time has shown that Spring's fears were almost prophetic. It is to be seen whether the efforts of the engineers can now save the bridge. When the actual construction was begun Spring had retired and the construction was put in the hands of Sir Robert Gales. It appears that Spring's fears about safety were brushed aside for consideration of commercial advantage, and it was said that engineers could build the guide banks and the bridge so strongly that they could prove the futility of the oft-quoted proverb of building on sand. Man proposed, but the River-goddess disposed—she refused to be tamed and frustrated in its attempts to wash the banks on the surface, worked on the deeper lying sand and undermined the whole structure from the bottom. It is reported that of the millions of stone boulders piled round the piers to protect them, nothing has been left behind, and all carried away. Nature has refused to accept defeat and it is very doubtful even if the engineers succeed in temporarily averting the disaster, whether the remedy would be of a permanent nature. For, the catastrophe which now threatens the bridge is attributed to the great flood due to abnormal rainfall near about Delhi last year, but past experience has shown that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

such catastrophic floods are by no means a very infrequent phenomena.

Need for a River Physics Laboratory

The disaster which now threatens the Sara Bridge emphasizes very strongly what has long been felt by some thoughtful persons who have the welfare of the country in their heart. The Central and Provincial Governments of India and other public bodies spend millions annually in various engineering projects dealing with the river system of the country; such as construction of the bridges, canals and embankments, etc. In point of size and expense these works are perhaps nowhere rivalled in the world except in the United States of America, and in no other civilized country have the engineers to deal with such mighty rivers, treacherous soil and catastrophic floods on the scale as they occur in India. In U. S. A., the responsibility of managing the Mississippi previously rested in the hands of Provincial Governments and Army Engineers who tried to control its floods by building huge embankments along the banks. But when during the last great flood the river burst through these embankments and caused a terrible disaster, there was a great hue and cry and a very strong public opinion grew demanding a more scientific control of the river. Since then much work is going on in America to study the problem of river physics in suitably equipped laboratories under able directors. In India, however, the study of river physics has so far been completely neglected in spite of the severe disasters that have befallen the country due to the mishandling of her river system. In our country the engineers are required to tame the mighty forces of nature without the requisite knowledge and the necessary data to which they are fully entitled. It is not surprising therefore that many such public works do not quite come up to the expectations; a few have proved absolutely futile and have gained notoriety to the public for the enormous sums of public money wasted on them. The Bengal Trunk Canal perhaps well remembers the Grand project in this connection. Similar scandalous projects in other parts of India need not be mentioned here.

As far as river problems are concerned, the position of Bengal is unique among all the provinces of India. Firstly because its health and prosperity are closely connected with its river system and secondly because the head-water of the two mightiest rivers of India flow through this province. As mentioned before the Ganges, though it is a much shorter river than the Mississippi, discharges more water at Sara than the latter at its head. The discharge of the Bramhaputra is estimated on good grounds to be about one and a half times as much as that of the Ganges. The Damodar system stands by itself. The discharge of all these rivers, their periodic variations, the amount of silt brought by them, the distribution of water in the country, study of the precipitation data for each basin, the mechanism and nature of erosion and scour formation, and numerous other allied problems should be accurately studied before any great engineering work (*e. g.*, river training, railway bridges and *bunds*, excavation of old channels, flood control, canal construction for either irrigation or navigation) is undertaken.

Due to the short-sighted fashion in which the Government and the Railway authorities have so far handled the river system of Bengal the masses have terribly suffered both from Malaria and other epidemics and from the ruin of agricultural prosperity. Hitherto Central and Western Bengal have been the worst victims but if the present policy or *laissez faire* is allowed to continue, one cannot be very hopeful about the future of East Bengal. If the rivers are not controlled and the people are not taught how to live in such areas, and keep their pools clear, Eastern Bengal may be subjected to the same devastating epidemics which have ruined Western Bengal. The need for scientific study of the physics of rivers is an all-Bengal and integral problem which cannot be undertaken piecemeal.

In conclusion, we cannot do better than to quote the suggestions of Prof. Saha given in the pamphlet mentioned above:

> "My final suggestions are:—
> (*a*) *Establishment of a Hydraulic Research Laboratory* for the study of the problems of River Training, Flood Irrigation, Navigation and Water-power development in Bengal.
> This should be a purely Research Institute after the model of the Wasserbau Laboratory of Berlin-Charlottenburg or Vienna. The object should

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be the study of the physics of Great Rivers, preparation of plans in combination with department (b) and testing of the plan by means of laboratory models.

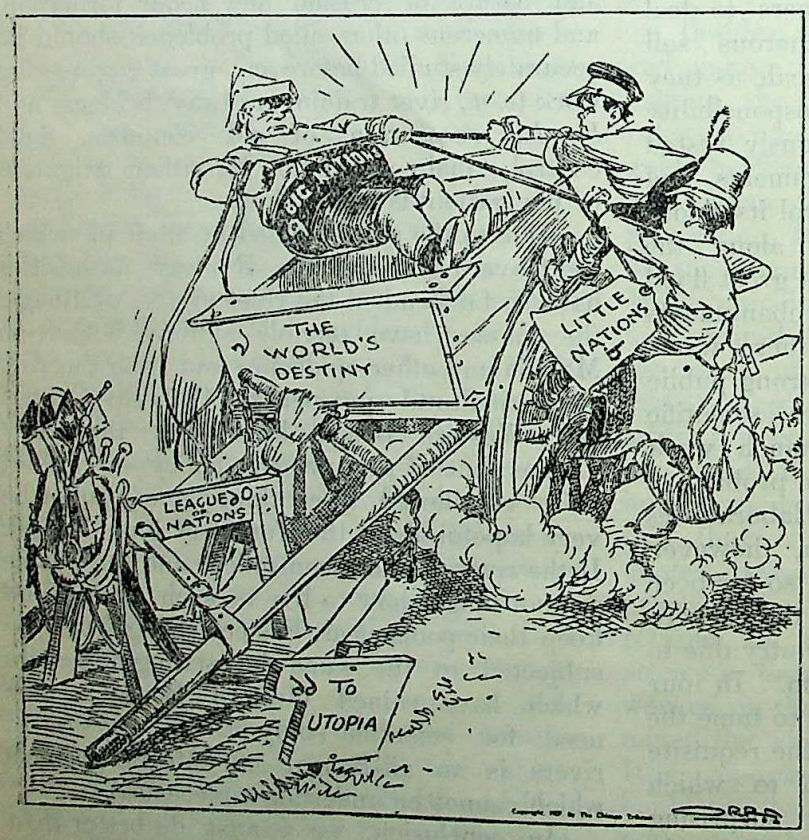
As the problems require expert knowledge of physics and mathematics, and demand much originality for their solutions, the laboratory should have a research atmosphere. It should be placed under a distinguished physicist who is also well up in mathematics. He should be provided with a good staff consisting of experts in allied lines, and a good laboratory.

Such a laboratory should be attached to the Universities, as Engineering Colleges in our country have not yet developed any research atmosphere. The initial expenses of a laboratory should not exceed Rs. 10 lakhs and the recurring expenditure Rs. 2 lakhs.

(*b*) *Department for Field Service.*

This will undertake a hydrographic survey of the rivers of Bengal, including relevant topics in Topography, Collection of Precipitation Data (such work is being done on a small scale by Prof. P. C. Mahalanobis in the Presidency College), and other geophysical factors likely to be of use in the preparation of great contructive projects.

The department may be easily financed if my proposal of imposing a small thoroughfare tax on the passengers and trading parties utilizing the E. I. Railway and E. B. Railway lines be accepted."



From an American Paper

"To Utopia"

The smaller nations have long displayed a spirit of impatience at the attitude of the Big Powers towards momentous international problems, *e.g.*, Japanese aggression in Chinese territory. The latest example of this impatience is to be found in the following telegram:

GENEVA, *April* 14.

The impatience of smaller nations at the delay in calling a disarmament conference was revealed in a movement led by Sweden which has communicated to the League the text of the proposals for hastening a substantial convention. Holland, Norway, Spain and Switzerland have approved the proposals which will be considered at the next meeting of the Bureau. The Swedish memorandum suggests that the convention should be limited to certain branches of armaments, leaving a comprehensive solution until a later date and postponing naval considerations until 1935.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

HISTORY OF THE RASHTRAKUTAS (RATHODAS): *By Pandit Bisheshwar Nath Reu* [illegible]. *Published by the Archaeological Department,* [illegible].

The title of this book is somewhat misleading as it is not a systematic history of the Rashtrakutas as it professes to be.

The book is divided into two parts.

In the first part the author has attempted to establish the following theses, among others :

(1) That in the days of Asoka and in early period, the Rashtrakutas lived in the north and not in the Deccan.

(2) That they ruled over Kanauj even before the Guptas.

(3) That the Gahadavalas of Kanauj were Rashtrakutas, and they ultimately founded the Rathoda principality of Jodhpur.

(4) The Gahadavalas were so called because of their association with Gadhipura (Kanauj).

(5) The Rashtrakutas were Surya-Vamsis.

In discussing these problems the author has brought together a mass of facts, which does credit to his learning but we regret to note that he has neither displayed a critical spirit nor a thoroughness of knowledge which marks a true scholar.

(1) While discussing the location of the Rattas he has altogether ignored the occurrence of the name in the Hathigumpha Inscription, the inscriptions of the Satavahanas and various minor inscriptions of the Deccan. These records when properly considered would, we believe, induce him to change his views.

(2) The proof on which the author relies in support of his second thesis is a characteristic example of the lack of critical spirit. In an inscription dated A. D. 1051, Chalukya, the eponymous founder of the clan, is said to have married the daughter of the Rashtrakuta King of Kanauj. "From this it is quite evident," says the author, that the Rashtrakutas also ruled over Kanauj in the early period, i.e., early centuries of the Christian era, as he says later. Comment on this is superfluous.

(3) As regards the third, the problem was dealt with in a scholarly way by Pandit Ram Karan in Sir Asutosh Jubilee Volume (Vol. III, Part II, pp. 255 ff) and the hypothesis he laid down seems to me to be a very sound one although it cannot be regarded as a proved fact. The author of the book maintains the same view though he does not refer to this excellent article, but he has not made any advance over Pandit Ram Karan in proving the thesis.

(4) The fourth thesis seems to be absolutely untenable.

(5) The line of argument (pp. 10-14) in support of this point is equally uncritical. He has himself admitted, later, on p. 26, how unreliable our data are in regard to the classification of historical dynasties as solar or lunar.

Two small chapters are devoted to the Religion, Science and Arts in the time of the Rashtrakutas. It is characteristic of the real spirit of the book that while only six lines are devoted to the art of the Rashtrakutas, almost as many pages have been devoted to the determination of their Gotra and Vamsa.

The penultimate chapter of the first part entitled 'The glory of the Early Rashtrakutas' betrays the real motive of the author which is not so much to write a sober history of the Rashtrakutas as to make the present Rathods of Jodhpur shine in the reflected glory of the ancient Rashtrakutas. Unfortunately, the author's very limited acquaintance with literature on the Rashtrakutas, written in English language, and an absence of critical spirit and proper historical outlook, have considerably taken away the value of this chapter. He does not seem to have realized the full significance of the glorious military exploits of Dhruva and Govinda III up to the slopes of Himalayas in Northern India. In this connection he refers to Dharmapal as Dharmayudha and mentions Banga and Magadha as two separate kingdoms.

The second part of the work deals with the inscriptions of the Rashtrakutas. The author has brought together a mass of information very useful for the study of the history of the Rashtrakutas. But his treatment of the subject is neither critical nor exhaustive and he has not made any serious

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

attempt to digest this information in order to bring out, in an intelligible manner, the salient features of the Rashtrakuta history. The author's attention may be drawn to the excellent outline of the History of the Rashtrakutas in *Bombay Gazetteer*, Vol. I, Part II, pp. 382-425, which is no doubt out of date, and requires revision, but which should always serve as the model for a critical and scholarly work on the history of the Rashtrakutas. The author makes one or two references to this article but does not appear to have fully realized, or at least acknowledged, the great value either of this chapter or the writings of Sir R. G. Bhandarkar on the same subject in the same volume.

R. C. MAJUMDAR

HISTORY OF NORTH-EASTERN INDIA

from the foundation of the Gupta Empire to the rise of the Pala dynasty of Bengal (C. 320-760 A. D.) By Radha Govinda Basak, M. A., Ph. D. The Book Company Ltd., Calcutta 1934.

Dr. Radha Govinda Basak's name is well known to Indologists as that of an able and devoted worker in the field of Ancient Indian History and Epigraphy. His learned papers on the Dhanaidaha and Damodarpur plates, on the Tipperah plate of Lokanatha and on Sasanka have qualified him to write with high authority on the Gupta and post-Gupta periods of Indian History. In the present work which had the distinction of being approved as a thesis for the Doctorate Degree of the Calcutta University, the author has given the mature fruit of his studies in so far as the region of North-Eastern India is concerned. The result is a scholarly and valuable contribution to our knowledge of the history of the country during the period with which it deals. The author has shown equal mastery in marshalling the vast array of his facts and in critically appraising their worth.

The book consists of twelve chapters. Leaving aside the introductory chapter, we find that the history of North-Eastern India under the Imperial Gupta dynasty (the author's expression "Imperial Gupta Emperors" strikes us anything but happy) is made the subject of three chapters (Chaps. II-IV). Here the author treads familiar ground, but still he finds it possible to offer some striking suggestions. Thus he ably refutes (p. 13ff) the view of the late Mahamahopadhyaya Pandit Hara Prasad Sastri (supported by the late Dr. Vincent Smith) namely that the Emperor Chandra of the Mehrauli pillar should be identified with Chandravarman of the Allahabad pillar inscription of Samudragupta. We, however, think that his own identification of this mysterious king with the Gupta Emperor Chandragupta I is not free from difficulties. For how can we reconcile the reference in the Mehrauli inscription to the long reign of Chandra as the paramount Emperor (p. 15) with the known short duration of Chandragupta I's reign ? Why, again, should the first Gupta Emperor choose to set up his costly column in the as yet unsubdued, or at any rate imperfectly conquered, upper valley of the Jumna ? We have only to make a few more remarks on these preliminary chapters dealing with the reign of the Imperial Guptas. The author describes (pp. 43-46) the internal condition of the country in Chandragupta II's time after Fa-Hien's sketch. But this description, quite apart from its applicability as a whole to Madhyadesa alone, is hardly in conformity with the high standard of scholarship reached in other parts of the work. Nor again can we conceal our disappointment at the slight notice which the author bestows (in his Preface) upon the very Kacha and Ramagupta questions. The fourth chapter is chiefly remarkable for the author's vindication of his earlier view, namely, that the Gupta Empire after Kumaragupta I's time broke up into a main and a branch line, the former consisting of Skandagupta, Kumaragupta II, Budhagupta, and Bhanugupta, and the latter of Puragupta, Narasimhagupta, and Kumaragupta III. In view of the scantiness of the material the author has done well in leaving the question open. Another notable statement of the author, which is supported by other scholars, is that the Gupta Empire was not destroyed by the Huns but was probably subverted later on by the ambitious Yasovarman. It may be added that the author throws new light on the relations between Visnuvardhana and Yasovarman.

The following chapters (Chaps. V-VI) deal with the two rival dynasties that rose to power after the downfall of the Gupta Empire, namely, the Maukharis and the Later Guptas. Though much of the material is already known, the connected account of the dynasties is very welcome. It may, however, be doubted whether the Maukharis of the Saketa-Kanauj branch, that is mainly dealt with by the author in chapter V, are quite in place in a history of North-Eastern India.

The chapter on Sasanka, King of Gauda, is one of the most admirable portions of the present work. The way in which the author pieces together the facts of this king's reign with the help of covert allusions in the Harsacharita, the biassed statements of Hiuen Tsang and the obscure references in the Manjusrimulakalpa, may well serve as a model to our young learners. Admirable also is the author's discussion of the questions whether Sasanka was guilty of assassinating Raiyavardhana and whether he was a persecutor of Buddhism.

In the chapter dealing with the kingdom of Orissa (Chap. VIII) the author has tried to tackle the vexed question of chronology of the Sailodbhavas. Here his sound knowledge of palaeography has enabled him to modify in some respects the conclusions of earlier scholars like Kielhorn and R. D. Banerjee.

The chapter on the kingdom of Eastern Bengal (Chap. IX) presents for the first time a connected history of this outlying region. Here the author with his usual thoroughness and critical insight deals successively with the data relating to Maharaja Dharmaditya, Vainyagupta, the Maharajadhirajas, the Samantas, Gopachandra, and Samacharadeva, the Samantas, Lokanatha and the Khadga chiefs. We, however, notice a slight inconsistency; for while the author in one place (p. 202) assigns the Khadga dynasty to "the period approximately between 660 A. D. (*read* between) 750 A. D.)", he elsewhere thinks that the last two Khadga kings "flourished towards the end of the 7th century A. D." and that the first last of them "may have lived sometime in the first quarter of the 8th century A. D."

In the following chapter which deals with the kingdom of Kamarupa, the author had the advantage of profiting by Mr. Padmanath Bhattacharyya's Bengali Monograph on the *Inscriptions of Kamarupa*. But he throws fresh light upon the relations between Bhaskaravarman and his powerful ally Harshavardhana.

The eleventh and the longest chapter of the whole

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...k is concerned with the kingdom of Nepal. Here we ...e (pp. 241-273) a valuable *corpus* of the ancient ...riptions of Nepal from 329 to 759 A. D. arranged ...chronological sequence with an analysis of their ...contents. This is followed (pp. 274-280) by a very ...table adjustment of the chronology of the Nepal ...ings, in course of which the author gives good ...sons for rejecting the opinions of Drs. Fleet and ...Sylvain Lévi. His own view is that three different ...—the Vikrama, the Gupta, and the Harsha eras— ...-in rogue in the country. He concludes the ...ter in rogue in the country. He concludes the ...pter (pp. 283-302) with a chronological table of the ...Nepal kings and a detailed analysis of each ...

The twelfth and last chapter contains the author's ...cluding remarks" on some of the special adminis- ...ve, economic, social and religious features of the ...d with which he deals. Considering the range of ...s included by the author within his purview, his ...ment might have been much fuller. Thus on the ...ect of religious development we might have been ...what special forms of the Brahmanical, Buddhist ...Jaina cults were in vogue and in particular how ...Tantric ritualism had made headway in North- ...ern India at this time. In connection with the ...opment of the fine arts we should have expected ...e enlightened about the different types of temple ...itecture that belong to this time, while the ...rance of this period as the dividing-line between ...North-Indian and the Eastern School of culture ...have been stressed. On the important question ...the progress of Sanskrit learning under the Guptas, ...author's views might have been more up-to-date. ...is a well-known fact that so far from the Sanskrit ...guage "suffering" from 'the cultivation of Prakrits ...the patronage of the Kushan Kings' (p. 305), ...was employed during or before this time not only ...the Brahminical Smritis and Epics but also in the ...mas and epics of Asvaghosha and even in the ...n of the Mulasarvastivadins, not to speak of ...e use of mixed Sanskrit in the Mahavastu, the ...ditistara and the Divyavadana. And when we ...e told that even the kings possessing paramount ...er did not care to celebrate the Asvamedha ...ice (p. 309), we may remind the author of the ...nces of Pushyamitra Sunga, Satakarani of the ...rdhana dynasty, Pravarasena I of the Vakataka ...and above all the Bharasivas, all of whom ...ished before the rise of the Guptas.

The slight blemishes we have noticed above do not ...ract from the high scholarly value of the present ...k. In our opinion it will be indispensable to every ...dent of the history of North-Eastern India during ...e Gupta and post-Gupta periods. Its value is ...reased by a map at the beginning as well as a ...plete synchronistic table and a good index at ...end.

U. N. GHOSHAL

THE WORK OF RURAL RECONSTRUCTION IN THE MYSORE STATE AND BRITISH INDIA: *By G. Rudrappa. The Bangalore Press, Mysore Road, Bangalore City.*

This is a speech delivered by the author at the ...nd General Meeting of the Civil Service Association ...Bangalore. It does not contain a scheme of rural recon- ...ruction; but is an enumeration of the advantages— ...and the necessity of the work, and lays stress on the ...various aspects of the problem which is now being dis- ...cussed all over India. The author rightly attaches great ...importance to the psychological factor. He says: "The mentality of the masses as well as those living in cities is just the same as it was some thousand years ago. A reorientation in their mentality and outlook seems to be immediately necessary if their notion is to be raised to the level of other progressive countries. New desires, new ideas and new hopes and aspirations have to be aroused and created in the masses. The Gospel of freedom and the right to demand and obtain better conditions of life should be preached to these simple people as Sir Frederic Sykes says. The country's concentrated attention to the villages and villager is urgently required". But the question is—how to do it and do it properly?

HEMENDRA PRASAD GHOSH

CASTE AND DEMOCRACY: *By K. M. Panikkar, Day to Day Pamphlets, No. 17, The Hogarth Press, Price One shilling and Six pence net, Pp. 39.*

This pamphlet tries to give us a description of the origin and essential features of the caste system, and then puts it in contrast with the democratic political organizations of the West. The fight between the two is yet unequal in India, and our author hopes that, in the interest of human welfare, the former should at least give place to the latter. In this, we find ourselves in full sympathy with the author; but we find ourselves in fundamental disagreement with him when he discusses the historical and sociological aspects of the system.

An example will suffice. According to the author, the Brahmins devised the theory of *karma* and transmigration of souls in order to support the existing order and maintain their privileged position in society. That theory formed the philosophical backbone of the Caste System. But he seems to forget that one of the most powerful advocates of *karma*, after the Brahmins was Buddha himself, who in the words of this book "attacked the roots of the (caste) problem." Is it not strange that the same philosophy should lie behind the two movements which were antithetical in character?

The theoretical aspects of the present question have evidently been thoroughly prejudiced by the author's personal sympathies. And this should not have taken place in a scientific description of any social phenomenon.

NIRMAL KUMAR BOSE

WORLD DEPRESSION: *By K. T. Shah. Published by the National Literature Publishing Co., Ltd., Madras. Price Re. 1-8. Pp. 272.*

The present volume is a reprint from the author's lectures under the auspices of the Madan Mohon Memorial Fund, Bombay, Gokhale Institute of Economics and Politics, Poona and similar other organizations. It comprises five chapters dealing with (*i*) the nature of the present depression; (*ii*) its causes; (*iii*) its remedies; (*iv*) Economic crisis of the U. S. A. and (*v*) World Economic Conference: issues, remedies and result.

The author is a well-known Professor of Economics and his contribution to the different branches of Indian Economics is considerable as well as valuable. In spite of tons of literature on the subject, there are still much confused thinking and vague ideas about this baffling, all-pervading phenomenon. The Professor has done well in bringing out a comparatively small volume dealing with all phases of the present depression in a clear, scientific and systematic manner. We are sure it will help to clarify much of the mist pervading our minds, and will be very useful as a handy compendium on the subject.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The technical or economic causes affecting the organization and operation of industry, the financial causes relating to credit and currency, the historical reasons and political complications, such as War debts and reparations, tariff walls and treaty realignment have all received due and separate treatment in the hands of the author, and I need not mention them here. I would, however, quote a few passages which need stressing :

"The cause of depression lies not in an excess of production, as the orthodox economists often suggest, but in the inadequacy of the means to liquidate the productivity."..."It lies in our present socio-economic system which lays a disproportionate emphasis on *Exchange*."..."We are suffering not from superabundance but from maladjustment. Large tracts of the world and great blocks of its population, still live very much below the margin of the merest subsistence, let alone any claim to any standard of culture, comfort or even decency."

In support of his statement the author has cited the case of Soviet Russia which has cut herself off from the moorings of Exchange (through money) in favour of the old barter and "is reorganizing herself on the basis of production primarily *for use* rather than for exchange." While all other countries of the world are suffering from sharp fall in production and accumulation of stock, Russia has doubled her agricultural production and more than trebled her industrial outturn, within these acutest years of depression ! And there is neither the curse of unemployment, nor the problem of how to dispose of this huge increase of output !

We may or may not accept Soviet model. But this much is probably certain that economic nationalism and warfare must cease and make room for international or universal planning and tinkering remedies adopted by individual States will not do. Says the author, "The problem is not simply one of readjusting the cogs and wheels of a machine which may temporarily be thrown out of gear ; but the machine itself must be scrapped."

Re : Indian Currency Policy : "India's trade has undergone a depression more severe than that of any other country in the world—largely because, in her own selfish interest, Britain made India, in the crisis of 1931, to keep her currency linked with sterling."

We must, however, join issue with the author where he characterizes America's unwillingness to forgo her War debt claims against Europe as "Shylokian." We consider this as rather unjust and one-sided. What is the attitude of Europe towards her own debtor-countries ? What about India's debt ? Can we blame America if she thinks that with the money obtained from remission they will proceed with greater zeal to prepare themselves to cut her and each other's throat ?

The remark of the author that "no one would put forth his best efforts, so long as there is a feeling that the fruits of his labour may be enjoyed by another, as happens inevitably in capitalistic economy," and his advocacy "to give the full benefit of the mental or physical powers that each may possess for the *common service*." (which is nothing but socialism) are liable to be contested. The author must know that this is exactly the contention in favour of the present system and against socialism.

The chapter on American crisis gives us a glimpse of what relentless fight President Roosevelt and his colleagues are giving to the demon of depression and how much a national State can do for its people in their distress. The book is replete with very useful relevant statistics which have considerably enhanced its utility.

ANATH GOPAL SEN

THE INDIAN CONSTITUTION : A SURVEY. *By S. K. Lahiri, formerly Editor of "The Panjabee" and B. N. Banerjea, Professor of Economics and Politics, Vidyasagar College, and Lecturer, University of Calcutta. Published by the Politics Club, Calcutta. Selling Agents, The Modern Book Agency, 10, College Square, Calcutta. Rs. 2-4.*

This carefully written and neatly printed book by Messrs. S. K. Lakiri and B. N. Banerjea is as good a piece of work as their "Introduction to the Principle of Civics." It contains a critical outline of the present Indian constitution along with a brief story of its evolution, in an historical setting. The concluding section of the work furnishes to the reader a succinct and up-to-date *resume* of the events leading to the formulation of the Constitutional Proposals, embodied in the White Paper, followed by a short review of the work of the Joint Parliamentary Committee." The first chapter, dealing with the historical background, briefly sums up the evidence for the conclusion that "in the early period of history there existed in Indian states with oligarchic or republican forms of government."

C.

THE ESSENTIAL UNITY OF ALL RELIGIONS. *Bhagavan Das. Theosophical Publishing House, Adyar, Madras. 1932.*

This interesting essay, written on the occasion of the first All-Asia Education Conference held at Benares in December 1930, has already received enthusiastic approval of audience and readers alike. It was at first designed to be a discussion on the unity of Asiatic Thought, but Asiatic thought is pre-eminently religious, while European thought is scientific, the author has taken up for his subject 'the essential unity of all religions.' The three aspects of scientific religion are knowledge, devotion and work. Dr. Das has finely shown the unity of all religions in the essentials, in these three aspects as well as their varieties—priestcraft and prayer, revelation and houses of god, even on the point of mystic practices and all this he has done with a largeness of heart and a copious fund of illustrations which do not only but charm and soothe. The one way to peace on earth, he declares, is goodwill among men. If the essential unity of all religions were once admitted there would be no more internecine war between sect and sect, and he exhorts educationists all over the world to come forward and help the fellowship of man by showing examples of goodwill and love, which is the greatest educator.

The value of the book lies more, however, in the numerous suggestions, hints, statements thrown occasionally by the author and in the numerous citations and parallel passages thrown into the book to show how the Quran and the Bible, the Upanishads and the Sufis, are agreed on the most vital points, as in the passionately loving appeal to unity, which the author makes, to prevent future wars by training the minds of the youth in a proper way.

The healthy tone of the book and the enthusiasm and sincerity of the author's motive make its reading an exhilarating experience ; the decision of

T.P.H. to release its copyright after 1935 will therefore be hailed with delight.

PRIYARANJAN SEN

THE INTELLIGENT MAN'S WAY TO PREVENT WAR.—*Edited by Leonard Woolf. Published by Gollancz. Price 5s.*

An extremely disappointing book. It is not as its title suggests a way to prevent war, it is a suggestion rather how peace may be preserved—a very different matter. The writers, however, are competent and know their subject but with the exception of Professor Laski their essays are not very convincing. Sir Norman Angell argues that the anarchy prevailing between separate Sovereign States must be brought to an end; Professor Gilbert Murray argues that the Peace Treaties must be revised; Mr. Lloyd discusses the problem of the U. S. S. R. and Mr. Buxton deals with the result of Europe's connection with other continents. How utterly different from all these is Professor Laski! Professor Laski deals with the economic factors which bring about war, and at once one feels that here is something real and substantial. His arguments are clearly put though in certain places he may be accused of exaggeration, in his attack on "economic Imperialism," as for example, when he says:

"No one now denies that the British occupation of Egypt was undertaken in order to secure the investments of British bondholders; and that the South African War was simply a sordid struggle for the domination of its gold-mines."

In the first place one has also to remember the Suez Canal, and India; in the second, certain factors had been causing trouble before 1880 when the gold-mines had not been thought of. The usual counter-attack to this form of argument is that, all governments must find work and food for their people, and therefore such things have to be. That such an argument should be seriously considered is a sad commentary on the present civilization. However as has been said before, the book is disappointing, and the further one reads in it the more will one feel the uselessness of discussing Peace Treaties, and Arbitration, until the economic system has been improved.

CHRISTOPHER ACKROYD

MARATHI

SELECTIONS FROM THE PESHWA DAFTAR: Nos. 22 & 23: *Edited by Mr. G. S. Sardesai, B.A.: Government Central Press, Bombay.*

Selection No. 22. *Extracts from the Peshwa's Diaries* contains (1) Cash accounts of daily receipts and disbursements, (2) Money transactions other than cash and (3) Miscellaneous orders of the Peshwas on various matters referred to them. These apparently disconnected items of information may at first appear dull and uninteresting to the general reader. But the trained eye of a historian will not fail to discover the salient features of the Maratha administration as well as the under-currents of Maratha social life beneath this unattractive mass of dry entries. To refer only to a few:

(a) The Peshwa as the head of the community and guardian of religion

i. One Sankaraji Kadam became a Musalman; an order was passed to take him back into the community after the performance of a penance (*prayachchit*) (No. 22, p. 41.)

ii. The Peshwa issues a letter to the Brahmins of a particular place to admit to social dinners one Baba Yesaji Prabhu, who had been boycotted for having taken food in every place but who had now expressed his desire to perform a *prayachchit* (*ibid.*, p. 80.)

iii. Daud Shah, faqir, is fined Rs. 60 for having slaughtered a cow (*ibid.*, p. 131.)

iv. The Peshwa writes a letter to Bagaji Yadar excommunicating certain Brahmins who had performed certain special rites [*pishta-pashu*] contravening the injunction of the *Shastras* (Selection No. 23, p. 9.)

v. Shripatrao Bapuji explains to the Peshwa why he allowed the continuation of the allowance to Shah Musalman in lieu of Santava Gosavi when both claimed to be disciples of the late Kabir of Poona. The writer further says that claims of Shah Musalman were also supported by the widow of the late Kabir (*ibid.*, p. 3.)

(b) Offerings made at the *mosques*.

At the time of cutting the tusks of the Peshwa's elephant, Fathe-lashkar, *sherini* (sweetmeats) was vowed to a mosque. Rs. 10—given to the elephant driver Fatu on this account (p. 46.)

(c) High rate of interest.

i. The Peshwa writes a letter to Shridhar Govind that he agrees to pay interest on Rs. 10,000 borrowed from him at the rate of 3 p. c. per month (p. 34.)

ii. Rs. 40,000 borrowed from Krishnaji Naik at the rate of 1½ p.c. per month.

iii. The Peshwa receives a loan of one lakh of rupees from Kondo Jivaji at the rate of one per cent per mensem.

(d) *S ikar-khana* establishment.

i. Birds (1) 81 Bengal Mainas (2) Jurrah hawks 1112 (?)
Cloves—20 tolas
Jaiphal—22 tolas
Saffron—12 tolas
Musk (*unch*)—12 tolas. (No 22, p. 142).

ii. Daily meat ration for hawks.
Half a seer for every (?) hawk (*Baz*)
" " " " *Bahiri* "
9 *chataks* " " Bussora " (No. 22, p. 119.)

(c) Servants in the *Shikar-khana* establishment and the rate for their pay:
Deer-keeper—12
* Pigeon-keeper—3
Mir-shikar (Chief huntsmen)—4
Tiger-keeper (*Baghban*)—5
Pay for a month and a half (*Der-mahi*)—Rs. 3 to Rs. 7 (No. 22, p. 99.)

* We may incidentally quote here an entry in No. 25 (pp. 36-37) which shows the Peshwa's love for pigeons. Sayyid Lashkar Khan sends 33 pairs of pigeons to him in response to the Peshwa's request for them in charge of an expert in pigeon-flying.

	Species	*Colour*
1.	Shiraji—*Kasni*, *Zard*,	Lal, Shaha. Sabz,
2.	Jogiya—Shaha,	Zard, Lal
3.	Lala—	
4.	Kala Tir—	
5.	Gandedar—	
6.	Mukhi—	
7.	Sistru—Sabz,	Ambari, Shaha
8.	Potya—Badal,	Lal.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(e) Crime against women.

i. Balaram Maniram was fined Rs. 1000 for violating the modesty of a Brahmin woman (*badanjar thebile*). His house was sold away and his property confiscated for realizing the fine (No. 22, p. 128).

ii. Ananda Rao Goswain was fined Rs. 1500 for forcibly taking into his house a dancing-girl (*kalawantin*) (No. 22, p. 118.)

(f) Religious services.

i. Ganapati festival—Rs. 2680, mainly spent on rewards to panegyrists (*Hardas*), musicians and dancinggirls.

ii. Rewards on the Nava-ratra—Rs. 178.

iii. *Dakshina* (remuneration) for *Japs* (repetition of *mantra*) at the rate of 4 annas per thousand.

Japs of the Mangal planet	—120,000 times		Rs. 30
„ Sun-god	—12,000	„	Rs. 3
„ Ketu	—12,000	„	Rs. 3
			Rs. 36.

(No. 22, p. 73).

Mr. Sardesai has done his duty to Maharastra; now it remains for the younger generation of Maratha scholars to make these selections available in English translation to students of Indian history. We have no doubt the English translation of these two Nos. 22 and 23 will eminently repay labour.

K. R. Qanungo

SANSKRIT—ENGLISH

ARCHITECTURE OF MANASARA. *Five volumes, with an Encyclopaedia, Introduction, Text, Translation, and 157 Plates in line and in colours, on Hindu Architecture. Vol. I—A Dictionary of Hindu Architecture; Vol. II—Indian Architecture according to Manasara Silpasastra; Volume III—Manasara, Sanskrit Text with Critical Notes; Vol. IV—Architecture of Manasara, translation into English; Vol. V—Architecture of Manasara, Plates I to CXXXV (Architectural), CXXXVI to CLVII (Sculptural). By Prasanna Kumar Acharya, I.E.S., M.A. (Calcutta), Ph. D. (Leyden), D. Litt. (London), Dean of the Faculty of Arts, Head of the Oriental Departments, Professor of Sanskrit, Allahabad University. Published by the Oxford University Press: London, New York, Bombay, Calcutta, Madras, China, Japan.*

The first two volumes of this monumental work were published in 1927 and were highly appreciated by savants and artists in India and abroad. They were reviewed in our Bengali magazine *Prabasi* and in *The Modern Review*.

Manasara is universally recognized as the standard Hindu treatise on Hindu architecture. But it has not hitherto been completely published after critical editing, nor comprehensively treated otherwise. A complete translation into English was also wanting. Its technical terms and 'barbarous' Sanskrit presented difficulties even to professional Indologists. Dr. Acharya has, after years of devoted labour, succeeded in overcoming these difficulties to a sufficient extent to be able to finish his work and thus to open up a new line of research. Scholars and the general public will be thankful to him for this service. There has been for some time a disposition on the part of a section at least of the Indian public to favour Indian architecture. But there has not been much definite and scientific knowledge of what that architecture stood for. Dr. Acharya's work will enlighten architects, engineers and craftsmen.

Though the plates number 157, the figures are in reality more numerous, as many of the plates contain more figures than one.

C

THE BHAMATI OF VACASPATI *on Sankara's Brahmasutrabhasya (Catussutri), edited with an English translation by S. S. Suryanarayana Sastri, Reader in Philosophy and C. Kunhan Raja, Reader in Sanskrit Madras University, with a foreword by Sir Radhakrishnan, Theosophical Publishing House, Adyar, Madras, 1933, pp. lxxiv+318.*

The Sanskrit word *Catuhsutri* or *Catussutri* means a collection of four *Sutras* 'aphorisms' and in connection with the *Brahmasutras* of Badarayana we know by it the first four Sutras of that work. In explaining these four sutras in his great commentary, *Saririkabhasya*, Sankara has said all about his profound philosophy in a concise form. Such being the case, this portion of the commentary has its special importance and immense value.

Vacaspatimisra, an author of most important works on all the orthodox branches of Indian philosophy excepting only the Vaisesika system has explained Sankaras' commentary on the Brahmasutras in his *Bhamati* which is the best of all the sub-commentaries now available. But this *Bhamati*, too, is not very easy in all places, and consequently it prompted some subsequent teachers to write explanations also of that work. One who is desirous of studying through the original what Sankara's philosophy is, but somehow or other unable to go through all that he has written, is best advised to study with the help of *Bhamati* his commentary on the Catuhsutri.

The commentary in English was already available, but not the Bhamati in that garb. But now it has for the first time appeared in the volume under notice.

It is not a very easy task to attempt a translation of such difficult works. Perhaps Dr. Ganganath Jha is the pioneer in this field. We must congratulate the learned authors on the success they have achieved by the present endeavour. Only the other day we received from them an edition and translation of an elementary treatise on Mimansa called *manameyodaya*, both of them being well done.

So far as the present reviewer can judge, the translation before him is faithful and literal as far as possible; and the notes ably explain many knotty points. The detailed table of contents, too, is very useful. Scholars must remain thankful to the authors for what they have got from their work. We may reasonably hope that the remaining portion of the *Bhamati* will not be allowed to remain untranslated.

It may be noted in passing that Vacaspatimisra's another work, *Nyayakanika*, is being translated into English by Prof. Th. Stcherbalsky and will come out in the Bibliotheca Buddhica.

As regards the identification of the author of the three verses quoted by Sankara (1. 1. 4, p. 249, *gaunamithyatra*), according to Mm. S. Kuppuswami Sastri, he is Acarya Sundara Pandya. In 1897 Lala Baij Nath writes (*Actes du* Onzieme Congress International des Orientalistes, Paris, 1879, Premiere Section, p. 119) to the effect that one Dirvadacarya (evidently for Dravidacarya) is referred to by Sankara and he is the author of the verses alluded to. But he does not mention the ground on which his statc-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

...is based. Then he goes on to say that he ...ed to get Dirvadacarya's Varttika from the library ...f the then Sankaracarya of Dwaraka where it existed ...ter, as he was told, no complete manuscript was ...available. It appears from the paper of Pandit ...Kuppuswami Shastri that Lala Baij Nath's Dirvadacarya ...Dravidacarya is no other than Acarya Sundara ...Paṇḍya and the Varttika is the Varttika of this ...Sundara Pandya.

VIDHUSHEKHARA BHATTACHARYA

BENGALI

SIRANI (*Darajir Sastar*) : *Compiled by Professor Muhammad Mansuruddin, M.A., Published by M. C. Sarkar and Sons, 15, College Square, Calcutta. Price twelve annas.*

The book under review gives the text of an Islamic folk-tale of Bengal which broadly agrees with the well-known romantic story of Vidyasundara. It is stories of this kind that seem to have made considerable contributions to the growth and development of the extensive Vidyasundara literature in Bengal. The work is, therefore, of sufficient interest from this point. Its linguistic interest is also not little. The learned compiler has commendably resisted the temptation of narrating the story in a chaste and elegant language as is generally used in modern Bengali literature but has allowed the peasant to relate the story in his own rustic way. This style of narration, though so common among the people at large, has unfortunately found scant regard in literature, while its special appeal to lovers of literature is undeniable. It is reminiscent of the exquisite style of old Buddhist narrative literature and has a long, hoary tradition behind it. The story is described in the dialect of the district of Pabna which (though expected to be highly appreciated by students of Philology) may be a bit difficult for the ordinary reader to follow. But this difficulty will not be as much as it appears to be at first sight and it will be removed considerably by the vocabulary of dialectic words with their meanings as given in the introduction of the work. It is, however, apprehended that the work will lose much of its general interest on account of the right to left style of writing followed in it as in a number of what are called Muhammadan Bengali books, in imitation of Persian and Arabic works. The book is fortunate in having two forewords from the pens of Messrs. Abanindranath Tagore and Muhammad Shahidullah. We join with them in wishing Professor Mansuruddin every success in the collection of folk-lore of Bengal, the importance of a thorough study of which cannot be overestimated.

CHINTAHARAN CHAKRAVARTI

GUJARATI

GOVIND GIRA : *By the late Govindji Kanji of Santa Cruz (Bombay). Printed at the Yogesh Printery, Bombay. Cloth bound. Pp. 350. (1933)*

Govindji who died early at the age of thirty belonged to a wealthy family of Bombay. He early took to literature and was a follower of Mahatma Gandhi. He had literary men as his friends, one of them being the able editor of this collection, Mr. Ramprasad Kanaiyalal M.A. The collection consists of short stories and a few poems from the pen of the deceased. They are very well written in themselves, but what is more important is the fact that they contain in themselves the promise of still better work, which had but Providence spared his life, would surely have come to fruition.

GUJARATI SAHITYA PARICHAYA : *By Manjulal R. Majmudar, M.A., LL.B., of Baroda. Printed at the Jaswat Sinhji Printing Press, Limbell. Thick Cardboard. Pp. 319. Price As. 14. (1933).*

The publisher has planned "An Introduction to Gujarati Literature Series" and this is the second volume. Mr. Majmudar who is entrusted with the work is well fitted for the task because of his wide reading and study of Gujarati literature, old and new. The present volume contains selections from the prose and poetical writing of almost every known writer : it also gives short biographical notices of the writers with appropriate observations and explanatory notes : so that all that a reader or student wants is here. The work should prove popular.

MANJARI : *Published by Ramu Thakkur, and printed at the Swadhin Printing Press, Ranpur, cloth cover, pp. 214. Price Re. 1-4-0. (1933).*

This is a collection of fifteen short stories, bearing on various domestic and social subjects published at different times in the weekly "Phul Chhab." They are very interesting to read, and many of them are torn in a very affecting way. We specially commend the story, sarcastically called, "The Happy Prostitute," narrating the life-history of a Hindu girl, widowed at the age of fourteen, and her trials and her face, till ultimately when she became a convert to Islam and a concubine of Musalman traders : all this because of the rigour of Society, which would not allow remarriage, the result being her being driven on the streets. It is a scathing commentary on our ways.

KHUSHKI AND TARI : *By Vijayrai Kalhanzai Vaidya, B. A. Printed at the Lakshmi Printing Press, Baroda. Paper Cover : Pp. 152. Price Re. 1-0-0. (1933).*

Mr. Vijayrai has vowed to devote his life to the uplift of Gujarati Literature. To accomplish it money is required, and he had to start in search of it. He therefore had to travel both on land (Khushki) and by sea (Tari). He travelled with open eyes and noted incidents, both grave and gay, important and trifling. Having the faculty of wielding a happy pen, he has been able to sit down his experiences and observations in a delightful vein. Karachi, Rangoon, Jubbalpore, Calcutta, and other places have been so well described that they actually seem to be living before our eyes. We are glad that Mr. Vijayrai has not kept his diary to himself but published it.

K. M. J.

ASSAMESE-ENGLISH

CHANDRAKANTA ABHIDHAN: *A Comprehensive Dictionary of the Assamese Language with etymology and illustrations of words with their meanings both in Assamese and English. Compiled and Edited by the Assam Sahitya Sabha. Chandrakanta Sandikai (Hondikoi) Hall, Jorhat, Assam. First Edition, 1854 Saka 1932. Size 10 ins. by 7 ins. pp. xxxii and 1044, cloth bound. Price Rupees Seven only.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

We welcome this publication as one of first-rate importance in the study of a New Indo-Aryan speech. This is the most recent dictionary of the Assamese language, and by far the biggest, and arranged in the most up-to-date manner. In the Preface the General Secretary of the Assam Sahitya Sabha, Mr. Deveswar Chaliha (Soliha), has given an account of the previous work in the field of Assamese lexicography. The English Missionary, W. Bronson, compiled the first dictionary of the language with the help of Jaduram Deka Barua over sixty-six years ago (Dictionary in Assamese and English, Baptist Mission Press, Sibsagar, Assam, 1867). After this pioneer endeavour, the late Hem Chandra Barua published in 1900 his *Hem Kosh*, which remained up till now the standard dictionary of Assamese. The number of words in the *Hem Kosh* is 22,346, and considerable learning has been displayed in this compilation, where English equivalents also feature.

The present dictionary, the *Chandrakanta Abhidan*, is the third one of Assamese. This has been published exactly thirty-two years after the second: we have in Assamese a registering of the progress of the language by means of dictionaries after each third of a century from 1867. The number of words in this dictionary amounts to 38,819. It represents a labour by a band of scholars extending over eight years.

The circumstances which made this dictionary possible have been narrated to Mr. Chaliha's preface, and they are quite touching, bearing testimony of a bereaved father's love for two young sons, the most promising of young men in their land. Of Rai Bahadur Radhakanta Sandikai's four sons, Krishnakanta, Chandrakanta, Lakshmikanta and Indrakanta, the second and fourth Chandrakanta and Indrakanta died within three weeks of each, both through an attack of typhoid, in August-September, 1923, when the eldest and the third of the four brothers were away in England for study. Chandrakanta was a graduate, and only 22 when he died. The parents, Rai Bahadur Radhakanta Sandikai and his wife Srijukta Narayani Devi, to perpetuate the memory of their sons created a trust with Rs. 30,000, half of which sum was spent on an institution called "Chandrakanta Institute," and the other half was to be kept as a permanent fund, the interest being utilized in compiling a dictionary of Assamese to be called the *Chandrakanta Abhidhan*, and after that a standard history of Assam to be called the *Indrakanta Buranji*, and when these works were published, the proceeds from them as well as the permanent fund of Rs. 15,000 were to be used for the furtherance of the Assamese language and Assamese literature under the direction of the Assam Sahitya Sabha. The Chandrakanta Institute has been completed, and opened formally by the Governor of Assam in December 1926. The dictionary is also complete and is now before the public. No more fitting memorial could be devised for these young men of promise, cut off by a cruel and untimely death: their names will remain for a long time household words among their people, and will become familiar in other parts of India, and outside India, wherever modern Indian languages and Indian history are studied.

Both Rai Bahadur Radhakanta and Mrs. Narayani Devi Sandikai took part in the actual labour of compiling the dictionary. Not only the standard words of the language find a place in it, but also a considerable number of dialectal words, and early Assamese words from old literature, printed and in MS. A mass of miscellaneous information on topics of various kinds find a place in explaining the words collected. New terms for new objects and ideas which are being coined have found a place, as well as old words and expresions which are being revived, or are thought worthy of being given fresh currency.

The etymological portion relating to words other than Sanskrit and foreign is not a very strong point in this dictionary, but we need not carp at it for this. The derivation of the Prakritic formations has not been properly paid attention to in India, and the *Desi* or aboriginal words present the greatest, often insurmountable, difficulty, which the best philological acumen of Europe and India is seeking to tackle. We are extremely grateful for what we have got, and that is quite a lot. Here we have a whole host of words, some of them of great value for comparative purposes, to elucidate the history of sister and cousin speeches like Bengali, Oriya, Hindustani, etc., made easily accessible for scientific workers. Assamese is remarkable as a New Indian speech which has resisted largely the imposition of learned words from Sanskrit. It has preserved intact a large native vocabulary, and in this matter it presents a refreshing contrast with Bengali.

Quotations from literature showing the use of words are frequently given, and this largely enhances the value of the work. Being an Assamese—Assamese-English dictionary—its utility has spread beyond the limits of Assam, and scholars abroad will find it particularly helpful.

There is an introduction by Devananda Bharati on the origin and character of the Assamese language, which includes a note on the pronunciation of Assamese.

So far as the present-day resources of scholarship in Assam are concerned, the dictionary is a very creditable performance, and will long remain the standard lexicon of Assamese, which will also find a place in the library of all interested in Indian Philology. We only wish the section on the Assamese language were written by a scholar like Professor Banikanta Kakati of Cotton College, Gauhati, who has taken in hand a history of his mother-tongue. The etymological section would have considerably improved in his hands.

There is one grave omission, which has, I understand, been rightly resented in Assam. Those who were actually engaged in the preparation of the dictionary deserved to have at least their names recorded in the Preface, along with the names of Rai Bahadur Radhakanta Sandikai and his wife who also helped in the work of compilation. I understand that two gentlemen were conspicuous for their labours in this connection—Mr. Kahiram Das, B.A., and Pandit Sashi Chandra Goswami. At least a slip bearing names of the persons whose learning and scholarly industry made the dictionary the fine piece of work that it is, should be attached to remedy what we should consider the first duty of the management of the Assam Sahitya Sabha and the Sandikai Trust Board in connection with the *Chandrakanta Abhidhan*.

THE INSTITUTE OF WORLD-WIDE ECONOMICS AND OCEAN-TRANSPORT IN THE UNIVERSITY OF KIEL

By ZOHADUR RAHIM

THE Institute of World-wide Economics and Ocean-transport in the University of Kiel is situated on the outskirts of the city, far from its din and tumult, but is connected with the university by a tramway line. Its position is simply idyllic, having the beautiful Kieler Forde (sea) in front and "Krussenkoppel", the woods, on the background. Attached to the Institute is the Scientific Club, which was formerly the Imperial Yacht Club. It was in spacious hall of this club that the ex-Kaiser of Germany used to meet all the personalities of Kiel at a dinner party. The same hall is used now for "Vorträge" (lectures but not university lectures, which are called "Vorlesungen") and the writer had the honour of hearing many distinguished men of Germany as well as of foreign countries during his stay there. One of the most impressive speeches he had ever heard was that delivered by Dr. Hans Luther, the then Reichsbank President (Reichs Kanzler 1925-26) in the summer semester of 1931, just after the reparation problem was settled to the satisfaction of the German people. Being an Indian and a Bengali too, I am proud of mentioning here that among the distinguished guests, who were invited to deliver lectures from time to time in this famous club hall, was also my countryman, Prof. Benoy Kumar Sarkar. That the lecture of Prof. Sarkar was attended by a large audience was a clear proof of Germany's great interest in the affairs of India.

Now I shall pass over to the history of the Institute itself. The Institute has a unique history of its own. The present building was formerly "Hotel zur See-Badeanstalt" and was a meeting-place of all the Royalties of Europe during "Kieler Regatta Woche," when the Kaiser used to come down to Kiel. All the neighbouring princes of Germany, such as, Denmark, Norway, Sweden, Holland as well as England, used to take part in the sailing boat competition of Kiel. It was a sight to see all the boats entering the Kieler Harbour with their different flags fluttering in the breeze. During Regatta week Kiel was all life and sensation. It was a happy time for Kiel, because much of the outsiders' money used to flow into the pockets of its citizens. Although "Kieler Regatta Woche" is still observed in Kiel, it has lost all the grandeur and pomp of the Kaiser's time. No princes, no foreign boats come now but the boats from all parts of Germany.

The Institute of Kiel is the most outstanding proof of Germany's insatiable thirst for knowledge and for research work. It might rightly be called the child born of the travail of the Great War. It was in November 1918 that the revolution first broke out in the marine station of Kiel. It spread like wild fire throughout the whole country and made an end of monarchism in Germany. In the national congress of Weimar on the 11th August, 1919, Germany was declared a republic. The war ended, peace was established in the country, but the people were still suffering from untold miseries. The effects of the Great War could not be effaced by mere change of constitution. They were all the more terrible upon Germany because it was she who fought almost single-handed, so valiantly against the whole world for a period of four years, and it was she,

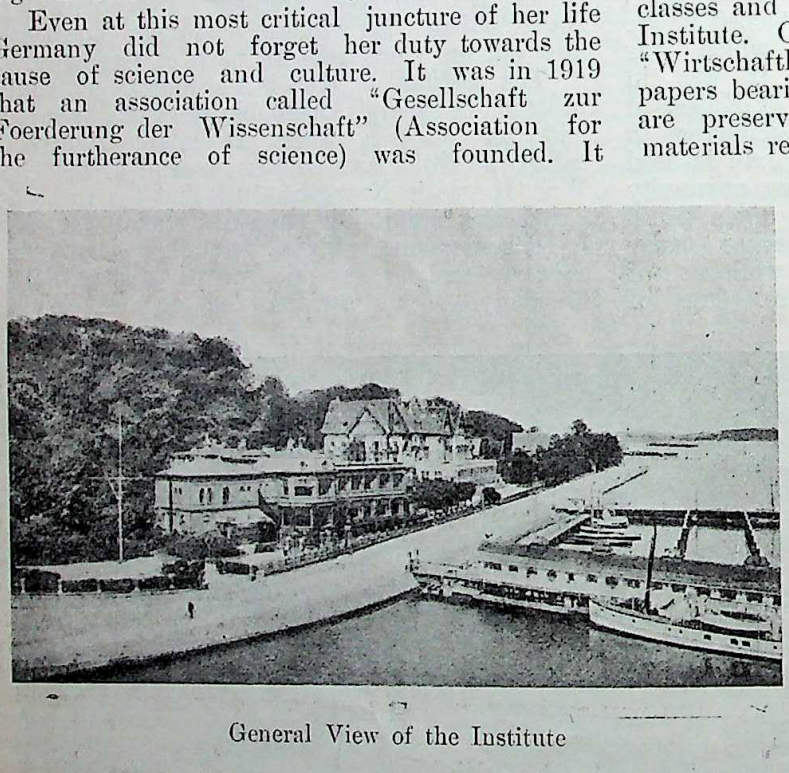
Digitized by Arya Samaj Foundation Chennai and eGangotri

who had to bear the full brunt of defeat, although the moral victory was on her side. The people once so opulent, a nation once held in so great esteem in the eyes of the world, now lay prostrate and humiliated, bereft of all its powers and with its resources completely exhausted. The whole country was in a state of confusion and chaos—her foreign trade totally ruined, her agriculture neglected, and her nation-building industry converted into a war-industry. After the declaration of the republic, Germany was confronted with very many problems. She had to re-establish her foreign trade relations, she had to take up in right earnest her long-neglected agriculture, she had to revive her nation-building industries. The work of rebuilding and reconstructing was to be carried on everywhere.

Even at this most critical juncture of her life Germany did not forget her duty towards the cause of science and culture. It was in 1919 that an association called "Gesellschaft zur Foerderung der Wissenschaft" (Association for the furtherance of science) was founded. It



General View of the Institute

counts among its members all the rich and influential men of Germany. From the contribution of its members, the association bought the "Hotel zur See-Badeanstalt" for one and one-fourth million marks and spent another million to renovate it. The intrepid and untiring Director of the Institute, Geheimrat Prof. Dr. Bernhard Harms was successful in collecting a substantial amount from the American millionaires by paying a visit to that country and this helped a great deal in the up-to-date equipment of the Institute. The Rockefeller Foundation still contributes regularly to the library fund.

It is a magnificent four-storied building, lavishly furnished, its staircases thickly carpetted. In the cellar is the library consisting of about two lacs of books in different languages of the world, a large percentage being in English. Eight thousand books a year are added to the conte of the library. Besides that, the Institute sub cribes to more than 3300 year-books, statist periodicals and newspapers of all different countr of the world. The number of dailies is fi On the ground-floor are the big "Arbeitsa (working hall) facing the sea with accommodati for 150 students (each student having his o table and chair, its wall studded with shelv full of reference books, "Zeitschriftensaal" i. e., room containing only periodicals such as wee lies, monthlies, quarterlies and so on, the "Ausleih or the room where the library books are to ordered, the Kanzelei or the office of the Insti and the rooms of the librarian and his assista The first and second floors contain numer rooms for professors, their assistants, tuto classes and also the central telephone office of t Institute. On the fourth floor is situated t "Wirtschaftliches Archiv" where cuttings of new papers bearing on important economical proble are preserved. Moreover one can find h materials regarding economies of all the countr of the world, materials on go of international trade as w as informations regarding important enterprises economical societies of the wo Dr. Losch who is in charge the Archive, spares no pain be helpful to the student.

The Institute is the ideal place for the students work in. Pin-drop sile prevails in the working None is allowed to carry on sort of conversation inside The student can bury him in his work in absolute undisturbed even by any exter agency, such as, noise of traffic. The lady supervisor the hall is always ready to him in finding out books in supplying him with information he requires for the further of his work. The professors, too, are always his disposal to assist him with their a regarding his study. The Scientific Club, hav a wonderful view of the sea, offers hi ideal place of retreat and recreation from strenuous work. He can spend some time in chat with his fellow-students, taking coffee or any refreshment he would like to The eatables and drinks available here are cheap in comparision with the prices he has pay outside for the same things. Each mem of the club has a key and he or she alone access to it.

One of the special features of the Institute its "Seminaruebungen" (tutorial classes). T are all held in the Institute unlike the lectu which are all delivered in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The "Übungen" are divided into three classes, *viz.*, one for the beginner, the second for the advanced students and the third for those preparing for the doctorate. They are meant to create in students the habit of critical study, to develop in him the power of oration and the power of discussion. They are held under the guidance of a professor once a week lasting generally for two hours (6 to 8 P. M.). Each student has to express himself on the subject already assigned to him in a clean neat speech within twenty to thirty minutes' time. The rest of the time is devoted to the free discussion of the subject among the professor and students. The number of students being limited (not to exceed twenty-five), every student is given the opportunity of taking active part in the discussion. During the writer's stay, the "Übungen" sometimes lasted for four hours. Of course, an interval of half an hour was allowed, during which we were served with sumptuous supper, naturally at the cost of the professor and sat down again for discussion for another two hours. These "Übungen" are great factors in bringing the students in close personal touch with their professors. It is not infrequent that the students are invited to a dinner or tea party by the professors in their houses. The writer can never forget many beautiful evenings he spent in these parties.

The other social functions organized either by the University or the Institute go further to strengthen the cordial relation between the professors and the students. I would like to mention here only some of those arranged by the Institute with which I was so intimately connected for a considerable period of time and the activities of the German and Foreign Students Association in the University of Kiel established in 1929 by the then Rector of the University, Prof. Dr. Hoeber. The Institute used to organize two big festivals, one in the summer, another in the winter semester. The summer ball used to take place in a café either on the sea-shore or on the side of a lake, the winter festival or fancy dress ball in a café of good reputation in the city. The participators were the professors and students of Economics and their invited friends and acquaintances. The whole night used to be spent in music and dancing interrupted by nice performances by the students themselves. The writer cannot resist the temptation of giving at least some idea to readers regarding the summer festival of 1932 which coincided with the farewell party to Prof. Dr. Loewe, who had to leave Kiel in response to the call of the University of Frankfurt am Main.

The festival was celebrated in a café situated on a beautiful lake. It opened with music and dance. Then there appeared a paraphernalia of judge and jurors, public prosecutor and barristers, expert and witnesses and at last Prof. Dr. Loewe was ushered in, handcuffed as a criminal. The charge of having grievously hurt the body of the University was framed against him. The University of Kiel is a Corporate Body having two hundred and fifty professors as its members. Now if any of its members desires to leave it, *i. e.*, tries to dismember it, without reasonable ground, he is naturally liable to prosecution. The question arose whether that member was actually a valuable member or only a protuberance on the Body Corporate. The opinion of the expert was sought for. It was proved to the satisfaction of the judge and the jurors that the member in question was really a very useful member and as such cannot help injuring the Body Corporate by his removal. Now the question was raised whether the accused was justified in his action, *i.e.*, in leaving Kiel University. The defence counsel argued that because Prof. Dr. Loewe was following a higher call, because he was actuated by a higher motive of being more useful to another corporate body, because he had a brighter and happier future before him, his decision to leave Kiel was perfectly justified. The accused was declared not guilty and discharged. The band of musicians began again and we lost ourselves in dancing. At 1 A. M. there was a pause. We, thirty in number of both sexes, and Prof. Loewe repaired to the ghat of the lake, got into some six boats with musical instruments and gay-coloured paper lanterns and rowed in accompaniment of the music, for an hour. It was a charmingly beautiful moon-lit summer night in Germany. I still hear that sweet melody of various instruments rising from the silent bosom of the lake and vanishing in the stillness of the boundless sky. When we returned to the hall, the dancing was going on in full swing. Refreshed and reinvigorated by the lake breeze, we gave ourselves up again to the goddess of mirth and jollity. It was early in the morning that a special tram-car (not a special train) carried us back to the heart of the city.

The winter festival or fancy dress balls are saturated with the ideas of Epicurus from beginning to end. All the formalities and etiquettes of the society balls are abandoned. The evening suits give way to fantastic as well as variagated national costumes of the world, even the dress of an Indian Maharaja is not wanting. The ladies look forward with great delight to the day when they can bid good-bye to their formal ball dresses and show themselves to their best advantage appearing like so many butterflies fluttering in the breeze. The polite form of address among strangers and the less intimate, "Sie," is replaced by a most familiar form of address "Du." Unfortunately, it is very difficult to explain to my readers the real significance and the charm the word "Du" possesses in German language. The English word "thou" is not the equivalent, because it is not the word

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

used by intimate friends, a word not used even by husband and wife. They all begin with "you" and remain with "you." It is the proud privilege of the German-speaking people to address their relatives and intimate friends with "Du." The very use of the word "Du" breaks all the barriers of reservation and conventionalities and make the conversation among friends most easy, most natural, hence most enjoyable. It is the key which opens one's heart before that of another. A little incident will substantiate this view. While dancing with a young lady in a fancy dress ball, the writer was told by her that she did not very much like to go to society balls but she was exceedingly fond of going to a fancy dress ball. Being asked why she liked fancy dress ball so much, she said, "Well, because I can say 'Du' to each and everyone." It may be mentioned here that the dancing halls are very tastefully and artistically decorated to suit the occasion.

Another most important social function of the Institute is the "Weihnachtsfeier" (Christmas celebration) which is celebrated exclusively among professors and students of Economics and contributes no little to cementing the friendly relation between the former and the latter. The place of celebration is the glass verandah of the club. According to German custom a fir tree decorated with silver thread and Japanese balls and with wax candles burning on all its branches was installed in the centre. At each covered table round about, there used to sit one professor with five or six students. At first the Christmas songs were sung in chorus by students and professors. Then there used to appear the old white-bearded "Weihnachts man" (Christmas-man), none but a student in disguise, with a bag full of X'mas gifts. The gifts were nothing but joke articles and the announcement of the recipient of each article was hailed with an outburst of laughter. Some entertainments in the form of a "Kasperle Theater" or acting a small drama or of a comical performance all managed by students themselves were also provided. It is needless to mention here that we were also treated with cakes, sweets, nuts and drinks, all at the cost of our beloved director, Geheimrat Prof. Dr. Bernhard Harms.

Now I shall pass over to the activities of German and Foreign Students Association in the University of Kiel, meant to create better understanding and cultivate friendly feelings among German students and students of all different countries residing in Germany. The writer was taking active part in it from its very inception and later had the honour of being elected its president, which office he held to the day he left Kiel. In summer semester 1932, we counted, among our members, students of twenty-three different countries of the world, all speaking different languages but united together by the common language—German. We used to meet every Wednesday evening in the "Studentenhe... (students' home) "Seeburg", commanding a vi... of the harbour. We arranged either for a lecture to be delivered by a professor on a burning to... of the day or we spent the evening in frien... discussion among ourselves or we passed t... evening in dancing and playing some ind... games. Apart from two big social gatherin... (one in each semester) to which all the profess... of the University, high Government officials a... leading men of Kiel were invited, we arrang... for excursion on foot, motor boat excurs... inspection of interesting places, such as printi... press, factories, breweries, Konsum-verein (co... stores) as well as going to theatre in company.

It may be mentioned here that while visiti... the above places we received the utmost cons... deration at the hand of the authorities concern... sity of Kiel and in the Institute attached to it. The contribution of the Institute to the cause of World-economy is invaluable. It is the biggest Institute of its kind in the world and as such keeps itself in steady communication and exchange of views not only with the leading economists but also in constant communication with the authorities, firms, associations and personalities of the whole world, with the result that it is of inestimable service to the research workers. No institute of the world possesses such a wide range of materials as the Institute of Kiel.

If there is any country at all in this world, where Indians are not only treated on equal footing but also regarded and respected, as being the descendants of a great nation possessing the oldest civilization, highest philosophy and finest culture, then it is Germany. A deep feeling of sympathy for the descendants of a nation once so great is to be found in each and every heart of Germany. "Men are we and must grieve when even the shade of that which once was great, is passed away". Wordsworth has found more followers among Germans than among his own countrymen.

Any student proceeding to Europe for scientific study of economics cannot do better than select the Institute of World-wide Economics and Ocean-transport in the University of Kiel.

THE GOVERNMENT SCHOOL OF ARTS EXHIBITION, MADRAS

By ALICE E. ADAIR

THE Madras Government School of Arts and Crafts held its annual Exhibition in March—the third under the Principalship of Sjt. Deviprasad Roy Choudhury, at the School Buildings. This Exhibition is becoming of increasing value in the cultural life of Madras. There were 224 exhibits in the Studio—paintings, drawings, modellings, etc.

The illustrations reproduced here are sufficient evidence of the quality of the work being done in and by the School. The fact that each year the students take a prominent place in the awards of the Fine Arts Society is in itself noteworthy.

The more remarkable of the works of the students are shown in the illustrations given here. They include a vital work in colour and design, "The Flight of Prithviraj," by M. Venkatarathan. The Exhibition also included a line-drawing of the same subject by the same student, showing his mastery in this method. "Rasalila," a really fine composition in clay by M. Venkatanarayana combines skilful design and honest craftsmanship with a rhythmic grace that is lyrical in its charm.

Original also in design and attractive in colour and feeling is the lovely little "Avisikarika" by P. V. Kuppa Rao, who is also responsible for a fine woodcut, a boldly treated, characteristic head. Muhammadan feeling and skill has an exponent in the finely executed portraiture of the "Soothsayer" by Syed Hamid. Of an altogether different type is the work of S. V. S. Rama Rao, showing how widely catholic is the training of the School. This impressionistic landscape is interesting on account of its combination of good composition and poetic feeling. "Evening Glow" is also pleasing in colour.

Mention must be made of a beautiful head in clay by the Principal of the School. Sjt. Roy Choudhury's portraits are well known. Unfortunately, opportunities of seeing any "subject" sculptural works from his hands are rare. Fine aesthetic qualities and sound technique always characterize his work, but it is not always possible to express in portraiture the deep emotional content of really great art. Hence we welcome this expressive work, the head of a Blind Girl.

In the crafts Section, Sjt. V. R. Chitra continues to make new experiments, and to design objects which are both useful and beautiful. Furniture was the best represented craft. The cut-out design in chairs is novel, and the dark wood is skilfully used both in the design of the chairs and of the Chest which goes with them.

The enamel and stamped leather Sections also showed some good work. In the ornaments both wired and unwired methods were used in the enamelling.

One can look forward with confidence to the results of the coming year of work in the Madras School of Arts.

ANSWERS OF RAMMOHUN ROY TO QUERIES ON THE SALT MONOPOLY

The following answers by Rammohun Roy to questions put to him on the salt supply of Bengal will be found interesting. These have been obtained from England from the Parliamentary Papers of 1831-32 (vol xi, pp. 685-86, App. No. 140) by Mr. Brajendra Nath Banerji for the complete edition of the works of Raja Rammohun Roy to be published by the Bangiya Sahitya Parishat. It will be noticed that no question was put to the Raja as to the practicability of manufacturing pure salt in Bengal at such cost as to enable it to hold its own against imported British salt. Had such a question been put, we could have known his considered opinion.—*Ed., M. R.*

Question 1. Are you acquainted with the retail price of salt in Calcutta and the neighbouring districts ?

Answer. The price of adulterated salt in Calcutta, at the time of my departure, was at the rate of between seven and eight seers for a rupee, or about 2*s.* for 15 lbs., if my memory be correct; and of pure salt, like the English, between four and five seers for a rupee, or about 2*s.* for nine lbs. It was of course proportionably higher in districts such as Midnapore, Burdwan, Beerbhoom, etc. more remote from the place of production and sale.

Q. 2. Have the poorer classes of natives in the places you have mentioned been prevented at any time from procuring a sufficiency of salt by its high price ?

A. As salt has by long habit become an absolute necessary of life, the poorest peasants are ready to surrender every thing else in order to procure a small proportion of this article; though the dearth of the salt is felt by the whole community, and the people in general are therefore obliged to make use of a bad quality, and few comparatively are able to incur the expense of procuring it in a purer form.

Q. 3. Do you consider salt as necessary to the food of the natives, and that the want of it is a great deprivation of comfort to them ?

A. As the food of the people in Bengal consists chiefly of boiled rice, which is by itself a most insipid kind of food, salt and ingredients dressed with salt are used to season the rice and render it palatable. The

Portrait of Raja Rammohun Roy
Ivory Miniature. Delhi School, 19th century. (Presented by the Executors in accordance with the wishes of Sir Robert Nathan, K. C. S. I., C. I. E.)
By the courtesy of the Director, Victoria and Albert Museum, London.

rice is usually eaten with what the Hindoos call *byunjun* or *turkaree*, and the Moossulmans *salun*; that is, something such as a little fish or *dal* (a kind of dressed peas), or vegetables, according to their ability to procure these articles. But as they have been long accustomed to the use of salt, the high cost of this ingredient sometimes obliges the poor people to give up their *byunjun* or *salun* to procure it, and eat their rice with salt alone, as noticed in my reply to the "additional query" 4th.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Q. 4. Do you suppose that a reduction in the price and an improvement in the quality would tend to any very considerable increase of consumption ?

A. Salt being, as I already observed, an absolute necessary of life, is now purchased even by the poorest individuals, at the sacrifice of every other kind of seasoning and eatable but rice, the stuff of life. If salt were rendered cheaper and better, it must greatly promote the common comforts of the people. I do not know that it would immediately cause a very considerable increase of consumption, but to a certain extent it would undoubtedly ; and from its cheapness, its use may be again extended by the people in seasoning the food of cattle, for which purpose formerly large quantities were used. The poorer classes at any rate would not in this case be compelled to sacrifice any other comfort in order to procure it.

Q. 5. Are you aware that the price of salt in England is much cheaper than in India ; and such being the fact, do you conceive there would be any objection on the part of the natives of India, arising from religious scruples, to eat salt imported from England—the preparation of English salt being free from all impurity ?

A. I understand that the price of salt is here about one-fourth of what it is in India ; therefore there is no doubt that the natives of India would be very glad to purchase English salt if imported ; excepting perhaps a very few professional Brahmuns. The bulk of the people would make no distinction between the salt which is home made, and that which is imported. One-fourth (if not one-third) of the soda-water manufactured in Calcutta by Europeans, is, I think, used by the natives residing in Calcutta and its suburbs ; and also a considerable proportion of the liquors imported from Europe.

Q. 6. Supposing that salt from England could be imported cheaper than it is manufactured in Bengal, do you apprehend that much distress would fall upon the molungees from the want of employment ?

A. The molungees would still be employed to a great extent in the khalarys by Government (if it be permitted to carry on the salt monopoly in future), or by those who farm them from Government, and the rest could be beneficially employed in agriculture and other occupations, as gardeners, domestic servants and daily labourers. Since common labourers among the Bengalese, such as gardeners, etc. not being equal to the demand, the natives of Orissa are generally encouraged to come to Bengal in great numbers to fill up these occupations.

Q. 7. Is the manufacture of salt attended with any suffering to the persons engaged in it, from exposure to unwholesome situations and tigers ; and do you consider them in a better or worse condition than the ryots employed in agriculture ?

A. Since the sunderbuns have been partially cleared, the danger from tigers is not considerable. But the molungees suffer chiefly from the humidity of the soil and the dampness of the atmosphere where they are obliged to continue during the manufacturing season. The agriculturists are better situated than the molungees in respect both to health and to personal freedom, from not being, like the latter, liable to be detained during the working season, though the agriculturists are not equally sure of regular employment and wages.

Q. 8. Are you of opinion that the molungees are liable to ill-usuage from the subordinate officers of the salt agencies ?

A. In proportion as the head molungees suffer extortion from the salt officers, they indemnify themselves by defrauding the inferior molungees in respect to the wages allowed to them, and the work exacted from them.

Q. 9. Have not regulations been passed of late years to protect the molungees ?

A. Regulations have been passed, but the combinations of officers, superior or inferior, render them almost inoperative ; to say nothing of the insuperable difficulties under which the humble individual generally labours in endeavouring to get redress against those in power or superior to himself in wealth and influence, as already explained in my answers to the "Judicial Queries."

Q. 12. To what extent is the salt of the Bengal monopoly adulterated before it reaches the consumers ?

A. The adulteration of the salt is carried to an enormous extent, by mixing it with

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

third or even one-half of earth, until, instead of being like salt, it more resembles the earth of which it is composed. Persons in comfortable circumstances generally purify it by manufacturing it over again before they use it, or purchase it already refined, often at double the common price; but the poorer classes cannot afford the expense of either.

London, March 19, 1832. RAMMOHUN ROY

SOME OBSERVATIONS ON THE "MIRAT-I-AHMADI"

By DIWAN BAHADUR KRISHNALAL MOHANLAL JHAVERI, M.A., LL.B.

THE Mirati-i-Ahmadi is a remarkable work; it gives the political and statistical history of the province of Gujarat from the earliest times to the battle of Panipat (A. D. 1761). It is considered very important from a historical point of view as the author narrates events of which not only was he an eye-witness, but in the planning of which either he, his father, or friends took part, and thus made history. The author is at special pains to observe "that he has summarised events of which he was an eye-witness, free from doubt* and partiality, without favour or prejudice" p. 13 Persian Text Part I, Volume I, Gaekwad's Oriental Series), and therein lies its great value.

Although till His Highness the Maharaja Gaekwad's Government very generously undertook to bring out the whole work in its present form (Volumes xxxiii, xxxiv, xliii, l, Gaekwad's Oriental Series)—and thus lay Oriental scholars under a deep debt of gratitude—very few copies† of transcripts of the book were available,—the larger number being full of errors, copyists' mistakes and incomplete,—writers on the history of Gujarat have not failed to make extensive use of it. No translation however of the complete work exists. Dr. Bird has translated a small portion of Part I, Sir E. C. Bayley has also made use of that portion. There is a Gujarati translation made by Pathan Nizamkhan Nurkhan of Part I (1913) and the *Khatimah* (1919). Part II however, which is by far the most valuable section of the Mirat has not been translated into English,* though Mr. Seddon promises "to attend to it later on." (p. xii, Foreword: Supplement; Volume xliii, Gaekwad's Oriental Series). All the same it has been extensively utilized, for the contents of the different Volumes of the *Bombay Gazeteer*, (Volume I, Part I, and also those relating to Ahmedabad, Surat and Cambay),—the basis being Col. Watson's translation of the larger part of it. William Irvine in *Later Mughals*, has also based a large portion of Chapter VIII, Vol II, Mahrattas in Gujarat, pp. 155-215. sections 47 to 68 (Ed.—of 1922 edited by Sir J. Sarkar on this part of the Mirat.† Sir J. Sarkar has also made

* Dr. James Bird. who has translated what the author calls the Mukaddamah (Preface) in his History of Gujarat (A. D. 1834) has not done so completely and has omitted certain passages and verses. Had the same were translated in its entirety it would bring out the author's object in writing this History—which in fact is but a part of a larger work—much more plainly. Dr. Bird translates the words "*Bi shayaheh*" and what follows, as "With great and attention"; but the author meant something more than that as would be gathered from the explanation given here. That it was so is borne out by what he states at the end of Part. II, while closing his labours; "May it not remain concealed that he has promised and (also) considered it proper essential for his task that in narrating events he should abstain from showing favour to relatives through prejudice (—*Adavat*, ill-will) against strangers (casually) indite only that which had happened, and really" (he has done so). P. 613 Persian Text Part II, Volume XXXIV. Gaekwad's Oriental Series.

† See as to some such copies, Dr. Bird's and Sir E. C. Bayley's Prefaces to their respective works and Sir J. Sarkar's Foreword to Volume XXXIV of Gaekwad's Oriental Series.

* The writer of this paper has translated the whole of Part II into Gujarati and it is being published by the Gujarat Vernacular Society of Ahmedabad. The first two-hundred pages are already out.

† This excellent summary suffers in places on account of the inaccurate text from which it was made, and also from want of knowledge of the correct names of the places and men referred to in the original. For instance,

(*i*) on p. 175, Vol. II, the name of the Manager is more probably Navnidh Rai, and Bharmal is the Faujdar ot Dholka and not Duraha. This mistake of calling Dholka Duraha is repeated all throughout. See pp. 197 and 210. Patia is the agent of the Zamindar (Thakor) of Jhabuwa as correctly surmised by Sir J. Sarkar and not Jhalod.

(*ii*) on p. 177 it is the Kankaria Talao (=Tala, a lake) that is meant by Tal which should

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

great use of it in his various works. The part containing the *Khatimah*—concluding portion—is translated into Gujarati by the same Mahommedan translator as of Part I and into English by Syed Nawab Ali and Mr. Seddon and published as Volume XLIII of the Gaekwad's Oriental Series.

The Gujarati Translation of the *Khatimah* suffers from all the faults of an incorrect original text. The later English one is indeed of a very high order, but as "in parts the Original has been freely rendered, and in parts it has been condensed" (p. xiii Foreword), it does not offer as much help to the general public as a close or literal translation would.

A curious example of this drawback came to the notice of the writer of this paper a couple of years ago. Government wanted to acquire and declare by the help of the Civil Court the private property of a certain gentleman an ancient monument under the Ancient Monuments' Preservation Act (VII of 1904) in the city of Ahmedabad, and had issued a notification for that purpose, pointing out that the property was the same as that described on p. 31 of the Mirat-i-Ahmadi, *Khatimah* (Karimi Press edition) *viz.*, the tomb of Shah Ghazni near the Raikhad Gate. The party affected contended that the property he possessed was on Jamalpur Road and not a tomb but a Roza and therefore the notification would not apply to him. The present writer was asked to make a translation of the various relative passages bearing on the question; that is, those relating to Shah Bhikhan, Shah Ghazni and Shah Aliji. It was pointed out that two translations, one in Gujarati and the other in English, already existed and a fresh translation was not necessary. He was told in reply that the Gujarati translation was not reliable * and that the English translation omitted certain things† and moreover was very general. The passages required were those on pp. 39, 48, 65, of the Persian text Vol. L. corresponding to pp. 37, 57 of the Supplement, Vol. XLIII of the Gaekwad's Oriental Series.*

It is indeed very gratifying to see the particulars so labouriously gathered by the author—who by instinct was a Chronicler—nearly two hundred years ago, bearing on this part of the subject-matter of his treatise should be utilized in a British Indian court of law in support of one's claim as reliable and authentic.

Neither in style nor in elegance of language could the *Mirat* be compared to the well-known standard historical works like the *Ruzat-us-Safa* or the *Habib-us-Siyar*. The language is not the language of a writer born and bred in Persia. It is that of one who though a scholar and a close student of Persian has still not been able to shake off the influence of the language spoken round about him, and has therefore got affected,—may be imperceptibly by the Hindustani idom, by the turn and phrase of that language. Indeed, to one who has read the above-mentioned standard works, it takes some time and study to make oneself familiar with the style and idiom of the author of the *Mirat*. This was, however, inevitable. Even Ferishta has not been able to steer clear of it.

In addition, the factor common to all such writers—padding the text with verses, making the style stilted—what Dr. Bird calls "laboured"—by a number of quotations from the Holy Book (Koran) is not absent from his work.

7. The same learned translator Dr. Bird in his estimate of Mahommedan Historians mentions the fact, that "they generally tire the patience of the reader by too minute a detail of sieges and battles, of murder and intrigue, without relieving the fatiguing sameness of their narrative by the more pleasing and instructive account of the individual character, or the policy and domestic manners of a people." He, however, exempts and rightly exempts the author of the *Mirat* from this "general censure."§ The *Mirat* in some places his narrative reads like a page from the present-day Government Gazette announcing transfers of officers—Imperial and

read Talab, the usual camping ground of armies approaching Ahmedabad.

(*iii*) on p. 181, Basu is the town of Vaso near Petlad.

(*iv*) on p. 183, the fine referred to as "*babura*" is the Gujarati word "*Vero*", which on account of the inter-change of the letters "b" and "v" is written Bero, misspelt *Bayorat*. It is *Bero*=*Vero*, a tax.

(*v*) on p. 192, Gangadin should be Ganga Das. Din, as a suffix, is used in North India, while Das is used in Gujarat.

(*vi*) on p, 198, Chandula is really Chandola.

(*vii*) on p. 207, Durgaikhan Gujarati is Darya khan Gujarati.

* The mistake pointed out was on p. 69, to the effect that while giving an account of Shah Aliji, in appreciating his Diwan (verses) it was really compared to that of Shaikh Maghreb, but the Gujarati translation gave the name of Shah Ghazni in its place.

† For instance, in giving the account of Shah Aliji (p. 57) the name of the locality where his tomb is situated which is definitely given as Raikhad in the Persian Text has been omitted. There is

printer's mistake in so far as Shah Ghazni is concerned. Shah Ghazi. There is a further mistake in reading *Gaondhani*, owner of a village as *Kanudhani*, really speaking the *Kaf* should be read as *Ga*, which would then be *Gaon*=*Gam*, a village.

* Shah Bhikhan's burial place in the Persian Text is shown to be on the *south* of the city gate, not on the *west* as translated in the English version.

† "His style is more laboured and verbose than that of most Mahommedan Historians (p. 3 of Preface, Dr. Bird's *History of Gujarat*.) As to verbosity, it is rather less than what is found in others.

§ Page 1, of the Preface, Dr. Bird's *History*

Provincial—from one place to another or their appointments (*e.g.*, pages 3 and 4 of Part II, Volume XXXIV, Persian Text, Gaekwad's Oriental Series), on the whole the story is so well told that it presents a vivid picture of the events and incidents related. As an instance, take the two important events in the chronicle of the affairs of Surat, one being the ambitious schemes of the millionaire, the Merchant Prince, Hajee-ul-Tujjar, Mulla Mahommedali, for founding a fortified town of his own near Surat, and the ultimate sad end both of the schemes and himself, and the other the ambition of Syed Sultan, its nominal Governor, and the part played by the members of the English factory at Surat. The narrative is detailed but not fatiguing. Indeed, it is so well told that it reads like an interesting story.* Further it is authentic: the authenticity of the later incidents can very well be established by a comparison of the events as set out by the author with those set out in the correspondence now published of the Company's local officers at Surat with their chiefs at Bombay and in England.

Similarly, for those incidents which relate to the Marathas, the authenticity of each and every one of them can be tested, and its accuracy found out by what is found in the ample materials now available as to the history of those times, in the published Marathi Records, Bakhars, etc., relating to those early days of their rule.

In numerous places the narrative is distinguished by the human touch: the author does not write from a stranger's detached point of view. He lived in Gujarat and felt for them and suffered with them. In narrating the levy of unfair and oppressive taxes (*Vero*) in the hands of the Subas, Hindu and Mahommedan, he laments the fate of the inhabitants bitterly and distributes blame equally between the Hindu and the Mahommedan Hakems. Referring the advent of the Marathas, he very graphically sums up the situation in one sentence, "that from that date onward they established themselves in Ahmedabad (Gujarat) and never left it."

The spirit of impartiality which he considers to be the keystone of the edifice of his work has been, on the whole, very well observed by him in the narrative. Whereas in other histories one would find Hindus called, Kafir (infidels), *Jahhal* (ignorant people), etc., the author of the *Mirat* has been very restrained and considerate in his language, and never once loses sight of the principle laid down by him. Even when he talks, in describing the severe famine of A. D. 1732, of the Marwadis purchasing a trifle, men and women belonging to the other classes of Mahommedans, with a view to remove them to Jodhpur and convert them to Hinduism, in retaliation of the Hindus having been captured and taken away from Jodhpur for being converted to Islam in the time of the Emperor Aurangzeb*, he takes care to see that not even one harsh word escapes him.

Very few Mahommedan authors give such details as the author of the *Mirat* does, as to the why and wherefore of the composition of their books. Dr. Bird has translated the autobiographical part of the Preface giving the genesis of the writing of the book. Unfortunately, it is not a translation of the entire Preface and not even a close translation. For this reason the full force of the author's object is not brought out. It seems he had written a far more ambitious work containing not only the Rules and Regulations of the Finance and Revenue Departments of the Imperial and Provincial Governments, but also a treatise solving the riddle of the difference between the Fasli and the Hijri eras; and in the elucidation of which he had passed long sleepless nights†, burnt the proverbial midnight oil; in addition he had narrated the political history of the province; it details also the difficulties he had to contend with in collecting the materials for his work, and specially makes mention of Mithalal Kayastha, whose valuable services were lost to him when most wanted. He narrates as to how he had to content himself with a restricted field of work, which did not give full play to his aspirations, resulting in the production of the present chronicle, Concluding the historical part of his work,†† he writes that he is conscious of the shortcomings of his work, and that he would have liked to proceed further after narrating the events relating to the movements of Surajmal Jat, and that if God granted him life and if he could procure peace of mind, he would write out a second volume commencing with the accession to the Gadi of the then auspicious Emperor of Delhi, but apparently that was not to be.

He was a poet himself and in the body of the book one comes across verses composed by him. He was a deep student of the Koran, and well-versed in Mathematics also. His zeal for learning was so keen that he never missed any source of information which would add to his stock of knowledge. Folklore he did not despise and the contents of the volume of *Khatimah* (Volume L of the Gaekwad's Oriental Series) speak most eloquently as to how vast must have been his reading and how vast the number of the persons from whom he must have collected information embodied in that compilation.

* It was the writer's intention to give extracts in support of the statement from the text; but found that it would make the paper very long, he refrained from doing so.

KESHUB CHUNDER SEN TO MISS MANNING

[This letter has been communicated by Mr. Karunaketan Sen. He got it from Mrs. Lawrence, who is a grand-niece of Mrs. Manning.]

Colootola, Calcutta.
10 May, 1871.

Dear Miss Manning,

I heartily sympathize with you in the heavy trial which has quite unexpectedly befallen you. I do not know how to express my sorrow for the loss we have all sustained in the death of your excellent mother. Not only as a kind personal friend but as a sincere well-wisher of our country she won my affection and esteem, although my acquaintance with her extended over a very short period. I always deemed it a great pleasure to be in her company and to listen to all that she had to say on religious and social subjects. Her work entitled *Ancient and Medieval India* is a standing monument of her love for this country and its people; while her zealous efforts in behalf of the London Branch of the National Indian Association gave her last days a peculiarly Indian interest, which we shall always gratefully remember. Personally I am under great obligations to her for a copy of *Tree and Serpent Wo* lately presented to me, and also for the wish she is said to have expressed a days before her death to meet the expens publishing my lecture on "Native Fa Improvement" at the Bengal Social Sci Association. I had calculated upon having pleasure of seeing her again in this wor the event of my paying a second visi England. But Providence would not have i She has been removed by the merciful han the Father to her true and ever-lasting h Her soul is resting cheerfully on the lap of All-merciful—away from the sorrows and tr of this world. The enclosed obituary paragra appeared lately in the columns of our l *The Indian Mirror*. *The Englishman*, leading daily paper in Bengal, has repro this morning a short article from the "Athenæ giving an interesting biographical sketch Mrs. Manning.

With kindest regards and best wishes for success of your efforts in connection wit London Indian Association,

I remain
Yours very sincerely

NATIONAL AND INTERNATIONAL FOOLISHNESS

By MAJOR D. GRAHAM POLE

Economic System Inherently Unsound

MEMBERS of Parliament separated for the Easter recess with the subject of unemployment uppermost in their minds. It had occupied almost the whole of their time during their last week of the sitting.

It is safe to say now that a change has come over public thinking in the matter. For some weeks, as the unemployment figures have been falling, and the Depression has seemed at last to be lifting, it has been hoped in many quarters that things were righting themselves and that we were muddling through somehow. This flattering belief was encouraged by the fact that England had undoubtedly weathered the Depresson more successfully than any other country.

But even the most superficial examination of the employment situation in our big industrial centres is enough to counteract any optimism. Just to visit them is to realize that the fall in the unemployment figures merely means that the Depression figures are falling off. But when the fringe has gone, the problem remains incapable of solution it seems in the present ordering of our affairs.

The Labour Party of course has always maintained that the present economic system is inherently unsound. Sooner or later, it says, private enterprise is bound to choke up the channels of exchange and defeat itself. But today even the strongholds of conservatism and privilege are beginning to say the same thing. A most striking article appeared in this connection the other day in the *Morning Post*.

Nobody's Business

It also has observed that the reduction in unemployment has not touched the real problem, and the fact remains that "nearly 2,000,000 people in this country are still without work, and that there are large areas and great industries which have so far enjoyed little share in the general progress."

"Is there any ground," it asked, "for hoping that the unemployment figures will fall below the million line, at which they stood in the best of post-war years, or that Lancashire, Durham and South Wales will somehow emerge from their chronic distress? Has anything occurred since the slump to substantiate such a hope?" And it answers that "It is difficult to avoid the conclusion that nothing has occurred to ..."

Then comes the most significant part of the article:

> "It is nobody's business to create openings for the unemployed, and the mechanism for creating such openings has yet to be provided. Unless, therefore, we take steps to establish the mechanism we are likely to be faced with a permanent problem of unemployment.
>
> "The question is worthy of study whether with this end in view and with the object of securing the maximum national prosperity, it may not be necessary to undertake a thorough reorganization of our productive system, and seek in co-operation within and between industries the solution of problems with which free lance competition can never hope to cope."

This calls for comment. In the first place, if it is nobody's business now to create openings for the unemployed, that is entirely the fault of the National Government. The Labour Government set up the Unemployment Grants Committee, which stimulated employment by making grants for suitable productive undertakings. But the National Government abolished the Unemployment Grants Committee. Also it will be recalled how, at the World Economic Conference last summer, the National Government crabbed all proposals for remedying unemployment by instituting a programme of public works.

No Plan

But it is not only in the select circles catered for by the *Morning Post* that there is an awakening in progress. Mr. J. B. Priestley, the author of *The Good Companions* and the solid embodiment of the middle classes, has been touring England. And he is telling the middle classes, in his new book, that some of the towns he visited in the North "looked much worse to him than some of the French towns he saw at the end of the War, towns that had been occupied by the enemy for four years."

And he asks indignantly:

> "Why has there been no plan for these areas, these people? The dole is no part of a plan; it is a mere declaration of intellectual bankruptcy.
>
> "The whole thing is unworthy of a great country that in its time has given the world some noble creative ideas. We ought to be ashamed of ourselves."

The National Government certainly has no plan for these areas. In the latest debate on unemployment in the House of Commons the President of the Board of Trade, Mr. Runciman,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

had absolutely nothing to suggest—except allotments and gardens as aids to securing the greatest degree of satisfaction and content! He seemed to go out of his way to communicate a spirit of hopelessness and helplessness.

Wages Halved Where Paid

Consider the case of Jarrow for instance. This was formerly a prosperous shipyard town of 32,000 inhabitants. But today, according to the *Times*, there are 75 men out of work for every 25 working. And all the comfort Mr. Runciman can give Jarrow is to suggest that Palmer's shipyard, which was one of the largest in the country but is now in the hands of the Receiver, should be put up for sale as a convenient site for other industries!

What comfort, one wonders, can the miners of South Wales expect from the National Government? In that same debate on unemployment Mr. Dagger, the Member for Abertillery, pointed out that the miner's wages had exactly halved during the past years. In 1924, the total wages paid to them was £46,000,000. In 1932 these South Wales miners received only £23,000,000.

One of the troubles of our present system is of course its finance. Industry depends upon credit and credit is given by the Banks and—as Mr. G. D. H. Cole pointed out in a recent broadcast debate—the prosperity of the City is not unfortunately the same thing as the prosperity of the country. We have seen this all through the Depression, when Industry has languished but the Banks have been choked with deposits awaiting "safe investment." The Banks concern themselvs solely with profits, though Industry may be panting for life.

Making More Cheap Competition

This worship of profits is playing havoc in our lives. Everyone knows that the loss of our Far Eastern markets is causing great unemployment and suffering in the cotton industry. Yet our patriotic capitalists have just supplied "complete equipment for two textile mills" to our future competitors in China! All this cargo left Birkenhead just before the Easter holiday and "for some time," we are informed, "Chinese mechanics have been in Lancashire familiarizing themselves with the machinery, so that they will be able to superintend its installation."

In the near future, then, we may expect Lancashire to suffer from still severer competition in the Far East—and this stab in the back she will woe to people at home, to capitalists who take no thought for anything but the profits to be grabbed at the moment.

"Damnable Waste"

Production for profit—instead of for use—leads to the most tragic absurdities. A little while ago the City page of a London newspaper came out with the heading "Brighter Outlook for Coffee Growers." A closer examination of the text revealed that prices were rising sharply. To maintain this happy state of affairs, happy only for the industry which must make profits or perish, a "sacrifice quota" was in operation. That is, no less than 40 per cent of the crop was being deliberately and wantonly destroyed.

Listen to the Dean of Canterbury on the subject and then ask what sort of a mad world we put up with it:

> "You must get hold of this horrible sinister fact and visualize it. Suppose you stood on London Bridge and saw a man raise aloft a sack of coffee, weighing roughly as much as you yourself and then fling it from the parapet into the dark waters of the Thames. If you were half a man you would say, 'That is a damnable waste.'...
>
> "Supposing, however, that as quickly as your wrist-watch ticked off the seconds, he flung similar bags, one bag a second, on to the waters and never ceased doing it day in day out, hour by hour through the whole of the 24; did it while the spring flowers bloomed, while the summer suns glowed, while the autumn leaves fell; threw away the bags as the days and weeks and months passed, *one bag a second for nine solid months on end*, that is the destruction deemed necessary to 'save' the coffee trade of Brazil...."

And of course, as the Dean points out, it has been the same story with tea. Last year "the tea producers of India, Ceylon, and the Dutch East Indies, received orders to restrict their crops by a weight of 121,000,000 lbs. That amount would have filled every larder in England and Wales with 12 lbs. of tea."

It is a curious thing that all the examples brought to our attention of this wanton restriction or destruction of goods seem to be concerned with *food*. Tea, coffee, sugar, wheat, bacon, potatoes, milk, oranges—all are being restricted. The same process, of course, is going on with other primary products and raw materials. But it seems as if the capitalist system, which has always prided itself in being a thing apart from humane issues and not to be judged by them, was at last over-reaching itself in such a way as to make quite sure of its destruction at the hands of sensible men. For years it has dinned into us that labour—the work and well-being of men and women—was only a commodity to be bought and sold like any other commodity. Now it is telling us that their food also is only a commodity to be bought and sold like everything else for profit. But to the common man the provision of food has always had a divine sanction. ("Give us this day our daily bread"). And this attack on the people's food may well blow the whole

Ottawa Agreements Breaking Down

Interference with our food, of course, began at the Ottawa Conference. The Agreements which the National Government entered into then with the Dominions were supposed to open a new era in inter-imperial relations. But it should not have needed a very wise prophet to foretell that the Agreements might in fact turn out to be a new cause for inter-imperial bickering.

The Ottawa Agreements reduced dairy imports from foreign countries so as to favour such imports from Australia and New Zealand. The result has been a greatly intensified competition from the Dominions. It matters little to the British farmer where the competition comes from—and if the Minister of Agriculture has "protected him against the one, there can be no objection *in reason* for protecting him against the other."

The Agreements lapse in November 1935. And already it is hinted they will not be renewed. New Zealand has been making overtures in the matter. She has asked whether Great Britain would maintain the free market here for New Zealand dairy produce if, in return, New Zealand makes heavy reductions in her tariff on British goods. But she has received a chilling reply. The Dominions Secretary is said to have intimated that the proposed tariff reductions "might not outweigh the severity of the competition now experienced by British farmers owing to the heavy imports of dairy produce from New Zealand and Australia."

So it has not taken long to unmask the Ottawa Conference! We were held up for months and months in our negotiations for a Trade Agreement with Russia because of our commitments to the Canadian Prime Minister, Mr. Bennett. But will this same Government that let us in for these Agreements, one wonders, still be in power, be there to face the music, in November next year when the Agreements come up for renewal—or repudiation?

Unemployed Cuts Unnecessary

At the moment of writing the Chancellor of the Exchequer has just announced that there is a Budget surplus of £31,148,000. This is the largest surplus there has been for ten years. It is to be hoped therefore that the first-fruits will be a restoration of those "cuts" made in 1931 in the income of the teachers, the Civil Servants, the police, and, above all, of the unemployed. Indeed, this Budget surplus shows that the cuts in unemployment benefit were never necessary. Well, then, let the Government lose no time in making amends. *If the cuts had been restored a year ago there would still have been a surplus.*

The unemployed and the small wage-earners have carried more than half their share of the Depression. Not only have their incomes been reduced, they have had to pay through the nose also in the indirect taxation of their food and clothing. The Budget accounts show £179,177,000 received in respect of Custom duties. Four-fifths of these duties were paid by the working classes. And the consumers have also had to pay an extra six millions a year for bread, because of the wheat subsidy, to say nothing of the staggering increases in bacon prices.

But it is not only on the grounds of equity and humanity that the cuts should be restored. A restoration would be of the greatest assistance to trade. There are indeed strong reasons for believing that it would help recovery far more than would a reduction in Income Tax. The unemployed spend their benefit on food and clothing and so employ countless thousands of other working men.

And now just a word about this Budget surplus. On every hand we shall be told that this is the largest surplus for ten years and a great feather in the cap of the National Government. But is it really? On the face of it, the year shows a surplus of over thirty-one millions. In fact, if the commitments to the United States made on our behalf by Mr. Stanley Baldwin and the Tory Government had been met, there would be no surplus but an actual deficit. Allowing for the token payment, we owe America on the year £35,000,000. And if the Socialist Government had proposed to default to our creditors abroad, what an outcry there would have been! We should have been told that the Socialists were ruining the credit of the country.

Air Scares

Perhaps we might just glance for a moment at a Disarmament matter. There has been a great campaign recently in the Rothermere newspapers to work up an Air scare. And it has been followed of course by an increase in our Air estimates—while the price of aviation shares has, in some cases, doubled.

In the current issue of the League of Nations journal, *Headway*, a most interesting reply is made to Lord Rothermere. The point is: who is our potential enemy in the air? Russia, the United States and Japan are ruled out because of distance. "A recent Italian formation flight to America has shown the immense difficulties to be overcome by a fleet of planes in crossing the Atlantic."

Who is the enemy in Europe then? The answer is, of course, France. But France has shown over and over again that she sets her security above every other consideration. Does Lord Rothermere imagine then, *Headway* asks, that France would watch our factories turning out hundreds of fighters and bombers without adding a machine to her own air force? Of course he must know that such a policy on

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection.

Digitized by Arya Samaj Foundation Chennai and eGangotri

our part would lead straight to an armaments race with France.

But there is another point—and this is not mentioned by the *Headway* article—of which Sir Norman Angell has recently reminded us. "France," he writes, "the strongest Air Power in the world, has offered to scrap her air arm if we internationalize civil aviation and establish a small air police; and has indeed offered to forgo the latter condition if the international control of civil aviation is thorough-going enough."

But, as a country, we seem to prefer being a law unto ourselves and to be prosecutor and judge in our own case. It is as futile in internationl matters as it would be in the case of a private citizen in national matters.

FINANCE AND INSURANCE

The Sugar Excise Duty Bill

THE proposal of the Finance Member to impose an Excise Duty of Re. 1-5 per cwt. (Annas 15-4.5 per maund) on 'all sugar produced in any factory in British India ··' on or after April 1, 1934, was most unfavourably received by the Indian Press. Vehement protests were recorded by the sugar manufacturers and the bill was referred to the Select Committee, which has just produced its reports.

The Excise Duty as originally proposed (Re. 1-5 per cwt.) is estimated to yield about Rs. 147 lakhs out of which it is proposed to set aside an amount equivalent to 1 anna per cwt., representing about 7 lakhs, as a fund to be distributed among the Provinces where white sugar is produced for the purpose of "assisting the organization and operation of co-operative societies among the cane-growers so as to help them in securing fair prices, or for other purposes directed to the same end." The Finance Member trusts that as a result of the legislation, "the immediate position of the cultivators will be protected" and "the measurement of protection which will remain is sufficient to allow all reasonably well-organized factories a fair margin of profit after paying a fair price to the cultivator and···in the long run, the industry will enjoy a more healthy life and growth if this change is made now than if the present excessive duty is allowed to continue."

The bill shall apply to all factories in British India where sugar is produced and where sugar is used in any such factory in the manufacture of *any* commodity other than sugar, (cl. 3). "Factory" is defined in the usual way to mean "any premises wherein or within the precincts of which, twenty or more workers are working or were working on *any* day of the preceding twelve months." It is thus possible that it will apply to factories other than sugar-producing factories, but the language is not clear. Power is given by clause 11 to the Governor-General-in-Council to make rules under the Act. The owners of factories and sellers of sugar may be asked to furnish informations required by such rules, to keep appropriate records and to make returns in manner prescribed by the rules. No person is allowed to issue any sugar out of a factory except in accordance with the provisions of the rules (cl. 5). Clauses 7, 8, 11 (3) provide penalty for evasion of duty or failure to supply information, for issue of sugar from factory in contravention of Clause 5 and for any breach of rules made under the Act. The penalty in each case is imprisonment which may extend to six months, or fine which may extend to one thousand rupees or both.

From 1908-09 to May, 1925, the import duty on sugar was on *ad valorem* basis. Since 1926-27, the duty has been specific. In 1931, the Tariff Board recommended a duty of Rs. 7-4 per cwt. (=Rs. 5-5 per maund) for seven years and Rs. 6-4 per cwt. (=Rs. 4-10 per maund) for eight years more. It also recommended that if market prices in Calcutta in future fell below Rs. 4 per maund without duty, a further duty of 8 annas per cwt. should immediately be imposed. It was also recommended that the minimum price paid for cane should be annas six per maund. The recommendations regarding the duty were given effect to by the Sugar Industry (Protection) Act of 1932. There is a provision in this Act (sec. 4) that if foreign sugar is imported into British India at such a price that the duties imposed (Rs. 7-4 per cwt.) proves to be insufficient, the Governor-General may "increase such duty to such extent as he thinks fit." In September, 1931, an emergency surcharge of 25 per cent was imposed making the duty amount to Rs. 9-4 per cwt. (Rs. 6-10.5 per maund) in all. The present bill proposes to abolish this surcharge. As Java Sugar sells in Calcutta at Rs. 3-7 per Rs. 10-1 minus Rs. 6-10.

...d without duty, the total import duty ...ld be Rs. 7-12 per cwt. (Rs. 5-11 per ...ly according to the Tariff Board recom- ...dation. The present bill aims at reducing ...existing duty to this level by imposing an ...ise duty equal to the difference.

The duty of Rs. 7-4 per cwt. was recommend- by the Tariff Board on certain suppositions. ...contemplated a margin of Rs. 4-3-2 per maund ...sugar over the cost of the cane. This included ...annas as the price of the molasses. At present, ...ever, molasses have become unsaleable at ...price so that the actual margin has come ...n to about Rs. 3-7 per maund. If an excise ...y is levied at annas 15-4·5 per maund, the ...gin further comes down to Rs. 2-7-5 only ...m which if the manufacturing cost and over- ...d charges are deducted, the balance left is ...enough to cover even the minimum return ...the capital invested.

Java sugar is at present selling at Rs. 10-1 ...maund and Cawnpore sugar at Rs. 9-5. If ...bill is carried, the former will sell at Rs. 10-7 ...the latter at Rs. 10-4 per maund.* If we ...for the difference in quality, the margin ...so small and the protection afforded so long ...entirely vanish. If the recommendation of ...Select Committee be adopted, the Cawnpore ...will sell at Rs. 10-1 which is more reason- ...

The full text of the Select Committee reports ...not available at the time of writing but the ...summary shows that the Majority are in ...of reducing the excise duty to Re. 1 ...and imposing a duty of annas 10 per ...on Khandsari factory sugar. The Minority, ...the other hand, is in favour of the retention ...the original proposal (Re. 1-5 per cwt.) but ...impose the duty as from August 1. It ...very likely that the Government would take ...advantage of this difference of opinion and ...for the enactment of the original bill in ...

The economics of Sir George Schuster is ...perplexing to us. It is a common saying ...you cannot both eat the cake and also have ...But Sir George wishes to achieve even this. ...you are committed to a protectionist policy, ...cannot at the same time look forward to a ...some customs revenue. That is the price ...has to be paid for protection. Having ...sed the surcharge on sugar, it is not fair ...Sir George to blame the sugar industry for ...lower customs receipts.

The argument of Sir George that the excise duty is designed to put a stop to the "danger of over-production which might in the long run bring disaster" does not seem to be very strong. It is only in 1935 that for the first time the production of sugar is going to equal the consumption in India, so that the problem of over-production need not be seriously considered for some time more. The proper way to tackle the problem would be either to restrict the cultivation of sugar-cane or to restrict the activities of the mills. But at present, the number of well-established mills is far too small to manufacture the cane into sugar. Most of the mills are mere infants less than two years old and is it not strange that instead of "nursing" our infant firms, we are trying to throttle them with excise duty even before the industry has had the chance of establishing itself? This is a contradiction which the official explanation has failed to resolve.

The magnitude of the reaction that a high restrictive duty will produce on the industry can be estimated when we remember that the sugar industry gives employment to about a lakh of factory workers, represents investment of no less than 20 crores of rupees and provides the means of subsistence of 15 million cultivators throughout India. We have also to note that Java is carrying a huge stock which, if released in the Indian market, would definitely harm the Indian industry, if not altogether kill it. If in addition Java goes off the Gold Standard, the result will be all the more disastrous.

We have one further remark to make. We do not know how the Local Governments will regulate the selling price of sugar. There are at present no sales societies or co-operative societies particularly meant to serve the interest of the cane-growers. The existing co-operative societies are, we fear, too badly managed to be able to assume this additional responsibility. It is further not very easy in our country to organize the illiterate peasantry in a short time. Even if such societies are formed, the Government will have to spoon-feed them for a pretty long time. Besides, we have to be alive to the difficulty that cane has to be absolutely fresh if it is to be of any use, so that storing will not be possible.

The scheme, if it successfully works, will be a triumph of "Economic Planning" and will be of the greatest importance to the future "planning" of our economic activities. For the present, we can only hope for the best and wait.

Statistics Relating to Sugar

Production of cane sugar: (raw sugar contents)
In thousand long tons

Year ending in Aug:	1931	1932	1933	1934 (Dec. estimate)
Java	2957	2715	1486	571
Cuba	3163	2636	2021	1673

*This is on the assumption that the selling price ...ld rise by the full amount of the duty. In ...ality it is more probable that the price of the Java ...would respond less to the increased duty than ...price of the Indian sugar would to the excise ...so that the actual margin would be even less ...what is shown above. Thus the protection ...would be entirely lost except in areas near ...mills.

British India	2877	3465	4652	4921
Phillipines	782	983	1146	1329
Total of cane sugar	17294	17726	16904	16235
Total cane & Beet Sugar	29034	26537	24685	24765

The decrease in case of Java and Cuba is to be noted; both of them are participants in the Chadbourne Restriction Scheme, 1931-32. At present British India is the largest producer of cane sugar in the world.

Consumption of Sugar (raw sugar content)
In thousand long tons

Year ending in Aug.	1931	1932	1933
Europe	10348	9723	9034
U. S. A.	6207	5841	5897
British India	4114	4162	5080
Grand Total for world	26515	25681	25886

Source: Estimate by Dr. Mikusch and Czarnikov, Ltd. (Bank of England Statistical Summary, Jannuary, 1934).

Import of Sugar

Quantity	(1000 tons) 1930-31	1931-32	1932-33	1933 (Apr.) to 1934 (Jan.)
Java	802.3	366.7	294.8	181.2
Total	901.1	516.1	369.4	247.5
Value (Lakhs of Rupees)				
Java	936.5	436.2	329.7	185.1
Total	1053.8	600.7	412.2	254.9

The above figures show that Java is the chief exporter of sugar. Other exporters are the United Kingdom and Japan. The bulk of beet sugar comes from the United Kingdom.

Final Sugar Cane Forecast 1933-34

	Area (000 acres) 1932-33	1933-34	Yield (000 tons) 1932-33	1933-34
U. P.	1793	1731	2612	2786
Panjab	558	467	444	347
Bihar and Orissa	302	418	313	623
Bengal	233	257	454	457
Madras	125	120	346	325
Bombay	105	102	275	266
Total	3321	3305	4684	5067

It appears that Bengal is the third sugar producing province in India. U. P. comes first with a percentage of 55 of the total while the percentage is 12 in case of B. & O. and 9 in case of Bengal.

The yield per acre (in pounds) are as follows:

	1932-33	1933-34
U. P.	3263	3605
Panjab	1782	1664
B. and O.	2322	3339
Bengal	4365	3983
Madras	6200	6067
Bombay	5867	5842
Total	3163	3434

The yield per acre will be less than in the previous year in all provinces except U. P. and B. O. The high productivity in case of Madras and Bombay are worthy of note.

Excise Duty on Matches

The bill proposed imposes an excise duty on matches made in British India. The duty payable would be (1) Rs. 2-4 per gross of boxes containing not more than eighty in a box and (2) 9 annas for every twenty matches or fraction thereof in case of boxes containing more than twenty. Section 9 of the bil, provides that no person shall manufacture matches in British India except under a licence and no person shall issue any matches out of a manufactory except in accordance with rules to be framed under the Act. Again, every packet, box or booklet of matches issued from any factory shall bear a "banderol" or stamp affixed in accordance with rules to be made under this Act. Appropriate penalties for infringement are provided for as also for evasion of duty or failure to supply information.

The collection of the tax is, in the first instance, to be in the hands of the Local Governments as agents of the Government of India. The customs duties on matches are to be revised so as to comprise rates maintaining the existing measure of protection for the Indian industry over and above the equivalent of the new excise duty.

The revised import duties are to be as follows:

1.	Boxes containing not more than eighty each	Rs. 3-8 per gross of boxes.
2.	Do···more than eighty in a box.	14 annas for every 20 matches or fraction thereof in each box, per gross of boxes.
3.	Not in boxes.	4 annas and eight pies for every 960 matches or fraction thereof.

Ths bill was referred to a Select Committee whose report was submitted to the Assembly on April 14. The Committee has recommended a lower duty and has made a number of important changes.

The rate of the excise duty would be, according to these recommendations, at the rate of one rupee on a gross of boxes each containing on an average 40 matches with corresponding rates for matches in boxes of 60 and 80 (cls. 4). Clause 18 (D) gives the required power to limit the number of matches contained in a box to 50. The customs duty has been changed in order to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

bring it into line with the duty now proposed (cl. 20). It is also recommended that imported mechanical lighters should be subjected to a suitable enhancement of customs duty and that an equal excise duty should be imposed on indigenous manufacture.*

SAILENDRA NATH SEN-GUPTA

Indian Insurance

INDIAN INSURANCE CONFERENCE

In his Presidential address to the Indian Insurance Conference at Lahore Sir P. C. Ray exhorted the Indian companies to put forth all their strength and resources with a view to expand their activities to all branches of insurance and made a pointed reference to the vast potentialities of non-life business in regard to which indigenous enterprises have not so long been able to make much headway. Of particular interest were Sir P. C. Ray's observations about the Indian Insurance Law which, according to him, "cannot save the Indian Insurance Companies from unfair competition. And even if some of the resourceful institutions of the West resort to dumping insurance business in India under conditions which may tend to paralyse the existing Indian enterprises, the Indian Insurance Law will not be able to offer any effective check to save the Indian Companies." He pleaded for an immediate revision of the Law and along with it, for the enactment of legislation, now long overdue, compelling non-Indian offices to keep records of, and value separately, their Indian business so that the relative liabilities may be rightly assessed. It is difficult to see why the Government have not yet found it possible to respond to this by no means unreasonable demand of the people who have entrusted their savings to particular institutions.

INDIAN POSTAL LIFE INSURANCE

That the Indian Postal Life Insurance is competing severely with our private insurance companies will be apparent from the latest returns which show that on March 31, 1933, there were about 85,000 policies covering an aggregate assurance of Rs. 15,85,00,000. The maximum amount for which life insurance could be effected in the Post Office Insurance Fund had previously been fixed at Rs. 10,000 but of late, the limit has been raised to Rs. 20,000. Moreover, in 1883 when the fund was first instituted it was meant only for the postal employees, but it has now been thrown open to all classes of Government servants as well as to the servants of the quasi-Public bodies. The Government's plea for such widening its scope and increase of limit is that the benefits of assurance are thereby made available to a large section of its own servants. But this object could as well have been, and as a matter of fact, was being, served—and that efficiently,—by private companies the working of which has given rise to few complaints so far. It is, indeed, the profitable nature of the business that has induced the Government to take this advantage. If in spite of the facts and figures the Government should argue that the Postal Insurance Fund does not offer any unfair or unreasonable competition with private companies and that the position of the Fund in relation to these companies remains substantially unaltered having regard to the very large field available in india for the operation of the private enterprises, it must be out to support an obviously insupportable case.

ORIENTAL'S NEW BUSINESS

The oldest amongst the Indian Proprietary Life offiices, the Oriental Government Security Life Assurance Company Limited celebrates its Diamond Jubilee this year. This is undoubtedly the biggest of the Indian Life offices, and this year it has written a record volume of business exceeding its own record of 1929 when it closed its books with 31,128 policies assuring Rs. 6,50,04,539. In 1932 its new business was Rs. 5,94,00,727 distributed amongst 29,982 policies. And in 1933 it has written 38,191 policies assuring Rs. 7,04,26,203 which shows an increase of Rs. 1,10,25,476 over the figures of the previous year. So far as can be judged from a cursory view the results are nothing but entirely satisfactory.

Foreign Insurance

RESULTS OF THE PRUDENTIAL

Now is the time when most of the insurance companies abroad are taking stock of their year's working and reports about some of them are already available here. The most interesting of such balance sheets and revenue accounts is, of course, that of the Prudential which has just stepped into the eighty-fifth year of its existence and is decidedly the "biggest insurance company in the British Empire." An elaborate discussion of its balance sheet is not possible here but references to a few of its figures will undoubtedly be of interest. The new sums assured in the Industrial and ordinary branch amounted to £85,764,388, while the total sums assured (with bonuses) came to £745,388,424. The premium income has also increased in all branches, and the income of the company for the year from all sources totalled £50,191,265. Consequent on the increase of the new business written in 1933 a substantial addition to expenses might reasonalby

* Since the writing of these notes (16.4.34) both the Sugar Excise Bill and the Bill for imposing Excise duty on matches have received legislative sanction. As anticipated above, the excise duty on sugar has been restored to Rs. 1-5 per cwt. as originally proposed.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

have been anticipated, but it is gratifying to note that the ratio of expense to premium has decreased all round, being as low as 12.43 p.c. in the Ordinary Branch, 23.87 p.c. in the Industrial Branch and 40.07 p.c. in the General Branch. The Company paid away more than £25½ millions to policyholders in 1933, and up till now the total claims paid exceed £432 millions. The aggregate assests at the end of the year under review were £277½ millions, showing an increase of about £13¾ millions over the figures of the previous year, "nearly half the debt of Great Britain before the War." 74.1 p. c. of the assets represents investment in the United Kingdom, 9.1 p. c. Indian and 16.2 p. c. Foreign. It may be pointed out that the Prudential receives not an inconsiderable amount of its business, particularly in life assurance, from its overseas branches, and in 1933 the total amount of such new life business shows an increase over the previous year of £1 million. The Prudential is a living example of the tremendous expansions that a financial institution is capable of when it receives active national support and co-operation.

The Biggest Life Office In The World

The operations of the Prudential are vast, no doubt, but vaster still is the scale of business of the "Metropolitan Life Insurance Company of New York" —the largest life-office in the world. During the year 1933 the Metropolitan booked a new business of $3175 millions, and the total insurance in force at the close of the year was $18,803 millions distributed amongst 41.7 million policies. In addition to this the Company had in force personal accident and health insurance carrying a capital sum benefit of $1214 millions and a weekly indemnity of $12·5 millions. During the year it paid $573 millions in claims, and it is interesting to note that the total payments averaged $4741 a minute for each business day. The total assets of the Company at the end of the year amounted to $3861 millions. The hugeness of the scale of operations of the Metropolitan will be understood from the fact that the total life insurance in force of all the companies working in India is approximately less than one-fifth of its new business in 1933.

Insurance Progress In Japan

Although comparatively a late-comer in the field Japan has made remarkable progress in life insurance. Her first life-office on modern lines, the Meiji Life Assurance Co. Ltd., of Tokyo, was established in 1881, when the first British Company was already about a century and a decade old, and when even India could boast of having about half a dozen life offices of her own. But within a little above half a century since then, simultaneously with the nation's economic development, thirty-nine companies have come into being and with her total amount of life insurance in force reaching about 11,148 million yen she stands today as one of the leading insurance countries of the world and ranks next to U. S. A., Britain and Canada. In the early years, of course, certain difficulties cropped up and the Insurance Law of 1900 paved the way for a smooth and progressive development. It was in this year that the Law regulating the operations of the Foreign companies was promulgated. The Foreign life-offices had never had any predominance in Japan, and today there are only two Canadian companies working in Japan their business in force at the end of 1930 amounting to only £250 millions.

The most remarkable development took place during the unprecedented general prosperity that followed the War, when the number of policies increased by 190 p.c. and the amount of insurance by 210 p. c. Japanese life-offices were put to a severe test during the Influenza epidemic of 1919 when 12½ millions yen had to be paid in death claims, the economic crisis of 1920, the earthquake of 1923 which resulted in a loss of 100,000 lives and 10 billion yen worth of properties, and the financial panic of 1927. From each of these severe assaults the Japanese life-offices emerged ever stronger than before. The social welfare work of the Japanese life-offices has contributed not a little towards the development of life insurance thoughts. Their splendid relief work after the earthquake, their generous donations to Social Welfare foundations, their incessant propaganda for health and sanitation, and their remarkble manner in which they have organized hospitals and health consultation bureaus, have convinced the public of the high ideals of social service that permeate the business of the Japanese. Firmly based on strong foundations the Japanese life-offices can reasonably look forward for an era of still more progress and prosperity.

ART AND LITERATURE IN RUSSIA TODAY

By NITYANARAYAN BANERJEE

We came back to our hotel for tea. In the evening we again went out to see the Art Gallery. But ere going there we had to go again to Intourist office to have my passport and ticket for Moscow, which were with them. That is a nice trick of the Soviet Government. As soon as one crosses the Russian frontier, they will search every corner of his suit cases, every envelope and will make a note of the foreign money and jewellery one carries. He will be allowed to take out that amount of money and jewellery which are endorsed in the passport and will be required to show the cash memo in the frontier for anything bought in Russia. Throughout the stay in Russia the passport is kept in Government custody probably to have strict control over the foreigners; only it is delivered to the holder when travelling from one city to another. At least this was done in my case. The office work of the Intourist did not seem to be very efficient; they take too much time to handle simple things. When I was just going out of the Intourist office, a tall dark figure checked my motion. I was very glad to see a 'non-White' man, who evidently was from India. He was kind enough to step forward and ask, "Are you an Indian?"

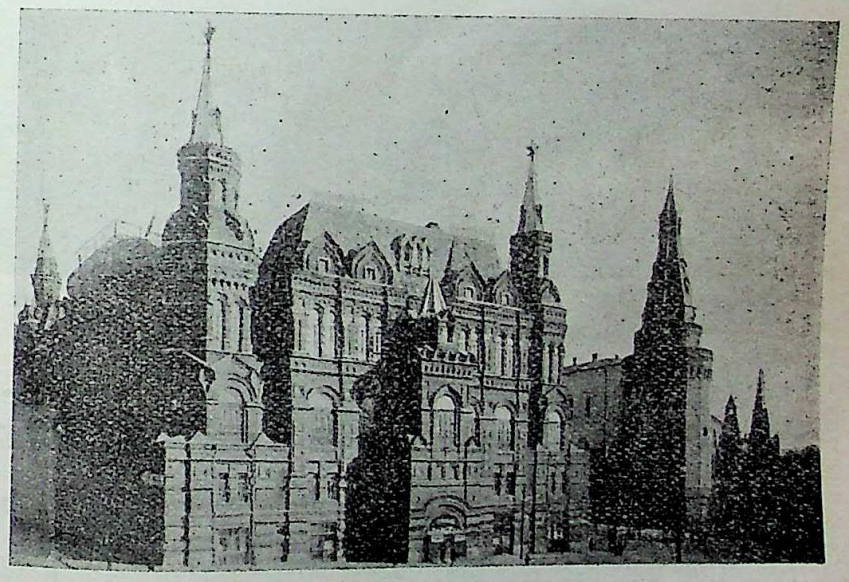
"Yes. Are you too?" asked I.

"Surely, can't you recognize that? May I know your name?"

I answered his question, when he said, "I am a Chatterjee."

I was extremely glad to see another Bengalee there and asked him his detailed whereabouts in India. He is Mrs. Sarojini Naidu's brother, son of the late Dr. Aghornath Chattopadhyaya. He is a professor of Leningrad University. I had to leave Leningrad that very night; so I was really extremely sorry not to see Mr. Chatterjee again, from whom I could have gathered much more about the real condition of Russia.

We went to see the Art Museum. This is not free; a nominal fee has to be paid. For that fee a well-informed guide takes the visitors through the galleries and explain the techniques, the period and the idea of the pictures and sculptures there.



The Historical Museum—Moscow

As the Hermitage contains the old-school works of art, this museum consists solely of paintings, portraits and sculptures of the after-revolution period. If anybody just studies the paintings systematically according to period, he may have an idea of the development of mentality in Russia from the date of the revolution up till now. The pictures are arranged in different halls according to their period.

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Just after the revolution the people's mind was overwhelmed with famine and civil war; the paintings of that period portray vividly the mental worries of the people during that period. Not only pictures but dramas, novels, short stories, songs—everything of art was created with that sad theme in it. After that period, when the opposing forces had been subdued, the Bolshevic youths plunged into drinking and debauchery. With everything else they

A painting of the 9th January revolution of 1905

took the women, too, to be socialized, and often there were cases when individuals or groups used to outrage the modesty of women freely without any privacy and restriction, even forcibly. The Russian youth at this stage, revolting against religion, defied every social law enjoined by religion. That was a horrible period—a period when the masses were maddened by the spur of the new freedom and the intellectuals were perplexed by the horrible result of the revolution and were searching for a better way to peace and social order. The famous Russian novels, *Three Pairs of Silk Stockings*, *The Embezzlers*, *Squaring the Circle* and others give vivid pictures of this state of Russia.

Next was the period of the Five-Year Plan, the constructive programme. Everywhere there was some routine, some definite plan of production, system and discipline. There are pictures of labourers working in [illegible] factories; building new club-houses, [illegible] shops; toiling before red furnaces, black [illegible] pictures of collective farms, common [illegible] halls and other works and ideals of the S[illegible]. There are paintings of fruits and flo[illegible] landscape and huts, but not a single pi[illegible] of an angel or fairy, heaven and [illegible] or Christ or anything imaginary. [illegible] Russians of today are extremely re[illegible] they even turned all fairy tales [illegible] fables out of Russian chil[illegible] books; only very re[illegible] they are again all[illegible] imaginary tales and fable[illegible] juvenile story books [illegible] that even is not of mer[illegible] and witches but of mira[illegible] attainments of the new s[illegible] and its ideals.

During this very [illegible] time after revolution [illegible] new techniques in col[illegible] and drawing have [illegible] adopted and given up. T[illegible] things show how revolutio[illegible] were the Russians ag[illegible] anything old and [illegible] restless were they. [illegible] though the art of [illegible] period took a very cl[illegible] shape from the old, y[illegible] must be admitted that it was not to[illegible] anything better.

All the pictures, novels, stories, d[illegible] had to be created with an object, the fu[illegible] ing of the revolutionary cause. Th[illegible] all powerful "Rapp," the society of [illegible] proletariat to control art, forced every[illegible] of art to be objective. Every book, [illegible] picture, every song should have the [illegible] of preaching the communistic ideals. [illegible] drama could be played which showed [illegible] sympathy with any bourgeois character. [illegible] dramas had to be cast in the same m[illegible] proletariat are always noble and the [illegible] the capitalists, always villainous, wic[illegible] menace to society. All characters were [illegible] absolutely noble or rogues, they were d[illegible] of real human character. The same pr[illegible] had to be followed in novels, short s[illegible] poems and other sections of art. [illegible] poems were not allowed to be written;

Con- ...tly with the abolition of the "Rapp" ...sian Art flowed in a different direction, it ...e back to its proper channel. True it is ... even now there is strict censorship on art, ...e censor only objects if there is anything ...st the State. The newspapers can ...ize State policies and programmes, but ... on constructive lines, not in the other ...ction. In *Moscow Daily News* I have ... letters criticizing vehemently some pro- ...e of the State. There are "Counter ...ings," that is, modifications of criticism ... plans submitted by the State Planning ...mission of Moscow. In *Voks*, the bi- ...thly illustrated English periodical of ...ow, I have seen appreciation and ...sion of Soviet works. From the contents of one issue of this periodical one may have an idea of the subjects dealt with therein :

Through the Union of the Soviets	M. Gorky.
The Economic and Cultural Development of the Far East Region	A. Butsenko.
The Conditions of Labour and the Personnel Problem in the Soviet Oil Industry ...	G. Mitrov.
At the Soviet Factory	N. Tinovsky.

Now writers may deal with real life, they are free from dictation. New pictures are again appearing in Russia. The latest paintings seemed to proceed fast to compete with famous Italian and French paintings.

Soviet Square. The Obelisk of Freedom after revolution and the Lenin Institute, Moscow

Novels and dramas dealing with love and romance may again be written. The Russians have now realized their madness. They have gained the experience that dictatorship may build factories and farms but not Art. Still Russian literature always smacks of Revolution, it has not altogether given it up.

Formerly artists were looked down upon as the remnants of the old bourgeois intellec-

tuals ; they could not express publicly their grievances against the State, as they were supposed to have no right in the State ; but now the case is different, very different. Now, like engineers and scientists, artists are also greatly favoured and patronized by the State. While I was coming back to Berlin from Moscow I met a writer in the train who could speak a little English. From him I came to know that when one finishes a book he has to submit it to the State and if the State thinks it worth publishing the writer gets remuneration on the basis of a unit of thousand words. The drama writers get royalty from the theatres on each performance. Probably now the artists are the most happy in Russia. They are favoured by the State, honoured by the people, live better, eat better, have no anxiety about the sale of their books. For the new education and culture Russians are so mad after literature that the supply is insufficient to meet the demand. I was told Maxim Gorky is the richest writer in Russia, but alas ! what can riches obtain in Russia. Income tax takes the major portion of the income, and if any body is a communist he has to pay another tax to the party. With the remaining amount one cannot have a house of his own, a nice car to have an evening drive or cannot accumulate it for his beloved children to live on idly. Riches are a curse in Russia instead of a blessing.

INDIA IN SHACKLES

By MAJOR D. GRAHAM POLE

[*The Author has studied Indian affairs thoroughly and at first hand. He is the Vice-Chairman and Hon. Sec. of the British Committee on Indian and Burman Affairs.*]

INDIA'S constitution is in the melting-pot. A Joint Select Committee of both Houses of Parliament has been sitting for the best part of a year considering the British Government's proposals which are embodied in a White Paper. The proposals were not much good from the Indian point of view at the beginning of their sittings. It seems unlikely that they will emerge much better than they began.

The outstanding feature of these proposals is distrust of India—camouflaged under the name of "safe-guards." The White Paper forms a book of some 130 pages and the leading Tory newspaper points out that there is a safe-guard on every page.

As Mr. Baldwin shrewdly pointed out at his meeting in Manchester last June, a bayonet may be a very good thing to open a tin or to dig with, but you can never sell goods to India by putting cotton streamers on the point of a bayonet. "Whatever safe-guards you have," he said, "the real safe-guard is the maintenance of goodwill."

There is little in the Government White Paper to evoke that goodwill, and meetings of protest against it have been held from end to end of the country. The Central Indian Legislature has even passed a unanimous resolution to the effect that "unless the constitutional proposals described in the White Paper were substantially amended, it would not be possible to ensure the peace and progress of the country."

History repeats itself. The Tories tried to dominate the American Colonies and so lost to the British Commonwealth of Nations the United States of America. They would have lost Canada but for Lord Durham's wise advice. In Canada the problem was much the same as in India today. There were two communities antagonistic in speech and religion—the Roman Catholic French Canadians and the Protestant English. They disagreed between themselves, but joined in a common hatred of England.

Sir Charles Innes, an Indian Civil Servant just retired, who has occupied several of the most important posts under the Government of India and whose voice may be taken as that of "the man on the spot," said in his evidence before the Joint Select Committee :

> Canada in the first half of the 19th century offers in some respects a parallel with the India of today. There was an irresponsible executive confronted by a powerful legislature, and Canada had its own communal problem in the rivalry of the French and English Canadians. The effects of these factors were much the same as [illegible]

manifested themselves in recent years in India. There was a tendency towards irresponsibility on the part of the legislature. The tension between the French and English Canadians increased and there was growing bitterness against the Home Government. Finally, there was a rebellion, and it was only Lord Durham's report that saved Canada for the Empire. He recognized that responsibility was the only real remedy for the situation that had arisen. History is repeating itself in India today, and much the same phenomena can be seen....

Politically-minded Indians tend to believe that the British are standing in the way of their legitimate aspirations, and that we do so because in our own interests we are reluctant to give up our hold on India.

The Tories fought a war to get and hold South Africa. They would have lost it to the British Commonwealth of Nations but for Mr. Campbell-Bannerman's wise statesmanship in giving it self-government. The Tories are obsessed with the policy of grab and hold. They have no vision, and without vision the people perish.

Mr. Baldwin last summer at Manchester admitted their shortcomings in these words :

Your really old-fashioned, hardshelled Conservative has always been opposed to wide extension of democratic government, and when responsible government was first given to Canada no language was bad enough, and no prophecies for the Tories of that time could be too bad about it.

We were wrong—our party was wrong—and had we had our way then we should have missed the bus. Looking back we can say that the granting of democratic institutions to South Africa was right. Distinguished Conservatives who voted against it at the time have since acknowledged that they made a mistake. It was a great act of faith.

The India of today is vastly different from pre-War India. Indians see the future of their country not in isolated and antagonistic Provinces and Indian States, but in one vast Federation. If such a Federation could be brought about, Great Britain is solemnly pledged to assist in framing for them a Constitution giving them real responsible self-government subject only to such safe-guards as, in their own interests, are necessary for a purely transitional period.

The Federation has been agreed on, but the Constitution it is proposed to offer them would give them no real responsibility. It offers a certain amount of freedom but prevents its full enjoyment by putting heavy shackles on the Indians' use of such responsibilities as are offered them.

India's Finance Minister, for instance, will be responsible for raising the revenue necessary for carrying on the Government but he will only be responsible for the spending of about one-fifth of these revenues. The responsibility for the spending of the other four-fifths is to be retained by the British Parliament thousands of miles away.

India is one of the poorest countries in the world, reckoning wealth per head of population. But we have given her and make her pay for (and it is proposed that she continue to have) the most costly Civil Service in the world. She is not even to be allowed under the kind of responsible self-government proposed—to appoint her own Civil Servants or Police Officials. That will be done for her by us, but at her expense, for years to come and the Civil Servants so appointed will be under *our* control for at least another three years.

She is to be allowed to have no voice in her own Foreign Affairs. The Tories have always blundered over our Foreign Affairs but are so sensitive on the matter that they insist on the exclusive right to conduct India's Foreign Affairs—without even the pretence of consulting her even to the very limited extent that is done at present.

Then they tell India she cannot have real self-government until she is in a position to defend herself—and at the same time deprive her of all means of so defending herself and refuse to allow her even to train efficiently as she desires. Here again India is compelled by us to spend a greater proportion of her revenue on Army matters than any other country in the world.

We are a wonderful people; we deceive ourselves so easily and seem to assume that everyone else is similarly deceived.

The only hope of staving off a revolution in India on a big scale and of retaining India in the British Commonwealth of Nations is the belief in India, happily not yet dead, that Labour on its coming to power will, in consultation with Indians, frame for her a Constitution that will be real self-government on a footing of absolute equality with Great Britain and the other Dominions. Nothing less will satisfy Indians: nothing less ought to satisfy them.—*Labour*

INDIAN PERIODICALS

The Liquidation of Illiteracy

In the last issue of *The Modern Review* appeared an article on the methods adopted in Russia to liquidate illiteracy. Miss Amy B. H. J. Rustomji in a thesis has proposed various ways and means for the liquidation of illiteracy in India too. *The Social Service Quarterly* summarizes the thesis as follows :

The issue of the Journal of the University of Bombay for 1933 contains an article of absorbing interest by Miss Amy B. H. J. Rustomji entitled, "A New Way In Education." Miss Rustomji calls upon the University, all its Alumni, all literates to take some share in the great work of securing the liquidation of illiteracy either in the organized manner or individually. Quoting Lenin, she observes that the removal of illiteracy is the problem of problems before the nation, for with an illiterate population there can scarcely be any possibility of progress, social, economic or political. Out of our huge population of 35 crores, less than three crores are barely literate, and even in a city like Bombay, which prides itself in being advanced, 72·29 per cent of the men and 81·83 per cent of the women are illiterate. Miss Rustomji's main thesis is that the removal of illiteracy is a work which can be taken in hand by each one of us, whether a house-holder employing servants, a clerk or quill-driver, an administrator or an industrialist controlling labour. The trouble is that although we see the evil in our midst, we do not take steps to remove it, on the contrary, we acquiesce in it. In support of this view of hers, Miss Rustomji reproduces the results of a census of illiteracy in cultured households held by some women's organizations in Bombay. In 315 households there were no less than 954 illiterates, and if the employers co-operated or even acted individually they could easily remedy the present state of things within less than six months. Similar action should be taken, Miss Rustomji suggests, by public utility companies, the Municipality and other local authorities, the Railway Companies and other large employers of labour. Government might follow suit both for their servants in the offices, the police force and even for the illiterates committed to their care in jails. The University itself has twelve thousand employees and can well turn its attention to the educating of these as well as of the illiterate employees of affiliated schools and colleges, with the assistance both of the staff and of students. University extension work is an integral function of all modern Universities, and, in Miss Rustomji's opinion, such extension work in a country like India, which has 92 per cent of its population illiterate, can best take the form of eradication of illiteracy. The University should take the lead and inaugurate a vigorous campaign ; if it does so, Miss Rustomji concludes, there is no reason why the number of literates should not go up in ten years' time from three crores to thirty crores as has already happend in Japan, Russia and other countries which have worked with a will to liquidate illiteracy at all cost.

—

At the Back Door of Russia

We hear much of the progress Russia has made since the days of the Revolution of 1917. Mr. Howard L. Haag gives us some idea of the condition of those Russians who could not conform to the methods of the Revolution and had to seek shelter in Manchuria and other foreign lands in *The Young Men of India, Burma and Ceylon.* He says :

It was natural that during those awful days immediately following the Russian Revolution those hoards of Russian people who knew that they must flee for their lives, should move eastward. They were cut off from the West. For hundreds of thousands of them the only opening left lay toward the East where still remained the outpost of old Russia—the zone of the Chinese Eastern Railway in Manchuria. It was logical that they might expect that there at least they would be welcomed on soil into which Russia had built its great culture. They could not be expected to see into the future to a time when that too would be taken from them. "Surely," they reasoned, "here we shall have time to wait out the turn of events and we shall have our homes back again." They have waited thus far in vain. No one knows how many Russians crossed the borders into Manchuria to seek refuge temporarily, they thought, from the pestilence which was sweeping their country. It may be safely stated that the numbers ran into hundreds of thousands. Since these first years the borders of Manchuria and Siberia have been the scene of an almost unending stream of fleeing people. Even to this day the winter months when roads

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are passable bring group after group of hungry folk who prefer the rigours and privations of the long trek to Manchuria to that with which they have to put up in Soviet Russia. Not longer ago than the winter of 1930 we assisted a group of some 200 people, a whole village, to get away from the border to the safety of Harbin. They had packed all they had upon their sleighs, hitched up their horses, loaded their women and children on, and in the depth of the Siberian night driven across the border into Manchuria. In spite of all their suffering on that long and bitter cold trip, in spite of all hardships they have endured since that time, they are all thankful that they have been delivered from the oppression which was upon them.

The population of Harbin has been a strange indication of the conditions existing in Soviet Russia. Not all who have come here have remained. Thousands have gone on to try their luck in other parts of the world. While America, Australia, Canada and parts of Europe would accept them, they pushed on in their search for new homes. But since depression has overtaken these countries, the doors have been closed to the unfortunate Russian He has had to find in Manchuria a way of living. This has not been easy. For a person of the white race to compete with those of the yellow races is not and probably will never be easy. Different language, customs, and standards force the former to give way in manual labour to the latter. Furthermore, land till now has not been obtainable for cultivation, and even if it were, the vastly different methods of cultivation and exploitation make it next to impossible for the Russian to compete. Hence, it has been the aim of the Russian in Manchuria to move on as soon as any opportunity presented itself. Shanghai has taken its share of those who seek status in a foreign settlement. There are at least 10,000 Russian people living there. In Harbin there still remain from 80,000 to 100,000 Russians.

—

Women and Law

The Bambay Law Journal writes editorially :

Not the least refutation of the charge levied by some of the foreigners against India that it is a backward country, is furnished by the remarkable awakening among Indian women in the present generation, not only as regards the welfare of their own sex, but with regard to social problems of infinite moment to the future of the country. H. H. The Maharani of Baroda, presiding over the fourth biennial conference of the National Council of Women in India, held in Bombay, last month, delivered an address which is remarkable for its fervour and its wide and courageous outlook and it will serve as an inspiration and guide in thousands of Indian homes. Referring to the Hindu Laws of Inheritance and property Her Highness observed that their injustice is evident. She further said, "Women could not afford to be mere dependents on men in matters of property, if they desired full scope for self-expression and development of their personality. They must be afforded a right to inherit, acquire and deal with property on the same basis as men. Many Hindu women were anxious to have a law of divorce passed for them, but a divorce law without proper laws of property and inheritance would be a misfortune." Lawyers are apt to lose sight of the fact while they are engaged in arguing about the true construction of ancient texts, public opinion has progressed so far that these texts do not matter now as much as they used to. We find from the Report of the Council that the Legislation Committee kept in touch with all bills relating to women and children introduced in the Legislative Assembly and in several instances pointed out defects and suggested changes in the various bills to the members who introduced them. The resolutions regarding social legislation passed at the Conference deserve the immediate attention of lawyers all over the country ; it is for them to take the next step, so as to expedite the putting into force of the measures recommended at the Conference. We suggest that the proceedings of the Conference should be made available to the public in the different vernaculars, at a moderate price.

—

India's Rice Trade

The Indians, particularly the Bengalee, should carefully note that rice, their staple food, is now being imported from Japan. India is fertile enough to produce in sufficient quantity for the consumption of its people. Even in the field of rice trade she is being cornered by foreign Powers. Organization of this trade is now urgently needed. Mr. Amritlal Ojha, President, Indian Chamber of Commerce, Calcutta, writes in *The Indian Review*.

In the rice trade of india, Bengal presents certain peculiarities which have been and probably, not present elsewhere in the country. Up to the year 1915, unlike Burma and Madras, for example, there were very few rice mills in Bengal. The cultivators had to bring their produce to the district towns and dispose of it off to the middlemen. A large number of mills have been started after 1915, and now practically every district has a number of rice mills. These mills, in addition to milling and cleaning rice, very often purchase the paddy outright from the cultivators and then sell them to the exporting centres, such as Calcutta, Dacca, Chittagong, or to the merchants who in their turn supply distributors to up-country areas....

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The rice trade of Bengal after the Great War has declined heavily but the reasons are not far to seek. Until 1919, Bengal rice commanded a good market abroad, but ever since that year, Burma has made heavy inroads in her trade and now she practically has obtained a complete monopoly of what was formerly Bengal's. Up to 1919, amongst the Indian provinces, Bengal alone was specializing in boiled rice. Burma has now taken even this special field of Bengal, and since 1925 the Burmese boiled rice has more or less ousted the Bengal boiled rice from the Indian (other than Bengal) as well as the foreign markets. At present, it appears there is little or no scope for Bengal rice in the Indian markets excepting, probably, in the U. P. and Bihar. In those two provinces, the land is increasingly going under sugarcane cultivation, and in all likelihood rice might have to be imported from the neighbouring province of Bengal in order to make good the local deficiency.

As regards the foreign markets, Bengal can hope to have some revival of her former trade only if the grave internal defects are remedied. Rice is, unfortunately, the most disorganized industry in the province. Some strong organization that would stop the unhealthy competition among merchants and effectively safe-guard the interests of the traders and cultivators, is absolutely essential to put the rice trade of the province once more on its feet. Another great defect is the vast number of varieties to be found in the rice grown in the province and a woeful lack of standardization of the different types. When it is understood that it is on the standardization of the agricultural crop alone, their prosperity in export trade is possible, the difficulties in Bengal could be easily visualized. It goes without saying that standardization can be effected only by a competent official or semi-official organization.

In the British Empire, Ceylon and Straits Settlements are India's good customers. It is quite likely that the United Kingdom may also become important in the course of few years from the point of view of the Indian rice trade. Amongst the foreign countries, Germany, Netherlands Java and China are large importers of Indian rice. Though we have practically lost the Japanese market, we can more than make up that loss in China.

Reference in this connection should be made as to the anxiety of some, about the possibility of not only India's export trade in rice suffering, but also the invasion of the home market itself by other countries. During the last year, Japan actually reshipped a few thousand tons of rice to India. Just now, we are hearing of the Siamese exports of rice into Madras Presidency. It is undoubtedly true that imports of even a few thousands of tons at lower prices are likely to disorganize the Indian markets and create panic in the minds of the merchants. Under the existing circumstances, instead of erecting tariff barriers against the Siamese and other rice, India would probably do better to make representation to the respective Governments just as she did last year in the case of Japan.

—

Kerala and Indian Culture

Contribution of Kerala, a Southern India province, to Indian culture is very considerable. Mr. T. K. Krishna Menon gives a *resume* of it in *India and The World*. Part of it is quoted below :

Kerala, in ancient times, was, for administrative purposes, divided into *amsams* and *desams*. Each *desam* formed the territorial unit for military organizations, while the *tara* formed unit for civil purposes. "Every division and subdivision was designated by the alloted quota of Nayars it was required to bring into the field." "The Nayar inhabitants of a *tara* formed a small republic, represented by the Karnavars or elders." According to Keralolpathi, the Nayars formed 'the eyes' and 'the hands' of the land. The *nad* or country was a congeries of *taras* or village republics and the *Kuttam* or assembly of the *nad* was a representive body of immense power, which, when necessity existed, set at naught the authority of the Raja, and punished his ministers when they did unwarrantable acts."

According to some, 'Southern India was the cradle of the human race, and the passage ground by which ancient progenitors of northern and Mediterranean races proceeded to the parts of the globe which they now inhabit.…'

The Jews, the Muslims and the Christians alike claim it as their first settlement; and all of them had a generous, tolerant welcome from the Hindu Rulers of old. Near it was Matilakam, the seat of a celebrated University.…

There was a famous temple there, common to all the 64 Nambutiri, *gramams*. The north and south length of its boundary walls was about a mile and a half. It was in the upper hall of one of its tanksheds (of Chempalikulam) that the Parliament of the Perumals sat. It was called *Vidvalasabha*, the assembly of the wise, a sort of witenagemot, to direct studies, to enact laws, and even to give the last word on political matters. The Vidvalsabha was adorned by the presence of renowned Sanskrit and Tamil poets, Buddhsit and Jaina scholars, and crudite pandits in every department of knowledge, temporal and spiritual. The Cheraman Perumals had their capital and residence at Thiruvanchikulam near Cranganoor. The Hindu temples and the Buddhistic Chaityas in Matilakam and Vanchi were perhaps the oldest ones in Kerala. "In that corner of India were built the first and probably the only Roman temple in India, the first church, the first mosque and the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

first synagogue and the greatest *vihara* of South India."

The temples of Kerala were centres of learning, and they helped to develop literature and Fine arts. Many of the ancient temples in Kerala exhibit the high stage reached here in architecture, sculpture and iconology. Some of the paintings on the walls and panelled ceilings are marvels of the art, and serve to impart instruction in the legendary lore of the Puranas. On occasions of festivals in temples, there will be grand processions, dancing and drumming, music and piping, *Kathakali* and *Thullal*, *Kuthu* and *Patakam* and sports of various sorts. Several of the dramatic pieces and hymns, and songs that accompany the sports and dances are rightly ranked as classics.

"Kerala again found a fertile and congenial soil for Tamil, Sanskrit and Malayalam to grow. Manimekhalai and Chilappadhikaram, the two famous Tamil classics, were first published in Kerala. In the field of Sanskrit literature, we have our representative authors of no mean attainments in every department of Sanskrit learning; Prabhakara Bhatta, Sankaracharya and Purnaprajna Madhavacharya in the field of Vedanta, Lakhmidasa and Narayana in the field of Poetry; Kulasekhara and Sakti Bhadra in the field of dramaturge; not to speak of great names in the fields of Ayurveda, astronomy, astrology, architecture and other branches of knowledge." In Malayalam literature the names of "Cherussori, Thunjan, Kunjan and Unnayi" form a constellation in second to none in brilliance and in its unique character.

—

George Carver of Tuskegee

Everyone of us should know something of the Tuskegee Institute and its devoted workers. This Institute, founded by Booker T. Washington, is entirely staffed by American Negroes. In *Harijan* (April 6, 1934) Mr. C. F. Andrews tells us the life-story of Dr. George Carver, a teacher of the Tuskegee Institute. It has a lesson for us all. We make a few extracts from the sketch:

One of the greatest teachers in Tuskegee is Dr. Carver, who combines in his character the simplicity of a child with the wisdom of old age. The days that I spent with him, either talking over my own religious experience and comparing it with his own, or else being shown by him over his own laboratory, where the most marvellous discoveries in science have been made, were among the most precious during all my stay at Tuskegee.

In his own field of scientific work, Dr. Carver is almost as great a genius as Burbank was with regard to plant life and Edison with regard to discoveries in electricity and light. He has been able to synthesize the different products of sweet potatoes, peanuts and other plants in such a manner as to produce entirely new materials to be used either for food, or dyes or other purposes. He has made synthetic products from waste materials, also of such a character that new building boards and floor marbels have been produced from them. Work that has undertaken in chemistry has led continually to discoveries of very great commercial value; but Dr. George Carver has never made for himself a fortune out of them. Not seldom he has given over his discoveries to others to use in the best way they could, and they have made money from them, while he has remained to the end of his life a poor man.

One of his most noticeable characteristics is his complete humility. Never in my life have I seen one so great in character and achievement and at the same time so modest and retiring in temperament. Though he is now advanced in years and has grown old in learning, his whole attitude towards life is child-like and simple. His laugh is expressive of his youthful heart within. He seems to have retained the secret of perpetual youth as he has grown towards old age.

The world and its values have no attraction for him and, when he was offered many years ago a place in the laboratory of Thomas A. Edison which would easily have made his fortune, he refused it, because he wished to live among his own Southern people and to give his learning to the service of Tuskegee Institution, which he so dearly loves. Sir Harry Johnston, who was one of the most eminent British scientist and explorers of the 19th century, writes of him as follows: "Prof. Carver, who teaches scientific agriculture, botany, agricultural chemistry, etc., at Tuskegee, is an absolute Negro; but in the soundness of his science, he might be Professor of Botany, not at Tuskegee, but at Oxford or Cambridge. Any European botanist of distinction after ten minutes' conversation with this man would instinctively treat him as a man on a level with himself." These words, which were written many years ago, have become still more true today; for Dr. Carver's experiments have gained him an even greater reputation in the scientific world than he had when Sir Harry Johnston wrote about him.

Probably the most beautiful of all his most recent discoveries are those that have been made of the common clay of his own Southern States. At a time when Georgia and Alabama were passing through a very critical period owing to failure of the cotton crops through the boll weevil, George Carver showed how the soil of Alabama was by no means confined in its fertility to the black cotton soil of the South, but that the clay soil, which had hitherto been neglected, was itself a soil which could produce splendid crops of peanuts and sweet potatoes and other products of great value to mankind.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

discoveries of Dr. George Carver put new life into the agriculture of the South. They made the Southern farmers lift their heads once more and realize that they had invaluable treasures which would carry them far beyond the point of their former complete reliance on the cotton crop alone.

Dr. Carver has a very great and wide renown among the farmers of his own State. They come to him quite frequently for advice on practical matters. Nearly every day, it is possible to see them questioning him about the soil on their own estates and getting from him an analysis which will prove to them what is needed to increase fertility and how their crops may be improved.···

—

The Chinese Women of today

We take the following from *Stri-Dharma* :

The last three decades have brought tremendous changes in the life and states of Chinese women ; changes brought about by personal contacts with westerners, by travel, education, war, business and industry, missionaries, and other factors.

In particular, literature from all over the world preaching advanced ideas, such as revolution, sex equality, and individualism—education and political revolution within the country—all these have liberated women from an unfavourable psychological suggestion as to what comprises their duty and virtue, and opened for them a new and larger intellectual horizon. Recently laws have been devised by the Chinese Government which bestow equal rights in matters of property and inheritance upon women. Today laws recognize no marriage contracts except those consummated by the young folks concerned, and permit wives to sue for divorce.

Today women assume leadership in China in every field of human endeavour. They are vital in shaping the destiny of the nation. They have made big strides in education, entered the professions, taken part in business and asserted their individuality in their family and social relations. Women doctors, teachers, lawyers, nurses, clerks, secretaries and typists are to be seen all over the larger cities of China.

Let us take education as an example. When the Government issued an edict in 1910 providing for women's academic training, the entire Empire showed only 12,000 girls in elementary schools. Twelve years later they numbered above 400,000. Statistics reveal that an increasing proportion of girls are entering every type of school.···

You will find some of China's outstanding women in the business field. For example, Miss Nyien Sok Woo manages the Women's Commercial and Savings Bank at Shanghai, which is operated entirely by women. The Bank was opened in 1924, capitalized at $200,000 with resources in the first annual statement amounting to half a million dollars. After eight years its resources have increased to $5,000,000. The bank now occupies its magnificent five-storey building on Nanking Road.

There are hundreds of women who are prominent and quite influential in political affairs. The most outstanding, of course, is Madame Sun Yet-sen, widow of the great revolutionary leader. The masses of the nation listen to her, for she alone brings before them Dr. Sun's ideals, principles and his plans for the reconstruction of the nation and the uplifting of its millions. For the entire country she has become the embodiment of oriental widowhood. Loved and revered by the people, Madame Sun shines forth like a star of hope over China darkened by internal difficulties and foreign invasion.

Over 200 women are working for the National Government at Nanking. There are police-women in Canton. We know that Canton women are rated as the ablest seamen. It is said also that should every fisherman and boatman be drowned the women of Pearl River would surely carry on.

During the Shanghai fighting, Chinese women organized themselves into a "Women's League for National Salvation." They gave support and service to the gallant soldiers of the 19th route army. These women have done heroic work. The executive committee of the National Federation of Chinese Women's Organizations to help in the cause of international peace.

FOREIGN PERIODICALS

Peace is Dead

After a deep-rooted and careful analysis of great Political Powers of the world, Mr. Devere Allen has come to the inevitable and logical conclusion that International Peace has died away. His learned introduction to an essay, quoted below from *The World Tomorrow*, is a challenge to the school of optimistic believers in International Peace :

International tragedies, now as much as ever in the past, have a way of tumbling toward a sudden crisis, revealing sharply in the flames of conflict issues previously limned in half-light or, for some observers, utterly obscured. That the world's peace structure is weak and wanting, every thoughtful person long has known. If the nature of its glaring deficiencies are not now more apparent, we are in a hopeless state indeed. For the ferocious campaign against the Austrian workers in particular, coming on the heels of the French riots and general strike ; the dim manoeuvres for a face-saving rearmament deal between Hitler and the French, the growing impotence of the declining League of Nations, the heedless obstinacy of Japanese imperialism, the swiftly-spreading prestige of fascism, and the stampede of our own government into a rampant war preparedness, all serve to illuminate the collapse of peace intent and mechanisms.

There are those who, with invincible optimism, will still persist in their hopeful incantations, believing that if they flood with sunshine the withering plant of peace it will revive, irrespective of what happens at the root. There are those who, with patient and profound analysis, will probe to the evils of human nature and find there such narrow limits to generosity that peace, should it ever come, will be an illegitimate child of cosmic chance. With neither do I propose to quarrel here : for the main thing is not who carries off the honours of posterity for Olympian prophecy ; the main thing is to discover ways of action which, whether by intelligence or a lucky guess, may give a breathing spell, free from a suicidal war, in which the scholars may go as far as they like up the golden streets of faith or down the dark alleys of realism. Poison gas works equally well in either.

Collectivization of Agriculture in Soviet Union

W. Ladejinsky in an essay on "Collectivization of Agriculture in Soviet Union" has traced the origin and development of the agrarian movement in Russia culminating in the State-ownership of the land. The following extracts from the *Political Science Quarterly* may serve the purpose of a short introduction to the history of agriculture in the U. S. S. R. :

Lenin's proposed method of bringing about a collective system of agriculture points clearly to the pace to be followed. Considering the general make-up of the Russian peasant, particularly his adherence to old forms and his distrust of large-scale economy, Lenin pointed out that "it is self-evident that such a transition ···a transition from individual peasant farming to collective working of the land, requires a long time, and under no circumstances can it be accomplished at once." Tsarism, in his opinion, could be overthrown in a few days, the landlords and capitalists expropriated in a few weeks, but the solution of the agrarian problem "which we are now approaching···can be achieved only through extremely persistent and continuous effort···For the collective working of the land we shall have to fight step by step, inch by inch."

A long time before Lenin formulated his views, the Russian peasant through sheer force of necessity, properly gauged the importance of collective action. For instance, the land commune system, which, before the promulgation of the Stolypin land reform, covered almost eighty per cent of the total peasant land allotments, has taught them lessons in effective co-operative action long before the modern co-operative movement came into existence. Under this system the land was owned by the entire village commune, or *mir*. In order that each member of the commune might use the land on an equal basis, the *mir* would periodically redivide the land among the members, allowing each one to utilize the allotted land for his own purposes···

Under the circumstances "it was inevitable that the households should follow a common routine in the seeding, harvesting, pasturing and fallowing of the intermingled strips in each great field." This close connection led to collective

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

activities which were not limited to the "holding, selling, purchasing and distributing of the land." They also found their expression, "though much less commonly, in the actual labour of production." Despite the variety of collective activity in which the peasant participated, he still retained a considerable degree of economic autonomy within the village commune.

The collective movement in the Soviet Union falls into two phases; the period from the triumph of the Bolshevik Revolution to 1929, and the period inaugurated in the spring of 1929 under what is known as the Five-Year Plan in Agriculture.

The beginning of the first period, the period of intensive preparatory work, dated from the famous Decree of October 26, 1917 (November 7, N.S.). ..... The Peasant Land Instruction which was incorporated in the same decree shows that private property in land, whether of the rich landowner or the rank-and-file peasant, was done away with:

The right of private property in land is to be abolished for all time. The land shall not be bought, sold, leased or otherwise alienated. All lands, whether belonging to the State, the former Imperial family, the *ex*-Tsar, the monasteries, or the church, whether copyhold, entailed, private, public or peasant, shall be taken over without compensation, turned into the property of the entire people, and placed at the disposal of all who till them for use. Article 1).

Thus, this land decree did away with what the Bolsheviks always considered the greatest obstacle to the solution of the agricultural problem in Russia—private ownership of land.

In the Decree on Land Socialization issued on February 19, 1918 we find the first attempt to give legal form to Lenin's policies...

This decree states that "all the land within the borders of the Russian Socialist Federated Soviet Republic, no matter who may be cultivating it now, is considered a single State fund."

—

British Association for the Advancement of Science

The New Atlantis, a quarterly of Western Renaissance and World Socialism, quotes the following from the address of Sir Fredrick Gowland Hopkins, President of the British Association for the Advancement of Science:

Though statesmen may have wisdom adequate for the immediate and urgent problems with which it is their fate to deal, there should yet be a reservoir of synthesised and clarified knowledge on which they can draw. The technique which brings governments in contact with scientific knowledge in particular, though greatly improved of late, is still imperfect. In any case the politician is perforce concerned with the present rather than the future.

I have recently read Bacon's *New Atlantis* afresh and have been thinking about his Solomon's House. We know that the rules for the functioning of that House were mistaken because the philosopher drew them up when in the mood of a Lord Chancellor; but in so far as the philosopher visualized therein an organization of the best intellects bent on gathering knowledge for future practical services, his idea was a great one.

When civilization is in danger and society in transition, might there not to be a House recruited from the best intellects in the country with functions similar (*mutatis mutandis*) to those of a Bacon's fancy?

A House devoid of politics, concerned rather with synthesising existing knowledge, with a sustained appraisement of the progress of knowledge, and continuous concern with its bearing upon social readjustments. It is not to be pictured as composed of scientific authorities alone. It would be rather an intellectual exchange where thought would go ahead of immediate problems.

I believe I might convince you that the functions of such a House, in such days as ours, might well be real. Here I must leave them to your fancy, well aware that in the minds of many I may by this bare suggestion lose all reputation as a realist! Most of us have had a tendency in the past to fear the gift of leisure to the majority. To believe that it may be a great social benefit requires some mental adjustment, and a belief in the educability of the average man or woman. But if the political aspirations of the nations should grow sane, and the artificial economic problems of the world be solved, the combined and assured gifts of health, plenty, and leisure, may prove to be the final justification of applied science.

In a community advantaged by these, each individual will be free to develop his own innate powers, and, becoming more of an individual, will be less moved by those herd instincts which are always the major danger to the world. You may feel that throughout this address I have dwelt exclusively on the material benefits of science to the neglect of its cultural value. I would like to correct this in a single closing sentence. I believe that for those who cultivate it in a right and humble spirit, Science is one of the Humanities; no less.

—

Christianity in Bali

The attempts on the part of the Christian missionaries to introduce the Gospel in Bali, have, in recent years, created a good deal of stir in the Netherlands as well as in the Dutch East Indies. It should be noted here that under the provisions of the East Indian Government Act, Article 177, 1922, no Christian minister, priest, or missionary may

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

engage in work in any part of the East Indies without the special permission of the Governor-General. Amry Vandenbosch gives a graphic account of the main currents of controversy in the columns of *The International Review of Missions* :

The controversy has stirred Indonesians as well as the Dutch, and has led to two unusual incidents. The first of these was the act of the Balinese chiefs in sending a memorial to the Governor-General, urging the exclusion of Christian missionary activity from their island. The second was the passage by the Volksraad (the East Indian central legislative body) of a resolution likewise petitioning the Governor-General not to admit Christian missionaries to Bali.

Little is known of the early history of Bali. Probably Hindu colonies from Java settled on the island, and with the aid of military support from home made themselves masters of its inhabitants. The now Hinduized Balinese remained for a long time subject to the powerful Hindu empire of Madjapahit, whose seat was in central Java. When in the fifteenth century Java became Islamicized a large number of Javanese, unwilling to accept the new religion, fled to Bali. This had several consequences: it strengthened the Hindu influence in Bali, as it left Bali an isolated Hindu commnnity, for the other islands of the Malay archipelago either remained animist or became Moslem ; and it made Bali politically independent of Java.

Although the Dutch first came into contact with Bali as early as 1597, they did not attempt an occupation until two centuries and a half later. Throughout this long period they did, however, maintain loose political relations with the Balinese chiefs.

Missionaries and missionary leaders have long viewed Bali as a strategic field for work. In 1829 the English missionary-sinologue, Dr Medhurst, visited the island, and in his report recommended that missionary work be begun on Bali. Dr. W. R. Baron van Hœvell, in 1846 issued a brochure in which he ardently pleaded for the establishment of mission posts on Bali. Dr van Hœvell was convinced that unless Christianity were speedily brought to the Balinese they would become Moslems. Missionary work was begun several times but discontinued after a shorter or longer period. An English missionary, Ennis by name, established himself on Bali in 1838, but apparently remained only a short time. From 1864 to 1881, the Utrecht Missionary Union, in co-operation with the Netherlands Bible Society, carried on work on Bali. The undertaking ended tragically ; the missionary, J. de Vroom, was murdered by the sole Christian convert. In 1891 Roman Catholic authorities obtained permission to begin work in Bali but no use was ever made of the permission. Over three decades later, they sought to begin missionary work on Bali by the opening of a Dutch-Indonesian school. Bitter opposition immediately developed against this plan. Mr. Tjakorda Gede Soekawati, the Balinese representative in the Volksraad, introduced a resolution requesting the Government 'to refrain from giving either direct or indirect support to propaganda of a religious nature. . . . Recent events in Bali have given the question an entirely new turn. Christianity has found its way into Bali even though the missionaries have been kept out. In North Bali Christian influence proceeds from a number of Amboinese families who have come there to live. Christianity has found its way also into South Bali.

As a result of these events a reaction began to set in, which became intensified when it became known that Dutch missionary societies were considering the advisability of opening work in Bali.

Naturally not all of those who desire the exclusion of missions from Bali base their opposition on the same grounds. Some merely take what may be called an opportunist point of view. Bali, according to this view, cannot now stand the strain of adjusting itself to an additional stream of influence.

A second group oppose the admission of Christian missions to Bali on the ground that missions would injure Balinese society, cause unrest, weaken the effectiveness of Dutch administration and cause a great deal of political disaffection on the part of the Balinese upper castes.

There is lastly a group which is opposed to all Christian missionary activity. Among superficial tourists, this takes the form of an amusing simplicity. They find the dances fascinating and the cremations of unusual interest. 'Would it not be a pity if anything of this charming civilization were destroyed by Puritan busy-bodies ? After all, one religion is as good as another—each people has developed the religion that best suits its needs.'

Others, with a deep feeling of sympathy for Balinese life and culture and with more than a smattering of knowledge of anthropology ethnology, would like to see Bali preserved as an anthro- pological museum.

A small group, however, view missions as distinctly a destructive force among oriental peoples. They contend that missions can only ruin an intelligent, civilized and deeply religious people, such as the Balinese of their most treasured possessions : their religion and culture.

There is little in this attack on Christian missions that is new. The attempt is here again made of linking missions with imperialism and of identifying the work of missions with the transmission of Western civilization. The criticisms of backward peoples are over-idealistic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The basic difficulty is, of course, that these critics hold a relativist view of religion and dismiss all other views as absurd. They consider all religion a purely human culture-product: man is constantly creating God after his own image.'

Friends of the missionary movement were not slow in pointing out that Bali had been left open to nearly every other alien influence—What good reason can there be for singling out Christian missions for exclusion? The answer of *Soekawati* (the Balinese representative in the Volksraad) and others is that whereas the other influences attack the Balinese India culture only incidentally and indirectly, missions would attack the cultural bases directly.

—

Public Health in India

The Asiatic Review has published a brief criticism by Mr. R. W. Brock, of the final report of Major-General Graham, Public Health Commissioner with the Government of India. In his review of the subject, the critic shows that the Commissioner has laid stress upon three important factors, namely, the question of Federal Health Responsibilities, the need for a Ministry of Health in India and adequate financial support:

In accordance with the Government of India Act of 1919, the health subjects which were reserved for the Central Government were: (*i*) International health affairs; (*ii*) wider aspects of epidemiology; (*iii*) census and statistics; (*iv*) emigration and immigration; (*v*) pilgrim arrangements ex-India; (*vi*) major port quarantine work; (*vii*) medical research; (*viii*) legislation in regard to any provincial subject stated to be subject to legislation by the Indian Legislature and (*ix*) powers relating to such subjects reserved by legislation to the Governor-General in Council. As Major-General Graham observes, it is extremely improbable that such reports as those named, which are generally recognized as federal health responsibilities, will come under the new Constitution, to be the concern of the Central Government and of its Public Health Commissioner. In the Report under review, as in preceding surveys of the same character, Major-General Graham has "laboured the desirability and need for a Ministry of Health for India. The recent reports of the Royal Commission on Agriculture and of the Royal Statutory Commission," as he reminds us "have emphasized the same need whether this be arrived at through a Ministry of Health or by strengthening the central health organization. "We are now," he adds, "within measurable distance of the introduction of a new Constitution—a Constitution which must presuppose heavy and increased expenditure in many branches of the administration; but the subject of federal health has been relegated, meanwhile at all events, to the background, and has not received the attention which its importance would seem to merit."

On the other hand, the project for a new Central Research Institute worthy of India, recommended by the Fletcher Committee, has been abandoned, owing to the financial implications being greater than the Government of India cared to undertake. The establishment of the All-India Institute of Hygiene and Public Health was only rendered possible by the munificence of the Rockefeller Foundation, which offered to purchase a site and to erect and equip an institute for six sections to deal with advanced public health teaching and public health research, subject to the Government of India undertaking to meet the recurring charges.

Inadequate financial support has, indeed, proved one of the most formidable handicaps to the promotion of public health in India. The drastic economies of the Inchcape Committee paralysed the renewal of research activities on a big scale before the work of the Indian Research Fund Association had had time to recover properly after the war. Public opinion, however, both in Great Britain and India, and scientific medical opinion in India as expressed through the Scientific Advisory Board, were not silent. His Majesty's Secretary of State for India, realizing the true implications of the closing down of medical research activities in India, pressed the Government of India continuously to restore the grant in part or in whole at as early a date as possible, and also the unspecified appointments in the Medical Research Department which were in abeyance.

INDIANS ABROAD

By BENARSI DAS CHATURVEDI

An Interview with Mr. P. B. Singh of Durban

The other day I had a long talk with Mr. P. B. Singh, President of the Natal Indian Tennis Association and representative of the South African Indian Football Association, in the Great Indian Hotel of Calcutta.

Mr. Singh arrived in India on 18th November, went to Karachi to see his parents and

Mr. P. B. Singh

then proceeded on a mission to create enthusiasm in the formation of an All-India Football Association visiting Cawnpore, Lucknow, Allahabad and Benares on his way to Calcutta. At Calcutta he saw the officials of the Indian Football Association who were invited in 1931 by the South African Indian Football Association to send a representative team to tour South India. Mr. Singh was hopeful that as a result of his negotiations an Indian team would sail for South Africa by June next.

Mr. Singh is a member of the Council of Colonial Born and Settlers Indian Association. In answer to my question if any particular work was entrusted to him by his Association Singh said :

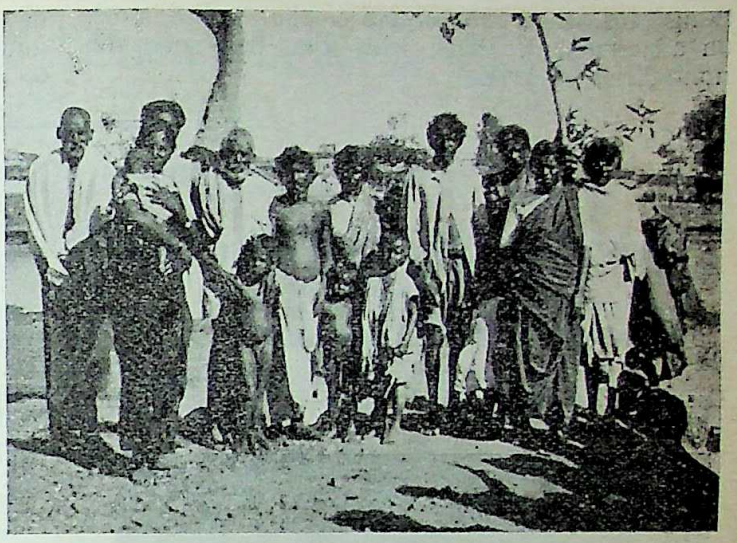
"I have been deputed by the Colonial Born Settlers Indian Association to investigate and re on the condition of repatriates from South Af Since Repatriation was started about thi thousand people have returned to India and f time to time we have been receiving harro tales of the hardships that most of these p are undergoing in India. Swami Bhawani D Sannyasi investigated into the condition of t people and issued a well reasoned and docum report in May 1931. Since then no improve has been made in the condition of these repatr in Calcutta and Northern India. Nor has any been done in South Africa to prevent repatri My Association has therefore deputed me to first hand knowledge of the situation. And seeing the deplorable condition of repatriates South Africa and other colonies at Matiabru slum of the worst type and a disgrace Municipality—I am thoroughly convinced that policy of repatriation has been a huge bl and if we had realized at that time the conseq of that thoughtless scheme we should never agreed to one single individual leaving the s of South Africa. The able-bodied men whom I known personally in Natal, who were pictur health when I met them last in the land of birth and adoption, were reduced to mere ske and could scarcely be recognized. This to my

Guljar and his family. This repatriated family from Natal contained eighteen members. Now there are only five. The rest have died of want and starvation

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is all due to the privations and hardships that they have suffered all along since their arrival in this country. They recognized me and with tears in their eyes, begged me to help them to return to Natal. Women and children with barely enough clothing to cover their limbs stood before me and I wondered whether those responsible for this atrocious scheme had ever visualised such helpless misery. And this was not a new scene that was being enacted before me. I went to Matiaburz quite unexpectedly without any knowledge on the part of the repatriates. Things like these have been happening since 1920 as can be proved from the reports issued from time to time by responsible workers like Mr. C. F. Andrews, Mr. F. E. James (Secretary Y. M. C. A. now M. L. A.), Mr. S. A. Waiz (Secretary Imperial Indian Citizenship Association, Bombay), Mr. H. K. Mukerjee and others. It is a pity that these reports were never circulated in the principal vernaculars—Hindi and Tamil—in South Africa. I feel sure that if this step had been taken a good deal of misery could have been averted. As far as I can see nothing substantial has been done to alleviate the distress of these unfortunate people. I do not forget that spasmodic efforts have been made form time to time to give temporary relief to these people but charity at the best of time is is only a palliative and can never be considered as a curative. Had any serious effort been made by the authorities concerned on the lines of the Indian Emigrants Friendly Service Committee



A group of homeless unemployed repatriated Indians at Madras

A group of repatriated Indians at Akra near Calcutta

the problem would not have assumed such dimensions. It is yet not too late. The Indian Government has a moral obligation to fulfil for they were a party to the pernicious scheme and had definitely promised to give all assistance to these repatriates on their return to India. An impression is fast gaining ground in South Africa that the Indian Government has failed in its duty and if things are not taken up in right earnest it will have a deplorable result. It will be most unfortunate if Indians in South Africa lose confidence in the sincerity of the Indian Government for that will put an end to all hope of any co-operation without which no substantial improvement could be made in the situation."

Mr. P. B. Singh came to the *Vishal-Bharat* office also and just when he was leaving it he saw a number of returned emigrants who had come to see me. We talked with them. Refering to these people Mr. Singh told me:

"I shall never forget the look of despair in the eyes of those people. They complained of being on their last legs and one could see that starvation was writ large on their faces. They looked emaciated and ill. I could at once see that it was not one man's work and it required the combined efforts of public bodies like the Y. M. C. A., the Arya Samaj and the Ramkrishna Mission."

Mr. P. B. Singh expressed his gratefulness to Mr. H. K. Mukerjee, Secretary of the Y. M. C. A. College Section and said:

"The noble work that Mr. Mukerjee has been doing for the last twelve years deserves every praise at our hands. I am glad to learn that through the efforts of Messrs. Mukerjee and Andrews Birla Brothers have given a good deal of help to the returned emigrants by supplying them food, cloth and medicine and we must thank them for their charity."

Mr. Singh was not satisfied with the attitude of the Government of India and he wondered why the Government had been neglecting

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

this problem. It would not be a difficult thing for them to organise the relief work on a permanant basis with the help of some non-official workers.

I invite the attention of Mr. G. S. Bajpayee of the Government of India to this question and hope that he will himself come to Calcutta to see the things with his own eyes.

Pola Negri and Uday Shankar

Upon her recent return to New York from Europe on her way to Hollywood for motion picture engagements, Miss Pola Negri the celebrated filmstar came to know that, Uday Shankar was dancing at the St. James Theatre. She at once engaged a box for herself and a few friends.

Pola Negri and Uday Shankar

During the first intermission Miss Negri went back of the stage and greeted Mr. Shankar most cordially and said to him :

"This is the greatest artistic thrill I have had in many years, in fact since the death of Anna Pavlowa. I was so sorry that I could not see Pavlowa before her death. You know how much I admired that great dancer."

"Yes, I do know that," said Shankar with much feeling. "And you know how much I admired her. I am so sorry that I could not dance for her even for only one evening with my full company of Hindu dancers and musicians."

"I am going to India ; and I hope to meet you there."

"I shall be most happy to greet you in India ; and shall be delighted to show you the matchless glories of our arts."

Miss Negri stayed to the very end of the performance ; and when Tandava Nrittya, the last number on the programme, was finished, she rose to her feet and cheered Shankar most heartily through several curtain calls ; and Shankar bowed to her in the box. And when asked by Mr. Basanta Koomar Roy how she liked the Tandava Nrittya, Miss Negri said most emphatically :

"It was superb. In fact all the movements of all his dances are superb indeed. Shankar is simply divine. I cannot say more ; and I cannot say less. Shankar is simply divine."

NOTE : On Plate II facing p. 419 of the last issue of *The Modern Review* was published "Kama Deva" by the courtesy of Elizabeth Dyson. This is the drypoint of impersonation of "Kama Deva" by Mr. Uday Sankar, the celebrated Indian dancer.

MAHATMA GANDHI WELCOMES REVIVAL OF SWARAJYA PARTY

By RAMANANDA CHATTERJEE

DURING the last week of March some Congress leaders held a conference at Delhi with a view to reviving the Swarajya Party and, after arriving at some conclusions, three of them, namely, Dr. Ansari, Mr. Bhulabhai Desai and Dr. Bidhan Chandra Roy, went to Patna to confer with Mahatma Gandhi. The result of their discussions with Gandhiji is to be found in the following letter addressed by him to Dr. Ansari :

PATNA, April 5.

"Dear Dr. Ansari,

It was good of you, Mr. Bhulabhai Desai and Dr. Bidhan Roy to come all the way to Patna to discuss the resolutions arrived at recently at an informal meeting of some Congressmen at Delhi and to ascertain my opinion on them. I have no hesitation in welcoming the revival of the Swaraj Party and the decisions of that meeting to take part in the forthcoming election to the Assembly, which you tell me is about to be dissolved. My views on the utility of legislatures in the present state are well known. They remain, on the whole, what they were in 1920. But I feel that it is not only the right but also the duty of every Congressman who for some reason or other does not want to or cannot take part in civil resistance and who has faith in entry into legislatures to seek entry and form combinations there to prosecute the programme which he or they believe to be in the interest of the country. Consistently with my views above-mentioned, I shall be at the disposal of the party at all times and render such assistance as it is in my power to give.

Yours sincerely,
M. K. Gandhi."

The revival of the Swarajya Party is to be welcomed for various reasons. All those who want to fight the forces arrayed against the struggle for freedom should fight them on all fronts. The legislative bodies constitute one such front. They should never be, they should never have been, left to be filled by a majority of those who cry ditto to the bureaucracy. It is true the old Swarajya Party could not completely gain its object. But it did succeed in preventing the passage of some anti-national, some repressive laws—at least in their original drastic forms. Some substantial amendments were made in them at the instance of the party. It also succeeded in carrying many important resolutions in the teeth of the Government, nominated and week-kneed elected members. Moreover, so long as the Swarajist members were in their full strength in the central and provincial legislatures, Government had to take care not to show utter disregard for public opinion in the bills brought before them. It may be objected that as the old Swarajya Party did not succeed in its main object, it would be useless to revive the party. But the No-changers, the Non-co-operators, also have not succeeded in gaining their principal object, namely, the attainment of Swaraj. Nor have the Liberals succeeded in gaining their object. It should always be borne in mind by the soldiers of liberty of all parties and every party, that many peoples have had to struggle very much longer than a decade or two for winning freedom. Repeated failures did not damp their ardour.

After the Swarajists as a party had retired from the legislatures, the opposition became very weak in the central and provincial legislatures. Government were able to arm themselves with all the weapons of repression which they required to frustrate the efforts of the leaders of the people to win self-rule. They have in fact now got a superabundance of instruments of repression. Many things which people could do and say and write a decade or five years ago without infringing any law are now unlawful or illegal. The executive and the police have fully utilized their experience of the past few years and have got laws passed depriving the people of many ordinary rights of free citizens and have succeeded in giving the ordinances a permanent place in the statute book as ordinary laws. In Bengal in particular, what is known as Martial Law, which, wherever enforced, is of short duration during emergencies, has been codified as permanent law. Already some prisoners have been sentenced to death, although their action, which was undoubtedly reprehensible, did not result in the death of any human being. And this in an age when the death penalty has been abolished in some countries for actual murder and when there is a widespread movement for its abolition in other countries. Hundreds of young men and women are in detention without trial, and a law has been made that nobody must show "undue" concern for them !

It may be that, even if the Swarajist members had been in the Councils all along, Government would and could have done by some means or other what they have provided themselves with the authority given by the legislatures for doing. But certainly not so easily as the emasculated legislatures have enabled them to do.

The attainment of each and every thing that is worth having is no doubt valuable, but the struggle to attain is not less important. The struggle both tests and develops our manhood.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Whatever the result, the struggle should continue. By this it is not meant that means and methods, policies and principles and strategy do not matter, provided there is some sort of struggle. What is meant is that every care ought to be taken in the choice of means, methods, policies and strategy—all to be consistent with sound principles, but that, if the struggle becomes unsuccessful, the endeavour is not to be given up, only the strategy has to be changed.

Here it may be observed that, if the members of the revived Swarajya Party seek election to the legislatures in the hope of winning Swaraj through them they are destined to be disappointed. "The national demand" was accepted by the central legislature by a majority more than once, but the British Government have totally ignored such demands. Swaraj cannot be won through the councils as they are. Nor can it be attained through the programme of Non-co-operation as followed by the Congress. The words, "I told you so," and the spirit underlying them are hateful to me. It is not in that spirit, therefore, but simply for the sake of supplying information, that I wish to tell the reader that some fourteen years ago it seemed to me that the programme of Non-co-operation would fail. I gave the reasons in *The Modern Review* for October, 1920, pages 457-58. Those reasons exist today in a stronger form.

The people of India ought to try to convince the people of Great Britain that India's freedom would be good not only for India but for Great Britain and all other countries, and that it is absolutely necessary for human freedom and welfare. Newspapers, periodicals, tracts, pamphlets, bulletins, books and other publications should familiarize our people and all the world with our ideals and arguments—with our case in short. Speeches and debates in India and abroad should be delivered and held with the same object. If we are sufficiently active, all these may convert reasonable people and idealists in Great Britain like their fellows in other countries to our point of view. But as in other foreign countries so in Great Britain, the number of idealists and reasonable people is small. The conversion of the whole British nation or the British Government in power at any time to our point of view in the near future, if it be at all possible at any time, cannot be expected. Hence in addition to the method of persuasion referred to above, some method or methods of putting pressure on the British people and Government must be constantly followed. The methods must be such that the resulting cumulative pressure may be irresistible. We live in such times that, though we are a disarmed and unarmed people, it is necessary to state in unequivocal language that the struggle, the fight, the methods, the strategy, the pressure, that I have in view is wholly unconnected with the use of physical force. And this for two main reasons. The most prominent objection that a programme of opposition leaders of India are wedded to *ahimsa* or non-killing. And under the present circumstances of India, if any one wishes to pit the necessarily unorganized, untrained, and quite insufficiently equipped force of any section of the Indian people against the highly organized, trained and scientifically equipped land, sea and air forces of the British Government, he is destined not only to disastrous failure but even to unintentionally putting obstacles in the way of others whose object is to win freedom for India in a non-violent way.

It is not the object of this article to say how the pressure that I speak of may be applied.

If the Legislative Assembly were dissolved before the introduction of the "Reforms," it would not be impracticable for the revived Swarajya party to capture the majority of the elective seats. Lord Willingdon's Government and the British Government would have the world believe that their dual policy of repression and of offering some "Reforms" *a la* the White Paper proposals had the approval—at least the acquiescence, of the people of India. The people of India know that such a claim, if made, would be utterly at variance with the truth. But a mere assertion of this description will not do. There should be an irrefutable demonstration of the truth. If the new Swarajya party (—why not also the Liberals ?) contest all the elective seats by declaring their opposition to the dual policy and the White Paper proposals and if they succeed in capturing the majority of seats, that would furnish the incontestable proof required. That would be one gain. Moreover, the Swarajist members of the central and provincial legislatures would, as the opposition, be able to do, during the period of continuance of the present constitution of India, all that the former Swarajist members were able to do. That might not be much, but it would be something.

Condemnation of the dual policy of the Government would perhaps be one part, the destructive part, of the election slogan of the new Swarajya party, the other, the constructive part, being whole-hearted support given to what Mahatmaji had demanded on behalf of India at the Round Table Conference. Victory won by the Swarajya party on such a ticket would go to show, what is the truth, that Mahatmaji really spoke for the people of India.

After their election the Swarajist members need not and would not merely be critics and opponents of the Government within the Council Chambers. They would perhaps make use of their position and powers to introduce and promote constructive legislation for the public good and move resolutions with the same object in view. If Government introduced any such legislation or a Government member moved any such resolution, it would not be at all wrong to support them.

The Swarajists need not be deterred by the

co-operation of the above description would be tantamount to "working the Reforms." Those who are capable of thinking for themselves should not be afraid of a phrase, but should do whatever is for the public good.

Congress has a following which is counted by the thousand. The legislative bodies can make room for only a few hundreds. And Mahatma Gandhi has clearly stated in his letter to Dr. Ansari that Council-entry is only for those Congressmen who for some reason or other do not want to or cannot take part in civil resistance and who have faith in entry into legislatures to form combinations there to prosecute the programme which they believe to be in the interest of the country.

Whether the Swarajya party be the majority or a minority of the adherents of the Congress, the majority of Congressmen would remain outside the Councils to follow the Congress programme in the country. And it has been stated authoritatively that the revived Swarajya party's programme would include not merely Council-entry but that the Swarajists would do outside the Councils what other Congressmen would do. It is true Council work brings in many a kind of fame which the doers of more valuable work outside the Councils cannot enjoy. But there are many men in and outside the Councils who do some kinds of work only for their excellence, not caring whether their labours would be rewarded with fame. Every day all the indigenous daily papers of India give publicity to the speeches, views, etc., of various persons all of whom are not indisputably superior to the ablest editors of the dailies. But the opinions of the ablest of these editors find publicity for the most part in the columns of the papers they edit—not in all the dailies. Notwithstanding this difference in the extent of publicity, which is a kind of fame, the ablest editors remain editors, leaving stump orators and demagogues to enjoy their greater publicity and their more extensive fame. From examples of this kind it seems to us that it need not be apprehended that Council-entry would deprive other kinds of service of the people of all value and attraction in the eyes of all Congressmen.

Council-entry may be difficult for those who have been in deadly earnest about Civil Disobedience, which is Civil Rebellion. Mahatma Gandhi declared himself a rebel at least once, if not more often. One cannot be a rebel and a loyal subject at the same time, or by turns. It is, therefore, only natural for Gandhiji not to seek to enter any legislative body, for after becoming a member one has to take the oath of allegiance. I do not know how many Congressmen have thought or declared themselves rebels. Of course, it is possible for rebels to become loyal subjects. But if any one still feels that he is a rebel, he cannot take the oath of allegiance without forswearing himself.

If the Government do not dissolve the Assembly in the near future and order a general election, that would clearly mean that they are not prepared to face the verdict of the country on the dual policy and the White Paper and accept the challenge of a strong opposition in the lower house of the central legislature.

After the introduction of the "Reforms" *a la* the White Paper, or *a la* the Joint Parliamentary Committee's report and recommendations, which would most probably be worse, there would be little probability of any Nationalist opposition doing anything effective. For the National oppositionists can come mostly from the Hindu community. But that community, though forming an overwhelming majority of the population, has been reduced to the position of an impotent minority in the White Paper Scheme. And against the forces of nationalism that Scheme has arrayed the nominees of the ruling Princes, the communalist Muslims, the Europeans, the Anglo-Indians, etc., all of whom have been given seats out of all proportion to their numbers. In the case of the Hindus, neither numerical strength, nor education, nor public spirit, nor ability, nor business enterprise, nor the (major) share of the revenue contributed by them, has been taken into consideration. There are Nationalists in the Muslim community, no doubt. But the Moslem community being smaller than the Hindu, Moslem Nationalists have always been smaller in number than Hindu Nationalists. And the White Paper Scheme has made such indecent exhibition of favouritism to that community that there are at present very few genuine Nationalists left among Mussalmans.

So in the constitution with which India would most likely be cursed in the near future, the Swarajists as the whole or a major section of the opposition would not probably be an actually effective force. Nevertheless, even in the future constitution, and certainly in the existing one, members of the legislature who possess a spirit of independence, courage, adequate information and debating powers, and who are not halting and travelling allowance-hunters, favour-hunters and job-hunters for themselves or relatives, would be a distinct gain to the legislatures and the country. The gain would be at least this that the political paralysis and defeatism from which the country has been suffering would be at an end, at least to a small extent.

Some sort of political activity had become necessary owing to the suspension of mass civil disobedience after the informal Poona conferences. For, very few went in for individual civil disobedience thereafter. But even that has been practically put a stop to by Mahatma Gandhi's statement of April 7 last. The scheme of constructive work outlined therein is entirely non-political. Hence, a political programme has become an urgent necessity.

MAHATMA GANDHI "MONOPOLIZES" SATYAGRAHA FOR SWARAJ

BY RAMANANDA CHATTERJEE

THE statement on Satyagraha and Civil Disobedience which Mahatma Gandhi issued at Patna on the 7th of April last contains the following prefatory words :

> "This statement was drafted by me on my day of silence at Saharsa, that is, Easter Monday, the 2nd instant. I passed it on to Rajendra Babu and then it was circulated among the friends who were present. The original draft has undergone considerable revision. It is also abridged. But in essence it remains as it was on Monday. I regret that I have not been able to show it to all friends and colleagues with whom I would have been delighted to share it. But as I had no doubt whatsoever about the soundness of my decision and as I knew that civil resistance of some friends was imminent, I was not prepared to take the risk of delaying publication by waiting for the opinion of friends. The decision and every word of the statement are in answer to intense introspection, searching of the heart and waiting upon God. The decision carries with it reflection upon no single individual. It is a humble admission of my own limitations and a due sense of the tremendous responsibility that I have carried on my shoulders all these long years."

This paragraph shows that Mr. Gandhi drafted his statement before Dr. Ansari, Dr. B. C. Roy and Mr. Bhulabhai Desai saw him on the 4th April. The drafting was no doubt preceded by the conference of the would-be Swarajists at Delhi and the conclusions reached by them. It is not known whether Mahatmaji had any idea of those decisions at the time of drafting his statement.

It is only natural that, before arriving at any important decision, a man of Mr. Gandhi's firm and deep faith in God should wait upon Him for light. But though he certainly does so, and has done so in this particular instance, his decision will be generally judged by the appeal that it makes to men's reason and conscience, though there may be followers of Mahatmaji who may take it as a God-inspired statement. It is well known that the scriptures of the historical religions of the world are claimed by their orthodox followers to be revelations from God. But others accept or reject particular portions of these scriptures according as they do or do not satisfy their reason and conscience. On account of this critical and rationalistic attitude of outsiders, many intelligent and wise defenders of their respective faiths, when they try to convince outsiders, do not any longer take their stand upon the revealed or inspired character of this scripture or that, but try to prove that they are soul-satisfying. Hence, just as in the case of the scriptures, so in that of secular documents, it is best not to say that they are the outcome of waiting upon God. For, if the documents are logical and sound, that itself would be their passport to general acceptance. But if they are wholly or in part illogical and unsound, the blame for such unsoundness and illogicality may be attached to God by scoffers and unbelievers. Of course, that would not injure God. But why give any opportunity to anybody to blaspheme? Moreover, as it is not always certain that what one considers God's voice is really His voice and not one's own prepossessions and inclinations, it is best not to speak of any decision as the result of waiting upon God.

Mr. Gandhi says that "the decision carries with it reflection upon no single individual." There can be no question that he does not intend it to carry with it any reflection upon any single individual. But it seems to me that it does unintentionally carry with it such reflection upon many, which will be shown below.

Mahatmaji writes :

> "This statement owes its inspiration to a personal chat with the inmates and associates of the Satyagraha Ashram who had just come out of prison and whom at Rajendra Babu's instance I had sent to Bihar. More especially is it due to a revealing information I got in the course of a conversation about a valued companion of long standing who was found reluctant to perform the full prison task, preferring his private studies to the allotted task. This was undoubtedly contrary to the rules of Satyagraha. More than the imperfection of the friend whom I love more than ever it brought home to me my own imperfections. The friend said he had thought that I was aware of his weakness. I was blind. Blindness in a leader is unpardonable. I saw at once that I must for the time being remain the sole representative of civil resistance in action.
>
> "During the informal conference week at Poona in July last I had stated that while many individual civil resisters would be welcomed even one was sufficient to keep alive the message of Satyagraha. Now after much searching of the heart I have arrived at the conclusion that in the present circumstances only one, and that myself and no other, should for the time being bear the responsibility of civil resistance if it is to succeed as a means of achieving purna swaraj."

In practically calling off civil disobedience Mahatmaji has done the right thing. After mass civil disobedience had been suspended after the informal Poona Conference, not many went in for individual civil disobedience. That showed that, whatever the reason, there was no longer much life left in the movement. So, instead of trying to keep up a mere formality or an outward-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Now, it was best practically to admit that the real thing no longer existed. That is how I, a mere onlooker, look at the matter. But Mahatma's reasons for henceforth bearing the whole burden of civil disobedience for Swaraj on his own shoulders are different.

Practically, his case for calling off civil disobedience for Swaraj rests on a single individual, "a valued companion of long standing," having done things "contrary to the rules of Satyagraha." I do not know the rules of Satyagraha. But Satyagraha had gone on for more than a decade, during which period tens of thousands, if not lakhs, have been its adherents. It is surprising that Mahatma Gandhi has only now, when the movement is at its lowest ebb, has discovered that there has not been a single true Satyagrahi, except perhaps himself. Numerous men and women among them have lost their all, have borne lathi charges of the police and military, have endured physical torments of various other kinds, and women satyagrahis or female relatives of satyagrahis or their neighbours have complained of having been dishonoured; and yet they have remained non-violent. As I write, the prison experiences of a brilliant young research student, narrated to me by himself, come to my mind. He related them to me quite calmly, without any resentment. I, an old man, could not help getting excited when listening to his story. But afterwards I came to think that he was an example of the miracle wrought by Satyagraha. There must be many such. Mahatma Gandhi is a great man, a good man, a saint, beyond compare in his own line. But so far as sacrifice and sufferings go, I humbly venture to think that there are numerous followers of his who have made very great sacrifices and suffered greatly, and, if Mahatmaji's fasts be not taken into consideration, their sufferings and sacrifices *in India* have been greater than his. In Indian jails Mahatmaji has lived in comparative comfort compared with the conditions of life of numerous civil disobedience prisoners.

From one solitary example of a person who preferred his private studies to the performance of the full prison task, Gandhiji comes to the conclusion that no one among his colleagues and followers is or is fit to be a true Satyagrahi. I do not mean any disrespect to him, but I cannot follow his logic. The very fact that so few Congressmen have complained of what has appeared to non-Congressmen to be unintentional injustice to many Satyagrahis on the part of Gandhiji, appears to show that there are very many true Satyagrahis who are above feeling resentment. Mahatmaji says, "I was blind. Blindness in a leader is unpardonable." I do not know if such blindness is not a disqualification in or for a Satyagrahi.

Gandhiji proceeds:

"I feel that the masses have not received the full message of Satyagraha owing to its adulteration in the process of transmission. It has become clear to me that spiritual instruments suffer in their potency when their use is taught through non-spiritual media. Spiritual messages are self-propagating. The reaction of the masses throughout the Harijan tour has been the latest forcible illustration of what I mean. The splendid response of the masses has been spontaneous. The workers themselves were amazed at the attendance and the fervour of vast masses whom they had never reached.

"Satyagraha is a purely spiritual weapon. It may be used for what may appear to be mundane ends and through men and women who do not understand its spirituality provided the director knows that the weapon is spiritual. Everyone cannot use surgical instruments. Many may use them if there is an expert behind them directing their use. I claim to be a Satyagraha expert in the making. I have need to be far more careful than the expert surgeon who is a complete master of his science. I am still a humble searcher. The very nature of this science of Satyagraha precludes the student from seeing more than the step immediately in front of him."

There is and can be no question that Mahatmaji is far more spiritually advanced than the generality of men and the generality of non-co-operators. It is, therefore, no wonder that the masses have responded splendidly to his personally delivered appeal throughout his Harijan tour. But the wonder is that he has taken thirteen long years to discover that Satyagraha has reached the masses through "non-spiritual media." I know very few Satyagrahis or non-co-operators. It would be impudence on my part, therefore, to question Mahatmaji's diagnosis. But the conclusion seems irresistible that either the non-co-operators are a bad lot, or that Mahatmaji's standard being very exacting they appear worse than they are.

Mahatmaji states his conclusion thus, giving reasons:

"The introspection prompted by the conversation with the Ashram inmates has led me to the conclusion that I must advise all Congressmen to suspend civil resistance for Swaraj as distinguished from specific grievances. They should leave it to me alone. It should be resumed by others in my lifetime only under my direction, unless one arises claiming to know the science better than I do and inspires confidence. I give this opinion as the author and initiator of Satyagraha. Henceforth, therefore, all who have been impelled to civil resistance for Swaraj under my advice, directly given or indirectly inferred, will please desist from civil resistance. I am quite convinced that this is the best course in the interest of India's fight for freedom.

"I am in deadly earnest about this greatest of weapons at the disposal of mankind. It is claimed for Satyagraha that it is a complete substitute for the violence of war. It is designed therefore to reach the hearts both of the so-called "terrorists" and the rulers who seek to root out the "terrorists" by emasculating the whole nation. But the indifferent civil resistance of many, grand as it has been in its results, has not touched the hearts either of the "terrorists" or the rulers

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as a class. Unadulterated Satyagraha must touch the hearts of both. To test the truth of the proposition Satyagraha needs to be confined to one qualified person at a time. The trial has never been made. It must be made now.

"Let me caution the reader against mistaking Satyagraha for mere civil resistance. It covers much more than civil resistance. It means relentless search for truth and the power that such a search gives to the searcher. The search can only be pursued by strictly non-violent means."

As Gandhiji is the author and initiator of Satyagraha, no one will dispute his right to 'monopolize' its practice, particularly as its practice is neither pleasant nor profitable, in the popular and worldly sense. But is it a correct general proposition that the author and initiator of a science (say, surgery, which Gandhiji has named) is justified in preventing all others from pursuing it after allowing them to do so for a dozen years? Has no one acquired the necessary spiritual and other qualifications during this long period?

I long with all my heart for an effective substitute for war. It would be bliss for me to live to see the success of Satyagraha in preventing violence and achieving the results of violence.

As for touching the hearts of the rulers and the "terrorists," as I do not know either class, I cannot judge whether Satyagraha will really touch their hearts. I hope and believe that to the extent that they are human their hearts can be touched. But machines have no hearts. Therefore, if men become like parts of machines, they cannot respond to Satyagraha.

Not having been a civil resister or a Satyagrahi, I cannot quite understand how there can be among Congressmen many persons who are fit to offer civil resistance for the redress of specific grievances without there being a single one fit to offer it for the attainment of Swaraj. To be obliged to live under Other-raj because of the absence of Swa-raj is a comprehensive grievance, including all or most specific grievances. The difference between the former grievance and the latter grievances is mainly not of kind, but of magnitude and degree. For the redress of both by Satyagraha, it is necessary to touch the heart of the rulers. Therefore, it seems to me that, if there are many Congressmen fit to offer Satyagraha for the redress of specific grievances, there may be at least a few who are fit to undertake Satyagraha for the redress of the comprehensive grievance, mainly, absence of Swa-raj.

A programme for the "freed" civil resisters follows.

"What are the civil resisters thus freed to do if they are to be ready for the call whenever it comes? They must learn the art and the beauty of self-denial and voluntary poverty. They must engage themselves in nation-building activities, the spread of khaddar through personal spinning and hand weaving, the spread of communal unity of hearts by irreproachable personal conduct towards one another in every walk of life, the banishing of untouchability in every shape or form in one's own person, the spread of total abstinence from intoxicating drinks and drugs by personal contact with individual addicts and generally by cultivating personal purity. These are services which provide maintenance on the poor man's scale. Those for whom the poor man's scale is not feasible should find a place in small unorganized industries of national importance which give a better wage.

"Let it be understood that civil resistance is for those who know and perform the duty of voluntary obedience to law and authority."

Mahatmaji's spiritual and ethical ideal is very high and beautiful. It is worthy of being pursued not only by Congressmen but by all men. His constructive programme of nation-building will do great good to the country if carried out. I could wish he had added the item of spread of education. Mere literacy may not have much value. But as a means to a great end, it is very valuable, and indispensable where large masses of men are concerned. So far as the religio-political atmosphere of the country is concerned, universal education cannot but be beneficial by destroying to some extent superstitious hero-worship.

It is to be noted that there is no purely and directly political item in the programme. Is the omission due to the fact that Gandhiji has resolved to eschew politics for one year? But that guess may be wrong. For his statements relating to the revival of the Swarajya party and Council-entry are politics.

In conclusion Mahatmaji says:

"It is hardly necessary to say that in issuing this statement I am in no way usurping the function of the Congress. Mine is mere advice to those who look to me for guidance in matters of Satyagraha."

This is true. But to the generality of Congressmen Mahatma Gandhi's advice is a mandate. There have been demands, no doubt, for a meeting of the Working Committee of the Congress, a meeting of the All-India Congress Committee, and a meeting of a plenary session of the Congress. Such meetings are desirable. If they are held and Mahatmaji attends them, it is more than probable that his "advice" will carry the day.

I cannot conclude this article without paying a tribute to Mahatmaji's self-control and spirit of detachment. Satyagraha, Civil Resistance, Non-co-operation were his spiritual offspring, on whose success high hopes were built. Yet their demise or suspended animation does not evoke a single sigh, a single note of sadness, or a single word of despondency. What utter cheerful resignation to the will of God! What faith in the ultimate triumph of Truth and Right and Justice!

NOTES

Present Assembly's Verdict Would Be Worthless

Calcutta morning papers of the 26th April contained the following telegram :

Simla, April 25

While a good deal of speculation is still going on as to the nature of the Government pronouncement to be made shortly regarding the life of the present Assembly, the "United Press" learns that extension will be granted to the Assembly for another year.

It is also revealed that the Press report about the supposed unanimity of the Willingdon Cabinet favouring dissolution is incorrect, inasmuch as at least two Indian members of the Executive Council are understood to have supported Sir Samuel Hoare in his contention that the Assembly should not be dissolved until it has given a favourable verdict on the Joint Select Committee report on constitutional reforms, which is likely to be published in August next.

One of the topics which is now being discussed most is what will the Swaraj Party do if their anticipation of a General Election is frustrated by the Government's non-dissolution decision.—United Press.

Congress is the best organized and the largest and most representative body in India. As Congress did not take part in the elections, through the Swarajya party, when the present Assembly was elected, it is a very inadequate-ly representative legislative body. Moreover, its elected members were returned neither on the White Paper nor on the Joint Select Committee's report issue. For these reasons, should the Assembly be not dissolved now but should be dissolved after it had given a favourable verdict on the Joint Select Committee's report, that verdict could not be taken as representing Indian public opinion. Should the Assembly be granted an extension for another year with the object stated in the telegram, it would not be unfair to consider such a move as an attempt to hoodwink the British and the world public into the false belief that the Indian people approved of any constitution resembling that sketched out in the White Paper or any other worse even than that.

For really ascertaining the true opinion of the people of India on the Joint Parliamentary Committee's report through the Assembly, a general election of the Assembly members should be held after the publication of that report, making the report the issue.

Waning and Waxing of Civil Disobedience and Terrorist Movements

It is stated in the Government *Report on the Administration of Bengal 1932-33*, p. xviii :

> "While the star of civil disobedience and the prestige of Congress were thus waning, numerous incidents illustrated the strength and the widespread nature of the terrorist movement."

Government cannot be accused of any partiality for either the civil disobedience or the terrorist movement. But has any connection between the waning of the one and the waxing of the other ever been suspected by the official mind? The lines quoted above seem to show that perhaps it has been.

"The Anticipated Effects of the Communal Award"

Paragraph 488 of the latest Bengal Administration Report on the general tone of the Press concludes with the following two sentences :

> "The most noticeable feature of the year was the growing cleavage between the Hindu and Moslem press, and the gradual *disappearance of the nationalist section in the latter.* The *anticipated*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

effects of the Communal Award on the division between the two communities of powers to be transferred by the new constitution mainly contributed to this development." P. 175. [Italics ours. Editor, *M. R.*]

So it was *anticipated* that the "Communal Award" on the division of powers between Hindus and Moslems in the forthcoming constitution, would lead to growing cleavage between the Hindu and the Moslem press and the gradual disappearance of the nationalist section in the latter, which means, in other words, growing cleavage between Hindus and Moslems and the increasing scarcity of nationalists in the Muslim community! Anticipated by whom? It is a subtle psychological question whether what is anticipated is always also intended, when the anticipators and the authors of that of which the effect is anticipated are the same party.

The Report does not supply any clue to the identity of the anticipator or anticipators. The introduction to it states that

> "The Report is published under the authority and with the approval of the Government of Bengal, but this approval does not necessarily extend to every particular expression of opinion."

Should the Bengal Government ever find itself in a tight corner on account of any expression of opinion in this Report, these words of the introduction would be useful as opening a backdoor for retreat.

Offences against Women

The latest Bengal Administration Report observes on the subject of offences against women:

> "On the 25th of August a circular letter appealing for funds was issued by the Women Protection Committee of the Bengal Provincial Hindu Sabha. This letter noted that 'there has been an alarming increase in the number of crimes against women in this Province. In most of these cases Hindu women are generally the victims'. The figures do not support either of these conclusions."

The Report then proceeds to give the figures.

> "The total number of cases reported to the Police under sections 354, 366, 376 of the Indian Penal Code for each of the four years 1929-32 inclusive was 778, 697, 729, and 772 respectively. The total number of 'True' cases reported to the Police and the Magistracy combined for the same four years was 1029, 684, 690, and 821 respectively. The total number of persons arrested was 2006, 1389, 1552 and 1657 and the total number of persons convicted was 409, 402, 352, and 495. These figures speak for themselves."

They do indeed, but not as the writer of the Report would have it.

The Report admits that "the figures available may not reveal the full extent of the evil. And in fact there are frequent complaints in the papers that the police do not record or take up all cases reported at thanas. Moreover, fear of social obloquy and excommunication and terrorism exercised by the offenders lead to the hushing up of not a few cases. But let us assume that the figures are accurate, and let us exclude from consideration the year 1929, which appears to have been abnormal for some reason or other. Then the figures for the years 1930, 1931 and 1932 respectively would stand thus: Cases reported to the Police, 697, 729 and 772; "True" cases reported to the Police and the Magistracy combined, 684, 690, and 821; and persons arrested 1389, 1552, and 1657. In the case of each of these sets of figures, there has been a steady increase from year to year. As regards the number of persons convicted, in 1929 the number was 409, which came down to 402 in 1930 and to 352 in 1931: but in 1932 it mounted up to 495, which is much larger than the figures for any of the three previous years. So it is unquestionable that the figures for 1932 are in all cases greater than the figures for 1930. *Hence they do support the Bengal Provincial Hindu Sabha's statement that there has been an increase in the number of crimes against women in Bengal.* The Sabha obviously made the statement with reference to recent years, just preceding the date of the circular letter wherein it was made.

Bengal's Record not Worst

The Report proceeds to observe that "the suggestion that Bengal's record is worse than that of other provinces is also refuted by the figures." It appears to be true that Bengal's record is not the worst, but one cannot readily understand how the figures in the Report enable one to arrive at such a conclusion. For, nowhere in the Report are the figures for the other Provinces given to make comparison possible.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The figures for the Panjab, Bengal and U. P. are given below from the Police Administration Reports of those Provinces for 1932.

Province	Population	Crimes Against Women in 1932
Panjab	23,580,852	504
U. P.	48,408,763	711
Bengal	50,114,002	693

These figures show that, considering their respective population, of the three provinces for which alone we have got the figures before us, the record of the Panjab is the worst, the next blackest being that of the U. P. But the point is, not whose record is the most shameful but that the records of all are disgraceful, and every effort should and must be made to wipe away the disgrace everywhere.

The Communal Aspect of the Subject

"With regard to the Communal aspect of the subject the figures are" :—

"For the years 1926-31 inclusive the number of Hindu victims was 324, 325, 304, 367, 362, and 338; while the number of Mahommedans was 494, 579, 657, 538 and 582 respectively. These figures show not only that there has been no appreciable increase in the number of Hindu women assaulted, but that more Mahommedan than Hindu women have suffered in this connection, and that it is in respect of the Mahommedan women that there has been some increase in the number of outrages."

In 1926 there were 324 *plus* 494 outrages or 818 in all. In 1931 there were 338 *plus* 582 outrages, or 920 in all. Hence these figures, too, show that there has been an alarming increase.

What we want is that there should be no outrages on women, no matter to what community they may belong. For gaining this object, Hindu brutes and Mussalman brutes should be punished with impartial severity and there should be an awakening of the public conscience in both the communities. But hitherto the agitation for special action and legislation by Government for putting down these crimes has been carried on by Hindus alone. Mussalman leaders and the Moslem press have repeatedly asserted that outrages on women very rarely, if at all, take place in the Moslem community and that the reaction of Hindu women is due generally to evil Hindu customs. The figures show that that is a wrong assertion. They ought to rouse the Moslem conscience. If Hindu manners and customs were mainly responsible for the evil, why should it be greater in the Moslem community ?

The Report goes on to state :

"It is noteworthy also that, while outrages by Mahommedan men upon Hindu women during each of these six years numbered 114, 122, 105, 114, 109, and 125 respectively, those perpetrated by Hindu men upon Hindu women totalled 205, 201, 198, 231, 234, and 194, respectively."

It would not be unnatural if the outrages upon Hindu women by Hindu scoundrels were really greater than those perpetrated on Hindu women by Moslem scoundrels. For Hindu men can mix with Hindu women more easily than Moslem men. But there is some reason to doubt whether the numbers of Hindu women victimized by Moslem men were really as low as the figures given in the Report would lead one to believe. For, in Hindu society the probability and fear of social obloquy, persecution and excommunication are greater in cases of abduction by Moslem men than by Hindu men, and consequently there is perhaps greater hushing up of cases of the former class than of the latter class.

The Report has given the figures of outrages on Hindu women perpetrated by Hindu men and Moslem men respectively, but it has suppressed the figures of outrages perpetrated on Moslem women by Hindu men and Moslem men respectively, obviously because the number of Moslem women victimized by Hindu rogues is much less than the number of Hindu women victimized by Moslem rogues and much less also than the number of Moslem women victimized by Moslem rogues. The *Sanjibani* of the 12th April last has published these figures from a voluminous statement placed on the library table of the Bengal Legislative Council some time ago by the Hon'ble Mr. Reid. These figures are given below.

OUTRAGES ON WOMEN BY MOSLEM SCOUNDRELS

Year	On Hindu Women	On Moslem Women	Total
1926	113	481	594
1927	122	576	698
1928	104	460	564
1929	114	676	790
1930	104	531	635
1931	125	573	698

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

OUTRAGES ON WOMEN BY HINDU SCOUNDRELS

Year	On Hindu Women	On Moslem Women	Total
1926	194	9	203
1927	201	3	204
1928	198	10	208
1929	236	8	244
1930	234	6	240
1931	197	3	200

The figures compiled above from the Hon'ble Mr. Reid's statement show that scoundrels belonging to the Moslem community perpetrate outrages on a far larger number of women than scoundrels belonging to the Hindu society.

We have referred to the communal aspect of these shameful offences because the Government Report has done so. We consider it disgraceful that Hindu society contains so many brutes. That according to Government statistics Moslem society contains scoundrels who perpetrate a far larger number of outrages does not in the least make it less binding on the Hindu community to fight the evil in its own ranks as well as in the entire population of Bengal. As regards the duty of the Moslem community, it had better be pointed out and laid down by the Moslem press and leaders.

Special Action and Legislation Certainly Required

The Report observes in conclusion :

"While the evil undoubtedly exists and while the figures available may not reveal the full extent of it, they are nevertheless a sufficient indication of the truth to enable it to be said that special action or legislation by Government is not required at the present moment. The subject, however, is not one which can be disposed of by statistics. That such crimes are perpetrated is a blot on the province, and the sense of horror they evoke is a welcome sign of a rising public conscience."

If one-hundredth of the outrages committed on Indian women with their attendant horrible cruelties had been committed on European women, it is perfectly certain that the European community in India would have demanded that gang rape, if not also rape of all kinds, and abduction and kidnapping of women in cases where the victims cannot be found, should be made capital offences, and Government would have lost no time in meeting the demands.

Government seem to take their stand on the fact that offences against women are not increasing. We have shown from their own figures that the evil has been on the increase and we shall quote from the Police Administration Report of Bengal to show that we are right. But assuming that the evil is not increasing, it can neither be contended that it is decreasing. And, therefore, we assert more emphatically that special action and special legislation are undoubtedly required to fight the evil. Pious platitudes like those quoted above will not do.

"Lies, Damned Lies and Statistics"

The Report rightly says that "the subject" "is not one which can be disposed of by statistics." Far less can it be disposed of by the kind of statistical information against which the British proverbial classification of lies, "lies, damned lies and statistics," is aimed.

Blot on Whom ?

The fact that such crimes are perpetrated is undoubtedly a blot on the province, as the Report says. But that is only part of the truth. It is a blot on the Government also.

It is also true that the sense of horror they evoke is a welcome sign of a rising public conscience. It would be a far more welcome sign if the word "public" included all sections of the public, and if one could be sure that the administrative machine had fully realized the seriousness of the evil.

Increase in Offences Against Women Officially Admitted

While the latest Bengal Administration Report has made an unsuccessful attempt to show that crimes against women have not been increasing in Bengal, the latest Report of the Police Administration in Bengal expressly states that *these crimes have increased*. The exact words are quoted below.

"The increase of 94 cases under this head is most noticeable, Burdwan, Nadia and Hooghly being the worst contributors with increases of 21, 20 and 17 cases, respectively." P. 23.

The Government Resolution on this Police Administration Report contains the following paragraph :

"His Excellency in Council notes that cases of offences committed against women under sec-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

366 and 354, Indian Penal Code, showed an increase of 94 over the figure of the previous year—Burdwan, Nadia and Hooghly being the main contributors." P. 2.

If the reader is puzzled to find differences in the figures given in the Bengal Administration Report, Bengal Police Administration Report and Mr. Reid's statement, the fault is not ours.

One Small Reason for Council Entry

Allegations of oppression and ventilation of grievances have been made very difficult and risky, if not wholly impracticable, at public meetings and in the columns of newspapers. The only places where this can be done with some amount of freedom are the council chambers. But there, too, it is only members who possess courage and a spirit of independence who can serve the public in this way. Hence, the larger the number of Congressmen there whom fear of imprisonment and lathi-charges has not deterred from doing their duty according to their lights, the better.

It is no doubt true that often, if not in every case, even if a member brings very serious complaints to the notice of the Government in the council chamber, no public inquiries are made to ascertain the truth or falsity of the complaints, and newspapers do not publish these complaints for fear of the law or of the press officer. A case in point is the number of very serious allegations contained in Mr. S. C. Mitra's speech in the Legislative Assembly on the 19th March last, which is printed in full in the official report of the proceedings of the Assembly, pages 2498-2502, and pages 2506-2512. In the newspapers this speech has been dismissed in a few lines. The speech related mainly to what had been alleged to have done to houses and other property and to many men and women in several villages in Midnapur by soldiers and the police. But these allegations appear to be considered so trifling that even the Government members of the Departments concerned were not present to hear them! No wonder that public investigations are not made, and Sir Samuel Hoare answers light-heartedly in the House of Commons, when questioned, that the allegations are either entirely unfounded or are exaggerated. If a true son of India were in the House of Commons as an M. P., he might have challenged Sir Samuel to state which of the allegations were unfounded and which exaggerated. If any allegations are unfounded, there the matter ends. But if any are exaggerated, there is at least a grain of truth in them. What action is taken by the Government to redress this grain of grievance?

If there is really oppression anywhere, it is better that at least some members of legislatures should hear of them than that the news should be entirely suppressed. And if the Houses ever came to contain an appreciable number of would-be free citizens, they might at least move a resolution demanding an open public inquiry into allegations of oppression like beating of men and women, rape, theft, destruction of property, etc., by soldiers or other public servants.

Police officials Receive Condign Punishment—But in Germany!

The Nazi Government has been criticized unsparingly when it deserved such criticism. But let it have well-merited praise, too, for at least one example of even-handed justice, *e. g.*, the following case:

> Berlin, April 6.
>
> Draconic sentences were imposed at Stettin Court on three police officials for maltreating persons in the Concentration Camp at Bredow near Stettin, which is now closed.
>
> Hoffman, the chief detective, was given thirteen years' hard labour, another five years' hard labour and the third five years' ordinary imprisonment. Various civilians, charged with the same offences, received sentences ranging from ten to two years' imprisonment. The trial was held in camera.—Reuter.

We forget what punishment, if any, was inflicted on those who were responsible for the shooting down of some detenus at the Hijli detention camp. Was it hanging, or thirteen or five years' hard labour or ordinary imprisonment?

Condemnation of the White Paper But not of the Communal Award!

There is an endeavour going on for a united Hindu-Moslem front against the White Paper scheme, but not against that part

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(though an essential part) of it which is based on the communal "award." The White Paper scheme has given very little power to the Indian people, and what little power has been given to them has been deliberately withheld from the Hindus as far as practicable, and given to the Europeans, Anglo-Indians and Moslems. The Hindus, who form three-fourths of the population of British India, and an absolute majority of the population of India, have been proposed to be reduced by that scheme to the position of an impotent and insignificant minority, and the Europeans, Anglo-Indians and Moslems, with the ruling princes, have been proposed to be given *statutorily* the powers of the majority. Apart from the grave injustice to the Hindus involved in the White Paper scheme and apart from its thoroughly anti-national and undemocratic character, the communal "award" has divided India into various big and small mutually antagonistic groups—sex being pitted against sex, religious community against religious community, occupational class against occupational class, racial group against racial group and one Hindu caste-group against another Hindu caste-group. So even if the proposed united Hindu-Moslem front of the kind indicated above succeeded in extorting the substance of independence or dominion status from the British Parliament and people, of which there is not the least likelihood under the present "National" British Government, it would still mean that India would be a land of warring groups which would not coalesce into a Nation. For that reason alone, if not for any other, the substance of independence, nay even independence itself, would not be desirable, if the condition precedent for obtaining it were the acceptance of the communal award.

We have said that even if the Hindus and Moslems presented a united front of the kind proposed, the British National Government now in power would not agree to the transfer of more power to the Indian people than has been proposed to be given to them in the White Paper scheme. On the contrary, the Tory Die-hards want more safe-guards or restrictions to be introduced in the future constitution of India.

But supposing any Hindu leader or leaders accepted the communal "award" for the sake of a so-called Hindu-Moslem Unity, what would be the result? To the extent of his or their Hindu following, the Hindus would be taken by the world public to be a people who do not know their own minds and who are capable of temporizing and forswearing themselves; for, hitherto, except some not all, "depressed" Hindus, the Hindu community as a whole has condemned the communal "award."

So, the first result of any Hindu leader accepting the communal award would be that the thinking public in India and abroad would cease to have any respect for the character, intelligence and political wisdom of the Hindus.

Another result would be that the Government would make a higher bid for Moslem support. It has not been forgotten that when the Unity Conference proposed to reserve 33 per cent of the seats in the central legislature for the Moslems, Sir Samuel Hoare lost no time to offer them 33⅓ per cent, and when the Unity Conference agreed to the separation of Sindh under some conditions the same British functionary declared unconditionally that Sindh would be separated. Hence, any effort to secure a united Hindu-Moslem front of the kind proposed would only foster this ancient cringing spirit. And it is no injustice to the Muslims to say that, *perhaps* with a few exceptions, they, being "realists," not sentimentalists or idealists, would accept the highest bid, namely, that of the ruling party, and consequently there would not be any united front.

A third result would be that the Hindus would be further divided among themselves. For there are numerous Hindus who would never accept the communal "award" even if Mahatma Gandhi, not to speak of any lesser leader, were to accept it. They would form a very large and influential section. As there would not in effect be any united Hindu-Moslem front, but only a combination of a section of the Hindus with the Moslems, such a combination is not likely to succeed in extorting any appreciable amount of political power from the British Government.

It is a glorious privilege and duty of any one to be in the minority of even one for the sake of Truth and Right. If Truth and Right

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

demand it, one should not mind separation from one's own family, class, community, people or nation. But the communal "award" is the negation of Truth and Right and Principle. And, therefore, no Indian, no Hindu, ought to further divide or sub-divide his community by accepting, even temporarily, this poisonous rotten thing.

Remember, Mahatma Gandhi risked his life by fasting to prevent the separation of the "depressed" class Hindus from other Hindus, as the original communal "award" would have had the effect of bringing about. It is very likely that the suggested acceptance of the communal "award" by some Hindus, if the suggestion were acted up to, would bring about a further division of the Hindu community into more groups. Whether Mahatma Gandhi would fast to prevent such division or to re-unite the groups, after such division, is more than we know or can anticipate.

It has been attempted to be shown in the foregoing paragraphs of this note that there cannot be a Hindu-Moslem combination of the kind proposed, and that even if there be a combination of that sort of Moslems with some Hindus, it will not succeed in getting any appreciable political concessions from Britain for India. But supposing such a combination of some Hindus with the Moslems succeeded in getting more power from the ruling race on the understanding that the communal "award" would remain intact, what would be the result?

The result would be that the Hindus, the majority community of India, would be reduced to the position of an even more helpless and powerless minority than the White Paper proposes to reduce them to, and political power would continue to be practically monopolized by the minority consisting of Moslems, Europeans, Anglo-Indians and the ruling princes; and hence, it is the minority which would become more powerful, and the majority would grow relatively more powerless. We do not lay stress on the mere fact of the Hindus being the majority community and on the fact of that majority community being reduced to the position of a powerless minority. But we do lay stress on the fact that the powerlessness of the Hindus would be a calamity for India, because the Hindu community contains the majority of the nationalists, the patriots, the intelligentsia, and of the public-spirited, able, and self-sacrificing men and women possessed of a spirit of altruism and independence.

Let us hope that, if Mahatma Gandhi cannot unsettle the communal "award," he will try his utmost to prevent and succeed in preventing further injury being done to the national cause by the acceptance of that so-called "award" by any of his Hindu and other followers.

The acceptance of a thing makes its future repudiation difficult. There is just a possibility—it may not be a probability—of India getting a democratic constitution when the Labour party next comes into real power in Britain. Our non-acceptance of the communal "award" and persistent agitation for its annulment and for the introduction of democratic Swaraj would help that party. But acceptance of that so-called award would hamper even those members of that party who are most enthusiastic advocates of self-rule for India.

Some Sanatanists and Mahatma Gandhi

It would be doing a grave injustice to Sanatanists in general to assume that as a body they are in favour of violence and prone to act foolishly. Pandit Madan Mohan Malaviya is a Sanatanist, and has just presided over a Sanatanist conference. It is well known that he is entirely against any Sanatanists using physical force against those who are called reformers. He is the very personification of sweet reasonableness. And there are many Sanatanists of lesser note and unknown to fame, who resemble him in these respects. It is to be hoped that persons like him and them would be able to restrain the fury of foolish so-called Sanatanists against Mahatma Gandhi and his followers.

We use the word "foolish" deliberately. It is really foolish to think that a man like Mahatma Gandhi can be prevented from acting according to his convictions by the fear of death. Both deductive and inductive reasoning should lead to this conclusion. If Gandhiji had never been subjected or threatened

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to be subjected to fatal assaults, from his character alone one could infer that fear of death would not deter him from doing his duty. But he has in the past actually been assaulted several times, which might have ended fatally, without being deflected from his chosen path by a hair's breadth.

Moreover, if Gandhiji could be frightened into giving up the cause of the "untouchables," which is unthinkable, or killed and removed from the scene of his consecrated labours, others would take up the work with re-doubled zeal. And with or without workers for the cause from among the ranks of the "touchables," it is bound to triumph. Hinduism will not die. Harijans will become respected members of the Hindu community and will not only keep it from dying but add to its vitality and strength.

Argue with and against Mahatmaji by all means. But baculine arguments directed against him are of no use.

Pandit Madan Mohan Malaviya on Untouchability

At the seventh session of the Panjab Provincial Sanatan Dharma Conference, held last month at Rawalpindi, Pandit Madan Mohan Malaviya delivered his presidential address extempore. The greater portion of his address was devoted to a discussion of the problem of untouchability as at present understood.

> Quoting extracts from the Scriptures the Pandit impressed upon the audience that untouchability as practised at present was never sanctioned by the Vedas or sastras. No untouchability existed in congregations, melas, tirthas, temples, schools and on the roads. Every human being had a right to have 'darshan' of the deity.

It is cheering to learn from an orthodox Hindu scholar like the Pandit that the Vedas and the other sastras do not sanction untouchability. But whether they sanction it or not, it is bound to disappear entirely. It has been disappearing gradually. The Hindus do not follow the Vedas or the other sastras in many vital things where strict adherence to the scriptures would have done them great good. Therefore, even if the scriptures did sanction the evil custom of untouchability, it would not have been consistent, logical or right for them to adhere to it.

Of course every human being has a right to have *darshan* (sight) of images or idols of gods and goddesses. Hindus in many places have gone further. In the festivals of the worship of the goddesses Durga and Sarasvati in many places the actual worship has been performed by Hindus of the non-Brahman "depressed" castes officiating as priests and the food offered and afterwards partaken of by Hindus of various castes including Brahmans, Namasudras, etc., sitting together, has been cooked by "depressed" class Hindus. Such festivals have not been followed by any untoward results.

> Referring to the bills now before the Central Legislature in this connection, the Pandit declared he was opposed to all of them on principle and would strain every nerve to get them withdrawn. He would not like the intervention of Government in religious matters. The Legislative Assembly, constituted as it was of Muslims, Christians, Parsis and others, had not the right, the Pandit contended, to pass any bill regarding temple entry which was a purely sanatanist measure.

That is too comprehensive a subject to be discussed in the course of a note. We, too, are opposed to the interference of the Government or the Legislature in religious matters, except in matters involving considerations of humanity and morality, as *Sutti*, infanticide, etc. But we do not see any objection to legislation of a permissive character and to legislation which removes some legal powerlessness on the part of temple trustees to admit "untouchable" worshippers to temples.

> Concluding the Pandit appealed to Sanatanists to work for the betterment of the oppressed and depressed classes. He, however, struck a note of warning against over-zealous reformers using compulsion or coercion in the matter of temple entry by untouchables and urged them not to commit any action likely to injure the feelings of the orthodox section of Sanatanists.

Both Sanatanists and reformers should work for the welfare of the lowly, not as patrons and benefactors, but in a brotherly spirit. Just as over-zealous reformers should refrain from compulsion or coercion, so should fanatical Sanatanists refrain from doing what was recently done at Buxar and Baidyanath-Deoghar to break the heads of Mahatma Gandhi and his followers.

It is encouraging that Pandit Ma

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mohan Malaviya is with the reformers up to a certain point.

Mahatma Gandhi Welcome to Bengal

Mahatma Gandhi is in modern times the greatest among the workers for the uplift of the poor, the lowly and the "depressed." He would, therefore, be cordially and enthusiastically welcomed to Bengal on the occasion of his tour in the province this month. We join with all others in welcoming him and wish all success to his philanthropic labours. We feel, however, that his tour will be all too brief and will not include many districts. We do not refer to Midnapur. We know that he is hard-pressed for time, but hope that on the next occasion he will be able to visit the districts, omitted from his tour programme this time.

The Late Sir Chettur Sankaran Nair

Sir Chettur Sankaran Nair, who passed away last month at the age of 77, was a man of strong personality, varied talents and many achievements in different spheres of activity.

Sir Chettur Sankaran Nair, B. A., B. L., C. I. E., was born on July 11, 1857; educated at Madras Presidency College; High Court vakil; Government pleader and public prosecutor to the Government of Madras; Advocate-General; Judge High Court, Madras; for many years a member of the Madras Legislative Council; president of the Indian National Congress at Amraoti; president of the Indian Social Conference at Madras; president of the Indian Industrial Exhibition, Madras; founder and for some time editor, the *Madras Review*, the *Madras Law Journal* and the daily newspaper *Madras Standard*; member of the Governor-General's Executive Council, 1915-1919; member of the Council of the Secretary of State for India 1919-1921; elected member, Council of State, Nov. 1925; chairman of the Central Legislature Committee which sat with the Simon Commission, 1928; author of *Gandhi and Anarchy*, which involved him in a libel suit filed against him by Sir Michael O'Dwyer.

We remember with gratitude that Sir Sankaran Nair contributed to *The Modern Review* for March, 1914, an article on "Village Government in Southern India," in which he said:

"Representative government is so constantly alleged to be abhorrent to the spirit of the East that I shall quote in extenso the rules for election for one of those [village] assemblies from the report of the archaeological superintendent for 1904-5, pp. 131-145. These rules are said to have been promulgated in A. D. 918-919 and 920-921."

He concluded the article with the remarks:

"It is interesting to observe that ladies were eligible for election and a lady was a member of a committee of justice. (Report for 1910, section 35, p. 98.) Other village assemblies appear to have consisted of cultivators and merchants. The archaeological superintendent surmises that the same rules applied to them, except knowledge of the Vedas. (Report for 1912-13, p. 98.)

"After this who can say that representative institutions and self-government are a foreign importation?"

The Late Mr. Kumud Nath Chaudhuri

Mr. Kumud Nath Chaudhuri, barrister-at-law, was a distinguished lawyer of the Calcutta High Court and a brother of the late Sir Ashutosh Chaudhuri. *Shikar* was his hobby, and as a *shikari* he had bagged many a tiger and other wild animals. During the last Easter holidays he went to the Kalahandi forest for shooting tigers, though he was about 70. Unfortunately he was fatally mauled by a wounded tiger. He was the author of a book and many articles on *shikar*.

The Late Mr. Pramatha Nath Bose

Mr. Pramatha Nath Bose had served Government for long years as an officer of the Geological Survey of India. In spite of his meritorious services, he was superseded by a European officer. For this reason he retired early, though he could have served longer. In the sphere of geological work he will be remembered as the discoverer of iron ore in the Gorumahishani hills in the Mayurbhanj State. This discovery of his lies at the foundation of the Tata Iron and Steel Works at Jamshedpur.

Mr. Bose was a widely read thinker and was the author of several books on Indian civilization and culture. He was the protagonist of Indian cultural swaraj. Having been educated in Britain, he lived and dressed like a European

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

during the period of his service and some years afterwards. But latterly, for long years, his dress and personal habits were like those of a Bengali who had never received English education. This change was deliberate and the result of conviction. He lived to be about 80. Years ago he was good enough to contribute several articles to *The Modern Review*.

Reward for Bibi Harnam Kaur

Miss Harnam Kaur, a Sikh girl of the Panjab, bravely offered resistance to a gang of dacoits in spite of receiving two gunshot wounds. Two of the dacoits died and one was captured, while her father also died in the encounter. Her brother also received serious injuries. Brother and sister are still in hospital. They are to receive Government rewards in cash (Rs. 2000 each) and lands. The public also should honour and reward their heroism in a suitable manner.

"Political Outrages in India"

NEW DELHI, April 26.

The Council of State met today to discuss the Trade Disputes Extending Bill, the Sugar Excise Duty Bill and the Sugar Cane Bill.

During the interpellation hour the Home Secretary informed Mr. Jagadish Banerjea that the total number of political outrages in India from 1931 to February, 1934, was 329 of which 210 was in Bengal. Of these 210 outrages in Bengal 13 were murderous outrages, 37 were attempts at outrages, 76 were dacoities, 10 were bomb throwing and one armed raid. The total number of officials killed and injured in India during this period was 193 of which Bengal was responsible for 114.—"United Press."

In March last Sir Harry Haig stated in the Legislative Assembly that Bengal had the monopoly of political outrages. That was not quite accurate. Political outrages have taken place in the rest of India, too, though not so many as in Bengal. It would be good for Bengal and good for India, if some disinterested competent party studied the aetiology of political outrages in India and their greater prevalence in Bengal and discovered remedies.

Proposal to Lighten Britain's Philanthropic Burdens !

The South African Whites have come forward in quite a fraternal spirit with a proposal to lighten Great Britain's philanthropic burdens ! Reuter telegraphs :

LONDON, April 26.

The possibilities of an inter-Imperial controversy have been opened up by an announcement by General Hertzog in the South African Parliament that the Government proposed sending a note to Britain urging the immediate transference of the native Protectorates of Bechuanaland, Swaziland and Basutoland to the Union.

The procedure by which such a change may be effected has been laid down in the Union of South Africa Act and the advocates of the change maintain that the British Government have failed to develop the Protectorates, which have been kept in a backward state.

The natives themselves, however, are strongly opposed to the transference, while the opposition likely to be offered in certain quarters in Britain is indicated by the comment of the "Manchester Guardian," which urges that there can be no question of entertaining the request, unless the Union adopts a more liberal native policy.

As if Britain's own "native policy" has always everywhere been and still is "liberal".

The record of the dealings of the whites with the black races in Africa is black.

Travancore Sanctuary for Animals

Travancore has taken suitable measures to establish an animal sanctuary on the shores of the Periyar Lake extending up to Peermade and for this purpose it is proposed not to allow any shooting on the highlands for a period of five years.

Unlike in many places in Northern India where animal reserves are mainly intended for shooting purposes, it is His Highness the Maharaja's intention to have the animal reserves on the Travancore highlands to enable visitors from all over the world to see the wild animals leading their natural lives. Owing to indiscriminate shooting in the past several species have been completely exterminated and the Government have decided to revive the rare fauna which once abounded in Travancore forests.

His Highness the Maharaja had on more than one occasion gone to the highlands to see for himself how this could be best effected and on every occasion he cruised Periyar lake on board the State steam launch. His Highness had witnessed herds of bison, sambur and even tigers very near the shores of the lake.—*A. P.*

Oriya Authors Honoured

Berhampore (Ganjam).

The All-Utkal Oriya Poet's Conference was held here last week, Raja Sahib of Dharacote presiding. A large number of poets and scholars from different parts of Orissa and Ganjam attended.

After Mr. M. S. Panigrahi, Chairman of the Reception Committee, had welcomed the guests, the Raja Sahib of Dharacote opened the conference. Mr. Gopal Chandra Praharaj, author of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Oriya Encyclopaedia, and the Raja Sahib of Chikati, a reputed author, were presented with separate addresses of welcome, referring to their valuable contributions to Oriya literature.

In connection with the conference several unpublished works, oil paintings and best works of art were exhibited.

A resolution condoling the death of the late Mr. M. S. Das was unanimously passed.—*United Press.*

We have seen the first three volumes of Mr. Gopal Chandra Praharaj's encyclopaedic dictionary of the Oriya language. In reviewing it in our last number, we have said that this dictionary will be of use not only to those whose mother-tongue is Oriya but also to those whose mother-tongue is Bengali or Hindi. Bengali and Oriya are in fact so akin that, if both were written in the same script, this dictionary could be easily adapted as a Bengali dictionary. If the same script were used for writing Hindi, Hindi lexicographers could also use it.

The close kinship of Oriya and Bengali has been known to me for a long time. It was brought home to me afresh when I went to Cuttack last year to take part in the local Rammohun Roy centenary celebrations. I could follow the speeches in Oriya of three gentlemen and a lady almost throughout, and although I delivered all my speeches in Cuttack in Bengali, except one, among the audience, consisting for the most part of Oriya gentlemen and ladies, only one gentleman complained that he could not follow me—and he was a Telugu-speaking young gentleman from the Ganjam district.

Tagore's Visit to Ceylon

On the 3rd of this month the Poet, Rabindranath Tagore, and party will start for Colombo, arriving there on the 9th. The party will consist of more than 20 persons in all, some sailing to Colombo and others journeying by rail. The Poet will stay in Ceylon for about a month and a half, during which period he will deliver a few addresses at Colombo, and *Shapamochana*, a drama by him, will be staged on four nights by the professors and students accompanying him. An exhibition of the arts and crafts of the Visvabharati at Santiniketan and Srinikentan will also be held. The Poet, his son, daughter and daughter-in-law, Principal Nanda Lal Bose, other professors and the boy and girl students are likely afterwards to pay visits to the principal historical and other famous places in the island. The Sinhalese will thus have a rare opportunity of being acquainted with Bengali culture in some of its principal phases.

Japanese Ambition

How Japan attacked and dismembered the Chinese Republic and practically became the owner of Manchuria and some other regions which had been Chinese territory before, and how the Western exploiters of China and the League of Nations simply looked on but did not or could not give any other help to China than words, words, words, though both those Asiatic countries were members of the League, is recent history. That history does not reveal Japan's pacifism. But last month Japan posed as the maintainer of peace in the Orient !

TOKIO, April 18.

What is interpreted bluntly in the press as a warning to the world to keep its hands off China is contained in a statement issued by the Foreign Office in connection with reports of proposals for joint international assistance to China. The statement declares that Japan deems it her natural responsibility to maintain the peace of the Orient. In view of the fact that the restoration of order in China depends on China herself, Japan will oppose any action by the Chinese Government contrary to the peace of the Orient. Furthermore, Japan will be forced to oppose any measure of other powers likely to lead to a disturbance of the peace of the Orient like providing China with military planes, military instructors and political loans.—Reuter.

This means, not that Japan really desires to maintain the peace of the Orient, but that she will not allow any other power to prevent her from breaking the peace whenever she likes. Hence she is speaking as if China were her vassal and she herself was the suzerain of all Asia and the islands in the Pacific Ocean and all regions bordering on it. She desires that China should remain entirely at her mercy. Hence she objects to that country being provided with military planes, military instructors and political loans. China as a sovereign state has every right to provide herself with these for defensive purposes. But even if she wanted these for purposes of aggression, an aggressive nation like Japan would have no moral right to assume airs of injured innocence and sermonize, because

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

when Japan attacked China, she turned a deaf ear to all ethical dissuasion. China, however, has no aggressive designs on any other state; she wants only to be equipped for defence, and that is what she has said in reply to the Japanese declaration.

NANKING, April 19.

No State has the right to claim an exclusive responsiblity for the maintenance of peace in any part of the world, declares a Foreign Office statement in reply to the Japanese declaration yesterday.

China, as a member of the League, desires to promote international co-operation, peace and security, but does not intend to injure the interests of any country, far less disturb peace in the Far East. The collaboration between China and other countries, whether financial or in the form of technical assistance, has been non-political and the purchase of military equipment and employment of foreign military instructors have been solely for national defence.

But "national defence" on the part of China is exactly what Japan does not like and wants to prevent.

China's declaration of her pacific intentions and her assertion of her independent political status were followed by a hypocritical "disclaimer" on the part of Japan:

TOKIO, April 20.

A disclaimer that Japan has any intention of interfering with the interests of other Powers engaged in trade beneficial to China has been made by a Foreign Office spokesman with reference to the statement. Japan has no intention of deviating from the policy of open door and equal opportunity to all nations in China or interfering with the independence of China. Japan desires unification and prosperity of China, which must be obtained by China's awakening, not by selfish exploitation by other Powers. The time has passed when other Powers in the League can exercise influence for the exploitation of China.—Reuter.

Of course, "Japan has no intention of deviating from the policy of open door and equal opportunity to all nations in China"! Only she wishes to be in a position to shut the open door against others whenever it may be necessary in her own interests. Similarly, she does not want to interfere with the independence of China. Only she will not allow China to exercise that independence to obtain from other countries whatever help she stands in need of for her "unification and prosperity"—for maintaining her integrity. Precious independence! The Japanese desire for the *"unification and prosperity of China"* has been clearly proved by the creation of Manchuria as a separate independent (?) state. It would have been all right if Japan prevented other Powers from exploiting China in the interests of China. But the fact is, Japan wants to monopolize the exploitation of China.

Meanwhile other Powers look on as if in abject impotence, as before. Consider the British attitude.

LONDON, April 23.

In the House of Commons Sir John Simon faced a storm of questions on the subject of Japan's "hands off China" announcement on April 18.

Sir John Simon replied that he had not received any notification to that effect from Japan but the British Ambassador had cabled the text of the informal verbal statement made to the Japanese Press by a spokesman of the Foreign Office.

Sir John Simon said the statement apparently was inspired by apprehension of certain dangers to peace and good relations between China and Japan which might follow certain action by other Powers in China.

Sir John Simon declared that no such dangers were to be apprehended from the British policy. He, however, had communicated with the Japanese Government with the object of clarifying the position of His Majesty's Government in consequence of the spokesman's reference to objections to financial assistance to China.—Reuter.

"Dangers to *peace* and *good* relations between China and Japan" might follow if other Powers acted in China as her friends. Peace and good relations can be maintained by China by licking the boots of the powerful aggressor and by the other Powers not doing anything to disturb this dignified Sino-Japanese tableau vivant.

John Bull is such a good boy and is so polite to persons armed with the big stick that "Sir John Simon declared that no such dangers were to be apprehended from the British policy." And it is really true that British manufacturers of war materials will not be so partial to China as to sell these only to China; but, if war were to break out between Japan and China, they will, as before, supply arms and ammunition to both the countries impartially to the extent of their respective powers to pay cash.

A further message from London is printed below.

LONDON, April 23.

The British communication to Japan on the latter's sensational warning indirectly addressed to the Powers regarding their policy in China has been despatched to the British Ambassador, Tokio, for delivery to the Foreign Office. There has been no direct notification by Japan to Britain regarding the new Japanese attitude. It is understood that Brit-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

communication is chiefly a reaffirmation of Britain's position, especially under the Nine-Power Treaty. —Reuter.

From the Chinese point of view, there does not seem to be any hope of help from the predominant partner in the League of Nations. Nothing is so far known about the attitude of France, Italy, etc. Outside the League the wealthiest and strongest Power is the United States of America. The American attitude is indicated in the message printed below.

WASHINGTON, April, 24.

It is definitely indicated that the United States intends, at least for the present, to remain a mute bystander in any international complications arising out of Japan's statement of policy regarding China.—Reuter.

Japan's "Hands off China" Policy

Since writing our note on "Japan's Ambition" we have found some more telegrams relating to Japan's "Hands off China" policy, subsequently published in the dailies. One of them runs thus :

TOKIO, April 26.

The desire for direct Sino-Japanese negotiations on the pending problems was expressed by the Foreign Minister, Mr. Hirota, in an interview with the Chinese Minister, General Changtsopin. Mr. Hirota said that a solution as early as possible was vital to peace in the Far East.

Clarifying and upholding the 'hands off China' statement, Mr. Hirota stated that there was a manifestation of sentiment in China which was not very pleasant. He declared that part of the Japanese statement was somewhat strongly worded but the Japanese Government would support its substance and spirit and hoped that the Chinese Government and people would co-operate, as both countries were responsible for peace in the Far East.

In the meanwhile, according to the Rengo Agency, Japanese official circles are giving serious attention to the reports that China has already purchased 13 aeroplanes from Italy and that two Italian instructors are teaching at the Nanchang aviation school and Germans are planning the establishment of an aeroplane factory in the same vicinity.

What Mr. Hirota has said in his interview with the Chinese Minister does not make it necessary for us to withdraw or modify any of our observations in the note on Japan's ambition.

As for China buying aeroplanes from Italy and Italy supplying them and China engaging Italian instructors of aviation, that is what all independent countries have a right to do. Japan herself will, it has been reported, greatly augment her air power in the course of three years. If China has really purchased aeroplanes and engaged Italian instructors and allowed Germans to make preparations for the establishment of an aeroplane factory in China, that would mean some sort of warlike preparation, defensive or offensive, or both. We heartily dislike war. But the proposition cannot be agreed to that it is the strong and the victorious alone who have the right to make military preparations on an increasing scale, but that the weak and the defeated have no right to become stronger in order to prevent further defeat in future.

Britain and France have dependencies and colonies in and near Asia, which are open to reprisals on the part of Japan. America has the Philippines in the Pacific to think of. Italy and Germany have no such territories in Asia. Hence Italy and Germany can do things to help China which Britain, France, U. S. A. cannot think of doing, unless compelled to by special circumstances in defence of their own interests. Holland also has a considerable stake in Asia and, therefore, must needs think thrice before giving offence to Japan directly or indirectly.

Besides the possession of territory in Asia, some of the powers mentioned above have stakes in China itself, as the following telegram indicates :

LONDON, April 26.

Arising from the Japanese 'hands off China' announcement it is pointed out authoritatively that the British investments in Shanghai are three and a half times those of Japan. In China proper British investments total £197,000,000, that is 56 per cent of the total foreign investments, as against £74,000,000 of Japan, which is 21 per cent of the total, and the United States' £32,000,000 or nine per cent of the total.

The British Ambassador in U. S. A. has explained the British position to the proper party in Washington.

WASHINGTON, April 27.

Sir Ronald Lindsay, the British ambassador, discussed the Japanese situation with Mr. Phillips, Under-Secretary of State, for half an hour in the State department this evening; and it is understood communicated to Mr. Phillips the authentic text of Britain's note to Japan and explained Britain's position. It is learned from authoritative sources that the United States has not taken any definite diplomatic action in the matter and has not sent any official communication to Japan or other signatories to the Nine-Power Treaty. There is no

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

indication that any immediate action is contemplated.

Some reasons for the French attitude have been stated above. Further indications of that attitude can be gathered from the following telegram :

PARIS, April 27.

Official circles are extremely reserved in regard to the reported Japanese statements of policy *vis-a-vis* China. The exact extent of the Japanese policy and aim is not clearly understood and it is believed that in the absence of authoritative indications France will hold her hand on the ground that Britain and the United States are more directly interested.

If any country states that its inaction in any matter is due to its interests not being affected, it is an honest statement.

Nations are generally chivalrous, generous, just, friendly, neighbourly, and so on, when it is to their interest to be so. They are never so, if by being chivalrous, etc., their interests are sure or even likely to be affected.

Temple Entry and Untouchability Bills

The same page of the same issue of an Indian daily newspaper contains the following two items of news :

AJMIR, April 19.

The commissioner of Ajmer-Merwara requested the president of the Hindu Sabha, Ajmer, to express his opinion on the Hindu Temple Entry Disabilities Removal Bill. The president placed the Bill before the Hindu Sabha as well as the Rajputana Provincial Hindu Sabha, and both the bodies have unanimously supported the Bill.

RAWALPINDI, April 25.

The Panjab Sanatan Dharma Conference adopted by an overwhelming majority a resolution opposing bills relating to temple entry and the abolition of untouchability on the ground that they constituted Government interference in a purely Sanatanist matter.

When the opinions of different Hindu representative organizations differ as poles asunder, perhaps the best course is to follow reason.

The greatest weight should be attached to the opinion of the depressed classes, who are the aggrieved party, and to that of Mahatma Gandhi, their greatest spokesman.

The Sanatanists could have made and can make the Bills which are obnoxious to them unnecessary by throwing temples, etc., open to the 'untouchables' and by removing untouchability in other directions.

The Redistribution of Provinces

On account of the obvious fact that the greater the number of provinces the larger would be the expenditure on account of the multiplication of the number of governors, directors of this department and that, secretaries, etc., and of big buildings and their upkeep, a discussion has been going on on the subject of the redistribution and regrouping of provinces. The forthcoming constitution, whatever it may be, would involve additional expenditure of various kinds. For these reasons, instead of creating a number of deficit provinces (for the present two) it would be far better to reduce the number of provinces. That is reason. But in these days, if a man wants to appeal to reason, logic and things of that sort, he must apologize for being so eccentric.

The Simon Commission favoured the appointment of a Boundaries Commission for the redistribution of areas among the provinces before a new constitution began to work. Bengalis have been agitating for it—rather mildly, we should think. Bengal should be made a linguistic province. This will not involve any extra expenditure. The Bengali-speaking areas now included in Bihar and Orissa and in Assam—districts and sub-districts which were formerly parts of Bengal, should be transferred to Bengal. In area Bengal is at present the smallest of the major provinces. Hence the inclusion of these Bengali-speaking districts and sub-districts will not make Bengal a more unwieldy province than the other major provinces.

It is risky to make other suggestions particularly for an organ conducted by a Bengali. So we prefer to refrain from making definite proposals. But cannot the small provinces, old or new, actual or future, decide to be partners of other provinces on advantageous terms ? Linguistic and cultural affinity may guide their choice.

Conference in Aid of Society for the Improvement of Backward Classes

Last month Sir R. N. Mukherji, president of the Society for the Improvement of the

Sir Rajendra Nath Mukherji

Backward Classes of Assam and Bengal, invited a considerable number of the citizens of Calcutta to meet in his office to devise ways and means for helping that Society in its work. It has been in existence for the last quarter of a century and has been quietly doing much educational work. There are about 450 schools in most of the districts of Bengal and Assam under its superintendence, where more than 17,000 boys and girls receive education. Pupils of all creeds and castes are admitted. The Society also maintains libraries and reading-rooms, and delivers health lectures in rural areas and works in various ways against untouchability. The annual expenditure of the Society averages Rs. 87,000 in round numbers. But recently its income has greatly decreased on account of economic depression. That was the reason why Sir R. N. Mukherji called the Conference.

Sir N. N. Sircar was to have presided over it. In his unavoidable absence Maharaja Sir Pradyot Kumar Tagore took the chair. Sir R. N. Mukherji being requested to open the proceedings made a short speech observing that both Government and the people should help the Society with more funds. In addition to his previous donations and the subscription which he pays, he made a donation of Rs. 1,000 at the conclusion of his brief speech. During the years of his connection with the Society he has also given ungrudgingly of his time and energy for the furtherance of its cause, in spite of his heavy engagements and the infirmities of age. He is more than 82 years old.

Mr. Haridas Majumdar of the Amrita Samaj promised a donation of Rs. 200 on behalf of that Samaj.

After some discussions and consultation a Committee was formed at the instance of the Maharaja Tagore with himself as the chairman for devising ways and means for the better financing of the good work being carried on by the Society. Let us hope that now that a man of the position and wealth of the Maharaja is taking interest in the affairs of the Society, it will receive some help

Calcutta Mayoral Election

The entire proceedings or certain parts of the proceedings of the meeting of the Calcutta Corporation recently held for the purpose of electing the Mayor and the Deputy Mayor are before the Bengal Government and the Calcutta High Court. We, therefore, say nothing about them.

We are not in the least opposed to the election of a competent Mussalman gentleman to fill the Mayoral chair. We are rather in favour of it; as, by the election of such a person, a cause of Moslem dissatisfaction can be removed. What is wanted is that the election should be regular. It is not necessary to discuss now whether Mussalmans are justly dissatisfied or not.

As regards Mr. Fazlul Huq, he knows that the editor of this *Review* supported his candidature for a councillorship.

Suggested University for Gwalior

In the article on the late lamented Princess Kamala Raja of Gwalior published in this issue the writer suggests that a university should be established in Gwalior in memory of the beloved Rajkumari. Though we have no local knowledge, we have no hesitation to support the suggestion that the memorial should take the form of a noble educational institution. As the Rajkumari was herself an accomplished lady who, in addition to literary attainments, was possessed of artistic gifts and was also a trained soldier, the educational institution founded to enshrine her memory should aim not only at the advancement of learning like other universities but should also promote the arts and crafts of India in general and of Gwalior in particular and train its alumni to be strong and valiant sons and daughters of the Motherland.

If the suggestion finds favour, there need not be any anxiety as to where the endowment is to come from, an anxiety which is felt in connection with many another educational project.

Effects of Last Year's Floods in Orissa

About a month ago, we received copies of appeals and letters issued by Pandit Nilakantha Das, Mr. Lingaraj Mishra, Mr. Gopabandhu Chaudhuri and others asking for public help for those affected by last year's floods in Orissa. On account of the pressure on our space we were unable to draw attention to Orissa's needs in our last issue. Now that Mahatma Gandhi is about to visit that stricken region, we have no doubt that something will be done for the distressed people there. When last year we visited Cuttack and were taken by friends to a relief centre, we were convinced that help would be required for many a month to come. We wrote to that effect in the papers and the people in distress received some help. Subsequently, the charitably disposed public could think of nothing else but the cataclysmic disaster which had overtaken Bihar. But a lesser calamity is also a calamity and those who suffer from it also deserve sympathy and help. And, therefore, we again call attention to the needs of Orissa. Those who desire to send contributions will kindly do so to the Secretary or the Treasurer, Orissa Flood Relief Committee, Cuttack. That is the earnest request of Srimati Rama Devi and Messrs. Gopabandhu Chaudhuri, Nilakantha Das, Bichitrananda Das, Lingaraj Mishra, Laxminarayan Sahu, Satyanarayan Sen Gupta, Seth Harakchand Motichand, and Seth Ramlal, which we support.

"How Long Can Man Live?"

It appears from the dailies that the last Public Health Report of Bengal has been published and that it makes gloomy reading on account of the idea that it gives of the terrible rate of infant mortality and of the ravages of malarious fever and other diseases in this province. That reminds us of an article by Professor Dr. Walter Weisbach which has recently appeared in *Pester Lloyd*, a German-language daily of Budapest, Hungary, in which it is stated:

> "Whereas in 1800 the average life span amounted to only twenty-seven years [in Hungary], it has risen today to fifty-six. In other words, it has more than doubled in a little over a hundred years. This success is largely due to strenuous action on epidemics and infant mortality."

Professor Weisbach adds that

> "The disastrous effect of epidemics makes itself felt especially in British India, and Ronald Ross's book, *A Bird's Eye View of India*, states

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

since 1896 ten and a half million people have died of the bubonic plague and that in the year 1918 about seven million died of influenza. In Bengal alone 350,000 to 400,000 people die of malaria each year."

But let us revert to the question of the average life span in different countries. Prof. Weisbach says in Hungary it was 27 years in 1800 and is now 56. What is it in India? In the Indian Census Report the expression 'average life span' is not used. In the report for 1931 the mean age is stated to be 23.2 for males and 22.8 for females. So India was worse off in this respect in 1931 than Hungary in 1800, more than a century ago. *The expectation of life at birth*, in different countries has been given in the Census of India Report, Vol. i, pp. 171-72, from which we compile the following statement.

Expectation of life in years at Birth

Country	Males	Females
Australia	55.20	58·84
Denmark	54.9	57.9
England	48.53	52.38
France	45.74	49.13
Germany	44.82	48.33
Holland	51.0	53 4
India	22.59	23.31
Italy	44.24	44.83
Japan	43.97	44.85
Norway	54 84	57.72
Sweden	54.53	56.98
Switzerland	49.25	52.15
United States	49.32	52.54

In reply to the question, "How long can man live?" which forms the heading of this note, Professor Weisbach writes :

"Hufeland has stated that as a rule the life of any individual is eight times as long as the period required for complete growth. Since the average man reaches maturity between the ages of eighteen and twenty-five, this would mean that man ought to live between 144 and 200 years. But even if the fact that men take a long time to reach maturity inclines us to estimate human life at five times this period, we should be justified in expecting a life of between 90 to 125 years." [Translations from *The Living Age*.]

But in India the average expectation of life is very far from 90 or 125 years. In fact the expectation of life in India is only half of what it is in other countries which have the lowest expectation of life in the tabular statement printed above.

"Overtaken by Good Luck" !

A certain university dignitary, who was telling his audience the other day how fortunate he was, said that a certain piece of good luck had overtaken him twice ! It seems he had been fleeing from good fortune all the while, but Dame Fortune was too fleet-footed for him and so overtook him ! It is lucky that the gentleman did not speak in his mother-tongue. Had he done so, his hearers would have been deprived of the treat of knowing how original one can be in congratulating oneself on one's good fortune.

"*Public Flogging of Women in Kashmir*" ?

A Reuter's message told the Indian public some days ago that in the House of Commons,

> Lieut.-Col. R. V. K. Applin, a Conservative member, asked the Secretary of State for India for the reasons for externing Lady Nethersole from Jammu and Kashmir; also whether she might now return home. Sir Samuel Hoare replied that the lady left Kashmir under an expulsion order issued by the Resident on the ground that she encouraged agitation against the State. Lieut.-Col. Applin suggested that the lady was turned out because she protested against the public flogging of women which she witnessed. Sir Samuel Hoare replied that it was not in accordance with his information, which showed that she was causing a great deal of trouble at a critical moment, for Kashmir and it was necessary to expel her in the interests of safety."

It is clear from the above that an English lady of the name of Lady Nethersole had made her home in Kashmir and that she was externed because she was creating a great deal of trouble at a critical moment. As the exact character of the trouble and of the critical moment was not described by Sir Samuel one is left to wonder what they were. Sir Samuel was not astounded at the Lieutenant Colonel's mention of public flogging of women. He gave only a conventional bureaucratic reply. Did the critical moment have any reference to the public flogging of women, and was the "great deal of trouble" given by Lady Nethersole was in part her persistence in protesting against such flogging? In any case, the Indian public would like to know whether there was any such flogging for any reason whatsoever and whether the Resident knows of any such barbarous incident.

An Offer to Libraries

With reference to the very informative and useful book, *Rammohun Roy, the Man*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and his Work," edited by Mr. Amal Home and published by the Calcutta Rammohun Roy Centenary Committee, the Secretary to that Committee has asked us to publish the following announcement, which we do with pleasure :

The Secretary of the Rammohun Roy Centenary Committee announces that a free copy of the above book will be awarded as presentation copy to all the libraries in Calcutta as well as outside. It will be available in the office of the Rammohun Roy Centenary, 210-6, Cornwallis Street, Calcutta, on production of a signed receipt from either the Secretary or any other authority of the library, between 7 A. M. and 10 A. M. in the morning, every day. To libraries outside Calcutta it would be sent per book-post on receipt of stamps worth annas three only. The offer holds good only so long as the stock of the book is not exhausted.

"Rammohun Roy Centenary Celebrations"

Reports of Rammohun Roy Centenary Celebrations held in various parts of India and abroad, other than those of the Central Celebrations Committee, Calcutta, have been compiled and edited and published in one volume by Mr. Satis Chandra Chakravarti, M. A., Joint Secretary, Rammohun Roy Centenary Committee. The volume, covering 328 closely printed pages, has been named "Rammohun Roy Centenary 1933." The price has been fixed at Re. 1 for the general public and As. 12 for the members of the Centenary Committee. It is a very interesting publication and is well got-up.

We make this announcement in the editorial pages, as the book is not a commercial venture.

Mahatma Gandhi Answers A Harijan's Questions

Harijan for April 20 contains Mahatma Gandhi's answers to ten questions sent to him by a 'Harijan.' As Gandhiji says, they are good questions. And his answers also are good and characteristic. Hence some of the questions and answers are printed below with a few words of our own. We wish we had space for all the questions and their answers. First come the questions.

1. Mahatmajee, why are you so much interested in our cause ? 2. If all religions are one in your consideration, are the Christians not entitled to combat untouchability ? 6. Arya and un-Arya are the divisions created for us. What harm is there if we remain separated ? 8. Once you said that Swaraj can be attained the day untouchability is removed. Is this present propaganda directed to that end ? 9. If so, are you going to give equivalent rights with other Hindus to our crores of untouchables ? 10. Instead of opening temples and eradicating untouchability, suffice it if you make provisions for our livelihood.

Gandhiji's answers are :

1. I am interested in the Harijan cause for the sake of purifying myself of the taint of untouchability and doing penance for the sin ; and, being jealous of the reputation of the faith I profess, I am anxious that fellow-members of the faith should also purge themselves of the same.

If any one doing 'Harijan work' were to say that he was interested in it because it is meant for the uplift of the depressed classes, it would not be an inaccurate statement. But Mahatmaji's answer strikes a truer and a more spiritual note, a note instinct with humility.

The reply to the second question is :

2. Not only are the Christians entitled, but it is their duty, to combat untouchability in their own midst. But if the question is that Christians should combat untouchability in Hinduism, my answer is that they simply cannot do it, because untouchables of Hinduism should not be untouchables to Christians. The anti-untouchability movement means weaning Hindus from their error. This cannot be effectively done by non-Hindus, even as Hindus cannot bring about religious reform among Christians or Mussalmans. If the question means that Christians should combat untouchability among Hindus by converting untouchables to Christianity, they do not advance the cause in any shape or form, the cause being reformation among caste-Hindus. If the latter repented of their sin, the Harijans would be delivered from the yoke of untouchability in a moment. Conversion can never do it. It can only add to the prevailing bitterness and introduce a disturbing factor in a situation, which is already bad but which, owing to the work of the Harijan Sevak Sanghs and other movements of internal reform in Hinduism, is steadily improving, untouchability being daily undermined.

This answer makes Mahatmaji's point of view plain. Harijans themselves can escape from the curse of untouchability by becoming Christians or Moslems ; and by wholesale conversion of this kind the evil of untouchability may be destroyed so far as the untouchables themselves are concerned. But this would be to dismember the Hindu community and would not cure it of the evil of untouchability. Mahatmaji's aim is to keep Hinduism and the Hindu community intact and at the same time to free it from the curse of untouchability. In his view, Harijans should remain Hindus as respected and self-respecting equal members of a renovated and purified Hindu community. He is right.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The answer to the sixth question is as follows:

6. He would be a bold man who is able to say today with any degree of success who is Arya and who is un-Arya. Historians tell us that a blending of the two took place centuries ago. If now a sharp division is attempted, it will harm not only Hindus, both caste and outcaste, but it will harm the whole of India and, by implication, the whole of humanity.

Historians and anthropologists will endorse Mahatmaji's answer. There is no wholly 'pure-blooded' race or caste or sub-caste or class.

The answers to the remaining questions are:

8. I should assert the statement again. But the present propaganda is directed only to the purification of caste-Hindus and, therefore, of Hindus. And when that purification is demonstrably attained, not only Swaraj but many other desirable results will follow, as day follows night. The word Swaraj as here used does not mean a mere legal status but something far better and more lasting. I would call it an organic status evolved from within.

9. Whatever meaning may be given to the word Swaraj, removal of untouchability will be a fraud, if it does not carry with it the enjoyment by the freed Hindus of precisely the same rights as the other Hindus and all other communities may enjoy under it.

10. It is beyond me, a single, poor mortal to make provision for the livelihood of millions. That can only be achieved by their own effort and God's grace. But if temples are flung open to Harijans and untouchability is eradicated, the dead weight that is grinding them down will have lifted, and they will have an equal opportunity with the rest of their fellow-men for earning an honest livelihood.

Sind Hindus on Sind Separation

The alleged or real observation of a great Hindu leader, namely, "The Hindus are Nationalists because it suits them to be so," is often flung in the face of Hindu Nationalists, particularly those who are outside the Congress camp. We are not aware of the existence of any nationalists in any country who are nationalists because nationalism does not suit them! The acid test of the correctness or otherwise of the above observation lies in the attitude of the Hindus in those provinces where they are in a minority. Do they want a purely national and democratic constitution, or do they, like the Moslems, want separate electorates for themselves with weightage and various other safe-guards like Mr. Jinnah's '14 points'? In Bengal, Hindus would be satisfied with joint electorates in a Nationalist democratic constitution, without weightage and with no reservation of seats for themselves. Such is the case with Panjab Hindus, too. In Sind the Hindus are a small minority. They held a conference last month. According to *The Sind Observer*:

> It has been made clear beyond a peradventure that Sind Hindus stand for undiluted nationalism. They are opposed to communal electorates and reservation of seats for any community in any form and at any stage. Though they are a minority community, they are prepared to have joint electorates for the sake of Swarajya, communal peace and harmony. Though the colour and complexion of elected Hindu representatives will be determined in joint electorates by the voters of the majority community, yet, for the sake of nationalism and Swaraj, they will take cheerfully all the risks involved, knowing that they, too, will have a share in determining the nature of the Muslim members to be elected. They do not ask for any special safeguards under joint electorates (without reservation of seats) unlike Muslim minorities elsewhere.
>
> If that is accepted by our Muslim countrymen, then, the question of separation can be considered on its economic merits. But the communal question must be cleared out of the way before any discussion on separation can be initiated. The Hindus will then forget their fears of tyrannous treatment at the hands of a highly communal Muslim majority. That is the crux of the whole problem; that is the way, too, to a national settlement.
>
> But if Muslim opinion is not prepared for such a patriotic step, doubts and fears will continue to obsess the mind of the Hindus and, if Sind is going to be separated in spite of their opposition, they demand certain safeguards which are mentioned in the resolution and are eight in number.

We are sorry we have no space for these.

Strike of Bombay Textile Workers

We know Bombay textile workers have their just grievances and that they ought to have a larger share of the income of the mills than is given to them in the shape of wages. They ought also to have better housing accommodation where decency and privacy can be observed and an average standard of health maintained. But whether a strike is the best way to secure these rights is very doubtful. The Bombay mill industry has not been in a flourishing condition for some time past. Their compulsory closing by a strike cannot improve their condition and enable them to pay

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

better wages to the workers. We cannot, therefore, support the strike. It involves much suffering, loss of some lives and the unemployment and loss of income of the majority of the workers for some time at least. At the same time we cannot but condemn the obduracy of the mill-owners which had led the workers to strike. The mill-owners have made huge profits in the past. If they could have satisfied the workers even by reducing themselves to their pecuniary position so far as current profits go, they ought to have done it. It would have been good for the industry. Can there not be compulsory arbitration under the law?

What is the Meaning of "the Objectionable Nature of the White Paper?"

A statement issued to the Press from New Delhi on the 29th April last by the secretariat of the Swarajya party contains the following paragraph:

> "It is hoped that in order to focus public attention on the objectionable nature of the White Paper, steps will be taken to launch a countrywide campaign alongside organized constructive work in the country and to keep the ideals for which the Congress stands constantly before the Indian people."

What is the meaning of "the objectionable nature of the White Paper"? As the so-called communal award is an essential part and a part of the structure of the White Paper scheme, it is to be hoped that the Swarjya party considers the nature of the communal award as an essential portion of the objectionable nature of the White Paper.

If not, if the Swarajya party openly or by silence or implication accepts or acquiesces in the communal award, Hindus as a community can never go in for any so-called "united front." The result would be not unity but internecine dissensions in the Hindu community. Hindus should not, cannot, will not as a body agree to anything which humiliates them and reduces them to abject powerlessness. Not even Mahatma Gandhi or Pandit Madan Mohan Malaviya, or Dr. B. S. Moonje or Bhai Parmanand can reconcile them to such a plight. We have explained our position and given our reasons in our note on the condemnation of the White Paper *plus* acceptance of the communal award. In that note and in this, we have given our independent opinion. We have never consciously spoken from a party point of view, though the editor of this *Review* was connected with the Hindu Mahasabha for years. Now that he is no longer connected with it, it should be still more obvious that any editorial opinion expressed in these pages is non-party opinion.

It is surprising that anybody can believe that there can be any real united front if one party alone has to do all the giving and the other party all the taking.

Sir C. V. Raman's "Indian Academy of Sciences"

An Associated Press message, dated Bangalore the 28th April informs the public that

> "An all-India (!) institution under the name and style of the Indian Academy of Sciences was registered today in the civil and military station of Bangalore under the Societies Registration Act of 1860, established on a 'distinctly federal basis' (?), with Bangalore as the temporary headquarters, says Sir C. V. Raman."

This attempt to forestall the decision of the Indian Science Congress Committee completely proves a previous assertion of Sir C. V. Raman's to the effect that Calcutta scientific circles are full of cliquism, with its corollary that Bangalore is quite free from it. Those who want to know all about the *proposed* Indian Academy of Science should read the article on the subject in our last March number.

THE MODERN REVIEW

JUNE 1934

VOL. LV., No. 6 WHOLE No. 330

ON RUSSIA

BY RABINDRANATH TAGORE

I have already said how impressed I have been by my first acquaintance with Soviet rule. The reasons for this are worth examining.

In the background of the picture of Russia that has taken shape in my mind lurks the dark misery of India. If the reader pauses to consider the reality behind this misery, it will be easier to follow my meaning in the present discussion.

The attainment of political glory was the inner urge of the expansion of Moslem rule in India. In those days struggle for territory always had this for motive. Alexander of Greece swept the foreign skies with the flaming tail of his comet-like army solely to extend his power. Romans felt a similar impulse. Phœnicians traded from shore to shore, but never scrambled for empires.

When at last Europe with its merchant fleet reached the shores of the Eastern continent, a new chapter in human history opened. The Age of Chivalry passed; the Age of Commerce dawned. In this epoch legions of adventurers scattered over foreign lands to trade, but behind the display of their wares raised empires. Their main concern was increase of profit; they cared nothing for chivalry. In pursuit of this, they did not hesitate to follow crooked paths, because their object was success, not glory.

At this time India was renowned for her immense wealth, a subject repeatedly referred to by foreign historians of those days. Even Clive himself declared:

> Consider the situation in which the victory of Plassey had placed me. A great prince was dependent on my pleasure; an opulent city lay at my mercy; its richest bankers bid against each other for my smiles; I walked through vaults which were thrown open to me alone, piled on either hand with gold and jewels! Mr. Chairman, at this moment I stand astonished at my own moderation!"*

Such mighty treasures are not easily obtained—India produced them. In the past those who came to rule here enjoyed our wealth, but never squandered it. In short, they were æsthetes, but not merchants.

To facilitate trade, the foreign merchants set up their imperial throne on the merchant's seat. Times were favourable. The Moghul Empire was in the grip of decay; the Mahrattas and Sikhs were busy untying the knots of the Empire; in the hands of the English it was reduced to shreds and to final destruction.

It cannot be said that in the reign of kings pursuing imperial glory there was no oppression, no injustice, no discord in this country. None the less these kings belonged to this country. The wound they inflicted was skin-deep; it bled, but never affected the nervous system. The manifold wealth-producing activities continued unimpeded; the Nawabs and Badshahs even encouraged

* *Cf.* Clive's evidence before the Select Committee of the House of Commons.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

them. Had it not been so, why should there have been such an assemblage of foreign merchants here; why such a swarming of locusts in a desert?

Subsequently, King and Trader met in India and in this fateful moment began the hacking at the roots of the tree of wealth—an oft-repeated but discordant tale. But simply because it is an old tale it will not do to draw the veil of forgetfulness over it. Here is the genesis of this country's unbearable burden of poverty. India had wealth, but if we forget by what means it was transported beyond the seas, a basic fact of modern history will elude us. The mainspring of the present political system is not the pride of heroism, but the greed of wealth. This truth must be kept in mind. Royal glory binds king and subjects in a human relationship, but not so the greed of wealth. Wealth is cruel, impersonal. Greed not only collects the golden eggs but also kills the goose that lays them.

The greed of the merchant-king has sapped India's varied wealth-bearing powers. Agriculture alone has been spared, or else the supply of raw materials stops, and the power to pay for foreign commodities is completely undermined. The day-to-day existence of India hangs by this very slender thread.

Let us admit that the skill and methods of production on which the livelihood of craftsmen depended in the past have become obsolete owing to the competition of machinery. Hence what was essential for their survival was to help them by all possible means to become efficient in the use of machines. In the struggle for existence, this effort is vigorously pursued in every country today. In a short time Japan has mastered the mechanical technique of wealth production; otherwise she would have been crushed out of existence by the conspiracy of mechanical Europe. That opportunity never came our way, because greed is jealous. Our existence withers away at the touch of this colossal greed, but what matters? Law and Order is still there to protect us! On our side, we have mortgaged our food, clothing, education, and all to pay for the watchman's livery. Nothing but greed is at the bottom of this fatal indifference. And the while, from our post far below helplessly look up to the seat of all knowledge and power and listen to words of comfort from on high: "Never mind your loss of strength; we are powerful, we shall protect you."

Greed exacts service, but never respects. One who is not respected is ignored as far as possible; at last he becomes so cheap that it galls to spend ever so little on him even in his direst need. How meagre is our life's demand, how little we expect to keep our human decency is not unknown to anybody. No food, no education, no medical aid; drinking water can be had only by straining mud; but there is no limit to the number of watchmen; no end to the number of fat-salaried officials, whose emoluments flow like a gulf-stream to warm the British Isles; we supply their pensions by economizing on our last rites. Greed is blind, remorseless. India is an object of greed to the rulers of India.

And yet, even in times of hardest trials I cannot own to myself that magnanimity is lacking in the English character; other Europeans in their treatment of subject peoples are less generous and more cruel than the English. The opposition that we show in word and deed against the English race and their administration is unthinkable against rulers of other races. Even had it been otherwise, the punishment would have been far less bearable, proof of which is not wanting in Europe itself or even in America. Even when we openly revolt and are punished by the officials, we complain in surprise, which only shows that even in the midst of the beatings we receive our deep respect for the English people dies hard. We expect far less from our own Rajahs and Zamindars.

During my sojourn in England I have noticed that disgraceful incidents about Indian administration hardly ever appear in the English newspapers. This is not merely for the sake of her reputation on the Continent and America. Indeed, even a firm English administrator fears his countrymen's good sense; it is not easy for him to boast of his exploits, because there are great minds among the English. English people know little of the real facts about India. The causes of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

self-reproach are suppressed. At the same time it cannot be denied that those who have for long eaten India's salt have become tainted in their English liver and heart, and yet to our misfortune, it is these who are authorities on us!

In connection with the present political upheaval in India, the authorities claim that punishment has been minimum. We are loth to agree, but comparing past and present methods of administration we cannot dismiss this as an exaggeration. We have been beaten, often unjustly beaten, and worse still is the punishment meted out in secret. I shall also add that in many instances the glory is theirs who have been beaten; those who have beaten have forfeited respect. But judging by ordinary administrative standards the punishment has indeed been minimum, especially as our rulers have no ties of blood with us, nor was it physically impossible for them to turn the whole of India into a Jallianwalabagh. Even in normal times, it requires little imagination to picture to oneself the hideous flow of blood that would occur, were the entire negro population of the United States boastfully to engage in a struggle for emancipation. Besides, it is superfluous to dwell on what has happened in Italy and other countries.

But this is little consolation. The punishment that is at the end of the stick grows tired in time, indeed may even be ashamed of itself. But the persecution that is deeper does not disappear by merely breaking a few heads behind the scenes of the bridge-party or the clubroom. It bleeds the whole nation to exhaustion. Century after century this process continues. Angry beatings cease, but greed never stops.

In the *Times Literary Supplement* I came across an author called Mackee who said that the "root cause" of India's poverty was excessive births due to indiscriminate marr age. The implication is that the sucking that continues from outside would have been more tolerable had there been fewer mouths to feed. It is said that between 1871-1921 the population of England rose by 66 per cent. In India the increase of population was 33 per cent in fifty years. Whence is this difference? It follows that the "root cause" is not increasing population, but inability to provide food. What is the "root cause" of the latter?

If the destiny of the rulers and the ruled were the same, there would be little cause for complaint, at any rate on the score of food. In other words, in times good and bad their respective shares would be similar. But where the one is separated from the other by colossal greed and giant oceans, the latter is ever starved of education, health, and deprived of dignity and material well-being, but provision for the midnight watchman's bull's-eye lantern never ceases to increase. Not much statistical intricacy is involved to see that during the last hundred and sixty years the all-round poverty of India and England's all-round prosperity lie close together. If we want to draw a complete picture of this, we must place the scene of life of a Bengali peasant, who produces jute, side by side with the life led by those who enjoy its profits in far-off Dundee. They are both connected by greed, but separated by enjoyment: the division has yawned wider and wider during the last century and a half.

No sooner did the manifold multiplication of profit by machinery become possible than the chivalry of the Middle Ages was converted into commercial morality. The opening of this remorseless commercial age coincides with the circumnavigation of the earth. The commercial age arose out of plunder. Mother Earth groaned in agony at the hideousness of slave-hunting and pillage of wealth. Foreign soil was the main scene of this cruel business. In those days Spain wiped off not only Mexico's accumulation of gold, but her whole civilization with blood. At last the gory storm clouds from the West reached the shores of India in repeated gusts. It is unnecessary to discuss their history. The flow of wealth turned from the East to the West.

From now onwards Mammon became firmly seated on his earthly throne. Science proclaimed that the law of the Machine was the law of the Universe: eternal truth there was none beyond outward success. Aggressive competition spread all round: brigandage became respectable in the guise of gentility. By the highways and bye-ways of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

greed slavery was reintroduced under a false name. European literature is replete with horrible descriptions of savage exploitation, deception and cruelty in factories and mines and on big plantations. In the West those who grow rich and the people who produce wealth have been at loggerheads for a long time. Sociability is man's chief religion: nothing destroys it more than greed. In the present age this enemy is convulsing human society and loosening and disrupting man's social relations.

In one's own country, among one's own people, however great may be the suffering due to the cruel division of classes in the economic sphere, the field of opportunity is open to all; there may be difference of power but there is none of rights. In the mill of wealth-production the upper and the nether millstones may well change places any day. Besides, the wealth accumulated by the rich, at any rate some part of it, is invariably distributed throughout the whole country. Individual wealth cannot help undertaking some responsibility in the national fortunes. Popular education, public health and other activities for people's welfare are enormously costly affairs. Whether they wish it or no, directly and indirectly the rich meet these varied demands of the country.

But only the barest leavings of the wealth which goes to enrich foreign merchants and public officials fall to India's own share. While the profound wants of the jute cultivators—their education and health, are left gaping like ditches and cesspools in drought, nothing of the outflowing profits turns back towards them. What leaves, goes for good. Rural water supply is contaminated by jute to make profit possible, but not a farthing drops out of the foreign trader's bulging money-bag to remove the unbearable scarcity of drinking water. If water is to be provided, it must come by taxing the life-blood of these destitute and hungry wretches. If there is no money in the royal treasury for the education of the people, why is it not there? It is largely because vast sums of money leave India for ever: the earnings of greed become complete strangers. In other words, water on this side evaporates into rain-clouds to pour down on the land beyond the seas. Long and unnoticed, hapless, ignorant, diseased and moribund India has been purveying for the hospitals and educational institutions of yonder country.

For a long time I have been an eye-witness of the supremely tragic sight of the mental and physical agony of our people. Poverty not only kills, but makes one contemptible. That is why Sir John Simon could say: "In our view the most formidable of the evils from which India is suffering have their roots in social and economic customs of long-standing which can only be remedied by the action of the Indian peoples themselves." These are indeed words of disdain! The ideal by which he has judged India's needs is not his own. The advantages of unlimited education, opportunities and freedom, which his own people enjoy for producing abundance of wealth, have enriched from many sides their ideal of life in education, action and enjoyment. India in rags, emaciated of body, exhausted by disease and starved of education must not even dream of this ideal. We must carry on as best we can by preventing the increase of our population and limiting our expenses so that their bloated ideal of life may grow for ever at the cost of our own. Beyond this there is nothing more to think; and therefore the entire responsibility for the remedy lies on us; those who make the remedy difficult have little to do.

But I have ceased to complain against Man and God and for some time have been devoting my limited energy to infuse life from within into our lifeless villages. In this effort I have not disdained government favours, nay, even desired them. But I have been disappointed, because sympathy is absent. Sympathy is not possible for our helplessness, our diverse miseries have crippled our demands. At last I have arrived at the conclusion that real constructive work adequate co-operation between the government and our workers is not possible. Therefore let us do what we can with the few coppers that remain after paying for the watchman's livery.

I came to Russia at a time when rapid greed and its offspring, insufferable indifference, had filled my mind with dark despair. I

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

familiar with the ostentation of wealth in other European countries, but it is so Olympian that, poor as we are, even our envy fails to reach its height. In Russia, the display of luxury is wholly absent; probably that is why it was easy to catch a glimpse of her true being.

Here I saw mighty efforts being made to provide universally everything of which India is deprived. Needless to say, I have seen it all with my own long-hungering eyes. It is impossible for me to judge correctly how the sight strikes a Westerner, fortunate in the enjoyment of freedom. I do not want to argue about the amount of India's wealth that left for the British Isles in the past nor how much is still leaving today and year by year by devious channels for the same destination. But I can see very clearly, and many English writers also admit it, that in the bloodless body of our country mind has suffered an eclipse; there is no joy in life: we are dying in mind and body. But on no account shall we bow down to the calumny that its "root cause" is in some moral perversity of the Indian, that its cure is beyond the power of any government.

I have always known that the relation of India's foreign rulers with India is one of strong self-interest and not of sympathy; the enthusiasm to maintain Law and Order with great vigour, therefore, is only natural, but in matters in which the interest is entirely ours, where it concerns the revitalizing of our country in every respect, materially and spiritually, the government is indifferent; it does not exert itself adequately. In other words, not even a portion of the efforts and sympathy of our rulers for their own country can be spared for us. And yet everything that we can call our own belongs to them: we possess neither means nor material which can save us from annihilation.

Even if it were true that we were in the grip of decay because of our stupid social organization, the education and encouragement which could remove this ignorance must wait upon the exchequer of a foreign government and upon royal vagary. The calamity of country-wide ignorance cannot be averted by advice tendered by a commission: the government must face it, as the British Government would, had this been a problem of the British Isles. Our question to the Simon Commission is, if it is true that the loss of India's vitality is due to her ignorance and long-standing social customs, why has there been no improvement during the hundred and sixty years of British rule? Has the Commission shown with statistics how much the British *Raj* has spent in this long period to maintain the policeman's baton and how much to educate the country? The policeman's baton is indispensable to the wealthy rulers from foreign parts, but it matters little to them to defer for centuries expenditure on the education of those whose skulls are at its mercy!

In stepping on the soil of Russia, the first thing that caught my eye was that in education, at any rate, the peasants and working classes have made such enormous progress in these few years that nothing camparable has happened even to our highest classes in the course of the last hundred and fifty years. And yet eight years ago they were as helpless, hungry, oppressed and illiterate as our Indian masses: indeed, in certain respects their misery was even greater, not less than ours. The vain picture of national education, our heart's desire, which I dared not draw even on the canvas of mirage is here a reality stretched from horizon to horizon.

Again and again I have asked myself: How has such a great miracle been possible? The answer that I have received in my mind is that here there is no barrier of greed. To think that by education everybody will become adequately competent seems so natural. The people here are not at all afraid of giving complete education even to Turcomen of distant Asia; on the contrary, they are dreadfully earnest about it. They have not relapsed into indifference after pointing out in their report that the root cause of all the misery of the people of Turcmenistan lies in their traditional ignorance.

With reference to the expansion of education in Indo-China, I have heard of a certain French pedant who advised France against repeating the mistakes the English have committed in the education of the natives of India. It must be admitted that there is a certain nobility in the English character in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that there should be occasional lapses in their policy towards the subject races : that there should be occasional faults in the close web of their rule ; or else who knows how many more centuries we would have taken to become articulate ?

It cannot be gainsaid that in the absence of education weakness becomes immobile, so that ignorance is as effective as the policeman's baton. Of this Lord Curzon seems to have had an inkling. The French pedant judges the needs of his own country by an ideal not considered necessary for those of the subject peoples. Its only reason is greed. To the greedy the humanity of the object of greed loses its reality ; it becomes natural to minimize its demands. India has grown small in the estimation of those with whom her lot has been cast for a century and a half. This is why the indifference of the authorities towards India's profound needs never changes. What food we eat, with what water we quench our thirst and what dense ignorance clouds our mind escape their notice even today. The main thing is that we are indispensable to them : it is unimportant that we too have our vital needs. Besides, we have become so very futile that it is not even possible to respect our needs.

The grim problem that has been sapping our body and mind in India all this time exists nowhere in the West. It is the fatal division of India's rights, the cause of which is greed. Thus when I saw greed humbled in Russia, it gave me joy such as others may not normally feel. Indeed the thought that is uppermost in my mind is that not only in India but throughout the world today, wherever one sees the net of a major disaster cast, its main motive is greed, accompanied by fear and suspicion and supported by war preparations, lies and cruel politics.

Dictatorship is another topic of argument. Personally I am not enamoured of dictatorial rule in any sphere. In my own field I have never in the least tried to further my opinion by threat of harm or punishment or by use of bullying language or manner. There are undoubted dangers in dictatorship. The harmony and constancy of its action are uncertain ; the imperfect contact between the wills of the leader and the led becomes a constant source of revolution ; besides, the habit of passive following weakens mind and character ; its very success defeats itself.

The destiny of the people unrelated to its united will is like a cage ; even though there may be a plentiful supply of food and drink it cannot be called a nest : in it the wings are paralysed. There is no more unmitigated nuisance to one's manhood than authority, whether of scriptures, *gurus*, or political leaders.

The emasculation of our society has gone on for decades and its result is familiar to all. When Mahatmaji called foreign cloth impure, I protested and said that it might be economically harmful but could on no account be impure. But our blind scripture-led mind must be bewitched or else nothing gets done. What can be more eternally humiliating to one's manhood than this? Thus is a dictator-led country hypnotized; one magician takes leave to be replaced by another with a different formula.

I admit that dictatorship is a great nuisance and I also believe that in its name many persecutions take place in Russia. Its negative aspect is compulsion, which is sin. But I have also seen its positive aspect, and that is education, the very reverse of force. If the mind of the people is one in the making of the country's fortunes its activity becomes creative and permanent. To the zealots of authority the only means of obtaining their ends is to keep everybody else's mind paralysed by ignorance. In the reign of the Tsars the people's mind deprived of education was under a spell and round it like a boa-constrictor coiled religious superstition. The emperor could without difficulty put this ignorance to his own use. It was then easy to provoke orgies of frightfulness in the name of religion between Jews and Christians, between Musalmans and Armenians. The loosely knit country weakened by ignorance and religious superstition fell an easy prey to the external enemy. Nothing could be more favourable to the perpetuation of autocratic rule.

As in former Russia, this condition has existed for ages in our country. Today, the country has yielded to the leadership of Mahatmaji, but when he is no more, pretenders will spring up as suddenly as do *avatars* and *gurus* everywhere before our religious fanatics.

Today in China, leadership is the object of continuous and destructive struggle among a number of ambitious militarists, lacerating the whole country into pieces, because the education that could guide the destiny of the country by united will is absent. I cannot credit the opinion that we shall not also have our share of the grim struggle for leadership; then it will be the turn for the grass, that is the public, to be trampled on, because it is grass and not tree.

In recent years Russia has witnessed the vigorous rule of the dictator. But to perpetuate itself it has not chosen the path of the Tsars, namely, the subduing of the people's mind by ignorance and religious superstition; the impairing of their manliness by the lash of the Cossacks. I do not believe that the punitive rod is inactive in the present Russian regime, but at the same time education expands with extraordinary vigour. The reason is that greed of individual or party power and of money is absent. There exists the irrepressible will to convert the public to a particular economic doctrine and to make a man of everybody, irrespective of race, colour and class. Had it not been so, one must needs agree with the French pedant who said that to give education was a great mistake.

Time is not yet to say whether the economic doctrine is completely valid, because so long it has tottered among books; never before has it enjoyed freedom so fearlessly and over so vast a field. At the very outset they ruthlessly banished the powerful greed which would have jeopardized this economic theory. Nobody can definitely say what final shape it will take as it passes through one experiment after another. But this much is certain that the education, which at long last the Russian masses are so freely and abundantly enjoying, has improved and brought honour to their humanity for all time.

One always hears rumours of cruelty of the present regime in Russia—which is not improbable. It is unlikely that her long tradition of cruel administration will disappear suddenly. At the same time the Soviet Government is untiring in its efforts to inculcate by means of pictorial and cinematographic interpretation of history the horrors of the system of government and oppression under the old order. If the present government as well should adopt a similarly ruthless policy, it must be called a strange mistake, if nothing else, to create so strong an aversion to cruel treatment. At any rate, to defame Siraj-ud-daula for the black hole tragedy by cinema and other means and at the same time to perpetrate the Jalianwalabagh (Amritsar) affair would not unfairly be called the height of stupidity, because in this case the weapon is likely to turn against the thrower himself.

It is obvious that a violent effort is being made to cast public opinion in Soviet Russia into the mould of Marxian economics; out of this obstinacy free discussion on this topic has been deliberately stifled. I believe accusation on this score to be true. A similar attempt was made during the last European War to muzzle public opinion and to crush the independence of opinion of people opposed to the government policy by imprisonment and hanging.

Where the temptation for quick result is too strong, the political leaders are loth to respect man's right to liberty of opinion. They are wont to say: "Let us attain our objectives first: we shall attend to other things later." The situation in Russia resembles wartime conditions. She is beset with enemies at home and abroad. There is no end to manœuvring all round to wreck the entire experiment. The foundations of their structure therefore must be strengthened as quickly as possible; hence they have no qualms about using force. Nevertheless, however insistent the necessity may be, force is one-sided. It destroys, but does not create. The process of creation is twofold. Its raw material has to be assimilated not by coercion, but by the recognition of its inner nature.

Russia is engaged in the task of making the road to a new age; of tearing up the roots of ancient beliefs and customs from their ancient soil; of penalizing the luxury of time-honoured habits. When man finds himself in the whirl of destructive frenzy, he is carried off his feet by its intoxication. Conceit grows; he forgets that human nature has to be wooed; he thinks that it is enough to tear it up from its old moorings. Who cares what happens afterwards? Those who have not the patience to wait for human

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

nature to come to terms in its own time believe in persecution; what they finally build up overnight by violence cannot be relied upon; it cannot support the burden of permanency.

Where theory is ready, but not men, I repose little trust on unbridled autocrats. Firstly because it is not good sense to take one's opinion for granted: the test of its validity lies in experience. It is curious how those who have no faith in the scriptural authority of religion are the very people who are unmoved in their belief in an economic doctrine. By means fair or foul they try to reconcile people to the latter without realizing that, even were it possible to do so by compulsion, it does not prove the truth of the teaching; indeed its truth is inversely proportional to the use of force.

When Europe's faith in the teachings of Christianity was intense, the attempt was made to prove the truth of religion by breaking men on the wheel, by burning them at the stake and by crucifying or stoning them to death. Today, both friends and enemies of Bolshevism are indulging in similar unrestrained dogmatism. They accuse one another of abusing man's freedom of opinion, with the result that human nature in the West is being harried to death from both sides.*

I have already stated my opinion on popular education in Russia and also discussed how, since politics there ceased to be tainted by the greed of profit-seekers, every Russian citizen, irrespective of race and colour, has been exalted by the equal enjoyment of rights and superior education. Being a subject of British India myself, both have given me profound pleasure.

I believe, I will now have to answer one last question. Many people have asked my opinion about Bolshevik economics. My only fear is that in a scripture-ridden and priest-led country the natural bent of our ignorant mind is towards accepting a foreign dictum as biblical truth. Guarding ourselves against this danger, we must say that a doctrine can be tested only by application: the end of the experiment is not yet. Any teaching concerning man must have human nature for its chief element. How far it will harmonize with human nature is a matter of time. One must wait before fully accepting the principle. Nevertheless it is possible to discuss the matter, not only as an exercise of logic or statistics, but by always keeping human nature in the foreground.

Man has two sides—the individual and the social. One is unreal without the other. When man in a sudden impulse rushes headlong in one direction, and losing balance causes all manner of trouble, the counsellor wanting to cut short the crisis advises chopping off one side altogether. When individualism turns into downright selfishness and runs foul of society, the lopping off of "self" at one stroke from self-interest is the proposed remedy for all trouble. Trouble may thereby be lessened, but it is not improbable that society will cease to move altogether. A horse without reins is apt to drag the carriage down into the ditch, but the carriage is not likely to behave merely because the horse is shot down: it is necessary to think of the reins.

Men fight because they are physically distinct from one another; hence to propose to create only one huge body in the world by binding all men hand and foot with a rope is only worthy of a boastful economist of a Tsar. To try to excel the law of Providence shows more stupidity than courage.

Once Indian society was mainly rural. In this intimate environment there was harmony between personal and common property. Public opinion was so strong that the rich man was ashamed of enjoying his wealth alone. He felt honoured when society accepted favours from him; in short, in this relationship there was nothing of what is called charity in English. The wealthy took his place by the side of the destitute. To maintain his status in society he had to contribute very liberally in many indirect ways. Pure water, medical aid and education, temples, entertainments and village roads were provided out of private means flowing into

* Here the Poet quotes a Baul (a member of a mendicant religious sect) song dwelling on the futility of forcing truth upon an unwilling world and comparing Man's impatience to realize his ultimate object with God's infinite patience in creation. . . . "the realization of our ultimate object is waiting for us. The Baul likens this fulfilment to the blossoming of a bud . . ." (*Cf. Creative Unity*, p. 76).—The Translator.

social channels and not out of royal revenue. Here individual and communal will could co-operate. It was spiritually creative because its basis was voluntary and not political agency; in other words, it implied not merely the external success of law, but personal improvement as well. The latter element indeed is the lasting living refuge of human welfare.

The position of the merchant community whose main business is the earning of profit by investment was low in our society, because in those days wealth was not held in much esteem. Consequently, the great difference between the rich and the poor was then non-existent. Wealth acquired its status in society not by huge accumulation, but by fulfilling its noble responsibility: otherwise it was ashamed of itself. That is to say, not wealth but virtue was honoured. Nobody felt humiliated in doing this honour. It is because those days are gone that signs of impatience towards wealth without social responsibility are evident in many forms, because wealth brings no suffering to man: it humiliates.

From the very outset European civilization has sought to consolidate itself in the city. In the city man's opportunities grow while his social relations narrow. The city is big; men live dispersed; individualism is extreme and the whirl of competition intense. Its prosperity accentuates the gulf between the rich and the poor and what little is done to bring them together by charity is devoid of comfort and respect. There the possessor and producer of wealth are related to each other by material ties: their social relations are either disrupted or non-existent.

The advent of the Age of Machinery was heralded, profits increased inordinately. When this epidemic of profit-making began to spread all over the globe, the helplessness of the distant stranger and the poor knew no bounds. China was made to eat opium; India had to part with her all; the suffering of Africa, the victim of age-long oppression, went on increasing. But this concerns the non-European world only; even within the Western continent a grim division separates rich from poor today; the ideal of life having enormously costly and its trappings manifold, the differences between the two appear all the more striking. In the old days, at any rate in our country, the pomp of wealth consisted mainly in philanthropy and other social services, while now it consists in personal enjoyment. It dazzles, but does not please: it causes envy, but raises no praise. The main thing is that in those days the use of wealth did not depend on the wish of the donor alone; it was subject to the strong pressure of social will. Hence the benefactor had to make his gift humbly; the maxim, "give reverently," held good.

In short, the tremendous power that wealth gives to the rich today can never dignify nor please everybody. It arouses infinite greed on the one hand and profound envy on the other, raising an insuperable barrier in between. Competition grows inordinately more powerful than co-operation in society. It rages between one class and another within the country and between one country and another. Thus on all sides suspicion forges fierce weapons whose growth nothing can check; while those strangers engaged in the task of appeasing the hunger of the far-off demon of greed grow leaner and leaner age after age for want of blood. Those who proudly imagine that the world's unrest cannot thrive on this widespread emaciation are blinded by obstinacy. These unfortunate wretches who eternally suffer are the main allies of the messengers of the god of Sorrow: the fire of revolution is being laid in their hunger.

Bolshevism originates in this inhuman background of modern civilization. It is like the storm which rushes in all fury flashing its lightning-teeth when the pressure is low in the atmosphere. This unnatural revolution has broken out because human society has lost its harmony. It is because the individual's contempt for the community has been growing that the suicidal proposal of sacrificing the individual in the name of collectivity has arisen. It is like proclaiming the sea to be the only friend when the volcano is causing trouble on the shore. It is only when the real nature of this shoreless sea is known that one becomes impatient to get back to the shore. Man will never tolerate for all time the unreality of individual-less collectivity. The strongholds of greed in society must be conquered and controlled, but who will protect society, if

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the individual is to be banished for good? It is not improbable that in this age Bolshevism is the treatment, but medical treatment cannot be eternal; indeed the day on which the doctor's regime comes to an end must be hailed as the red-letter day for the patient.

I pray for the victory of the co-operative principle in the production and control of the wealth of our villages, for it recognizes human nature in not scorning the desire and opinion of the co-operators. Nothing succeeds by antagonizing human nature.

In this connection, I must stress one point. When I wish our villages to revive, I never wish for the return of rusticity. Rusticity is a species of superstition and education, intellect, belief and activity, which is unrelated to anything outside the village limits. It is not only distinct from the spirit of the modern age, but opposed to it. The scope of modern knowledge and mind is universal, although the sympathies of the modern heart are not as wide. Villages must be infused with life which is neither trivial nor narrow; which neither dwarfs human nature nor keeps it in darkness.

Once I happened to stay at a farmer's house in England. I noticed that the girls of the house were restless to go to London. In comparison with all the glories of the town the resources of the villages are so poor that the hearts of the villagers are not unnaturally constantly drawn towards the town. Even in the heart of the country the villages feel like so many places of exile. I have seen in Russia the attempt to do away with the contrast between the village and the town. If this attempt succeeds the unnatural expansion of the towns will be checked. The country's vitality and intellect will spread and be active throughout the nation.

I want our villages to enjoy full human dignity and wealth instead of being content with the leavings and surplus of the towns. It is my firm belief that by co-operative methods alone the village will find it possible to salvage its sinking strength. The regrettable thing is that until now co-operation in Bengal has lost itself solely in money-lending—a slight improvement on money-lending rusticity; it has been of no service to the task of production and consumption.

The main reason is that co-operation has come to our country official-ridden, under the patronage of an administrative system which is blind, deaf and indifferent. At the same time we must perhaps shamefully admit that the qualities which make co-operation easy are lacking in our character. Mutual trust is feeble in those who are themselves weak. Indeed absence of self-esteem is the basis of disrespect for others. Loss of self-respect from long servitude has culminated in this degradation. They will accept with bowed head the rule of their masters, but cannot tolerate the guidance of their own class; it is easy for them to cheat their own people and to treat them cruelly.

One learns from Russian story books that the condition of the long-suffering Russian peasantry is similar. However difficult the solution, there is no other way; nature must be corrected by creating opportunities for combining the forces of mind and body. It is not by granting co-operative credit, but by combined effort, thereby making the villagers co-operation-minded, that we shall save the villages.

Translated from the Bengali by Dr. Sasadhar Sinha, Ph. D.

Revolution is impossible without an all-national crisis, affecting both the exploited and the exploiters—*Lenin.*

THE TRAINING OF TEACHERS FOR VILLAGE GIRLS' SCHOOLS AND COMMUNITY SERVICE: PLANNING FOR THE FUTURE

By Miss USHA BISWAS, M. A., B. T.

BEFORE determining the steps to be taken to train teachers for village schools and community service, we shall do well to think out the type of education that is most suitable for village girls. We must also be quite clear and definite as to the aim and purpose of the education that is to be provided for the girls of the rural community. Barring a few isolated experiments in a new type of rural education that are being carried on, here and there, in this province by some of the Christian Missions and private agencies, a uniform system of education is generally in vogue both at the rural and urban schools. Efforts are seldom made to adapt the rural schools to the peculiar needs and conditions of the villages where they are located. Consequently, village schools fail to meet the real needs of the community, and thus alienate the sympathy of the local people. Unless a rural school can satisfy the requirements of the locality, it cannot be expected to be looked upon as an integral part of the community. Naturally enough, the parents are inclined to think that their children derive very little benefit from the schooling they receive. They, therefore, grudge to spare their children, for so many hours every day, for what seems to be a mere waste of time, energy and money. At the present time, the imperative need of modifying the entire educational system is being keenly felt by many, inasmuch as it seems to be too much dominated by what Bertrand Russell terms "the desire for sex equality." Indeed, the current curriculum is hardly designed to respond to the special needs of our girls. The little provision that has been made in it for a few special subjects for the girl pupils, such as cookery, domestic economy, needlework and the like does not suffice for the purpose. The village Primary Girls' Schools being mostly staffed by men, at the present time, very little facilities are provided for teaching even needlework to the girls. So the education that the village schools generally impart is of a purely literary and academic character. This course is intended to be a preparation for College and University education. It is needless to add that this type of education is anything but a misfit in the rural community, where 99 p. c. of the girls get married after a short career at the schools and are not likely to go in for higher University education. So these prospective wives and mothers of the rural community need to be "trained not only in books but in the art of home-making also." The bookish education that the girls receive at the average village school does not help to prepare them for their main occupation in life. After leaving school, the average village girl lapses into illiteracy, as the work that she had to do there is totally unrelated to the activities of her later life. Thus the rural school becomes entirely divorced from rural life, and the children, too, seldom care to improve the conditions around them. This maladjustment to rural conditions stands in the way of the progress of village education. School education thus tends to be looked upon with distrust, and is regarded as a sort of luxury that can be dispensed with. The view of Bertrand Russell that "some part of the female education should be a technical training for motherhood" seems to be a very sound one. The village girls, especially, are badly in need of this training. Another grave defect that is generally noticed at the village schools is that handwork and manual training are neglected there. But the majority of the pupils of the rural schools are the children of farmers and artisans. They are, therefore, destined for a homely career in their later life. So the over-emphasis of an academic education befitting gentle women, is likely to engender a lack of respect for manual labour among the school girls, who

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

may thus feel inclined to look down upon the calling and occupation of their own class. But education, to be worth the name, should consist in training people to be good citizens and useful members of the community. So organized efforts need to be set on foot in no time to give a new orientation to the rural schools for girls which have been neglected so far. Nothing short of thorough overhauling of the present curriculum and the method of instruction will be of any avail in making the schools function. The subjects to be taught to the village girls have to be selected with special reference to the needs of the rural community, inasmuch as the schools should aim at training the pupils in the work that will prove helpful to their own community. Our main problem is, therefore, how to turn out better housewives and more useful members of the rural community. In a word, the girls should be taught how to make better homes and better villages, when they leave school. Consequently, special stress should be laid upon health (including hygiene, sanitation and first aid), household management, cookery, dietetics, mothercraft and care of children, home industries and needlework. School gardening, educative handwork, practical nature study, music and games should also be included in the curriculum. Occasional lessons may well be given in poultry-raising, care and improvement of live-stock, dairying and the rudiments of agriculture. In fact, the curriculum ought to be properly adjusted to the needs and conditions of particular villages and localities. Girls may be trained in a few useful handicrafts too. If they can thus help the male members of the community in their agricultural and industrial pursuits, the economic problem of the villages may be partly solved. Thus the village schools can be made more responsive to the needs of the rural community. If the instruction imparted at the village schools is to be sounder and more lasting, the project method may well be resorted to with a view to linking the lessons of the class-rooms to the everyday experiences of the children's life. At the village schools, everything may be taught on a project basis. Thus the "situations of real life" can be introduced into the class-rooms. For example, the problems relating to cleanliness and sanitation may be worked out in the hygiene classes. Practical Arithmetic may be taught through the shop project, in connection with buying and selling. So the facts that the pupils learn are the results of their practical experience. The method is a tried one, and the principle underlying it is "learning by doing." The pupils are thus taught to develop initiative and resourcefulness, and are also trained in co-operation, self-reliance and "purposeful activity." In this way, a practical bias can be given to the whole of their education.

A village school can be a vital agency for rural uplift in various ways. It should constitute an important community centre, and, as such, its function should be to disseminate sound educational ideas and healthy ideals among the public which will make for a better and healthier life of the village people. With this end in view, entertainments, social gatherings, parents' and teachers' meetings, baby clinics and baby shows, midwives' classes, health campaigns and the like may well be held at the school. Excursions, exhibitions and *melas* are also of great help in promoting a public spirit and stimulating community interest. The school can thus provide for the education as well as recreation of both the children and adults of the village. The school authorities may also co-operate with the sanitary and agricultural officers as well as the Co-operative Society Secretaries in organizing, from time to time, lantern lectures at the school, for the benefit of the villagers, both young and adult. A circulating library, too, containing a choice collection of good books, may well be maintained at the school to which the literate section of the village population should have easy access. Thus the school and the community can be brought closer together, each helping the other. The school may serve as a model to the whole village, in respect of sanitation, gardening and farming. An ideal rural teacher needs to be a strong community leader, the noble mission of whose life should be to serve the village people and to contribute her share to their betterment. She should have the best interests of the community at heart,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

should eagerly participate in all the activities, pertaining to village welfare. She cannot, therefore, afford to neglect adult education, the importance of which cannot be stressed too strongly. She can well undertake this work, out of school hours at night, provided her time and circumstances permit. She can also take up the instruction of adult women in sewing, elementary nursing, hygiene, village sanitation and the care of infants at her spare moments, by cutting down her own leisure hours. For this part of her work, she will need a special training. If she herself is not sufficiently equipped and qualified for the task, she may secure the help and co-operation of some outside agencies. Now and again, she may, also, arrange for special demonstrations, showing how to improve upon the sanitary arrangements of the village houses, how to make these more comfortable and beautiful with the minimum of expense.

It is no use formulating a programme of rural education, unless it can be carried into practice. All our efforts in this direction will prove futile, if an adequate number of trained and qualified teachers do not rise to the occasion and come forward to carry on an extensive reform in this field. To secure suitable teachers for the rural schools seems to be one of the most difficult problems of the day which has baffled all solution up till now. The average city-bred woman is both to be employed as a teacher in the rural areas, where she is incommoded in more than one way, being cut off from the amenities of town life. The scale of pay that is generally offered as the village schools is hardly attractive enough to induce the right type of people to undertake such an important work. Consequently, in many of the village schools the teaching has to be entrusted to the people, with little or no professional training, who are quite ill-equipped for the task. Due to the paucity of teachers as well as of funds, in many cases, four or five classes have to be run by a single person, at the sacrifice of efficient teaching. Sometimes, even, if qualified teachers can be secured with great difficulty, they seldom care to stick to their jobs, as the lure of town life often proves too much for them. This is one of the reasons why the rural teachers should be recruited from the villages, where possible. The village women are expected to be more capable of a sympathetic understanding of the rural problems than their urban sisters, who often find it difficult to enter into the life and needs of the rural community. An ideal teacher ought to know not only the children but their entire background also. She should be keenly alive to the moral, intellectual, social and economic needs of her pupils. Hence the necessity and importance of the study of civics and rural science for the prospective teachers of the village children. Those who will, in future, be the custodians of the educational interests of the rural community, should, by all means, be afforded ample opportunities of studying the village problems, at first-hand.

They must also be acquainted with the functions of the various rural agencies in charge of village welfare work, with whom they are expected to co-operate in bettering the social conditions of the people. For this, they need to go through a special course of training, which will enable them to equip themselves properly for the purpose. They must also possess the necessary skill and ingenuity to tackle the rural problems that they may be faced with. So an ideal village teacher is expected to be something of a social leader as well as a social reformer, who should throw herself heart and soul into her work. She must have the zeal and ardour of a reformer, and her selfless devotion to her cause should inspire her fellow workers with courage, enthusiasm and confidence. She also needs to have such a great personality as will enable her to command the respect and goodwill of all. She must, also, be something of an idealist, and must always strive to live up to her ideals. She should take a very keen interest in the village social problems and in the progress of her students and their people. She must also be an expert teacher, possessing ample initiative and resourcefulness as well as a strong capacity for service. If the village teacher is expected to fulfil such an important function, the selection of teachers for the rural schools seems to be of primary importance. If the teachers are to command a wider respect, their status must invariably be raised. The standard of recruitment needs

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to be much higher than what it is at present, and the quality of training should also be improved upon. More respectable and adequate salaries are absolutely needed to add to the social position and prestige of the teacher and the dignity of her profession. The missionary spirit cannot be expected of every one of the qualified persons.

The rural teachers are seriously handicapped, due to their rather self-imposed isolation from the other educational thinkers of the day. They are badly in need of adequate training and sympathetic supervision. Their own environment is no source of inspiration to them, it being exceptionally narrow and conservative. So the question of providing for an adequate and effective training for them should be one of vital import. It is a pity that the training schools have done very little as yet to meet the educational needs of the rural community in the way of preparing efficient teachers for the village schools of the Province. These training institutions hardly stimulate and encourage independent study and thinking on these lines. Suitable vernacular text-books are also wanting. That the teachers of the training schools are rarely conversant with the rural conditions, under which the students are likely to work in the village schools constitutes one of their serious disadvantages. So it is desirable that the training schools should keep in close touch with the ordinary rural conditions of Bengal. These institutions may well be connected with the social welfare centres, located at central points in each district. Facilities can be provided in various other ways to enable the training schools, preparing village teachers, to have easy access to villages. The training students may occasionally be taken on excursions to villages, thus enabling them to study the rural conditions at first-hand. On these occasions, they may be given plenty of opportunities of doing social service among the rural people. The training schools may also enter into an agreement with some of the ordinary village schools, so that the students under training may be sent there, for the purpose of practice teaching with reference to the rural conditions. The training course, too, needs to be revised, and the study of rural science should be made compulsory for the prospective rural teachers. The number of training schools being too small to cope with the work, other deserving educational institutions should be allowed ampler scope for making experiments with the training curriculum, with a view to turning out more efficient rural teachers. Even trained and qualified teachers need a good deal of supervision and guidance. Very often, teachers are not loyal to their vocation. They have a tendency to "slip back into the old grooves", if left to themselves. Besides, they are liable to get antiquated and thus to deteriorate, if they are quite out of touch with the modern developments. To prevent this sort of thing, short courses for further training may well be arranged during the vacations. The training school teachers will also do well to pay occasional visits to the village schools, where their former pupils are employed so as to guide their work on the right lines. Special conferences can also be arranged at the training institutions, for the benefit of the village teachers. There are other ways in which the training schools can ameliorate rural education. It cannot be expected that all the rural teachers will be trained in no time. So the training schools should try to devise ways and means to improve and guide the untrained teachers. They can send out trained supervisors of village schools, conduct teachers' and supervisors' institutes, arrange for brief courses for the teachers in service, and run educational journals for the instruction of teachers, just as the Moga School in the Panjab does. Care must be taken that efficient and competent supervisors are always appointed. The supervision, too, needs to be well-planned and well-regulated. The supervisors should aim at bringing about some definite results, by means of their sympathetic and intelligent guidance. Demonstration schools may well be set up in centrally-situated places for a limited number of schools. Demonstration lessons should be organized under ordinary village conditions. The teachers of the neighbouring villages should be required to attend these, so that they may profit by observing good teaching methods and sound educational experiments. They may also avail themselves of these opportunities

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to discuss their common problems, and to arrive at definite standards, to which the village schools should conform. Health lectures, illustrated with slides, may also be arranged for, with the help of a hygiene expert, on some of these occasions. It is not possible here to lay down exhaustive suggestions as to how the untrained rural teachers can be guided along the right lines.

Now to sum up. I may be accused of putting forward some utopian ideas, which can never be put into practice. The tremendous success achieved by the American Community Schools and the "folk schools" of Denmark in the field of rural education may not be easy of attainment in our country. But we must not, therefore, conclude that such a scheme of rural education will not even partially materialize in Bengal, and that all our efforts in this direction are foredoomed to failure. There is no denying the fact that we shall have to fight against heavy odds. The deplorable conditions obtaining in the villages of Bengal are likely to unnerve many a sturdy worker. Appalling poverty, conservatism, social and religious antagonism, ignorance, superstitions and various other causes prove a serious stumbling-block to all the progressive movements of the country. But the admirable work, done by some of the educationists, even in Bengal, inspires us with hope and confidence, and testifies to the immense possibilities of rural education even in our country. What they have been able to accomplish seems to be an earnest of what may come about in future. In Bengal, the Ushagram School at Asansol and Tagore's Sriniketan are two of the notable experiments in rural education that I know of. The example set by these two institutions is worthy of imitation by others. It is desirable that more schools should be started on the lines of the Ushagram School. The training schools may well co-operate with this institution in training teachers for village schools. It is high time that co-ordinated efforts should be put forth to overcome our difficulties, which should, by no means, dishearten us. Let us brace up our energies for the uphill work that is ahead, and at the same time, sound a note of hope like Shelley—

"If winter comes, can Spring be far behind ?"*

* Read at the Bengal Women's Educational Conference, 1934.

FIERCE VEXATION

By VERRIER ELWIN

My elder brother came to me,
His age had made him burdensome,
Importunate and suppliant, he
For pity's paltry boon had come.
But I with harsh discourtesy
To his poor pleading said him nay,
And sad he turned to go away.

Then saw I on his ancient brow
Fresh drops of blood, on his old hands
Marks of hard nails, while scarcely now
Upon his wounded feet he stands.
I looked into the awful Face
Of love, while with uncertain pace
My Master stumbled from the place.

Argument is as a desert and as a wilderness wherein one loses his way and comes to grief. Realization is everything.—*Buddha.*

ENDOWMENT OF CULTURE

By O. C. GANGOLY

IF the agitation for an economic *swaraj* succeeds, and the power of taxation and control of public fund is transferred, in the future democracy in India, to popular control, it is a matter of great speculation to what extent, the uncultured masses, or the successful trader, or factory owner will be inclined to vote for decent sums of money being set apart for the cause of higher education and of expensive research works in all departments of knowledge; and for the preservation and development of the artistic heritage of India in its various aspects. It may be assumed that if the necessity of maintaining an expensive Police Force is removed, and the salaries of public servants are reduced, certain amount of public funds may be released out of which adequate provisions for primary education may be voted. But primary education is only the base, not the crown of the Pyramid. We have already some amount of primary and secondary education, with bases of very slender length, on which we have already built higher education of fairly respectable altitudes. If the length of the base of our primary education is indefinitely extended, in case universal primary education is achieved, within a few years, it does not follow that higher education, the point of the Pyramid, could be reached within a reasonable time. For, it is a piece of mathematical truth, the greater the base of a triangle, the greater is the height of the perpendicular. In fact, the demands for universal primary education are likely to exhaust the available public funds so as to leave nothing available for higher education and research work. The "Depressed" classes may be well expected to say that no grants need be provided for development of higher education, before all members of the "Depressed" classes had primary education given to them. What is really expected to happen is that there will be a tug-of-war between the claimants of primary education and the advocates of the higher education. There is a popular belief that higher education can afford to wait until primary education has grown to a respectable size, and that it is sheer waste of money to endow or subsidize institutions of higher culture and research—if the mass welters in a sea of illiteracy and ignorance. It is even now difficult to convince not only the *intelligentzia*, but many of our public men, our Councillors, and a large section of our educated brethren, that *primary education is no substitute for higher education*, and the latter cannot be and should not be made to wait until universal primary education has become an accomplished fact. To understand the gravity of the situation it is necessary to examine critically the position of Education, and of the provisions for culture and research in a democracy, and what 'mass education' really means. Indeed, some of the best thinkers on the theory of Education have come to the conclusion that hardly any good, if any at all, is likely to come out of universal education. In any given society, it is impossible to find more than a fraction of the whole, fitted with the real equipment or the thirst or desire to acquire knowledge in the true sense of the term. Before we come to the views of educational philosophers, one is tempted to refer to the instructive Satire, by which Dostoevski hints at the kind of education that democracy demands. In his *The Brothers Karmazov*, he makes the Inquisitor say: "What the masses need is not freedom of the spirit, but mystery, miracle, and authority; some one to take their bread from their hands, bless it and give it back to them; some one who will permit them to sin, and take the responsibility on his own soul, some one who *will guard the secret* and deceive mankind every step of the way as he leads it down to death." In his lecture on "The Future of our Educational Institutions," Nietzche puts a similar value to mass education. He believed that to the degree that education is universalized, it is weakened and minimized. That is to say, extension leads to want of depth and quality. The pseudo-culture in a democracy, according to Nietzche, "endeavours either to bring the leaders down to the level of its own servitude, or else to cast them out altogether." He again remarks: "What is called 'the education of the masses' cannot be accomplished except with difficulty and even if a system of universal compulsory education be applied, they can only be reached awkwardly. ... ... The education of the masses can not, therefore, be our aim; but rather the education of a few picked men for great and lasting work. We well know that a just posterity judges the collective intellectual state of a time only by those few great and lonely figures of the period. If we analyse his writings on this subject, we find that Neitzche came to the conclusion that education is *difficult* and *dangerous*, and that only the rare, strong and courageous spirits may attain it. According to Neitzche, many do not really want education at all, but only [illegible] cheaper knowledge which will give them success and enable them to take their places in the ranks and file; seeking such education, the herd *tramples culture under foot*, like cattle in growing corn when the fences are down. All his writing on this subject is a warning cry that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

the cultural values of civilization are in danger of being lost in an education for democracy.

Mathew Arnold is another of the thinkers whose views on Education are entitled to respect. In his own way, he thus characterizes the level of culture of a prosperous democracy: "Consider these people, their way of life, their habits, their manners, the very tones of their voices; look at them attentively, observe the literature they read, the things which give them pleasure, the words which come forth out of their mouths, the thoughts which make the furniture of their minds; would any amount of wealth be worth having with the condition that one was to become just like these people by having it?" Like Neitzche, Arnold also insists that education must struggle for its values if it is to survive in a democracy. In terms of his own socio-political environment, Arnold calls this new democratic force Jacobinism which he defines as "violent indignation with the past, abstract systems of renovation applied wholesale, a new doctrine drawn up in black and white for elaborating down to the very smallest details a rational society for the future ... ... Culture is the eternal opponent of the two things which are the signal marks of Jacobinism—its fierceness, and its addiction to an abstract system." According to Arnold: "plenty of people will try to give the masses, as they call them, an intellectual food prepared and adopted in the way they think proper for the actual condition of the masses. The ordinary popular literature is an example of this way of working on the masses. Plenty of people try to indoctrinate the masses with the set of ideas and judgments constituting the creed of their own profession or party. ... But true culture works differently. It *does not* try to teach to the level of inferior class."

The misgivings and suspicions of these learned theorists may be said to have been disproved by the extensive spread of education in the so-called democracy of the United States, in Fascist Italy, and in Soviet Russia. In the States, the enormous subsidies given by the State, and the cities (both by private endowments and grants, and also by appropriations from municipal funds) to the growth and extension of educational facilities, have enlarged the boundaries of the means of education, by including large sections of the "lower strata" of society, which but for these facilities would be left out of the zone of educational benefits. In the States, more than in any other part of the world, the duties of the State and the cities in the matter of providing educational facilities on a democratic basis, have been given practical shape. Education, says our socialists, should not be confined to the few, but must be made available to the many. Education and culture must not remain the preserved privilege of the few and shut up in the cloister or the *chatuspathis*—it must be made to flow outside the clique of the cultivated and the learned, outside the coterie of a few professionally trained scholars. Every member of a democracy must have the opportunity to share in the 'Cultural Goods of Civilization'. Education is not culture unless outside college halls it is a permanent and widespread interest which makes a difference in the tastes and habits of thought of the community. Huxley gave an unconscious compliment to the value of dissemination of culture and education when he deplored the fact that much of the intellectual leadership of Victorian England was found outside the University faculties. While this may have been a just criticism of the universities, it was a sign of intellectual vigour in the nation.

In the United States, while the demands of the education of the community have not been neglected, the demands of the facilities of a truly aristrocratic culture have not been lost sight of. Education, knowledge and culture have not been dragged down from its aristocratic height to pander to the medoicre level of the democracy—to the downward slopes of the lesser needs of the community. A very happy balance has been maintained between the demands of higher education and culture and the mass education of of the community in the United States. Without neglecting primary education, very generous and rich endowments have been provided for maintaining higher education and culture at a very high level and enormous funds have been provided not only for research work in the laboratories, and the museums, but also for expensive research expeditions, for excavations and field works, to distant countries, for gathering new data and materials for knowledge of every department of human activity. The universities and the museums have been equipped with adequate funds to pay for the service of the best experts of the world with library and laboratory facilities of the highest efficiency that money can buy. These expensive provisions have come, not only from the public purse, but also from the the purses of generous private donors—members of a cultured democracy, from industrial magnates railway and bank directors, from Rockefellers, Carnegies, Pierpont Morgans, and Otto Kahns. The writer is not familiar with the details of the provisions made for other departments of knowledge. His informations and experiences are confined to the steps laken in the States for disseminating knowledge of the Fine Arts and for providing for all members of the community opportunities to come in contact with Art, in all its phases, ancient and modern. Art is regarded as a vital factor in education, and is not neglected or relegated to a place after primary education. Education and culture 'through the eyes' is considered a most efficient form of primary *as well as* higher education. This is accomplished by providing richly endowed museums and collections of masterpieces

of Art, established by block grants from the States and from the Municipal funds, and kept up by recurring grants from the city corporation and by enthusiastic supports of the citizens who pay large amounts of subscriptions, through annual, life and sustaining membership. Almost all the important cities of the States have such museums maintained by public and private endowments. It will be enough to quote the figures available for three typical museums to illustrate the public support given to these typically democratic institutions of education and culture for the community. The Indianapolis museum in Indiana, the poorest city in the States, has an endowment fund of about 800,000 dollars (Rs. 32 lacs) and a recurring annual income of about two lacs of rupees, out of which Rs. 80,000 come from the State Education Department and the municipal funds in equal shares and the rest are contributed by the citizens as sustaining and associate members. The Art Institute and Museum of Chicago, a typically industrial city, has an endowment fund of two crores and twenty lacs of Rupees (5,700,000 dollars) and an annual income of eight lacs of rupees. The Boston Museum has a total endowment fund roughly estimated at four crores of rupees, with an annual income of rupees twenty lacs. The Metropolitan Museum of Art, New York, spends annually a sum of thirty-six lacs of rupees (nine lacs Dollars) out of which the city of New York contributes, from municipal funds, about nine lacs (3 lacs Dollars). The service that these municipal museums render to the cause of education is invaluable. They are intimately connected with the local universities, and students from schools and colleges are frequently brought to study in the museums with the help of expert guides provided by the staff of the Museum. Besides special series of lectures for boys and girls, technical lectures for teachers and professors are given at regular intervals, not only by the permanent staff on the Museum which include some of the foremost authorities on the various subjects represented, but also by visiting experts and special lecturers invited from abroad. Research scholars from the schools and universities are provided with facilities for studies, not only with the priceless masterpieces of the objects of Art and Culture belonging to the permanent exhibits (which are frequently added to every year by new acquisitions) but also with the help of a rich library of books, periodicals and photographs of monuments and objects pertinent to the studies of these scholars. In addition to these facilities, travelling fellowships, scholarships for study abroad, and research expeditions for excavations are provided for by the Museum from the general as well as from especially endowed funds. In addition, a training school for artists and designers are maintained with an expert teaching staff, provided by each of these museums. For the general public, a competent staff of *docents* are provided for explaining to visiting members of the community the objects of the museum and for furnishing correct and expert opinion to enable the visitors to enjoy their contact with works of art and ancient monuments. For special groups of the public, or the members of clubs in the city, 'Sunday Afternoon Talks', and 'Gallery Talks' and 'Museum Tours' are given by members of the staff for the benefit of groups or particular sections of the public desiring to enlarge and broaden their culture, through intimate contact with art under expert guidance. Special exhibitions are held at frequent intervals, of ancient and modern work of art, in all their phases, Western as well as Eastern ; and in connection with these exhibitions, lectures are delivered to draw the attention of visitors to the merits and characteristic qualities of the works exhibited. In museums on an average twenty four separate exhibitions are held every year, in addition to the permanent objects exhibited. Purchases and acquisitions of new work of art to the various departments absorb a large part of the income. And there are expert acquisition committees who critically examine works of art submitted to the Museum for purchase or acquisition by gifts. The Metropolitan Museum acquires on an average, every year, about two thousand new objects carefully selected on account of their artistic, historical or antiquarian merits.

In the States, responsibility and control of education have been shared equally by the State and the municipal or civic administration, a fair share being also left to individual and private enterprises. This division of responsibility has been based on the principle that good education begets good citizenship, and both the political and civic authorities are equally interested in the making of good citizens.

"In the nation as a whole both the elementary and the secondary schools are predominantly under public direction while in the realm of higher education private institutions still carry the larger burden. Thus, less than ten per cent of the elementary and secondary school pupils are attending private schools whereas the corresponding percentage in the institutions of higher education excluding normal schools and teachers' colleges is well above sixty. If the influence of the religious factor be disregarded, private enterprise remains strongest in those portions of the United States and at those levels of the educational system where the more favored social classes have sent down their deepest roots. In support of this policy of tolerating and encouraging private enterprise in the field of education, the American advance two major arguments. In the first place they say that there are limits to which the State should go in determining the content of education. They seem to feel that parents have certain rights over the education of the child which the State must respect. Another argument is the contention that it provides an excellent opportunity for men of great wealth to devote a portion of their substance to the service of the public. Sometimes

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the argument takes the other form that a society should have rich men in order that it may secure patrons of great universities, art galleries, and other cultural undertakings *which the people themselves would be unwilling to support*. According to the assumption underlying this theory, in the absence of millionaires the arts and sciences would languish. Certainly in America the tradition of turning private funds to such uses has developed great strength, and huge fortunes are given to educational enterprises every year." (G. S. Counts: *The American Road to Culture: A Social Interpretation of Education*. 1930, pp. 35-37.)

The passage italicized above is very ominously significant, as it suggests that Democracy left to itself *would* neglect higher education and cultural undertakings. The assumption that in the absence of millionaires, the arts and sciences are sure to languish, has been somewhat discounted by the programme of Soviet Russia.

Long before the advent of the Soviet Republic, Russia has paid its tributes to the cause of higher culture by collecting valuable works of art, relics of old civilizations, and remnants of antiquarian monuments of great aesthetic, historical and scientific values. The Hermitage Collection of Old Masters has a world-wide fame and reputation. The same museum contains unique examples of Sassanian and Islamic art. The well-known collection of Buddhist relics, made hy Prince Uchtomskij, which includes a remarkable series of metal sculpture of the Lamaistic School, (now housed in Leningrad,) has provided invaluable data for the study of Mongolian and Tibetan Buddhism. Recent scientific expeditions of Russian scholars and learned academies to Caucasus, South Russia, and Siberia (*e. g.* those led by Kondakoff, Kozlov, Boroffka and others) have added to the Russian museums unique and invaluable relics which throw a flood of new light on Scythian, Sarmatian, and later phases of Hellenistic culture. While preoccupied in solving economical and social problems, the Soviet Republic has not been unmindful of their duties as custodians of valuable works of art and priceless antiquarian remains and the need of affording opportunities to the larger public to establish contact with art and to liberalize their outlook on life. From this point of view, the impressions of Dillon, a trained journalist, are of great interest. In commenting on the facilities afforded by the educational authorities to the public to benefit by contact with valuable works of art collected in the museums, the author remarks:

"In truth, the Hermitage has not shrunk in extent or lost any of its treasures since the fall of the Empire. They are all safe and sound, and possibly more helpful to the general public today than ever before. On Sundays and holidays crowds of eager art worshippers, divided into numerous groups of about thirty visitors each from schools, clubs, and politlcal associations all over the country, pilgrimage to the museums accompanied by masters or expert mistresses who explain to them in simple, clear, and expressive words how a picture should be intelligently viewed, or else familiarize them with the characteristics of an old master, or a school. Hundreds of these children and adults travel from afar after having spent weeks, or months in preparation for the great day of their acquaintance with the famous painters of Italy, Spain, Holland, and Germany..... On week-days, however, the Leningrad Galleries were mostly empty, at least during my visits, and looked somewhat neglected. Occasionally, however, I met country people there in their rough costumes, and school children putting searching questions and uttering naive criticisms of the old masters in a low tone of voice" (E. J. Dillon: *"Russian Today and Yesterday*, New York, 1930, pp. 244-45).

Indeed, art occupies an important flank in the 'cultural offensive' of the Soviet educational plan. The curriculum of the first cycle of the school of the second grade has a compulsory time-table, which, in addition to language and literature, Mathematics, Geography, Gymnastics, etc. include, six hours for "Drawing and Painting," and five hours for Singing and Music, every week. (Hans and Hessen: *Educational Policy in Soviet Russia*, 1930, p. 109.)

The evidence of Dr. Rabindra Nath Tagore, on the facilities of culture values in Soviet educational policy, is of great interest and significance. In the course of a remarkable series of letters recording his impression of educational activities of the Republic [since published by the *Visva-Bharati* under the title: "Letters from Russia" (Bengali) 2nd edition, 1338]. Dr. Tagore has commented on the topic:

> I am sure you will be interested in the report of how Museums of Art function here. In the city of Moscow there is a famous collection of pictures known as Tretyakov Gallery. Between 1928 and 1929, in the course of a year, about 3 lacs of visitors have come to see the pictures. It has been impossible to find room for the crowd of visitors anxious to come to see the pictures. To regulate crowds on holidays, it has become necessary to register previous applications for such visits. Before the establishment of the Soviet Government in 1917, visitors to this gallery came from the monied, educated and respectable classes,—the section of the people whom they call *bourgeoisie*. Now, the visitors are innumerable labouring classes, such as masons, mechanics, grocers, tailors and so on, and also Soviet soldiers, military captains, students and the agricultural classes.

The poet goes on to observe:

> It is necessary to arouse in them, gradually, a consciousness for Art. For tyros like them, it is impossible to apppehend the secrets of pictorial art at first sight. They wander about gazing listlessly on the stretches of walls, and their powers of apprehension lose their way. For this reason, docents have been provided in almost all museums. These docents are recruited from the educational section of the Museums or from trained scientific hands in the Departments of the State. The visitors get their services free. The docents should be careful that the visitors do not run away with the fallacy—that to know only the contents and subject-matters

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

of pictures is all that "seeing" pictures means.... As I have stated in my previous letter, that they have started strenuous campaigns to make the whole country alive in strength and power, at a reckless speed, through intensive agricultural and machine-power organizations, this is an out and out practical scheme. This represents a supreme effort to attain absolute economic independence challenging the competition and rivalry of other and more prosperous nations.

In our country, whenever there is any talk of such comprehensive political efforts, we begin to say that in order to feed the red flame into one supreme conflagration, all other lamps in all other departments of life must be put out, otherwise, distractions may discount the values of our work. Especially, the culture of the Fine Arts is the enemy of all manners of stoic resolutions. In order to strengthen the national character, a hard and strenuous programme of acrobatics is essential. The *Vina* of Saraswati, if it has to be saved from banishment or extinction, can only be utilized as a regulation *lathi*, but not otherwise. One can only realize the hollowness of these false heroics, when one comes to Russia. Here we come across elaborate arrangements—to train the minds of those labourers, intended to function as efficient operatives in comprehensive schemes of factories and machineries, to approach with educated sense the spiritual flavours, the *rasa*-values of pictures. They have realized that those who are not sensitive to spiritual flavours are barbarous savages, and savages notwithstanding their sturdy exteriors, are actually feeble in spirit. (Pp. 77-82).

Yet, in spite of an apparent anxiety to keep open the doors of higher education and culture, the Soviet programme of public instruction has not been able to maintain a liberal outlook. For the sake of the demands of a communistic republic and those of vocational education necessary to solve the 'bread and butter' problem, the ideal of an education for its own sake, an education for the realization of the higher values of life, had to be shelved. On this point, the evidence of Albert P. Pinkevitch, President of the Second State University of Moscow, is very clear and outspoken.

> The significance of the aesthetic interest in the education of man has never been questioned, yet that this field has been sufficiently developed or studied, particularly by students of Sovtet pedagogy, *cannot be maintained*. There are, to be sure, a considerable number of small works dealing with the problems of æsthetic nurture, and the volume published by the Scientific Division of the State Scientific Council, entitled *Artistic Nurture in the School*, gives much concrete and highly valuable information, but nowhere do we find presented even a tolerably complete theory of æsthetic education. *In our scientific literature a simlar condition prevails.* Aside from articles by Plechanov, Lunacharsky, and Friche, articles which do not aim at a systematic review, we have, as a matter of fact, practically nothing. Comrade Pelshe therefore is only stating the truth when he says that in field of artistic creation the international proletariat has nothing even approaching the material which it possesses in the fields of economics and politics in the form of the classical *Capital* by Marx, the works of Engels, or the writings of Lenin. (A. P. Pinkevitch, *The New Education in the Soviet Republic*, 1930. P. 318.)

That in spite of scanty attempts for opportunities for development of the finer faculties the æsthetic side of education is being neglected is hinted at by the same authority:

> In contrast with the old School, a school of books and words, our school strives to become a labor school, a school of life. Because of reaction against tradition, the word, particularly the artistic word, very frequently receives relatively little emphasis. Such a result is of course unfortunate. (Ibid, p. 329.)

For political reasons, the teaching of music, in preference to the other forms of plastic arts, receives grater emphasis in the educational curriculum.

> The programmes of the State Council plan chorus singing at the foundation of the musical studies; and their explanation for doing so is that "Chorus singing is an excellent method of social collectivistic training. It habituates the child to blend his own personal experiences with the experiences of others, to feel and act *en masse* and at the same time to carry on his own individual work in connection with the work of the group and to feel himself a part of a complex organized whole." (Ibid, p. 328.)

Music is given an important place, not for its own sake as a valuable expression of higher phases of human culture, but as a useful instrument for developing the communistic ends of a political democracy. Yet, some of the Russian authors (*e.g*, Kurpsakia) has emphasized the function of all the forms of art, not only music, for developing a sound collectivism. "Art can contribute enormously to the development of a collectively-minded individual."

Nevertheless, the freedom of research and academic teaching had to be subordinated to the needs of the new Department of Vocational Education.

> The vocational policy of the Soviet Government in trying to connect academic work with economic life of the country succeeded only in destroying the old organization of Universities, but failed to create any new methods of academic study. The policy rather resembles more the policy of Napoleon, who established a centralized "University site Imperiale" which consisted of many vocational institutes subordinated entirely to the needs of the State Government. Here, as elsewhere, the Soviet Government has followed the example of absolute rulers of the past. The number of higher institutions in the Soviet Republics is hardly comparable with the number of Universities and Technical Colleges in Imperial Russia. ... Russia possessed 11 Universities, 22 Higher Courses for Women and 16 Higher Technical Institutes and Schools and 20 State and Private Colleges and Schools of University rank. The total number of students in these institutions was about 90,000. They give statisticians give quite different figures. The Soviet the higher institutions as 99 with 110,000 students including under this heading higher institutions

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of Music and Art, Veterinary Institutes, Archaeological Institutes and some private institutions not chartered under the old regime . . . . But the evident failure of this policy, which deprived Universities of their best Scientific forces and materials, has been recently acknowledged by the authorities (*Educational Policy in Soviet Russia*. pp. 165-166).

It must be evident that higher education and culture have somewhat scant prospects in a popular democracy. And if in the coming reforms in India, education continues to be a transferred subject, under the absolute control of popular voting, it is very unlikely that any money would be available for the needs of higher researches in history, art, archaelogy, science or medicine. It is possible that existing educational institutions and universities may be socialized for the benefit of *harijans*, and universities may be replaced by primary schools to liquidate illiteracy. In Russia illiteracy has been abolished at the expense of and by sacrificing higher education and culture. For, from the democratic view of education, it is better that every man and woman in the estate should but learn the three R's, than that a few scholars and research students should be allowed facilities for the pursuit of knowledge for its own sake, and permitted to enlarge the boundaries of the same. The discoveries of Science, or of historial data, or the creation of Art must wait, till universal primary education has been an accomplished fact. The Bose Research Institute, the Bangiya Sahitya Parisat, the Asiatic Society of Bengal, the Tropical School of Medicine, or the Science College and all the Universities may have to close their doors, or to store away their stock of books, apparatuses, and equipments and be compelled to lend their halls for *harijan pathsalas*, or night-schools for factory hands. Already, the existing universities have earned much unpopularity for failure to provide vocational education or to solve the economical problems relating to poverty and unemployment. With the enlargement of popular control in education, the universities are likely to be subject to severer assaults. It will be argued with great vehemence and some logic, of what earthly use is the Chair of Comparative Philology in a country seething in illiteracy, what fraction of economic misery has been allayed by the lectures of the Minto professor?

It is incumbent on those who have a sensitive conscience for education, it is the duty of those who believe that the claims of higher education and culture must not be subordinated to vocational training, it is the responsibility of those who believe that *primary education is no substitute for higher education*, and *knowledge is no substitute for culture*, to demand for adequate endowments in the new constitution, for liberal provisions for higher education and cultural institutions, so as to make the pursuit of the higher forms of knowledge and research work in all its branches independent of popular caprice, or the accidents of party politics.

WOMEN'S POSITION IN THE WORLD AND INDIAN WOMEN

By Mrs. KIRON BOSE

The Position of Women in the United States

THE women of the United States have struggled to gain their present status. Miss Perkins has been made a Cabinet Minister (Dept. of Labour). Miss Ruth Bryan Owen has been appointed Minister Plenipotentiary of the United States in Copenhagen. There are Senators, Congress Women, Professors, Bankers, Medical Women, etc.

Mrs. Julia Woodroff Wheelcock, who was entrusted with the deplomatic representation of the United States in Yugoslavia, has now taken over her new duties in Belgrade. She is a staunch feminist and firmly belives in woman's ability to serve her Government in any station of life.

But there are social inequalities and evils in the U. S. A. and the women are to change them, especially Divorce Law, and the right to secure information on birth-control.

The Position of Women in the British Empire

In Great Britain Margaret Bonfield was a Cabinet Minister. There are M. P.'s, Professors, Lawyers, Doctors. It will not be out of place to mention that only a few years ago a group of progressive women under the leadership of Lady Astor was fighting for crimes against children and was arranging to raise the marriage age of girls to sixteen.

The position of women in other parts of the British Empire is growing more favourable, but the following news items must be of some interest to Indian women and to those who feel happy in vilifying Indian Womanhood.

(Special Correspondence, *The New York Times*, October 29, 1933.)

Auckland, N. Z., Oct. 2—By a bill introduced in the House here John G. Cobbe, Minister of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Justice, seeks to raise the marriage age for New Zealand girls from 12 to 16.

The measure would remove what social workers have recently stigmatized as "a disgrace to the British Empire, and a state of affairs which would not be tolerated, even in India." Indian law demands that a boy be 18 and a girl 16. In New Zealand it has been possible for boys of 14 and girls of 12 to wed.

Social workers object to the present situation because of the fact that men held on charges of offences against girls often escape the police by marrying before the case comes to Court.

(Tribune Press Service)

Cape Town, Oct. 27—The Congress of the South African Women's Agricultural Union today passed a resolution in favour of raising the marriage age for girls from 12 to 16.

Mrs. Siebritz said that such early motherhood as caused by these marriages resulted in physically defective and subnormal children. She mentioned the case of a woman who at 42 years of age was the mother of 17 children.

Other speakers declared that very early marriages often protected men from a criminal charge when it would be more fitting if they should receive a life sentence.

The Position of Women in Scandinavia

As the direct outcome of two women M. P.'s proposal that the present constitution should be changed so as to allow women to become members of the Cabinet, the Government has now decided to introduce a Bill granting women access to all positions under the State, with the exception of the Army and Navy (including the various Departments of Military Administration) and the State Church.

By an Act in 1912, Norwegian women were granted the right to hold positions in the Civil Services and other State Departments under the same conditions as men, but they were expressly barred from appointment as members of the Cabinet, Diplomats and Consuls and as preachers of the Gospel in the Service of the State Church. If the new Bill goes through, women will be able to hold offices as Cabinet Ministers, and Diplomatic and Consular careers will be open to them.

In Norway a shipping firm has been successfully run for twenty years by two women. The two partners, who also personally supervise the repairing of the boats, have successfully steered their business through the stormy waters of post-war conditions. They own six steamers with a tonnage of 23,560.

Women Police in Copenhagen

The Municipal Council of Copenhagen has unanimously decided to increase the police force of the Capital, and in that connection to appoint five more police women. This will bring the number of police women in Copenhagen up to fourteen. The decision of the Municipal Council goes to show that the fathers of the town have become conscious of the public utility of women police.

Norway, Sweden and Denmark send three women representatives in their delegation to the League of Nations during the Assembly. In Mexico a women police force was organized in 1929 and started with fifty members. Their chief duties are the protection of children, the prevention of women's offence and the prevention of public immorality. Police women are chiefly on duty in public parks and gardens and in picture-houses, theatres and hospitals, but can be on duty in any other place to which they may be appointed. The police woman is naturally endowed with kindness and love towards children, with a complete knowledge of the character and weakness of her sex and with a high conception of desire for morality and righteousness.

Women in Switzerland

The Swiss women are profoundly attached to the ideal of democracy. Because they love their country, they claim increased influence in the government of the State in which the citizens enjoy the maximum of civic rights. There is a woman lawyer on the "Swiss Committee for the combat of the war industries."

First Customs Expert in France

For the first time in France a woman has been appointed "Customs Expert" for the valuation and determination of the origin of carpets and tapestry. France also for the first time included a woman in the delegation to the League of Nations at Geneva.

Belgian Women in Public Life

Women are members of Parliament in Belgium (where women are permitted to stand for Parliament, but may not yet vote at political elections), one of them occupying a seat in the *Senate* and the other in the *Chamber de Depute*, and the other in the *Senate*. Both belong to the Socialist party. On the provincial Legislative Assemblies women were represented by four members. The number of women members of Municipal Council is 171, that of women Mayors 13. Fourteen women hold office as Sheriffs, 16 as Town Clerks.

Women in Germany

The position of women in Germany has been the reverse of progress. All the women organizations have been dissolved. The Minister of the interior, Dr. Frikj has undertaken the protection of the new organization, the "Deutsche Frauen-front" which was composed of the different feminine groups. Mrs. Siber (who is one of the few women in a higher position in the Civil Service) was appointed the Vice-Chairman. Miss Lucie Hofflich, the well-known German Actress has been appointed Director of the State School of Dramatic Art which was recently opened in Berlin. Another woman, Mrs. Edit Von Colen serves on the Board of the new State Institution. Among the 38 members of the German

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Academy of literature, which has been reorganized in harmony with the literary conception now prevalent in Germany, four are women.

The Fascist Attitude Towards Women in Italy

In Italy Feminism has taken a backward step in the fourteen years of the Fascist regime. Great stress is being laid on the home and wide field is provided to fit them for the bearing and rearing of children, but for no other career.

Wireless To The New York Times By Arnaldo Cortesi

ROME, Oct. 28.—Fascism, from its foundation in 1919 to today, has been such a purely masculine phenomenon and has laid such stress on the development of the manly virtues that one occasionally loses sight of how women fare under the present regime.

Women, who hardly ever appeared in the picture of Italian public affairs even before the advent of fascism, certainly play a distinctly secondary rôle today. Indeed, from some view-points feminism has taken a step backward rather than forward.

Soon after Benito Mussolini's accession to the Premiership he appeared about to concede to women that equality of political rights with men which already existed in most progressive States but in which Italian women always displayed only a very lukewarm interest. He granted to them the vote in municipal elections, and this was generally interpreted at the time as the first move toward universal suffrage. Soon afterwards, however, elected Mayors were replaced by government-appointed "Podestas," with the result that women lost the newly acquired right before having time to exercise it. Since then woman's suffrage has hardly been mentioned in Italy.

The exclusion of women from politics is in perfect harmony with the Fascist outlook on women and the Fascist conception of their proper place in the scheme of things. The Fascists believe women were created by God for the specific purpose of bearing, rearing and educating future generations, and they hold that this mission is so profoundly important and absorbing that women should have little time left for other occupations. They believe, in other words, that woman's kingdom is her home and everything should be done to induce her to dedicate herself exclusively to it, this being the only method to insure that Italian stock shall continue to grow healthy and strong.

Within the narrow limits set by these principles, much has been done for women by the present government, especially with a view to fitting them to become good wives and mothers. At an early age, girls enter youth organizations of the Fascist party, which teach them the rudiments of the prevailing conceptions of their duty toward the State.

At a later stage, when they are about to become mothers, the nationwide organization provides ample facilities for their advice and assistance. Opportunities for learning the domestic arts and modern methods of caring for children are made available.

The outstanding development in the Italian women's existence is that they are now for the first time encouraged to take an interest in sports. Such activities are under strict control by Fascist authorities, who frown on violent and fatiguing games, which are believed likelier to injure a woman's delicate frame than to strengthen it. Nevertheless, the milder sports, such as tenis, swimming, riding and gymnastics, are now definitely on the normal curriculum of Italian young women. The motive that prompted this departure from traditional usage was the same as that underlying the greater part of the changed outlook towards women, namely, belief that a moderate amount of the right kind of sport fits their bodies for motherhood.

In the United States and Britain, the status of women in Italy perhaps is considered somewhat old-fashioned. That status is probably influenced somewhat by the opinions of the Vatican, which is even more conservative than are the Fascists where women are concerned. It will be recalled, for instance, that the Pope more than once has publicly protested against even the limited amount of sport for women advocated by the Fascists.

The March of Progress of the Women of Asia

The Turkish women are progressing fast and are holding their head high. They have taken full advantage of a decade of freedom from Moslem tradition. They are facing life unafraid. Now that the first thrill of liberty is over, they are tackling sober problems of everyday life.

The women of Japan and China are taking a prominent position in medicine, education, etc.

The Associated Press

Istanbul, Oct. 28—Ten years have been sufficient for Turkish women to run the gauntlet of a newly acquired freedom and settle down soberly to education and work.

With its tenth anniversary occurring tomorrow, the Turkish Republic celebrates also the end of the adjustment period of its women's emancipation.

One of President Mustapha Kemal's most sensational reforms was his liberation of women from the traditional veils, harems and the seclusion of Moslem tradition.

"Show your faces to the world and look the world in the face," the Ghazi told them, and a million city women dropped their veils with zest.

Their first look at the world was fairly startling. Women of the upper classes who had long nibbled at romantic novels behind lattices, found at last an opportunity to be their own heroines. The new education opened to them by American motion pictures added sophisticated touches to their ambitions and they swung with gusto into the business of being socially modern against a brand-new background of cubistic apartments.

Marriages decreased, divorces increased. One Istanbul merchant won a divorce from his wife because of her poker debts.

Millions of Turkish liras went to France for imported champagne, Paris gowns, perfumes and lipstick. The society women of Istanbul and Ankara came to be among the best dressed in Europe, the most skilful of modern dancers and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the most insouciant of cocktail drinkers. They drank because it was "chic" to drink, but have never developed a real taste for liquor. Even in the most flamboyant days of the new freedom it was rare to see a Turkish woman inebriated.

Young men and women who had been brought up to expect the usual Turkish fate of marriages arranged by parents, with not even a glimpse of each other until the marriage day, now had the luxury of freedom in matters of the heart and made tragedies of a good many of them. Stories of the death pacts among the youth became so prevalent in the Turkish press that finally the government ruled that no mention of suicide should be made by any newspapers in Turkey.

A recovery of their native good sense, momentarily shaken by the merry-go-round of Western liberty, coupled with the economic crisis, is now making Turkish women swing round to normal in matters of the heart, poker, foxtrotting and Paris gowns.

The younger generation is actually turning up its nose at the imported frivolities of its mothers. Girls and boys alike have to face a future of work conscious that the present crisis is theirs to solve.

The number of girl students in primary schools throughout Turkey has increased fivefold since 1913. Many women have become prominent as professors, lawyers and writers.

The new decade has produced a woman banker, Hatidje Hanim, who both looks out for a family of five children and holds down the job of subdirector of the biggest Turkish bank, the Ish Bank, in Istanbul.—*The New York Times, Oct. 29, 1933.*

The Japanese people see in the International Red Cross Conference which is to be held in October, 1934, at Tokio, an event calculated to promote world peace and better understanding among the nations, Prince Tokugawa, President of the Japanese Red Cross and for 25 years President of the House of Peers, told American newspapermen at the Hotel Meurice yesterday.

"I am glad to think," the Prince declared, "that public opinion in my country strongly echoes the hope of the Japanese Red Cross that the International Conference in Tokio may make a real contribution, not only to the development of the Red Cross movement throughout the world, but also to the cause of better understanding between all the peoples of the world in that humanitarian work, which lends itself perhaps bettter than any other to close and friendly iuternational co-oqeration."

Prince Tokugawa has utilized his visit to Europe to make personal contacts with the headquarters of the League of Red Cross Societies in Paris, whose secretary general is Ernest J. Swift, and with Red Cross leaders in other countries. As president of the Japanese Red Cross, he will welcome to the Tokio Conference the delegates of all governments that are signatories of the Geneva Convention and the representatives of 58 national Red Cross societies.

"The Red Cross in Japan is a very vigorous and active body," he explained. "Besides keeping in readiness for the work which it—like all national Red Cross societies—may be called upon to do as the auxiliary of the army medical services in war time, it has an extensive peace time programme, conducting many hospitals and dispensaries, training and utilizing nurses on a great scale, and possessing a junior Red Cross membership that approaches 2,000,000."

The Prince, who received a delegation of the French Junior Red Cross yesterday afternoon, is leaving for London today.—*Chicago Daily Tribune.*

Indian women should send their representative sisters in the coming Congress.

Women Police in China

Hankow, where eight women were trained for the policeforce in 1931, had the honour of being the first Chinese town to introduce women police. Recently another town, Peiping, which already has the reputation of possessing one of the finest forces of the country trained by a Norwegian Officer, is to be still further improved by the co-operation of a large number of women who are now undergoing three months' training by Chinese Officers who have studied the American method. The majority of the women are students; they will, as is usual, perform all duties in connection with women and girls.

The Position of Women in France

For the second time in the history of French Medical practice, Dr. Papillon, a woman doctor, is to hold the position of head of the department, the first woman to occupy such a positon having been Mme Bertrand Fontaine. Mme Papillon, a specialist in diseases of the throat and mouth, declared, "there is an anomaly with regard to us, women doctors in France which, to express it mildly, has always amused me. I hold the life of patients in my hands and if I apply for a passport I cannot get it without my husband's authorization." Countess Anna de Noailles, the French poetess, was one of the few women to hold the high rank of the Commander of the legion of honour.

In Ireland three women were returned to the Dail at the last Parliamentary election.

The Diplomatic career open To Spanish Women

Among the advantages which the Spanish women have derived from the new regime is access to the Diplomatic career. Twenty-seven candidates out of two hundred and seventy were successful at the recent examination for the Diplomatic service, one of them being a woman, Senorita Margarita Sallaveria. There are two women who have secured seats in the Spanish Parliament.

Suffrage for the women of the Phillipines

Women of the Phillipines have been granted Suffrage on the same condition as men. To exercise their new rights they must be twenty-three years of age, able to read and write, and possess property worth at least $. 250.

The first Woman Architect in Poland

Hedvige Dovrzynska is the first Polish woman to choose Architecture as a career. Though she is only 23 years of age already she holds a prominent place

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

among architects in her country, having designed and costructed important buildings. She has taken part in numerous architectural competitions, national and international, can boast of no less than thirteen first and an even greater number of second and third prizes.

Women in Luthania

Magdalene Brazyte is the first woman judge in Luthania. She has been attached to the Mario-polite Law Court since 1920. She became a temporary member of the court in 1920 before she was nominated a judge in 1931. The number of law students is growing steadily. Quite a number of women are deviling for Barristers previous to being called to the Bar and many are attached to Law Courts, where, according to legal practice in Luthania, they have acquired practical knowledge of juridical procedure, before they can enter the official branch, first as Substitute Judge, and finally as regular member of the Bench.

Women in India

Contrary to the popular belief in the West, the women in India have always occupied a place of respect and veneration. Both in ancient and modern times Indian women have contributed much to science, religion and social welfare. Organized activities on the part of Indian women is, however, of recent origin.

The most important work undertaken by Indian women at present lies in the political field. In the struggle for national emancipation women have been fighting side by side with men. The women suffrage movement may be dated to the year 1917, when the All-India Women's deputation waited upon Mr. Montagu, who was the Secretary of State for India and who visited India in that year. The women demanded equal suffrage, and although they failed to secure representation in the National Legislature, Provincial Governments were empowered to enfranchise them and over a million of women were granted suffrage as far as provincial legislature was concerned, As a result Dr. Mrs. Reddy became the Vice-President of the Madras Legislative Council.

At the Round Table Conference, Indian women had three representatives. According to the present arrangements, about six million women will be enfranchised and some forty-four women will occupy seats in the provincial legislatures under the new constitution. It must be mentioned that Indian women, irrespective of caste or religion, have been from the begining opposed to the communal representation, and the present award of representation has been thrust upon them in spite of their vehement protest.

The activities of Indian women are not confined to the political field alone. They are interested in education, social reform, social service and similar other work. Many are being qualified as lawyers, doctors and professors.

Mrs. P. K. Ray, the well-known educationist, is a member of the Senate of the Calcutta University. In the year 1927 two women magistrates were appointed in two of its largest cities, *viz.* Bombay and Madras. In England the first magistrate was appointed in 1920. And only recently a similar honour was conferred on Calcutta when eleven women magistrates were appointed simultaneously. There are about sixteen women magistrates in Bombay and many more in the Madras Presidency. Two women were elected as Councillors of the Calcutta Conporation by the general electorate and a woman was appointed an Alderman.

In 1920 two of the Native States, Cochin and Travancore, not only granted franchise to women, but soon after that nominated two women to their respective Legislative Councils, the lady member in Travancore holding the portfolio for Public Health.

Sarojini Naidu, the famous poetess, presided over the Congress Sessions in the year 1925. Recently a few women have entered banks.

Indian Women have realized that they have their own special mission in life and a contribution to make to the evolution of humanity. And in spite of the tremendous obstacles in their way, they are striving by every means in their power, to stand shoulder to shoulder with their sisters in other lands and to make their contribution as efficient as any.

This year, for the first time, an Indian woman has been appointed to represent India on the Committee at Geneva dealing with "Traffic in Women and Children." The two Committees dealing with traffic in women and children consist of representatives of twelve Governments and of those International Organizations which are directly interested in the questions dealt with by the Committees. The Committees consist of thirty-one members, of which thirteen are women, seven being representatives, five assessors and one a liason member. Three Eastern countries have been asked to join the Commission of Enquiry into the traffic in children and women. The Committees which had delegated women either as their sole representatives or substitutes were Denmark, Great Britain, Poland, Roumania, Spain and the United States and they are elected for the period of five years.

Sex equality is the law of nature and therefore it is the law of God. In all the vegetable and animal kingdoms until they come to man the law of sex equality is as firmly established as the law of sex difference.—Mrs. Pethick Lawrence.

VIKRAMPUR ARIAL MUSEUM

By RAMES BASU, M. A.

DURING the reign of the Palas and Senas as also of the other less-known dynasties of local chiefs Bengal had attained a great celebrity in art, religion and other branches of culture. And as we have no connected history of that glorious period from the eighth to the twelfth century, we are to remain satisfied with the stray historical materials lying scattered here and there. Owing to the recklessness of man and ravages of nature we are to search out even the names of the vestiges of ancient time which are now lost to us. And it is all the more unfortunate that the manuscripts which contain these vestiges could not very often maintain their existence within the four limits of Bengal—for that we had to go to Nepal or other neighbouring provinces. The only source of our consolation is that the relics of ancient temples, images and stone and copper inscriptions have not completely vanished. The relics of most of the temples are recovered after much exploration or excavation, and from time to time the images and inscriptions, all on a sudden, come to our sight. But old coins of gold and silver suffer most owing to the fact that ordinary people do care for their metallic value and not the historical. In our times old relics are discovered only to be transferred from their original sites; these are procured either for the big public museums or for rich private collections. In the last century the finds from a certain well-defined cultural region have travelled far from their original sites; now in most cases, we do not even know the names of the find-spots. This is a great obstacle to the clear understanding of the cultural tradition and general history of a particular region.

Another fact also is worthy of our serious consideration. The common people of the country at large go to the museums of the cities and wonder at the images or some other exhibits; they cannot feel or claim any sp of intimacy with them—they cannot ev think that they are the descendants of th who had worked those wonders. It is for t

Suryya—Dacca Sahitya Parishat

reason that if local museums are establish in the regions considered to be the cent places from historical point of view then

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ordinary people not merely wondering at the things of the past will feel a particular connection with them. We have had enough of bookish history, now it is time that we should look to the practical application of history in the matter of training the masses. They will not stop short merely by worshipping

Ganes—Arial Museum

the images and other relics—as they are wont to do—gradually along with the spread of education they will be up and doing so that those invaluable treasures may not be either lost or removed. That such a mentality can really grow we have noticed practically in the rebuilding of a village museum which is still in its nucleus stage. As a case to the point we should like to give a very short account of the preliminary stage of the formation of a museum in a very old village of Vikrampur in Eastern Bengal.

The *pergana* of Vikrampur was a very well-known centre of culture in ancient times. This was connected with the names of the Palas, Senas, Chandras, Varmans and Khargas of Bengal history. From almost all the old villages of this region, images and other relics have often been discovered. Most of those finds have now gone beyond the limits of the *pergana*. Only those who care for historical research or carry on investigation themselves know their whereabouts. It is desirable that a regional museum should be established in

Kalkin (horse-faced)—Arial Museum

Vikrampur itself for the special study of Vikrampur centre. Even a short time ago whatever came from within the limits of Vikrampur was known to outsiders as being found at Rampal, reputed to be the capital of Vikrampur. So the original places of many of the finds could not be known. But the finds should be connected with the name of the place from where they come. And as the cultural products of Vikrampur they have a special claim for inclusion in the proposed Vikrampur Central Museum. With this purpose in view the *Palli-Mandal* (Village-union) of Arial has decided of late to found a museum for Vikrampur. This will facilitate connected research-work about Vikrampur on scientific lines. And, as to the matter of collection, even now many relics can be preserved and unearthed if only the sympathy and co-operation on the part of the villagers can be secured ; otherwise, if we are to sit idle looking for the attention of the Archaeological Department of the Government it is sure that many of the things will either be lost or transferred. The inhabitants of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Vikrampur are well known for their local patriotism, so it can be hoped that they will not hesitate to show enthusiasm in the project.

Garud—Arial Museum

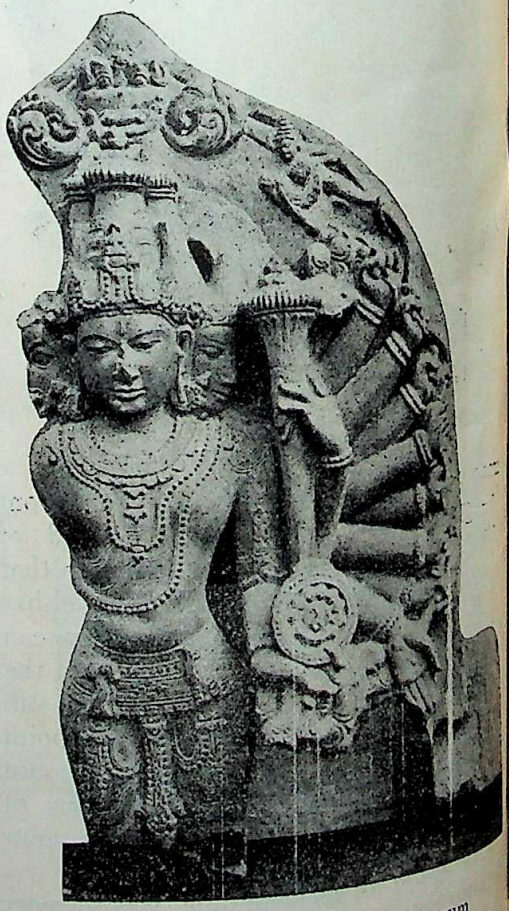
We propose to give below a list of the images with a short account of each collected from Arial itself.

(1) A new type of Vishnu image (Visvarupa)—This is one of the rare types of Vishnu images. It has four heads and twenty hands. We find no mention of such an image in the Bengali book on Vishnu images called *Vishnu-murti-parichayaya* by Pandit Binode Behari Bannerjee. In Mr. T. A. Gopinath Rao's *Elements of Hindu Iconography* there is a *dhyan* of Visvarupa but there is no mention whether any such image has ever been found anywhere. In an article in a Bengali magazine we published details of this image with its identification which seems to be quite satisfactory. The image was a very good specimen of Bengal sculpture, but, unluckily all the hands on the right-hand side and both the legs down the knees have broken off.

(2) A Vishnu image of the Bengal school of the usual type.

(3) The head of a Vishnu image.

(4) A new type of Kalki image (horse-mouthed)—Of the various *avataras* of Vishnu Kalki has this peculiarity that he rides on a horse. This our image reminds us of Revanta the son of the Sun-god, to some extent, but on close observation the former will be found to be nothing else than that of Kalki. He has four hands and is riding a horse; there is the



Vishnu (Visvarupa)—Arial Museum

sri-vatsa mark on his breast. The chief peculiarity of the image is that the face is horselike and that can be clearly detected even in its broken condition. There is

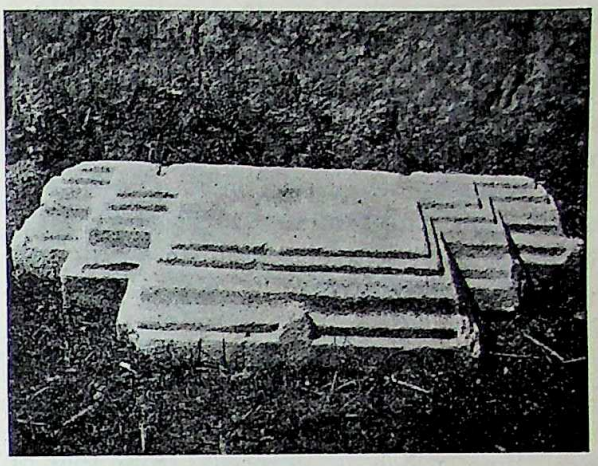
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

dhyan of the image in Mr. T. A. Gopinath Rao's *Elements of Hindu Iconography*. But it is not known whether any other specimen of this particular type has elsewhere been found. The face, one of the left hands, the left leg of the god, and the head and leg of the horse are broken.

In order to show clearly that this is an image of Kalki, we quote the special *dhyan* of the god which helps identifications :

कल्किनं मध्यमं दशतालमितमश्वाकारं मुखमन्यन्नराकारं चतुर्भुजं कर्त्तव्यं खड्गखेटकधरमुग्ररूपं भयानकमेवं देवरूपं कृत्वा कौतुकं वेष्वं चतुर्भुजमेव कारयेत् ।—वैखानस आगम ।*



Pedestal—Arial Museum

Karttikeya—Arial Museum

Uma-Mahesvara—Arial Museum

(5) It was a piece of good fortune that the collectors of Arial got such a fine image. Very few images of Garuda are found to be any match for this one from the artistic point of view. Its special merit is this that the sure touch of the artist's fingers has combined

* *Elements of Hindu Iconography*—by T. A. Gopinath Rao. Vol. I, pt. II—appendix C. प्रतिमालक्षणानि p. 49.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

liveliness and godliness. Even the folding of the hands is artistically treated. It is bound to be considered a finished and matchless specimen of Bengal art. The image is unbroken.

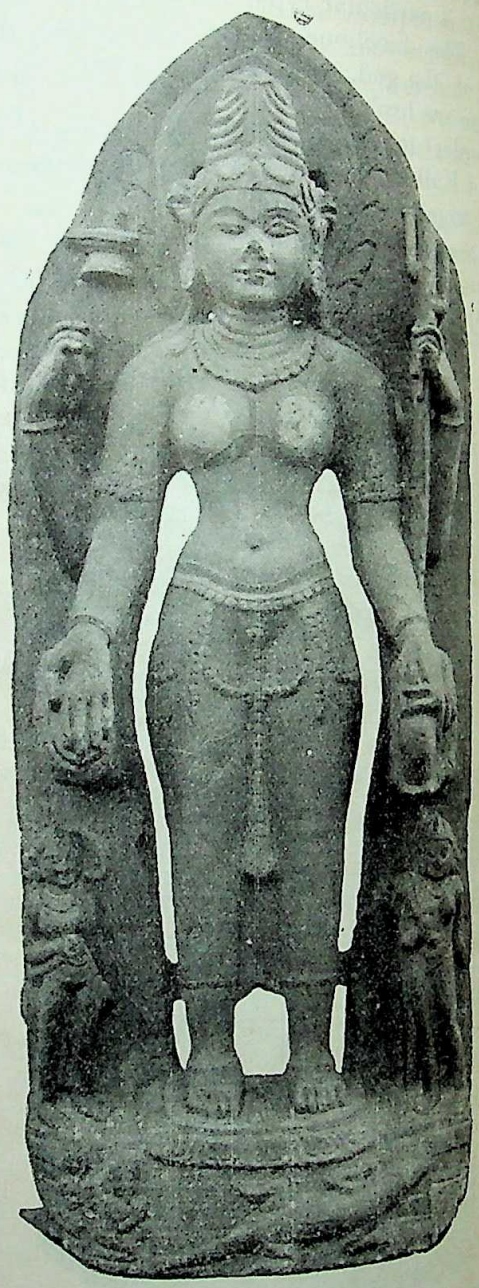
(6) Uma-Mahesvara—This is an *alingana* type of image, having all the marks of the type. It is unbroken. There is a little peculiarity in the features which may be marked in many old images.

(7) Uma-Mahesvara—Another of this type is in the collection.

(8) Nataraja—This Siva image is of the Bengal type which is different from that of the Deccan. The image is broken.

Vishnu—Arial Museum

(9) Karttikeya—A fine image of Karttikeya. Unluckily the face and a hand are broken. The god is riding on peacock, his *vahana*, in the *maharaja-lila* posture. This type of Karttikeya image is found in the Bharat-Kala-Parishat of Benares and the Varendra Research Society of Rajshahi. This image is very rare in Eastern Bengal. In the illustrated catalogue of the Dacca Museum Mr. Nalinikanta Bhattasali, M. A., remarks, "The only image of Kartikeya that has come to the writer's notice in the Dacca and the Chittagong divisions, is preserved in the Vaishnava monastery at Abdullapur, district Dacca (*Iconography of Buddhistic and*



Gauri—Dacca Museum

Brahmanical Sculptures in the Dacca Museum p. 147). The image has six hands.

(10) Ganes—A Ganes image with the entire lower portion missing. It is very like the Nataraja Ganes of Outshahi (found at Ranihati) and Munshiganj, both in Vikrampur.

(11) Suryya—A miniature Sun image has been collected. It was discovered by a boy of the village aged only ten years.

(12) Only the lower part of a huge Sun image has been acquired—the seven horses are distinctly carved.

(13) A broken Marichi image is in the collection.

(14) Over and above the images a huge *asana* for an image has come into the collection. It is of the *pancha-ratha* style. It is made of a kind of graphite stone which does not seem to be very much used in Bengal. The surface is smooth. There are two small holes for setting the image for which it was built.

(15-16) Two huge blocks of sandstones—These are shaped, which, at the very look, seem to be the relics of the basement of some old stone-building. This fact by itself is significant enough, because stone buildings are very rare in alluvial Eastern Bengal.

(17) A part of wooden door-jamb—about four cubits long. On it is carved two serpents embracing each other—scales are very clearly carved on these serpents. At the other end of the same surface, a finely finished woman is standing in the *tribhanga* pose.

Besides images and sculptures, other old relics have been collected. About 700 old manuscripts of the village have been taken charge of. A small coin-cabinet has also been the look out of the workers—for which one coin of Akbar the Great, one of Shah Jehan, one of Alamgir II, one each of Lakshmi Singh and Gaurinath Singh, the Ahom Kings, and four or five of the British and French East India Companies have already been acquired.

From what has already been said one can judge about the possibilities of this village museum which is still in the nucleus stage. Considering the fact that a great many of the images of this village discovered in the nineteenth century have been transferred to other places, it is no mere idle speculation on the part of the organizers of this museum to form one. Already through the indefatigable and praiseworthy attempts of Mr. Jayshankar Bannerjee, B. SC., who is a resident of this village, we know of a score of images which are now either in the village or neighbouring villages, in the courtyard of the Dacca Collectorate, Dacca Museum, Dacca Sahitya Parishat, at Belur or with private persons. The inscribed and dated image of Chandi, of the reign of Lakshman Sena, which is now at Dacca, in a private house, was taken to that town by the late Mr. Baikunthanath Sen along with a number of other images from this village on the back of an elephant. This is remembered by all the old people of the village.

This museum was started only three years ago. It has already attracted the imagination, sympathy and co-operation of the villagers, young and old. It has the good fortune of acquiring some very rare and fine specimens of Bengal art.

A high level of armaments is no substitute for general security. At best, it only creates the illusion f security in one quarter while at the same time it is aggravating the sense of insecurity in another. The security which set before us as our ideal is security for all, and security for all fundamentally depends on armaments reduction.—*Sir John Simon.*

THE REDEMPTION OF THE BRAHMAN

(A Review)

By JNANCHANDRA BANERJI

THE "Redemption of the Brahman" is a short novel by the eminent American scholar and authority on the Sankhya philosophy, Dr. Richard Garbe. It was published so far back as in the year 1896 in Chicago as one of the volumes of the Religion of Science Library by the Open Court Publishing Company. It tells the story of a caste—and custom-ridden Brahman and how he was redeemed, and thus gives us an insight into Dr. Garbe's ideal of what constitutes true Hinduism. The penetrating vision, the deep wisdom and foresight, and the love of Hinduism of Dr. Garbe may be gauged from the fact that the two lessons which he has sought to inculcate in this simple love-story deal with the two vital problems of Hindu Society which, thirty-seven years after he wrote, have now been thrust into the forefront by the aggressive and riot-loving section of the Moslems on the one hand, and by the attitude of Mahatma Gandhi in connection with the agitation among the so-called depressed classes and untouchables on the other.

The scene is laid at Benares, in the year 1840, in the house of a merchant (evidently a Vaishya by caste) Krishnadas, a widower, living with his young widowed sister Lilavati and his married daughter Gopa, aged 18, whose husband is engaged in trade in Cashmere where he is a boon companion of the young prince in his sports and dissipations and has not visited his wife for years.

The story opens with two processions to celebrate the Muharram and a Hindu religious festival, the Mahomedans moving toward the mosque of Aurangzeb 'whose slender minarets tower high above the holy city of the Hindus' and the Hindus proceeding toward the neighbouring temple of Visveswar. They had to pass from opposite directions through a narrow lane.

"It was but a few moments and the two processions met before the very door of Krishnadas. Involuntarily the shouts and prayers ceased, and for a moment a deep expectant silence ensued.

"Then from the front rank of the Hindus, a tall young man with firm energetic features, of a strongly-marked foreign type, stepped forward and spoke : 'Make way, and let us pass !'

"But scarcely had he spoken when a howl of anger arose in the ranks of the Mohammedans : 'Will you fall back, you unbelieving dogs !' and the foremost of the Moslems leaped forward swinging the clubs with which they had provided themselves in anticipation of a conflict.

"The Hindus began to fall back muttering ; but the youth who had appointed himself their spokesman turned upon them a glance of boundless astonishment, drew himslf up haughtily, and cried to his yielding comrades : 'How now ? Will you give up the field for the cowslayers, the unclean herd ? Stand, and force them back !'

"A howl of rage from the Mohammedans was the reply, and in a trice they had surrounded the bold youth and separated him from his companions. Then with a swift movement he seized the club from the nearest of his assailants, smote him to the ground, and before the Mohammedans could recover from their astonishment at the unprecedented occurrence with lightning speed he struck down a second, third and fourth. A cry of surprise escaped the lips of Gopa looking out of the window with breathless attention : 'Look ! look ! it is Mahadeva who has come down to destroy all enemies of our faith !'

"At this very moment she cried out anxiously, for the supposed God had received a fearful blow on the breast, and sank against the door of the house. A redbearded Mollah with glittering eyes shouted above the tumult, 'Let me through to kill the dog !'

"Willingly they made room for the fanatic in whose uplifted fist a dagger gleamed but before he reached his victim something unexpected happened ; the house door flew open, the unconscious Hindu disappeared and in a few seconds the cross-bar grated behind the closed door. The Mohammedans were indignant and endeavoured to break down the door, but the well-joined timbers withstood them. A few moments longer the uproar continued, until the guards of the public order appeared, led by the English officer under whose supervision the police were placed. The sight of the much-feared magistrate, who was seen in the interior of the city only upon special occasions, had a quieting effect upon the excited throng. Several arrests were made and the remainder dispersed....."

The hero of the story, Ramchandra, who was thus rescued from the clutches of a fanatical mob of Moslems and brought back to life by the lovely and beautiful Gopa and her father and aunt was a Brahman from Rajputana who had come to Benares to study 'not the subtle teachings of logic, which the acuteness of the Hindus is wont most to exalt, but the deeper wisdom of the great Indian pantheism.' 'He had learnt with shame how cowardly the Hindu was.' With the aid of Krishnadas, for Ramchandra was very poor, he began to prosecute his studies, and in a few years the fame of his learning, young as he was, filled the whole town. He was now engaged by Mr. White, Judge of Benares, to instruct him in the wisdom of the Hindus. Mr. White had entered the Indian Civil Service as the first scholar of his year expressly with the object of studying Hindu philosophy. But suspected by his friends as a Government spy, owing to his intimacy with Mr. White, Ramchandra replies in words which no doubt reflected Dr. Garbe's own views, as follows :

"If the wisdom of the Brahmans is promulgated in the West, is it better that it should be a chaos, a mass of indistinct ideas, at which all wonder and shake their heads, or that it should shine as the bright light of the sun, so that the thinkers of the sunset lands shall point to India and say : Thence comes our light ?"

Then follows a pathetic chapter on the death of Lilavati, whose *ekadasi* fast fell on the day when

was suffering from high fever and whose parched lips cried out for a drop of water, but when Gopa wanted to offer it, it was the Brahman Ramchandra who, with his implicit faith in the injunctions of the *shastras*, prevented her.

But his faith in popular Hinduism and the ritualistic laws of Brahminism and in his own pride of birth was rudely shaken by the puerile and inhuman practices which he saw at Benares. The Pitah festival at Durgabari, where great herds of cattle were slaughtered and at the same time monkeys were worshipped, the unmeaning and inhuman sufferings and indignities which widows had to undergo, the vile treatment meted out to the untouchable Dhobi by all but Mr. White, even the hint thrown out by him as to the purity of Ramchandra's Brahminic blood, whose fiery and brave temper he attributed to a strain in his blood derived from a female ancestor of the soldier caste at a time when the *anulom* form of marriage, sanctioned by the law books, was still prevalent,—all combined to make him feel the Justice of Mr. White's retort to his remark—redemption is beyond your reach for all time'—

"The redemption, that is, the emancipation of the individual soul from the pains of mundane existence, all your systems which I have studied with you, propose to attain through the medium of the intellect, through this or that knowledge. I seek redemption by morality, and I believe that everyone may attain to it in this life. The disciples of Buddha, the enlightened one, whom you Brahmans have driven out of your land, have approached nearer to the true understanding of redemption than you."

But argue with the Judge as he might, Mr. White's friendly remonstrances had struck home, and we find Ramchandra thinking to himself thus :

"Your laws ? Your commandments ? And what if it be true, as the Sahib says, that the sacred laws are not given by the gods, but are the work of men ? No, no, it is not possible that by human laws millions of creatures are condemned to filthy misery, despair, and starvation ! I shall go mad if I think of it."

And the wise English Judge observing the workings of his friend's mind, said :

"Believe me, Ramchandra, you are in the true path to enlightenment. It will not be long before you, too, can distinguish between the will of God and the laws of Brahmanism."

Meanwhile Gopa's husband also died in distant Kashmere and Krishnadas, with the memory of his deceased sister still fresh in his mind, refused to shave her head and take away her jewellery, and was ostracised in consequence and his business was ruined. This was too much for Gopa, who, in her wrath, drove Ramchandra a bit of her mind :

"In the short time that has elapsed since Lilavati's death, this has become perfectly clear to me. The divine laws, of which you Brahmans are always talking, and whose most distinguished conservator you desire to be, are nothing but lies and deceits. The pitiful existence to which you condemn the poor Pariahs was formerly established as a law of your class through base selfishness. And the mass, the ignorant mass, has believed your words and has languished in these fetters from century to century. You Brahmans are not the protectors, you are the scourges of our people.....with your solemn faces, you stand there unassailable and say : 'it is the will of the gods that the widow must live in misery and despair'. I tell you, more tears have flowed from the eyes of the widows of our land, than waters from the Ganges into the sea ! But that does not move you ; sooner will the lofty glaciers of the Himalaya melt, than the icy coat of cold indifference round a Brahman heart..."

"Sobbing, she left the room."

"The Brahman stood there, deeply agitated, but at the same time a feeling of freedom came over his heart. 'From the lips of this woman,' thought he. 'the truth has been shown to me, and the truth will conquer and must conquer. I see redemption dawning upon us. But she does me an injustice. From this hour I am no longer a Brahmin, but a man'.

The first thing he now did was to take his meal with Krishnadas—a thing which he had so long scrupulously avoided ; then he confessed his love for Gopa and asked for her hand :

"I always loved you, Gopa, but I know it only a few days ago."

"The maiden lifted her happy eyes, leaned upon his shoulder, and whispered, 'I always loved you, and always knew it'."

The last thing that Ramchandra did was to break his sacred cord, as the last outward sign that bound him to his caste. This did not mean, however, that he renounced his religion. To the priest who said 'Next we shall hear that Ramchandra, the learned Brahman, has accepted the Christain faith,' he replied, "Oh no, rest assured I shall not become a Christian."

But when the priest, whom he had so far shown the greatest deference, commanded him to leave the outcaste Krishnadas and his house, with a calmness quite unexpected he replied :

"Only those should give commands who have power to compel their execution. You weaklings have allowed this power to be taken from your hands ; the Sahibs rule the land."

Then the priest cursed him and said, "May you never find redemption"

"Redemption ?" Ramchandra cried, "I have found it. There is but one in India, the redemption from the fetters of your delusion, from the soul-smothering bonds of Brahmanism."

Krishnadas was now the happiest of fathers, for Gopa was to be married (evidently under the Civil Marriage Act) by the Judge with Ramchandra whom he so dearly loved. He said :

"You are young.....and may live to see things change in our land, I shall not ; and it is not necessary. Having once partaken of such happiness as has been mine today, I have not lived in vain."

And the Judge Mr. White, turning to Ramchandra, said :

"You do not know yet what I owe *you*. You have restored in me the belief in your people, which I had lost. In you I see the future of this country"

This brings the story to an end, leaving the reader to ponder, in the year 1933, how far Mr. White's best wishes for the future of Hinduism have been fulfilled since Dr. Garbe wrote the book in 1896, and how many Brahmans since then have been redeemed, in the sense in which the author uses the word.

HENRY DEROZIO : THE TEACHER-PATRIOT

By JOGESH C. BAGAL

I

HENRY Louis Vivian Derozio died in Calcutta on December 23, 1831, at the age of 23. In this short period he rendered immense service to Indians. Though of mixed descent, he always regarded India as his motherland. His poetry breathed deep love for India and her ancient culture and muse.* To the world outside he is known as a poet and a journalist.† His services to India, however, consisted chiefly in his work as a teacher in the Hindu College of Calcutta (1826-1831). His teachings moulded the life and character of the boys of the College. Some of these boys became pioneers of religious, social, political and intellectual movements in the country in after life.

Derozio was a brilliant alumnus of David Drummond's Dhurrumtolla Academy in Calcutta. In annual examinations he often stood first in recitation, reading, geography and other general subjects.§ In those days examinations were conducted with great pomp. The elite of the city, including the editors of newspapers, were invited to these functions. In the annual examination held on December 20, 1822, in the Academy, Derozio's recitation was very successful and excited the applause of the audience. The editor of *The India Gazette*, who was present on the occasion, wrote :

> The English recitations from different authors, were extremely meritorious, and reflect great credit upon the scholars and the teacher. A boy of the name of DEROZIO gave a good conception of Shylock ; and another fine little fellow, named EDWIN TURNBULL, gave Portia's appeal, and the speech on Mercy, with appropriate gesture, feeling, and correctness of accentuation. Colman's humorous Vagary of the Poetical Apothecary, was recited also by DEROZIO, and with capital ludicrous effect.... It was an interesting sight to behold the Native children sitting side by side with the sons of Europeans. This is as it should be. The Natives begin to duly estimate the value of education. Those who are educated together must contract kindly feelings towards each other and this must in the end prove generally beneficial.*

It should be noted here that Derozio's kindly feelings towards his pupils—all Indians, were nurtured in his *Alma Mater*, the Dhurrumtolla Academy.

II

Derozio left Drummond's school in 18[illegible]. He then went to Bhagalpur, and became clerk in a mercantile firm. During his stay over there he pursued his studies further in English literature, history and philosophy. A poet by nature he culled themes from what he saw around him and composed beautiful poems. He was still in his teens when he returned to Calcutta to serve as a teacher in the Hindu College. Derozio was amiable in nature, and had a sweet voice. His exposition of things was also excellent. He was not far above his pupils in age. It is no wonder then that soon after his appointment in the Hindu College, he became the beau ideal of its young learners.

Derozio's services in the College commenced in May, 1826.† In the pay-sheet of its teachers for January 1827 I find him stated as the fourth teacher and Rs. 100 against his name.§ We learn from the diary of Radhanath Sikdar that he took lessons from Derozio in English grammar, composition and poetry while he was in his fourth form.** This Radhanath Sikdar rose to be the Chief Computor of the Great Trigonometrical Survey of India and discovered that Everest was the highest peak on earth. It is probable that Derozio later taught the boys of the second and third classes English literature and history.§ Besides Radhanath there were among his pupils such eminent persons as Sib Chandra Dev, Ramtanu Lahiri, Ramgopal

---

* His sonnets "Why hang'st thou lonely on yon withered bough ?" and "My country ! in thy days of glory past" are illustrations to the point.

† Henry Derozio edited two papers—*Hesperus* and *East Indian*.

§ Two advertisements about Drummond's school appeared in *The Calcutta Gazette* of Dec. 25, 1817 and *The Government Gazette* of Dec. 31, 1818 respectively. In them were described the successes of the pupils at the annual examinations. About Henry Derozio we have :

Henry Derozio—First in Recitation, Reading, Geography, and general extraordinary acquirements at 8 years of age.

Henry Derozio—First Reader in the School and A Gold Medal remarkable powers in recitation, etc. (9 years of age)...

Walker's Elocution (prize)

Ghose, Raja Dukshinaranjan Mukherji and Pearichand Mitra. The Rev. K. M. Banerji, Rasik Krishna Mallik, Hara Chandra Ghose and Tarachand Chakravarty, though not strictly his pupils, were imbued with his teachings and became his friends.

Derozio loved his pupils dearly. He was impressed with the rapid progress they were making in their studies. He built high hopes on them. He believed that this noble band would one day bring honour and glory to their country. Derozio wrote a beautiful sonnet on his pupils, which shows, in vivid colours, the ideal teacher that he was :

Expanding like the petals of young flowers,
I watch the gentle opening of your minds
And sweet loosening of the spell that binds
Your intellectual energies and powers, that stretch
(Like young birds in soft summer hour),
Their wings to try their strength. O how the winds
Of circumstance, and freshening April showers
Of early knowledge,and unnumbered kinds
Of new perceptions shed their influence,
And how you worship Truth's omnipotence !
What joyance reigns upon me, when I see
Fame in the mirror of futurity
Weaving the chaplets you are yet to gain
And then I feel I have not lived in vain.*

III

In teaching Derozio followed a method which was not only interesting but also proved beneficial to the young learners. They have borne testimony to it in their writings. Radhanath Sikdar wrote in his diary :

Mr. Derozio was a very kind and indulgent teacher ; though often vain of his attainments, he was nevertheless a learned man. He first taught us the whole class the object and end of knowledge, an information which cannot be too highly valued ; and implanted that ambition of literary fame in my bosom which I am glad to affirm directs and actuates all my effort even to this day. He first directed my metaphysical studies and gave us those moral and liberal principles which I hope will ever influence my actions. Cut off in the prime of life, amidst innumerable projects for the reformation of India, his untimely death must ever be a matter of regret ; and it may be safely affirmed also that he has been the cause and the sole cause of that spirit of enquiry after truth, and that contempt of vice, which are so fashionable among the enlightened portion of the community, and which cannot but be beneficial to India.†

Derozio always aimed at instilling the spirit of enquiry into the minds of his boys. He wrote on one occasion :

Entrusted as I was for sometime with the education of youth, peculiarly circumstanced, was it for me to make them pert and ignorant dogmatists, by permitting them to know what could be said upon only one side of grave questions ? Setting aside the narrowness of mind which such a course might have evinced, it would have been injurious to the mental energies and acquirements of the young men themselves. And (whatever may be said to the contrary) I can vindicate my procedure by quoting no less orthodox an authority than Lord Bacon. "If a man," says this philosopher, "will begin with certainties, he shall end in doubts." ... ... One doubt suggests another and universal scepticism is the consequence. I therefore thought it my duty to acquaint several of the college students with the substance of Hume's celebrated dialogue between Cleanthes and Philo, in which the most subtle and refined arguments against theism are adduced. But I have also furnished them with Dr. Reid's and Dugald Stewart's more acute replies to Hume—replies which, to this day, continue unrefuted.†

H. L. V. Derozio

IV

Derozio did not instruct his pupils in the class-room only. Out of the college hours his

pupils and friends flocked to him to hear his discourses in the Academic Association or in Mr. Hare's school (now called the Hare school). The Academic Association, a debating club and perhaps the first of its kind in India since the advent of the British, was founded by Derozio, in 1828 or 1829. The Association met at first in Derozio's house; later it was transferred to Srikissen Singh's Maniktala Garden-House. Derozio's discourses in the Association on such subjects as fate, faith, the sacredness of truth, the nobility of patriotism, exerted immense influence on the minds of his pupils. These young learners started *Parthenon*, the first paper in English, ever conducted and edited by Indians. *The Bengal Spectator*, conducted by some of these pupils, wrote in its issue of September 1, 1842:

> About this time [early 1830] the lamented Henry Derozio by his talents and enthusiasm, by his unwearied exertions in and out of the Hindoo College, by his course of lectures at Mr. Hare's school, by his regular attendance and exhortations at the weekly meetings of the Academic Institution,* and above all by his animating, enlightening and cheerful conversation, had wrought a change in the minds of the native youth, which is felt to this day and which will ever be remembered by those who have benefited by it. It was then that the first native paper in English the "Parthenon," was put forth under his auspices. The first No. advocated the cause of colonization and that of female education. It condemned the superstitions of the Hindoos and prayed for cheap justice. It started the orthodox Hindoos, and their might and influence crushed it in the bud. The second number was in type, although it was never circulated. But the spirit of enquiry was not, could not be checked ... ... Half a dozen of Derozio's boys caused a fervent in society and gave the first shock to Hindooism. A strict and reverent adherence to what they were taught as their principles, an almost romantic attachment to what they deemed the spirit of truth, characterized these young men. There was indeed such a singleness of purpose, such a devotion to the cause of truth, such unflinching attachment to principle and such burning and pervading enthusiasm, that one might have predicted without extravagance, a revolution in the manners, the morals and religion of the Hindoos.

Derozio's pupils stood for truth, right and justice. They wanted to fight dogmatism to the finish, no matter from whatever quarter it came. The enthusiasm of some, however, ran to excess. They ate things publicly from forbidden quarters in defiance of Hindu orthodoxy. They went a step further. They became sceptics and lost all faith in established religions. Neither Hinduism nor Christianity was spared. In his auto-biographical sketch, the Rev. K. M. Banerjee wrote:

> The opposition they manifested to Christianity was nearly as decided as their antipathy to Hindooism. Several nights the subject of [illegible] sketch rambled in company with large bodies [illegible] friends in the principal streets in town, in order [illegible] throw the missionaries into ridicule, by feigning [illegible] to preach the gospel, and imitating their [illegible] pronunciation of Bengalee and their incorrect [illegible] of words and phrases in their language.*

Such conduct of the pupils was naturally resented by the orthodox people. They made Derozio responsible for this. An agitation was set on foot in the Hindu community against him which virtually caused his dismissal from the Hindu College. This happened on the 25th of April, 1831. Derozio wrote in reply to a letter from Horace Hayman Wilson, Vice-President of the Managing Committee of the College:

> If the religious opinions of the students have become unhinged in consequence of the course I have pursued, the fault is not mine. To produce conviction in their minds was not within my power; and if I am to be condemned for the atheism of some, let me receive credit for the theism of others. Believe me, my dear Sir, I am too thoroughly imbued with a deep sense of human ignorance, and of the perpetual vicissitudes of opinion, to speak with confidence even of the most unimportant matters. Doubt and uncertainty besiege us too closely to admit the boldness of dogmatism to enter an enquiring mind and far be it from me to say that "*This is*" and "*That is not*" when after most extensive acquaintance with the researches of science, and after the most daring flights of genius, we must confess with sorrow and disappointment that humility becomes the highest wisdom, for the highest wisdom assures man of his ignorance.†

V.

The period during which Derozio served the Hindu College was afterwards known as the "Derozian Period." With his departure from the college, its efficiency in teaching also fell. A person with the initial "W" wrote a letter to *The Calcutta Courier* in April, 1833, complaining of the miserable condition of teaching in the college. This led to a controversy in the papers, some supporting and others refuting the statements of "W." In the course of a letter, "A friend to the College" gave an account of the condition of the College in the time of Derozio. His estimate of Derozio's services to the college was almost thorough. He wrote:

> Your correspondent W. has drawn his conclusions from the state of thing, not as they were but as they *are*. Let him for a moment take a retrospective glance of what may with propriety be termed—*the Derozian period of the college*. The master-spirit of this young man, whose premature end will be deplored by every friend of humanity and of literature, called forth all the energies of the human breast. The charm of his eloquence nerved his young disciples to the most daring—yet

* A debating club over which Mr. H. L. V. Derozio presided for several years.

the noblest acts doing what is unparalleled in the annals of any college, or even in the history of mankind. He infused into the infants the sternness of manhood, and taught them to sacrifice home and every kindred tie at the altar of Truth. Those who were near felt the violence of the times, and though his best friend applauded, yet that applause was not altogether unqualified : yet this one good was achieved—the Rubicon, that great moral barrier of Hindoo refinement, was crossed, and the triumph of reason and philosophy over ignorance and superstition may now be regarded as fixed and irrevocable.

To appreciate in a correct manner the rapid advances that education has made within the last few years, we need only to revert to other prominent facts connected with this eventful *Derozian period*. I shall point out a few of these. The *Parthenon*, a weekly moral and literary periodical, was got up under his auspices, and but for the friendly interposition of Dr. Wilson, who lamented its being a rather too premature production (a direct avowal this of an advance too rapid for the state of things), it bade fair to flourish, supported entirely by the contributions of the young students of the College. *The Academic Association*, another extremely useful institution, which has attracted the attention and elicited the applause of the first gentlemen of the place, was founded and fostered during his time and by him ; and despite the various efforts made to crush it at its bud, the spirit that animated its founder, continues to guide its operations to this day. A third work of his hand was the *Weekly moral and intellectual Lectures* given by him to the Students of College and other sister Institutions. I remember with feelings of pleasure the glow of enthusiasm visible on every countenance assembled on these occasions. Love, gratitude truth, honor, appear to have been the prominent features of his short but brilliant career ; and the spell that bound his pupils around him, served alike to animate them to almost super-human exertions. Those who benefited most by his instruction have brought themselves conspicuously forward ; some editing respectable periodicals, others aiding by contributions ; while a third class, moved by a congenial spirit, have spread themselves abroad and are benefiting their fellow countrymen by the establishment of gratuitous Seminaries, devoting thus not only their heads but their purse in the glorious cause of moral improvement...

One word more and I shall have done. In drawing our attention to the merits of the Hindoo College, I have been insensibly led into an eulogy of the late much lamented Mr. Derozio ; these have been so identified that, in dwelling on the one, I have not known how to separate from it the other.*

The spirit of enquiry Derozio infused into his pupils has come down to us and led us to acquire fresh knowledge every day with an open mind. Herein lies the greatness of Derozio—the teacher-patriot of the early nineteenth country.

* *The Calcutta Courier*, June 5, 1833.

COIN OF SAMPRATI MAURYA

BY K. P. JAYASWAL

CUNNINGHAM in his *Ancient Coin of India* has published a coin of the Taxila mint (Coin No. 20 on Plate II, opposite page 60). This coin has not been attempted to be read.

On the *reverse* the legend is in Kharoshthi and reads

(Line 1) स म्प्र (*Sampra*)

(Line 2) दि (di)

There is a *moon-on-hill* monogram of the Maurya dynasty placed on the top of a standard. The other symbol is of the four-quarters (चतुरन्त) ruling Empire by the standard the letter *di*. On the *obverse* side the coin has the same moon-on-hill symbol which started with the reign of Chandragupta and was a monogram on his name (*Chandra*, moon). There is a svastika below the monogram, as on Asoka's inscription at Jaugad, where it is placed on a standard. By the side of these symbols, there are two *aksharas* in Brahmi मौ and य्यौ (*Mauryya*), but the *yyo* is placed above *Maur*.

We have thus a second signed coin of the Mauryas. The earlier Mauryas gave only initials of their names on their coins which have been discovered at Pataliputra (Excavations). I am showing this in my book on Maurya coins.

I may add that the form *Sampradi* is correct, while *Samprati* of the Puranas, meaningless. The Divyavadana gives *Sampadi*.

Samprati (corr. *Sampradi*) was a grandson of Asoka. This coin and that of Dasaratha (already published) prove that both Dasaratha and Sampradi ruled, one after another, just as the Puranas state. That their empire included Taxila, like that of their grandfather, is now established by these frontier coins of Dasaratha and Sampradi, bearing legends in Kharoshthi, for circulation in Afghanistan and the neighbourhood.

ESTABLISHMENT OF CLOSER RELATIONS BETWEEN KINDRED VERNACULARS

By DIWAN BAHADUR KRISHNALAL MOHANLAL JHAVERI, M. A., LL. B.

HIS Highness the Maharaja Gaekwad of Baroda has recently sanctioned a scheme for holding, every year, a Conference in Baroda of Marathi and Gujarati writers of repute, for the benefit of the public. In accordance with it, the Vidyadhikari invites five scholars of each language to Baroda, and along with several other officers of the State, connected with the Educational Department, discusses with such scholars subjects bearing on the different branches of literature. The scholars are further invited to deliver lectures on some subject of their choice out of those determined at the Conference. Provision has been made for paying travelling and halting charges of the person invited to attend the Conference and also an honorarium to the lecturer. The scheme furnishes one more instance of the generous encouragement given to literature by His Highness. This year the time selected was the week beginning with 28th February, when His Highness' birth day celebrations were being held. Five subjects were selected for lectures, one of them being "Establishment of closer relations between kindred vernaculars." The others were: 1) Some thoughts on Gita: Principal A. B. Dhruva of the Benares Hindu University; (2) The critical edition of Adiparva: Prof. B. K. Thakore, B. A., I. E. S., (Retd); (3) Ideal of Indian Universities on linguistic basis: Mr. K. M. Munshi, B. A., LL. B.,—not delivered owing to illness; (4) Main tendencies of modern Gujarati literature: Mr. Ramanlal V. Desai, M. A.

The lectures were delivered in Gujarati.

The following is a translation of what the present writer said on the subject of the title of this article.

Out of the many vernaculars current in India, those that belong to the same gotra, *i. e.*, those descended from the same parent, have come to form allied groups. Hindi, Bengali, Marathi and Gujarati, for instance, have their origin in Sanskrit, and therefore form an allied group. The resultant advantage is that an individual speaking any one out of these four vernaculars finds it easier to pick up a working—if not an intimate—knowledge of any other or all the vernaculars of that group, than one speaking the vernacular of an alien group, *e. g.*, a Madrasi. A Gujarati or a Dakshni would more easily pick up Bengali or Hindi than a Tamil or Telugu speaking person from the south. The reason for this is that many words are common to each of the allied vernaculars, besides similarity in syntax, mode of thinking and expression of thoughts and ideas. On account of this element of commonness and similarity it is easier to establish closer relations betweet such vernaculars *inter se*, for literary purposes amongst others, than between them and those belonging to an alien-non-allied—group which have no common origin and lack contact linguistic and spotial.

Indians have an innate aptitude for studying foreign languages. Study of foreign languages has been their destiny for centuries. During the time of the Muhammadan rule, they had to study Persian, as that was the Court language and the language of their rulers. Indians learnt it so well that they became experts. They could write poetry, carry on correspondence in cultured style, and discuss such highly philosophical subjects as Sufism, most creditably in that foreign language. That was so all over the country, specially in the north, east and west. Then with the decline of the Mogul rule, our destiny became linked to the British rule, and for the last century and a half we have taken to the study of English and produced scholars of the calibre of Sir Surendra Nath Banerji, Dr. Rabindra Nath Tagore, Mrs. Sarojini Naidu, the Rt. Hon'ble Mr. Shastri and the late Mr. G. K. Gokhale whose command of the language is unique and unquestioned. Aptitude for the study of languages, therefore, exists in us by nature. If we can study foreign languages so well, there could be no doubt that we can study Indian vernaculars with equal ease. The real question to consider is, what should be the means taken to facilitate their study. A few thoughts which have occurred to the writer, in connection with it, are set out here.

Out of the four vernaculars mentioned above two are near neighbours: Gujarati and Marathi, while the other two, Hindi and Bengali, though near neighbour to each other, are distant from graphically from the first two. Hindi had close contact with Gujarati in olden times. It possesses Mss. written in Vraj. Poets like Lallu Lal and Dayaram could write verses in Vraj. Dadu Dayal preached his Vani in Vraj, and the saints and sadhus who came to Gujaral in large numbers from the north also used Vraj. But that contact gradually disappeared. As for Marathi and Gujarati, their contact dates from the days when the former language began to be heard by the inhabitants of Gujarat on account of the conse-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

military expeditions undertaken by the Marathas to subdue the province. They constructed a fort at Songhad Vyara, their deputies began to take up residence in Surat, they created Thanas (military posts) at Baroda, Dabhoi and Petlard, in the heart of Gujarat; they began to dwell in Ahmedabad; and lastly due to their *Mulkgiri* and *Chouthai* raids in Gujarat and Kathiawad, echoes of Marathi began to reach the ears of the Gujarati. Although Persian was the medium of correspondence in political matters, and although Maratha officers stationed in Gujarat corresponded with the authorities at Poona and Satara in Marathi, still as they had to remain long in Gujarat, and as the language of the province was Gujarati, they could not ignore the existence of the language and had got to be acquainted with it. It is for this reason that many Dakshni families resident in Gujarat use very good Gujarati both in speech and writing. Similarly those Gujaratis, who have gone to the Deccan, for trade and other purposes and live in places like Poona, Dhulia and Nandarbar, and those who live in Thana and Bassein as natives of the district—specially the Agri Lad Banias of there—write and talk Marathi as well as the Dakshnis. Thus contact had long been established between these two vernaculars due to political and economic causes. In cities like Bombay where Gujaratis and Dakshnis reside in close proximity of one another or serve as colleagues in the same offices, they naturally pick up each orther's vernacular. However, what they talk is neither correct Gujarati nor correct Marathi. Gujaratis mostly employ Marathi servants, and a working knowledge of each other's language, such as would make his servant understand the master's needs on the master's part and such as would make the master understand the servant's needs on the servant's part, suffices for all practical purposes. It resembles the correct speech as much as the Pigeon English of the Chinese resembles the correct English of the Englishman.

This state of things shows one of the means to the end of the establishment of closer relations between the two varnaculars. It is a self-evident point, still requires noting, *viz.*, that if close relations between two vernaculars have to be established, then the speakers thereof should be brought into closer contact spotially and mutual intercourse for exchange of learning and ideas has to be established.

The fall of the Maratha power in Gujarat and the rise of the British power resulted in the termination of close contact between the Gujaratis and the Dakshnis. Excepting for those Dakshni families that settled in Gujarat and made places like Surat, Broach and Ahmedabad their home, those other Dakshnis who used annually to visit Gujarat and return to the Deccan at the end of the fair season, ceased to come, and thus the field of contact became circumscribed. Marathi found a permanent home only in one place, Baroda, and that also an isolated home, surrounded on all sides by Gujarati. Thus close contact between the speakers of the two vernaculars came to an end. It remains to be considered how it can be re-established.

Still the one means that is considered the chief and most important means of establishing closer contact between the two near vernaculars applies with equal force to all the four,—is common to them all. It is the suggestion that books, newspapers, periodicals, etc., published in these four vernaculars should be printed in Balbodh or Devnagri script. Marathi and Hindi have still adhered to that script. Gujarati has completely gone off it and Bengali partially. There is great advantage in having a common script. As mentioned above, there is commonness of words between these four vernaculars and also similarity in syntax and thought expression; therefore, if the script be such as could be read by all then it would not be difficult to follow the subject-matter of the writing. Bengali poems printed in Devnagri can be understood by Gujaratis and *vice versa*, Gujarati poems printed in the same script can be understood by Bengalis. Those Gujaratis who have settled in Calcutta and other places in Bengal, can testify to this. Gujarati quotations in the two books (1) Milestones in Gujarati Literature, and (2) Further Milestones in Gujarati Literature, published by the present writer have been printed in Devnagari with the object that those who can read Balbodh script may understand them. Diwan Bahadur Keshavlal H. Dhruva, who recently delivered a series of lectures in Gujarati under the auspices of the Bombay University has printed them in Devnagri script, as the subject of the lectures, पद्यरचनानीऐतिहासिक आलोचना, is from a literary point of view of importance not only to Gujarat but also outside the province of Gujarat. His object was that those outside Gujarat should avail themselves of the result of his researches, and as a a matter of fact, such outsiders have been making use of the scholarly publication. Old writers like Diwan Bahadur Ranchhodbhai Udayram also followed the same plan, and the Baroda State, so far as some of its publications,—*e. g.*, the History of Education by the late Manishankar R. Bhatt,—are concerned, uses the same medium, Further, the State Gazette (Agna Patrika) is printed in Balbodh. The argument advanced against the use of this script, is that thereby the vernacular loses its individuality; Gujarati printed in Devnagri is not Gujarati: it is so. Change of appearance does lead to some defect in its original form or shape: but that should not out-weigh the resulting advantages. Writers, therefore, in these four vernaculars would certainly be able to help the cause greatly by following the suggestion made in this direction.

H. H. The Maharaja Saheb has now made Hindi the court language, and thereby taking a most important step in the directon of establishing

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

very close contact between Gujarati, Marathi and Hindi. His Highness' subjects, if they happen to be Dakshnis, have necessarily to study their mother tongue, Marathi, if Gujaratis, then Gujarati. In addition, Hindi being the court language, they both will have to study Hindi for reasons of state. The experiment, therefore, if successful, will certainly bring the three vernaculars very close.

If opportunites are afforded to those who speak these vernaculars to meet often, for exchange of thought, that would be an additional advantage. The present Conference is a concrete instance of it. They can at such Conferences, very easily find out, the common features between the vernaculars, their similarities and dissimilarities, and then consider, whether there is any room, and if so, in what way to bring about the desired object. They can take decisions on literary, social, scientific and other cognate subjects : further, prejudices harboured by one against the other would be removed.

Every province now holds its literary Conference (Sahitya Parishat). Marathi, Bengali and Hindi Literary Conferences have done and continue to do praiseworthy work. The permanent offices of the Bengali and Hindi Literary Conferences are doing great service to their own language and and literature. If authors and writers of allied vernaculars be invited to be present at the sessions of the Parishat of any particular vernacular that would do great good, but for that purpose the invited authors must make it a point to attend the sessions. To illustrate this, I would give only one instance. At the time the Gujarati Sahitya Parishat was in session at Lathi in Kathiawad during last (1933) Christmas holidays, the well-known Hindi speaker and writer Pandit Ram Naresh Tewari happened to come there. He was requested to attend and give the Parishat the benefit of his scholarship ; he agreed and for fifteen minutes held the audience spell-bound by his discourse on certain features of Hindi folk-lore, of which he is a deep student. He spoke in Hindi and drew a vivid picture of the poignancy of the grief of a doe whose mate had been shot and eaten by a King and of her appeal to the Queen to return at least the skin of the deer to her so that she might console herself by looking at it. The hearers followed him completely. If, therefore, this suggestion be adopted, it would result in some gain. Some such suggestion was once made at one of the previous Sessions of the Gujarati Sahitya Parishat, but nothing tangible came out of it. The suggestion, if adopted, will not surely lead to any harm. Such invited representatives may either discuss this very subject, of closer contact, or may deliver separate lectures and therein discuss the subject and invite exchange of views. If nothing else, the presence at least of such representatives would create curiosity, in the minds of the persons assembled, to know something about their language and literature. Even this awakening of interest would be a gain.

A common meeting ground can be arranged for persons living in the same town or city or passing through it. In Baroda there is the Central Library. In Bombay the Forbes Gujarati Sabha Mandir or the Dakshni Brahman Samaj Hall. The difficulty, however, is to create in people a desire to utilize such means, as, at present, one finds complete indifference thereabout.

Ideas and ideals of morality and immorality, liberty of thought and action, figure in different literatures in different ways. There is a clash between old notions and new, on these subjects. Realism is now coming into prominence. The portryal and evaluation of historical and Pauranic characters has also raised a controversy. Within what limits and to what extent can portrayers depart from the original source or materials, and where should they stop—these are some of the questions at present agitating both Gujarati and Marathi literatures. A common meeting ground would help their solution, as the original sources would be common.

The difficulty experienced owing to absence of suitable scientific (पारिभाषिक) terms in these vernaculars is a long-standing handicap to the spread and popularizing of education in scientific subjects through vernaculars. If scholars of these vernaculars can come to an agreement in this respect and prepare a vocabulary, it is bound to prove authoritative and can be easily used by all. In this way, something more than close relations would be established, as then there would be unity. The Hindi, Nagari Pracharini Sabha had prepared and circulated such a vocabulary sometime ago. The Bengali Sahitya Parishat had done something on identical lines. I do not know about Marathi. The late Prof. T. K. Gajjar had undertaken the task in Gujarati, with the help of His Highness' Government and seen it through. What is required is a sustained and systematic effort towards co-ordination.

Responsible literary bodies belonging to each vernacular should publish lists of their classics, so that the other vernaculars may know exactly which works are worth translation and which not. Mutual arrangements for translation of such works can be made.

In the Deccan, even though the States are not as large or rich as those in Gujarat and Kathiawad, their enlightened rulers wholehearted help the cause of literature. In Gujarat, H. H. the Maharaja of Gaekwad's generosity and wide outlook stand pre-eminent and act as a beacon light to others. If a leaf is taken out of H. H.'s book by other rulers in helping the fulfilment of this object, much can be accomplished.

These are a few suggestions which at present occur to the writer. Time alone will show how many of them can be or are acted upon with success, but, still, if an attempt be made to print books etc., published in the four related vernaculars

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Devnagri, it would facilitate the carrying out of that noble object, *viz.*, finding out a *lingua franca* for India, and making Hindi take the place of that common language.

His Highness the Maharaja Saheb cannot be thanked enough for devising such means as these to bring scholars of different languages together.

SO-CALLED SCIENTIFIC CRITICISM OF ORIENTALS

By DHIRENDRA NATH ROY, PH. D.,

Head of the Department of Philosophy, University of the Philippines

Of the various characteristics which have been ascribed to the people of the Orient—many of them designed to be in the form of criticism—the one that seems to be most appropriate is the lack of what is known as the scientific spirit. But in view of the usually admitted fact that orientals are in general philosophically inclined, this may sound rather paradoxical, unless the term "scientific" is proved to connote something antithetical to philosophical. If the end of science is to become philosophy, it is obviously impossible to establisb any antithesis between the two. But if science is regarded as an end in itself, there may be some such possibility, and the apparent paradox of the orientals being philosophical but unscientific may disappear.

Accepting the popular Spencerian meaning of science as partially unified knowledge, anyone may perceive its hypothetical nature from its own limitation. Scientific knowledge is rightly held as partially unified, because the collection of facts upon which knowledge is based can hardly be regarded as complete. Moreover, the facts that are thus collected give only a partial knowledge of them until they are studied in their relation to the whole reality. Each science builds its own little world of facts upon which it seeks to generalize. The truth of such a generalization may be established by the facts of this little world, but when one considers that these facts bear richer and fuller meaning in their relation to the facts of the vast outside one invariably finds it difficult to accept it as really established. This is why science leads to philosophy and does not oppose it. But science may oppose philosophy when its little world is all that it likes to recognize in testing the truth of its own generalization. Philosophy certainly admits the great value of scientific studies, but it cannot understand science when the latter claims its decision to be final.

The scientific spirit as revealed in such an exorbitant claim is clearly antithetical to any philosophical disposition. This spirit is found sometimes to go so far as to make itself positively harmful to the real cause of science.

In the case of any natural science such spirit, however, may not be so readily perceived, inasmuch as its generalization is based upon some facts of nature, and nature does not care as to what sort of opinion is passed upon it. Nature did not say anything when Ptolemy upheld his generalization about planets—the generalization which had long been the gospel truth. It was equally unconcerned when Copernicus proved that generalization to be false. But did not that peculiar scientific spirit reveal itself in that astronomical generalization which proclaimed its certainty and despotically sought to maintain that position ?

In the case of a social or rather humanistic science the so-called scientific spirit may be clearly visible. This is because its generalization affects men and men do not choose to be wholly indifferent to what is said about them. But science has an advantage peculiar to itself. It gives facts for its generalization and facts are very powerful for immediate influence over one's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

decision. Few are prepared to see through the game. For, these facts are very often collected with a hidden purpose and manipulated in a manner so as to compel the generalization already intended. The quaint and fantastic race theories of some 'distinguished' anthropologists might have been "scientific", because based upon physical differences, *viz.*, skull formation, skull content, facial bones, shape of the head, colour of skin, hair, and eyes, etc., but these have served very little of the real cause of science, inasmuch as physical characteristics are the most unreliable determinants of race divisions. On the other hand, when some person of that scientific spirit notices that those theories are merely convenient devices to flatter the theorists themselves and their kinsmen and to feed their national bigotry, he may try to uphold, with the same purpose, some counter-theory by means of equally scientific data. Of the many psychological theories of race qualities the one that is much talked of is the theory that maintains levels of race intelligence. Some races are generalized as superior in intelligence to some other on the bases of intelligence-quotient and statistics. When a person affected by this theory finds that the generalization invariably includes in the former group the theorist himself, he may become equally sensitive and try to prove the contrary, to his own advantage, in the same scientfic manner. The sociological theories of cultural levels, progress, and civilization have been upheld as scientific, while these may show to all reflective minds how each theorist has ingeniously collected facts to persuade others to feed his national egotism. While he recognizes some sort of natural divisions of mankind, he does not seem to feel shy of dogmatically upholding his own likes and dislikes as the sole criteria of other people's achievements and his own standard as the only measuring rod of all types of progress and civilization. There are certain fundamental ethical principles which, on account of their intrinsic value, have universal application. These are the acknowledged criteria of high moral life. So the same scientific spirit is found to play its part in the fatuous generalization about a whole people or race as morally depraved from some individual instances of failure to observe such principles. On the other hand, to please itself it may naively generalize about a people as highly moral from the instances of its individual members observing those principles, to a certain extent, within their own little group.

The absurdity of such theories or generalizations does not seem to strike those for whom these have some pragmatic values. On the contrary, they may try their best to uphold them neglecting or even hiding all facts that may be advanced against such theories. Reason fails because their will is determined. Only persons of similar scientific spirit may make them listen to another story,—persons who may collect, in an equally glaring manner, another set of facts to justify a contrary theory. They may listen and be temporarily silent about their own pet theories, but they will not like to admit that their theories are wrong until and unless they have tried all possible means to disprove the contrary and found themselves unsuccessful. Evidently, what is passing at present for scientific spirit is that confirmed habit of generalization upon facts without due regard to their adequacy. Science may thus define itself as an unusual attempt to generalize and to generalize, in a good many cases, with a hidden motive.

A little reflection upon the points described will show that science in this sense is a misnomer and the so-called scietific spirit is positively dangerous, if not suicidal. No real scientific spirit can ever think of admitting in the laboratory the idols of Bacon.

If we have hitherto endeavoured to describe the points in the abstract, it is because many ugly things are being done in the name of science,—things whose awful meaning may not be clear to all of us until the true nature of this science is exposed, and because it will now be easy for us to understand the mighty problem with which the Orient has been grappling.

And nowhere in the whole Orient is the problem so relentlessly exacting as it is in India and China. This is because these two countries represent two splendid civilizations which never yielded to the ravages of time and still refuse to yield, in their intrinsic values, to any upstart civilization. These two

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

great countries have been turned into veritable laboratories in which any type of foreigners may come and investigate facts about the people or rather "natives,"—often without their knowledge and sometimes in spite of their protests—for some "scientific discoveries" most of which are usually more self-pleasing than scientific. The facts they collect are not what they find but what they look for and these too often without due regard to their quantity, time, place, and other circumstances so that the intended generalization may be justified. But even these facts may not have the same meaning for the foreigners as for the native people and hence, the former cannot be in a position to form a generalization representing the latter. Yet, hundreds of generalizations are ungraciously formed about the Orientals and then sedulously spread all over the world through books, newspapers, magazines, cinema shows, platform speeches, and pulpit orations. So the world has been educated to know the Oriental peoples and their civilizations in ways which are not only misleading but even insulting.

But in every case of such misreprentation the glaring array of facts, however magnified, gives it a scientific colour and hides its true nature. This is the age of science. The world likes to believe in anything that may be presented in the name of science, for science is the modern Pope, supposed to be infallible. This is why no amount of protest from the Orientals against such misrepresentation has been enough to impress the world. But the Orientals see and suffer from the injustice of it. They wonder how the world can accept the false stories of the foreigners who do not understand the meaning of the facts collected by them.

To give more concrete facts, it has been said and spread throughout the world that the Oriental people are very low in morals, superstitious, cruel, mean, treacherous, timid, conservative, and so forth. These ugly generalizations have been held before the world for a long long time and facts have always been available to support them. If at the beginning the facts were very few, the imagination was not lacking to make these highly sensational and thus impressive. Where imagination failed, the vastness and variety of the population helped, for no instance of human frailty is absolutely impossible to find in such a vast area of land with more than half of the world's population consisting of large heterogeneous types. Where even that failed, the long history of the Orient helped, for no people, however advanced in civilization, can, for all times and under all circumstances, keep itself free from some moral lapses or other, and the history of some of the Oriental countries being the longest known to the world may supply any required facts at some period or other. When all these ways are thus considered, one can easily understand how these generalizations have been supported by facts to make them scientific,—facts which the Orientals probably cannot deny and yet they sincerely believe that the generalizations are not true. But the world is given facts and it wonders why the Orientals should still venture to contradict.

While these generalizations have been thus working for a very long time in the mind of the world, no pains are being spared to discover, from time to time, new facts to preserve intact the world's impression already created. These new facts may be very few and far between but are certainly useful in confirming the old beliefs. Some of these facts may be picked up from those advertised a long time ago but are made fresh by new artistic skill in brilliant colouring, and the impression of the people is re-quickened. One can, therefore, well imagine what it really means to the Oriental people to convince the world that it has totally misunderstood them.

Take, for instance, the belief that the Orientals are of very low morals. This belief has become so deeply ingrained in the mind of some foreigners that it is clearly discernible in all their dealings with the Orient. We may mention in this connection the view of one of the world's most widely read European poet Rudyard Kipling as typical. Referring to the Oriental people to the east of Suez this honourable poet very impressively said that "there ain't no Ten Commandments." The motive of excluding the regions west of Suez from his pious attack is that these Ten Commandments are said to have originated somewhere on that side and he could not conscientiously attack

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the people of that sacred part of the Orient. The Ten Commandments, whether Mr. Kipling knows it or not, have never been unknown and unpractised in the land of the Buddha and Confucius, but they have been more in the form of principles than commandments. The Oriental people are by tradition not so used to commandments. A commandment, no matter from where it comes, has an autocratic significance—something imposed from outside, and is necessary only where people are morally crude and incapable of self-discipline. Mr. Kipling is, of course, both an effect and a cause. He was certainly not in all the countries he hits, but his sweeping statement is the result of his false education. As he has become very distinguished, although probably because of the nourishment derived from the same land of immorality, his statement has a great influence upon his readers. How can the world disbelieve a man whose literary craftsmanship has won him a Nobel prize? The Orientals naturally find it most difficult to convince the world otherwise. They know it is false and regret that a man like Mr. Kipling should say it. The only way they can consider him as not a liar is that "there ain't no Ten Commandments" for him and for other men of his type when they are east of Suez or speak of things east of Suez. The Orientals know it very well that there are foreign people who come to live among them without ever feeling the necessity of observing what they call their Ten Commandments. If Mr. Kipling means anything by his statement it is that he is one of these foreigners.

The same may be true of the other beliefs. It is said that the Orientals are superstitious. Of course, in a sense all people are more or less superstitious. But to specify the Orientals, especially the Indians and the Chinese in general, as very superstitious,—people who have given the world some of the profoundest types of philosophy, studying freely, persistently, and deeply all the rich varieties of cosmic mysteries and social problems, people who still cultivate such studies with unflagging enthusiasm,—is most ungenerous, puerile and ridiculous.

The Orientals are said to be cruel. But the facts of history do not seem to support it. They are not the descendants of the Vikings or Buccaneers. They have never sought to immortalize any bloody conquerors, tyrants, or marauders. Their tradition has not been desecrated by holy crusades and inquisitions. They have never sought to exterminate smaller and weaker races. On the other hand, they proudly trace their descent from saints and wise men. They have uncompromisingly sought to discard violence in thought, speech and action. They have sincerely acknowledged other people's right to believe and worship in their own way. They have always discountenanced oppressing smaller tribes and that is why these are still so plentiful in the Orient. Why, they have shown the world that by cultivating good feelings even the fierce denizens of the forest could be made to forget their cruel habits.

Are the Orientals mean and treacherous? If they really are or used to be, no foreigners could ever think of establishing themselves in the Orient. The proverbial hospitality of the Orientals is inconsistent with any kind of meanness. It is rather the indiscriminate generosity of the Orientals that has brought about their present misfortune. Time and again the foreigners, under the very shelter of some Orientals, proved faithless and intriguing and yet they were forgiven because they were guests. It was the spirit of extreme generosity, almost bordering on imprudence, that could trust a foreigner with a most responsible official position upon which rested the welfare of the people, and that was why an Italian Marco Polo could be a Governor in China. Had the Orientals been a little more inhospitable, it would certainly have been a real blessing for them. They would have been, then, suspicious and cautious in their dealings with the foreigners and thus prevented the latter, while there was time yet, from carrying out their wicked designs. The result is that the Orientals are now the pariahs even in their own lands. The foreign guests have shown their gratitude for the generous hospitality of the Orientals by seeking to rob them and having robbed by going even so far as to put the Chinese and dogs together out of their pleasure parks built in China. Why, the Orientals must

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

obligingly receive in their own countries those foreigners and never interfere with their free movements,—the very foreigners who, in their own generous spirit, may proudly shut their doors against all Orientals by openly branding them as undesirables.

Similarly, it is not difficult to show the various other humiliating generalizations about the Orientals as unjust and cruel. If they are regarded as timid, it is because they have shown an undue spirit of patience and tolerance in the face of deliberate interference and brute aggression. A long tradition of cultured life invariably chastens the man and consequently he hesitates to express his violent passion even when bitterly annoyed or wantonly attacked. This spirit may be aptly described by the popular Indian saying, "If the dog bites you, you must not bite the dog in return." But this very spirit of self-restraint in the case of extreme provocation has been misinterpreted. Besides, the moral value of humility, as recognized by the Orientals in their daily life, cannot be understood by those for whom the greatest heroism lies in the exhibition of violent spirit.

And lastly, the Orientals may be considered as conservative, if by it is meant firmly and tenaciously adhering to those principles which are honestly held as very ennobling. They have a sort of traditional dislike for that hypocritical show of "civilized" life in which practice and profession are consciously set at variance. If certain principles are undeniably recognized as good, why should human life be ever lived contrary to them simply because they happen to be old? But probably the term "conservative" is taken here in a negative sense, *i.e.*, unprogressive. Yet, to generalize a people as unprogressive without first satisfactorily defining progress is no sign of scientific thinking. And who can give a standard definition of progress knowing it well that the progress of a people is determined by its own ideal and different peoples may have different ideals? Whether or not the Oriental people are progressing can be determined only by the fact whether or not they are struggling to realize more and more their own ideals. If it must be admitted that the Orientals have failed, in this sense to progress at the present time, it is because of the countless hindrances placed before them by those who are pleased to call them unprogressive. The Orientals have been using the best of their energy to resist these hindrances in the path of their progress or it could certainly have been used in the direction of greater realization of their ideals.

There is hardly any need of taking up some more generalizations of the kind we have just studied to show how unfairly these have been used to describe the Oriental people in general. But this is just what the authors of those generalizations do not like to understand. On the contrary, they seek new facts which, if available, are presented in lurid colour so as to divert the mind of the world from such explanations against them. The unfortunate Orientals are quite inexperienced in this peculiar game. Besides, there are two characteristic virtues in their life which seem to serve as obstacles in the way of their desire to counteract the effect of misrepresentation. Firstly, they are extremely shy of advertising themselves and singing eulogies of their own qualities. When they have to advance facts in support of their own qualities they seem to feel rather small and as such very hesitant. Secondly, they do not see any virtue in the profession of looking for other people's faults, since they know that they themselves are not perfect and should spend their time in freeing themselves from their own faults. They do not like to judge others as bad, for they do not like others to judge them in the same way. So they have observed silence for a long time, even though they have been aware of such worldwide misrepresentation. But this very silence has worked against them, for it has been misconstrued as the impossibility of the Orientals to deny those generalizations. The world has, therefore, taken them as true. And when in their dealings with the world they find how awfully and egregiously it has been impressed and prejudiced against them through misrepresentation, they can no longer help being restless and seeking some way to counteract its effect.

Nor is this all. They notice to their great helplessness that this persistent policy of misrepresentation has made the greatest possible contribution toward minimizing in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

eye of the world the enormity of what may be rightly called as the most relentless aggression in the various spheres of Oriental life, especially political, economic, and religious. Every act of aggression or rather oppression is so skilfully whitewashed with the pretext of "carrying civilization" that if there happens to be any Oriental courageous enough to raise his voice of protest he is regarded as a silly agitator or as a dangerous extremist and if he gives real facts describing the incredible sufferings of the people these are regarded as nonsense.

What should the Orientals do then? They have tried every way consistent with their high ideals of life to correct those false and humiliating ideas about them, but none has proved successful. The cruel spirit of aggression has found these too useful to be given up. On the other hand, the long practice of vilifying the Orientals has so hardened the Occidental spirit that it no longer makes any secret of maintaining that the Orientals are not civilized. So the "carrying civilization" policy is justified even though it is causing awful sufferings to them. With miseries at home and humiliations abroad they find it now all but impossible to observe those noble principles which constitute the very essence of civilization. They find it impossible to observe them any longer in their relation with those who take advantage of their goodness and strike them without the least humane feeling. By long cultivating the inner goodness of life in all its outward manifestations the Orientals have become so good that they are about to be good-for-nothing. They know that *Ahimsa* (non-violence) of the Buddha, *Wu wei* (non-assertion) of Lao-Tze, and *Jen* (universal good feeling) of Confucius are undoubtedly the highest principles of civilization. Having known them as such they have been struggling, for more than twenty-four centuries, to realize them in life and have certainly made considerable progress in that direction. But it is this progress of the Orientals which, instead of inspiring the people who are still very crude in the inward refinement of life to emulate, has rather encouraged them to indulge in the worst crudities in their relation with the former inasmuch as there is little danger of being served in the same manner. That progress has necessarily stopped. But the Orientals could not immediately descend to the crude state of life and so have tried in vain all the peaceful ways of persuasion. Can they still continue to act in this way? How can they? Their increasing miseries and humiliations are making their lives almost impossible and it is simply the natural law of self-preservation that suggests to them that they must turn back and rebarbarize themselves.

This seems to be inevitable, however the wisdom of the Orient may deprecate it. For the Orientals have learnt from long experience that the higher values of life acquired by them through a long cultural tradition, cannot be appreciated and assimilated by those people who first began to talk about civilization not very long ago and are still guided by the principles of tribal life. The difference between the life that seeks to realize all great principles in their universal application and the life that satisfies itself by trying to apply them only within the little group of its own kind, is rather too great. It seems the Orientals have not thought of considering this difference in their dealings with others. Naturally their ways have been misunderstood and abused. To make themselves understood, therefore, they have to turn a little way back and adopt the old tribal spirit in all their international outlook of life. Then they will have so many things in common with others that there will be less difference and more understanding. This is quite in accordance with the common saying, "The best understands others when they show their teeth." It may be called an unfortunate retrogression but it seems to be the only alternative to living death.

Does it not seem quite assuring to the suffering Orientals? They have right before them a very glaring example,—that of Japan. This beautiful island country of the Orient was a faithful disciple of India and China. From her teachers she was deeply engaged in the problem of realizing, in all her activities, the higher values of life—those upheld by the Buddha, Lao-Tze, and Confucius, when, all of a sudden, some uninvited guests appeared and in their characteristic manner told her she was uncivilized. This strange kind of treatment from those who hardly tried to understand her things naturally disturbed her and as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

turned around watchful and suspicious she noticed, to her great fear, the growing helplessness of her neighbouring countries on account of the awful treatment meted out by the same kind of strangers. In order to prevent such a fate from overtaking her she promptly turned her attention to the strangers to understand their strange nature. From the struggles of her unfortunate neighbours she learnt the need of assimilating the spirit of the strangers and when she fully demonstrated it in her bloody encounter with the Russian she was readily understood and recognized as civilized. She is now so overflowing with that civilization that she intensely feels the duty of carrying it to all other peoples and is already on her way to fulfil the task. There can be no more criticism against her, no unscrupulous generalization; for she is only following the trodden way of what has been carried on in the name of civilization. She is now a great country, her children are a great people, and the world is bound to listen to her. This is what she knows and nobody can openly deny it. Her success, indeed, is remarkable. The question is not whether it is for her ultimate good or bad nor whether she has become what she is by choice or necessity, —the question is whether or not she has averted the dire fate of her great teachers India and China.

Naturally the temptation is great, if not irresistible, for the whole suffering Orient. Prostrate India still speaks of the spiritual values of life. China has too long been a sort of foot-ball to others and has been kicked enough to force her to lay aside, at least for some time, her Confucius, Lao-Tze, and Mencius and be prepared in the manner of Japan, to let herself be recognized as civilized.

And these, India and China, are the only two countries which have trodden for millenniums, on many a devious path of life-values to ultimately arrive at those that are universally applicable without prejudice to anyone. Other ancient countries fell in their journey, leaving footprints to warn future travellers against the pitfalls of a narrow tribal outlook. But neither the experienced voices of India and China nor the solemn warnings of the fallen ancient countries, like Egypt, Babylonia, Assyria, Persia, Greece, and Rome seem to be impressive enough to stop the present madness of brutalizing mankind. India and China are being forced back to it under protest, for they still maintain that it is a sad reversion from civilization and once they get into it there is no knowing what would be the fate of the life-values which they still consider to be the best for mankind and for which they struggled throughout their history.

KEY TO THE FRONTISPIECE

A battle took place between Ballal Sen, the King of Gaur, and the Yavana Chief Vayudumba in 1091 of the Saka Era. Ballal Sen took a pigeon with him. Before he set out, he said to the women of his family:

"If the pigeon returns before me, you shall know that I have fallen in the fight. Only then you may observe *Jahar* (that is, plunge into fire and die)."

Ballal Sen won. On his way back the pigeon suddenly slipped off his hand and flew away. Ballal rode as fast as he could, and reached home only to see the last flames of the fire. This proved too much for him and he died by plunging into it.

THE WATERS OF DESTINY

BY SITA DEVI

IV

PRATULCHANDRA'S home broke up, but the eternal current of life flowed on as before. Man's life and death are but bubbles on this stream. They appear and they burst, but who is there to notice it.

Three days passed. The three people in the house were busy, each with his or her own sorrow and problem and had no thought to spare for the others. Subarna wept and shrieked. She dashed her head now and then on the threshold of Narayani's room. The women from the neighbouring houses were there all the time, they looked her up, attended to her and tried to comfort her to the best of their abilities. Narayani's sister sat in a corner, wrapped up to her eyes. She seemed to have lost even hunger and thirst. Sometimes she would count the beads of her rosary and sometimes she would weep and now and then she would even discuss her return to her own home, leaving this abode of sorrow behind. What Pratul thought, none knew. He had no friend, no person to whom he could talk. Alone, in the house, his cheerless days passed on somehow. He tried to read, but his mind wandered. Now and then he would stare at his daughter with a strange light in his eyes. But the sight of the child never seemed to give him any pleasure ; for he would turn away his eyes very soon. He seemed to feel bitter to the very core of his being. The change in the girl was too much for him. Where was that beauty, which had led her grandmother to call her Subarna (gold) ? He had cherished high hopes about her training and education. But to what a plight had the girl been reduced ! She had neither health, nor education, nor any strength of will. She would cry out, if hurt beyond her endurance, otherwise she would suffer on in silence, like a dumb animal. Such was her life. She knew that there was such a thing as fate, but she had probably never heard of man's free will, which can fight against fate even. Such was Subarna, the only child of Pratulchandra, and such perhaps she was destined to remain to the end of her days. If the foundation is all wrong, one can hardly expect a magnificent edifice on it.

On the fourth day, as soon as Subarna opened her eyes, her aunt approached her and said, "You cannot go on like this for ever, my dear child. You must do everything that social usage demands. Today is the fourth day after your mother's death, you must perform your mother's *Sraddha*, you being her only child."

Subarna looked at her with eyes full of despair. "How can I perform it, aunt?" she asked. "I am penniless."

"Listen to the girl," said her aunt. "Nobody expects much pomp or magnificence from you. But you must do at least the minimum, enjoined by the Shastras. Call a priest and arrange about it and I shall ask your father to give you the requisite money."

"Very well," said Subarna, sitting up.

Her father at once supplied her with money when asked to do so, but he did not express any opinion about the coming ceremony. The priest was called, and the last rites were finished very simply.

In the evening, as Pratulchandra was sitting in his room, his sister-in-law came in and sat down on the threshold. He got up in a hurry and said, "Why do you sit there? Get up and sit in a chair."

"Don't trouble yourself," said the lady. "I am quite all right here. We are not used to chairs much. But I have come to discuss things with you. What has happened, has happened and there is nothing to be gained by grieving over it. You must think about your home now and arrange about it."

"I have not much of a home left now," said her brother-in-law with a sad smile. "For when your sister was alive, my home had ceased to exist. I shall send back Subarna to her husband's and start for Calcutta myself. When do you want to go? If you tell me I can arrange about it."

"First you must take Subarna to her husband's house, then I may go. Otherwise the house will remain empty. Besides you will have to arrange about your house and property here."

"I suppose, I shall have to," said Pratul. "But these things can wait."

They had not noticed Subarna, who had come in quietly and was sitting behind her aunt. Suddenly she cried out, "Father, please father, don't send me there." Her voice sounded like a wail of despair.

Her father was taken aback. "What ill-omened words are these!" cried her aunt. "You don't want to go to your husband's house? Where do you want to go then? Is there better shelter for any woman, anywhere?"

Subarna began to sob aloud. "If you send me there, they will bury me alive", she said between her sobs, "they won't let me live."

Pratulchandra's heart burned with rage and remorse. To this plight had his only child been reduced ! She was dazed with fear, and unable

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

defend herself in any way, tears her only weapon. Our girls receive only this training, the training to suffer. Their human strength to fight against odds is rarely developed.

But Subarna was still crying and her father's thoughts came back to her, instead of straying further. She never spoke much to him, but now she must be made to explain herself. He could not clearly understand why she was behaving like this.

"Why do you cry like that?" asked Subarna's aunt. "All women have to suffer something at the hands of their husbands' people. At first you have got to submit to it. Afterwards when you will become the mistress of the household, things will be different."

"But I have run away from their house," said Subarna, "they will surely kill me if I go back now."

"Why did you run away?" asked her father.

"Mother was dying, yet they would not let me come," said she.

"My mother-in-law said it was a lie. What else could I do? As soon as she sat down to count her beads, I ran away. The boatman knew me, he agreed to row me over, when I told him that you would pay him his fare."

"Really, what else could the child have done?" said Subarna's aunt. "Was she to refrain from seeing her dying mother even? Her mother-in-law is a real fiend. But my poor child, you must submit to your fate now. Perhaps they will abuse you. You must be patient and listen silently. But you must never think of staying away. Your father himself will take you, perhaps that might appease them a bit. Everyone wants to be on good terms with rich relatives."

Pratulchandra maintained an angry silence. So he would have to come down to the level of those people! Subarna went on sobbing. She did not say whether she would go or not.

"The time is inopportune," said her aunt, "or we would have tried to bring about peace, through such presents."

"Don't think about these things now," said Pratul bitterly. "I shall take her there to-morrow. If they welcome her, well and good. Otherwise some other arrangement would have to be made."

"What other arrangement could you possibly make?" asked his widowed sister-in-law. "Since she has fallen into their hands, she must try to put up with them as best as she can."

Subarna left the room, still weeping. Her aunt followed her soon after. Pratulchandra was left alone in the darkness with his thoughts.

Next morning, preparations began early for Subarna's departure. Her face was swollen with continuous weeping, but she had no longer any strength to oppose her elders' will. When no one listened to her crying she submitted to her fate and prepared to go. Her aunt was cooking in the kitchen, Subarna sat by her, helping her with small services.

Subarna had come away only in the dress she was wearing. So she had not much packing to do. But she had to take away some things with her. Pratulchanda called Subarna's aunt to him and said, "Sister, give Subarna all her mother's dresses and ornaments. They would be of no use, if left here, and would only get stolen. These things rightfully belong to her, so let her have them."

But the widow was a wise lady. "Do not give them all to her, at once," she said. "Those two trunks contain things that are worth a lot. The ornaments alone will fetch three thousand rupees. I propose to give half to her now, and half afterwards in instalments at opportune times. You don't know these people, they are not as simple as you think. But we have been dealing with them for years and know them thoroughly."

Pratulchandra smiled and said, "Very well, do as you think best. But the remaining half must remain in your charge, and you must send them to her, whenever you think fit. If I take them to Calcutta, they would get stolen all the same, as the place I live in is nothing but an inn."

"All right," said the widow, "I shall look after them. My house is a brick-built one, so there is not much danger from thieves. Besides, my nephew is a very strict man, and nobody dares to play any tricks with him. He can make the cow and the tiger drink at the same pond. Let me finish the cooking first, then I shall sort out the things and pack them."

The cooking and the eating too, were finished very quickly. Subarna's aunt opened Narayani's trunks and began to divide the contents into two parts. The more costly things she kept back, and packed others into one trunk, which Subarna was to take with her. Subarna put on a dress, belonging to her mother, and got ready to start. Her heart was full to bursting with sorrow and fear, still she was trying to gather courage in her mind.

Pratul had decided to come back in the evening, after seeing the girl to her home. His sister-in-law would remain in his house till his return and start for her home afterwards. Pratul had decided to leave his house and property in charge of some relative and to go back to Calcutta. The village seemed to stifle him.

A bullock cart was brought and the luggage piled into it. Subarna bowed down to her aunt and got in too. It was morning, still some of the darkness of night seemed to linger on the earth. The sun could be seen and felt very indistinctly. Pratulchandra refused to use the bullock cart. He took his umbrella in hand and began to walk by the side of the cart.

It did not take him long to reach the riverside. A boat was ready, waiting for them. They had to wade through knee-deep mud to get into the boat. Very few people could be seen by the river, as none cared to be too near that destructive current. Two or three persons, who happened

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to be there on business, looked on silently at their departure.

The cremation ground of the village was situated close by. Certain portions of the bank had disappeared due to erosion. As soon as she saw the place, Subarna cried out in agony, "Mother, oh mother, where have you gone away leaving me alone?"

"Please stop," said her father. "What is the use of crying over something that is past and cannot be remedied? Better prepare yourself for the trials that are still before you."

The boat advanced slowly. There was nothing but water on every side, rushing past them, with terrific noise. It sounded like the din of destruction in poor Subarna's ears. But there was no one to whom she could unburden her heart. There was no one whom she could really call her own. Her mother was dead, her father was a stranger to her. The few people to whom she was bound by social ties, behaved like butchers to her. She was alone and helpless, the Bhairabi was not more terrible to her than the world. She had nothing to cling to, she did not know where the stream of destiny was carrying her.

It was nearly afternoon, when they reached Bhatgram. The sky had cleared up a bit by that time. Here too, the riverside was deserted. But a boy, belonging to the caste of fishermen, approached on seeing their boat. Pratulchandra got down and asked, "Can you get a palanquin for me, my boy ?"

"There is no palanquin hereabouts," said the boy. "But if you want a bullock-cart, I can fetch Chhidam's. Where do you want to go ?"

Pratul told him his destination. The boy grinned, and ran off to fetch the cart. Subarna got down from the boat, and stood on the slippery path with her veil pulled down over her eyes. Her father, with the help of the boatman, brought out all her luggage. "Please wait here an hour," he told the man, "I shall return by that time."

The cart arrived. Subarna got into it, and her father walked on by its side, as before.

V

It was a cloudy day. So the village street was mostly deserted. Pratulchandra met only two or three people, as he walked on. Everyone looked at the cart with eyes full of curiosity. Nobody in the village knew Pratulchandra, and Subarna was sitting inside the cart, all huddled up, with head bent down, so that it was not easy to distinguish her features. So everybody went on conjecturing about them, after seeing them pass by.

The cart came to a stop before a house. Pratulchandra looked at it carefully. It did appear to be the home of a fairly well-to-do family, according to village standards. The outer room was brick-built, the rest having mud walls with thatches of straw. The straw had been recently renewed. The front door was of strong thick panels. It was closed from inside.

Subarna got down from the cart with trembling steps and stood by her father. Pratul looked at her, the child's face had turned white with fear. He stroked her on the head soothingly and said, "Why are you so frightened? I am here with you. does not even that give you any confidence ?

Subarna gulped back the tears that were threatening to come out in a stream. The memory of her past sufferings were yet too fresh to be forgotton. Nobody had ever tried to protect her. So, though she heard her father's comforting words, she gained very little assurance from them.

Pratulchandra knocked at the door. Subarna seemed to feel the blow on her own heart. She felt faint, with fear and excitement.

The door opened with a jerk. A young woman, dressed as a widow, looked out from behind the half open door, with an enquiring glance. First she gazed at Pratul, who was standing in front. Next her glance passed on to Subarna, who was standing behind her father, veiled to her eyes. A crooked smile appeared on the woman's lips and she turned away her face, shouting to someone within the house, "Please strike up the band, the princess has returned from her travels."

Next moment she shut the door on their face with a bang.

"Do you see, father ?" asked Subarna, in a voice choked with tears.

Pratulchandra's face had turned red with anger. But he controlled himself somehow and said, "Very well. But don't get too much frightened. I shall see the matter through." He pushed the door open again, which had not been bolted. The woman had disappeared. He dragged in Subarna by the arm and pushed her towards the inner courtyard, saying, "Go in, you have a right to enter. You have paid dearly enough for it. They cannot cut through such ties, merely by shutting the door in your face."

Subarna advanced trembling. Pratul looked up and met the eyes of a young man who was standing by the outer room. His eyes were full of hostile curiosity. As Pratul looked at him, the young man lowered his eyes. This must be his son-in-law, thought Pratulchandra. He forced a smile to his lips and said, "Open the door, please. Am I to stand on the road all this while?"

The young man looked a bit embarrassed and ran to open the door. Pratul pointed to the luggage inside the cart and asked, "Where are these to be taken to ?"

"How shall I know ?" said the young man.

"Are not you Shribilas ?" asked Pratul.

The young man nodded in assent. "I am Subarna's father," said Pratulchandra. "Who else have brought her back, as you see. Who else tell me what I must do with these things ?"

Shribilas looked at him foolishly. He

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

not give any answer. He bowed down to his father-in-law sheepishly and muttered, "Sit down please."

A pair of wooden bedsteads could be seen in a corner of the room, covered with a white sheet. A few bolsters were scattered on it here and there. In another corner stood a small table and a chair. This was the room in which Shribilas studied. Pratul dragged the chair forward and sat down. He looked at his son-in-law and asked, "In which year are you now?"

Shribilas looked rather annoyed and muttered, "I am in the second year of my college."

Pratulchandra was about to ask him something again, but a sudden shriek of fear from Subarna interrupted him. He got up hastily from his chair and came out of the room. At the same moment, Subarna ran out into the yard, pursued by a woman who had a broom in her hand.

Pratul cleared the few steps from the verandah to the yard at one spring, and caught hold of the broom, which the woman had raised again to strike Subarna. "What is this? What is this that you are doing?" he cried furiously.

The woman made a face, and shrieked at him. "How did she dare to show her burnt face at my door? Get out of my house, at once, else I will cut her in two with my fish chopper."

Pratul pulled away the broom from her hand and threw it away. He pushed Subarna behind him, thus covering her with his own body. Then he spoke to the woman again, "What are you saying? Was it such a crime to go to see her dying mother?"

Shribilas's mother, for the woman was none else, shrieked again like a lunatic, "Oh dear, dear! Like father, like daughter. So you have come to explain away her conduct and to show me the right and the wrong? Where have you been so long? I never saw any father of hers up to this time. A bride from a gentleman's family runs away at night, and you have the face to tell me that it was no offence? In which land have you been living?"

"That is immaterial," said Subarna's father. "I want to know whether you are going to take her back."

Subarna's mother-in-law waved her hands in his face, saying, "No, I won't. Get out of my house with your daughter. How dare you threaten me?"

Shribilas, too, had come out of the outer room, and had been standing on the verandah. Pratulchandra turned to him this time and asked in a tone of suppressed rage, "Is that your opinion, too?"

Shribilas looked at his mother. He was about to say something, but thought better of it, and remained silent. Subarna had collapsed on the ground and she was weeping. Shribilas looked at her, too, and frowned. "Have you got nothing to say?" asked Pratul again. "After all, it was you who married her."

"I have nothing to add to what my mother has said," said Shribilas. "Take away your daughter."

"All right," said Pratulchandra. "It will be a pleasure. If I had to leave her with you, I would have regarded it as a calamity. But understand that this going away is final."

He pulled Subarna up from the ground. The iron bracelet (the emblem of wifehood in Bengal) on her wrist scratched his hand. He looked at it for a moment. Then he pulled it out with a jerk and threw it at Shribilas. "I accept the fact that my daughter has no husband," he said; "a woman can never be married to a clod of earth."

Shribilas's sister shrieked wildly in rage as discarding the iron bracelet by Subarna symbolized the death of Shribilas. Pratulchandra passed out with his daughter. The cartman outside was nodding drowsily on his seat. Pratul gave him a push and said, "Get up. We must go back again."

Subarna got in, Pratulchandra followed her. The cart started with a jolt.

They reached the riverside in a few minutes. The boatman was amazed to see Subarna back again, but he did not have the courage to ask any questions. The frowning face of Pratul silenced him. The luggage was removed from the cart to the boat and the driver was paid off.

Subarna sat in the boat all huddled up and weeping. Only God knew what a storm raged in her heart. She felt with her immature mind that the greatest calamity in a woman's life had overtaken her. She had heard from her childhood and seen it too, that a gentlewoman could have no other home than her husband's home. She had lost this shelter for ever today. Where was she to go now, how was she to pass her days? She looked into the future and could see nothing but darkness. Her eyes filled against her will, and the terrible pain in her heart found relief in tears. A woman can only weep and blame fate.

Pratulchandra approached her and tried to comfort her. "Why are you crying, my little mother?" he asked. "Be glad rather that you are rid of those heartless butchers for ever."

"But what will happen to me, father?" asked Subarna.

"Why, everything can happen now," said her father with a smile. "If they had taken you back, that would have meant the end of all happenings for you. I shall try to give you that sort of education which I had hoped to give before your foolish marriage. We shall have to begin rather late, but that cannot be helped now. You must forget all these things, and try with all your power to build up your own future. You must not object to anything and must not fear anything, neither must you grieve about anything."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Subarna probably did not understand him fully. But this much she felt that her father was there and he was trying to comfort her. As long as he was alive, she would have a shelter. She wiped her tears and became calm. No tie of affection bound her to the family which she was leaving for ever. She was afraid only of social calumny, of being helpless and shelterless.

When they reached Jamral, the darkness of a cloudy evening had closed in round the village like a pall. Pratulchandra looked ahead in the darkness. "Can you get any sort of a light?" he asked the boatman. "It is impossible to walk in the dark."

The man had a broken hurricane lantern with him. It gave out more smoke than light. But as there was no other light available, this had to suffice. The man lighted it and they stepped ashore. It was too late now to hope for a conveyance. They called and shouted and at last got two men to carry their luggage. Pratul took his daughter by the hand and advanced carefully. The village lane was entirely deserted. Pratul felt glad of this. He was in no mood to talk to people, or to offer them explanations about Subarna's return.

Subarna's aunt was alone in the house. She had lighted a single lamp, with which to scare away all evil from the homestead. The greater part of the house was in darkness. She had eaten a frugal supper and had gone and laid herself down on her bed. She had kept awake, as she was expecting Pratul back. In the normal course of events, he would have been obliged to remain in his daughter's new home at least for one day. But here there was no such possibility. So Subarna's aunt had prepared some supper for her brother-in-law and had kept it by the kitchen fire so that it might remain warm. She was waiting for Pratul and was feeling a bit nervous. Only the other day, Narayani had passed out of this house for her last journey. The very thought was making her flesh creep. While in this world, human beings are tied together by the closest bonds of love. But once they step beyond its pales, the love is replaced by feelings of deepest dread. The widow could no longer dream of seeing Narayani again.

Suddenly somebody knocked at the door. Had Pratul come back already? What awful people were those? Probably they had not even asked him to sit down once. He had turned back the minute his work had been done.

"Wait a minute, brother," she called out, "I shall light the hurricane lantern and open the door. If I take out the other lamp, it will be blown out immediately."

She took out the matchbox from beneath her pillow and lighted the lantern. She wrapped her *sari* closely round her shivering body, and getting down into the yard, opened the outer door. "Come in brother, come in, what a nasty—" but she could not finish her sentence. She looked at Subarna, bewildered.

Pratul came in, followed by the two men who carried the luggage. "Come this way," he said to them, "and put those things down there."

They deposited the luggage as directed and went away, after being paid. The boatman, too, went away with his broken lantern, after receiving his fare. Pratul entered and sat down in the big room with Subarna.

His sister-in-law now spoke for the first time. "What is this brother?" she asked. "Why have you brought Subarna back?"

Pratulchandra had been untying his shoes with bent head. He did not raise his head as he replied, "They won't take her back."

"How absurd, good God!" said Subarna's aunt, with her palm on her cheek. "Such awful people! they are just like butchers! Now what is to become of the poor girl?"

"Something good, I hope." said Pratulchandra. "If she had been left there, she would have had nothing but a dog's life."

His sister-in-law did not understand him fully. Still she said, "you are quite right brother. They are called gentlefolks by courtesy alone. But what is done is done. Now wash your hands and faces and take some food. I hope the rice will be sufficient for you both. Else I shall give you some ripe fruit"

But the supper was enough for them. Both the father and the daughter were too exhausted after the day's happenings to desire to eat much. They just touched it, and retired for the night. Subarna herself swept the floor and made up the beds. She also prepared betel leaves for her father and fetched some drinking water, in case he wanted it during the night. "Shall I put up a mosquito net for you, father?" she asked.

"No, my dear", said her father with a smile. "I don't want it. I could never sleep inside one."

"She is very useful for her age", he remarked, looking at his sister-in-law.

"So she is," she replied. "Else that demon of a mother-in-law would have killed her long ago. Strict mothers-in-law are a boon in one way, though they do torture the girls."

"But cannot one be taught to work through a more humane method?" asked Pratulchandra.

Subarna's aunt remained silent for a while. Then she said, "I must go away to-morrow brother. I only hope my home has not fallen into wreck and ruin by this time."

"I too shall start to-morrow", said Pratul. "So you can easily go away then."

"Are you going to Calcutta for the present?" asked the lady.

"Yes", said Pratulchandra.

VI

Next day, the bustle of preparation began here from the morning, Subarna's aunt cooked

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a hasty breakfast and served it to her niece and Pratul. She took some also herself, as one cannot start on such a long journey on an empty stomach. She had only a small tin trunk with her, so her own packing was easily finished. It took longer for Pratul and Subarna. As they were not coming back to their village home, they decided not to leave anything there. Everything that could be taken away to Calcutta was packed up by Subarna. The rest of the things, such as cooking utensils, furniture, etc, were deposited in a neighbour's house. Pratul wanted someone to remain in the house, but he did not manage to secure any one, in such a hurry. He decided to settle the matter from Calcutta. For the time being he engaged a man of the barber caste to look after the house at night. The man agreed to do so, when offered a salary of four rupees monthly.

Subarna's aunt started first. She did not have to cross the Bhairabi to reach her village, so a bullock cart was called for her. A woman of the village was to accompany her. She too arrived soon, ready for the journey.

Subarna burst into tears as she bowed down to her aunt at the time of parting. She was the last representative to Subarna of the familiar world, she was leaving behind. She had parted for ever from the other persons, she used to know. Her mother, the dearest and nearest, had left her for ever. Subarna did not know her father. His grave face, his serious words had made him an object of awe to Subarna. Still she was not a young child, she was thirteen and not a dull girl. She understood that her father was the only relative left to her, and he was the well-wisher of Subarna. Still her heart was ready to burst with grief at the thought of parting from her aunt.

Her aunt too wept. But she wiped her eyes soon and addressed Pratul thus: "I don't know what to say to you brother. I wonder what is in store for you with such a daughter in your hand. A girl is but an evil in the shape of a child, you can expect only misfortune through her. And her unfortunate mother, too, died at such an inopportune time."

She turned next to Subarna and said, "Don't weep my child, it is no use weeping. If your luck is good, your husband's people will change their minds. Have your trust in the gods, and never let your father suffer any pain on your account."

Pratulchandra did not say anything. A cynic expression stole over his features, as he listened to his sister-in-law. Subarna parted from her aunt still weeping, and the bullock-cart started.

Then they prepared for their own journey. As they had a large amount of luggage, they had to call three carts. A few neighbours had collected there, to see them off. Pratul took leave of them shortly and got into a cart, with his daughter. The man, whom he was leaving in charge of the house, came and took away the key from him.

Subarna sat, with head bent down. The life with which she had been familiar was ending today. An unknown future awaited her. She did not want to look anybody in the face. Her breast heaved with suppressed sobs. Her father was her sole refuge now, but him she did not know. She had never even heard him spoken of by her own mother. Her mother and sister-in-law had mentioned him frequently, but in such terms that Subarna had not learnt either to love or to esteem him. She had heard that her father was not a good man, that he did not walk the way of the righteous. She did not know what he intended to do with her. But whatever his intentions, she would have to submit to them. She had no other option, as her husband's doors had been shut against her for ever.

They had a long journey by boat. This kind of travel was nothing new to her, so she did not even want to look around. Besides, the terrible aspect of the Bhairabi only gave rise to a feeling of dread in her mind. She was feeling sad enough, as it was, so she spread a mat inside and laid herself down on it. After a while, she fell asleep. Pratul sat at the same place, throughout the journey. Thoughts crowded into his mind from every direction and he did not know what to decide.

After a long while, they reached their destination, which was a village containing a railway station. They had to wait another hour here for the Calcutta train. Getting down from their boat, they hired two carts for their luggage and themselves, as the railway station was situated at a distance from the river. Before starting for the station Pratul asked Subarna if she was hungry. In that case, she could have something from the sweetmeat shop close by.

"No, father," said Subarna, "I am not at all hungry." So they started for the railway station.

Subarna had never been in a train. She had not even seen a train ever. The few years of her young life had been spent in the two villages—Jamral and Bhatgram. She had to go from the one to the other in boats. So she had never had any occasion for travelling by trains.

It was a small village station, and passengers were few. It had a platform, covered with red gravel, and a few tin sheds. Even this looked strangely beautiful to Subarna. "Good heavens," she thought, "what a crowd! I wonder where they are going. And what an uproar! What was that man in a turban? How strangely he was speaking. Was that Hindi?" Subarna had never even heard the Hindi language. And who was that woman with him? Perhaps his wife. What a funny way of wearing the *sari*, with such tucks in front!" It seemed very masculine to Subarna, and a smile appeared on her lips. Pratul was busy purchasing the tickets

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and disposing of the luggage. He had also a wire to send to Calcutta. After finishing all these, he came and sat down by Subarna. She was still staring at the upcountry woman. "From which land does she come, father?" she asked, as soon as she saw Pratul.

Pratulchandra smiled at the question, "Why? Haven't you ever seen a Hindusthani woman?" he said. "Well, let us reach Calcutta, then you will see all kinds of people that live in this world."

Subarna's eyes glowed with pleasure. Hitherto an iron-load had seemed to rest on her mind. She had even forgotten to smile. Many years ago, she had once laughed aloud, in her husband's house She still remembered the furious flood of abuse that greeted her laugh. "Have you ever seen a gentlewoman showing her teeth like this?" her mother-in-law had shrieked at her. "You are braying like a donkey. What sort of a mother have you got? Didn't she ever teach you how to behave? If you again bare your teeth like that, I shall knock them out all." After that, Subarna had never smiled again. Not that she had very many occasions for doing so. Her mother-in-law and sister-in-law took good care of that.

Her heart was trembling with fear now, as she was standing on the threshold of a new life. Still, she could not but feel that the load on her mind had become much less heavy. Her father was a serious person, but he answered her, whenever she asked a question. If she laughed, he never threatened to knock out her teeth for that. She hoped that she would lose all feelings of fear and diffidence about him, after a while, if they stayed together.

The train was seen advancing towards them. So she had to go by this? Her heart seemed to freeze with fear, as she looked at the huge iron monster. She had never seen such a thing. She never knew that a vehicle could move so amazingly fast.

Pratul shook her by the arm and cried out, "What are you gaping at? Get in at once. It stops only for three minutes here."

Subarna came to herself and ran along with her father. Each car looked full to overflowing. Where were they to get in? The train stopped only three minutes. Alas, alas! they would never be able to get in this time.

Her father pulled open the door of a compartment and said, "Get in, quick." She got in somehow with his help. The coolies began throwing in their luggage in great haste. Subarna was suffocating with anxiety and dismay. Oh God, what was going to happen? The wretched coolies barred the way and would not let Pratul enter. Was the train starting? Subarna was the only girl in the compartment, the rest being male passengers. Oh, what was going to happen to her, if, perchance, her father was left behind?

But at last the suspense was over. Pratul got in after pushing a coolie voilently out of his way. The train started the same minute. The coolies ran along the platform, shouting for their money. Pratul gave them whatever they wanted, without haggling over it. He was too busy then to think of such small matters.

The compartment was only half full. Two of the benches were full, on the third there was only one old gentleman, lying down. As soon as he saw Subarna getting in, he sat up and gathering together his bedding, made room for her to sit down Subarna sat down, but she remained silent and motionless like a statue as long as her father did not come in.

"Why do you crouch like that?" asked her father, sitting down by her side, "There is plenty of space, why don't you stretch your limbs a bit? You will have to remain in this carriage till ten at night."

Subarna now felt more at ease. The old man asked Pratul, "Are you going to Calcutta, Sir?"

"Yes", replied Pratulchandra. The old man perhaps wanted to continue the conversation, but Pratul was not a talkative person. He spoke very little even with acquaintances, while before strangers he was totally dumb. So replying to the old man in a monosyllable he turned his back on him, and stared out of the window. He remained in this position for nearly two hours, without moving. Once only he turned to Subarna and said, "If you are feeling hungry, tell me. You had only a hasty breakfast in the morning."

But Subarna did not need any food. She had forgotten hunger and thirst in her first thrill of looking at a new world. She leant on the window gazing with all her soul in her eyes. She had heard of the world, but had hitherto, seen very little of it. Only two small villages, and Bhairab the terrible, these comprised her world. She did not know that such a vast place existed beyond. She did not know that it was so strangely beautiful. Her heart filled with amazement and expectation. She wondered what else was before her to see.

The train stopped at wayside stations, and Subarna's amazement grew apace. What a crowd of people, and what a din! She began to feel without understanding fully that not only this world, but life as well was vast and mysterious. It might contain many things, besides oppressive and tyrannical relatives and unkind husbands. Subarna did not know what these things were, but unconsciously she was preparing to welcome those strange guests of her future life.

She was gradually getting drowsy, through the constant motion and sound produced by the wheels. Her father looked at her and asked, "Do you want to lie down for a while?"

His old fellow-passenger was glad at having another opportunity to speak. "Yes, yes," he said, "Let the child lie down, she must be very tired."

Digitized by Arya Samaj Foundation Chennai and eGangotri

I shall go and sit on the other bench, it is half empty."

Saying this he got up and went away to the other bench. Pratul moved away, thus leaving space enough for Subarna to lie down. She did so, and was soon fast asleep.

They were nearing the end of their journey. He could see from a distance the whole sky lit up with the glow from hundreds of lights of the metropolis. It was like the waving aloft of a proud banner. Pratul pushed Subarna and said, "Get up, we are nearly there now."

Subarna got up hastily. She looked out with eyes still laden with sleep. Whence came such a glow of light and such noise? She felt rather bewildered. "What is this, father?" she asked.

"That is the Howrah station," said her father. "Is n't it very big?

Subarna looked at it agape. She had never dreamed of anything so vast. She could not believe her own eyes and ears. Was she going to live in such a place? How many people of her village had seen such a sight, she wondered. If she ever went back to Jamral, she would tell everybody about this and make them stare with wonder. She began to feel proud at the mere anticipation.

But as the train came to a stop by the platform, she felt her limbs shaking with fear. So she had to get down amidst this sea of people. She did not know where she was to be carried away. She felt her ears going deaf.

Pratul looked at her face and could understand what was going on in her heart. He smiled and said, "Don't be afraid. Let the porters take out the luggage first, then we shall get down. There is no cause for alarm."

Subarna sat crouched in a corner of the bench. The porters rushed in and began to carry down their luggage. Pratul ordered them to carry the things to a taxi. As he saw that the crowd had thinned somewhat, he took his daughter by the hand and got down from the train.

But Subarna could scarcely walk. She clung to her father's arm in desperation. "Why do you feel so alarmed?" asked her father. "You must not mind Calcutta so much. Afterwards you may have to go to England, even."

Subarna did not speak. She knew that the Sahibs and the Mem Sahibs lived in England. Beyond this her knowledge did not go. But sufficient unto the day was the evil thereof. She was too upset by Calcutta to think about her future voyage to England.

Pratulchandra dragged her along somehow and put her inside the taxi. "This is called a motor car," he told her; "you will see, how fast it goes."

Subarna was looking all round her with eyes full of wonder. Her eyes had never beheld such strange and wonderful sights before. When the taxi came to a stop before the house in which Pratulchandra had his rooms, Subarna still felt disinclined to get down.

The house was a three-storied one. The ground floor and the first floor were occupied by the lodgers. On the second floor, there were only two rooms and there was no kitchen. For this reason, the second floor remained without a tenant for the greater part of the year, as a family cannot do without a kitchen.

Pratul had wired to the manager of the lodging house, to get these rooms for him. He could not live on the first floor with the other lodgers, as Subarna was with him. But it would be difficult and very expensive to hire a separate house and have an establishment for themselves. These two rooms would suit him perfectly. He could remain aloof, yet have all the advantages of the lodging house.

The manager had at once engaged the rooms on getting Pratul's wire. Pratul climbed up to the second floor and saw that all his furniture and things had been moved into the larger of the two rooms. The smaller room, too, was not empty. There was a small bedstead and a clothes-horse there. Both these pieces of furniture were new. Most of the lodgers were asleep by this time, a few had gone out to enjoy the theatre or the cinema. The manager, the cook and the servants welcomed Pratul and Subarna.

"I have bought these two things for your daughter," said the manager. "Else the child would have been put to much inconvenience."

Subarna started at hearing herself referred to as the child. She had long since forgotten that she was a child.

"You have done quite right," said Pratul. "I forgot to tell about these. But you must not sit up any more for us. Go and lie down. The servants will see to our needs."

The manager went down. The servants untied their beddings and made up the beds in the two rooms. Then the servant and the cook brought their supper upstairs. They spread small carpets on the floor, and arranged the dishes and glasses of water nicely in front of them. Then they remained waiting.

Subarna had forgotten long ago what it was to be waited upon. She felt very glad, yet shy, at the same time. Was her future life going to be like this? She wondered.

A NEOLITHIC SITE IN THE SATPURAS

By DUNCAN GREENLEES M. A. (Oxon.)

INDIA, from Himalaya to Comorin, is divided on the West between plain and plateau by the hills that flank the Tapti and Nerbuda. These hills,—the Vindhyas, Mahadeos and Satpuras,—are still partly covered with remains of the ancient forests that once made them so impassable a barrier that, north and south, the Aryan and Dravidian nations grew together almost wholly ignorant of one another.

Their denseness in those days provided quiet retreats for Rishis and ascetics of every kind, and they have also been in every age the sanctuary of races driven by more highly cultured rivals from the fertile plains. The stories of the Epics and Puranas speak of these forests as the lair of Rakshasas, who often grievously harassed the saints at prayer and sacrifice. Although we think of Rakshasas as demons, in those times at least they were looked upon as wholly physical in their nature, though often with strange powers and bestial in their form.

Who, then, were these Rakshasas ? It seems more than likely they were really the earlier savages, who seemed barely human to the civilized races who drove them from their hunting-grounds into the dark and fearsome forests. Such savages would very likely raid the homes of unprotected sadhus and steal the meats of sacrifice, and the comparative ease wherewith the Aryan heroes could destroy them also points to their lower state of culture. These Neolithic men, if this surmise is correct, displaced by the rising waves of civilization, were probably ancestors of those same "jungly tribes" whose life and customs today are but little removed from primeval savagery.

Casually wandering on these lonely hills, the scientific traveller of today has, from time to time, found arrow-heads of flint and agate, and other implements of the harder stones, still lying where they fell from the long-still hands of these ancient men. In Bundelkhand and Mirzapur great numbers have been found, in sandy gravel, at times with pottery and skeletons, and in many parts of India they are common, though I do not know of any specimens hitherto published from the Betul District of the Central Provinces.

Come with me into that district. Crossed by the Tapti Valley, with its still-densely wooded banks in the heart of the Satpura Range, it is still known as one of the most backward tracts in India. A great part of the people are Gonds, an interesting and picturesque race, who speak a Dravidian tongue allied to Tamil, and education away from the larger centres is a thing unknown. A yet earlier racial stratum survives in the Korku folk, whose language is of the primitive Munda family, known also among the Santals of Bengal. These may well be the descendants of the lost Neolithic people of Central India.

In the midst of these forest areas is the sacred place known as Baraling, from the twelve lingams cut in the rock here beside the River Tapti. If you climb the steep hill at whose foot the temples nestle, and pass the Korku "devasthan" on the summit, (a red-smeared rock, surrounded by five red flags with a yellow banner flying over-head,) you will come on the northern side to a flat ridge looking down upon the Gond village of Chichthana. This ridge is about 200 yards long and some 30 wide, and almost bare of trees. The rocky core of the mountain protrudes in places above the surface, which is clad with a hard gravelly sand, lightly covered with grass.

Here, at the southern end towards the river valley, which winds some six hundred feet below, I came upon a number of stone implements, apparently of Neolithic dating, lying on the surface of the ground. Out of some fifty which showed distinct signs of human workmanship, picked up in less than an hour, I select sixteen for illustration, these being typical and most clearly artefacts. These drawings are made life-size, so that they may give the best idea possible of the objects

themselves, but it is a pity they cannot be reproduced in colour, for some of them, made of local stones, are of great beauty. Their hues range from a chocolete striped in fawn, through salmon to a lovely veined pink, and several are struck from colourless transparent stones and seem cut in glass or crystal.

The sizes of these implements range from 13 mms. to 46 mms., so they are all small, and some may even come within the category of the "pigmy flints," so long a mystery to pre-archæologists. A few seem to be arrow-heads, several may be knives or scrapers, and others may well have been the teeth of scythes. The material is such as may be found here and there outcropping from the grey "primary" rock of the local hills, or may be picked up among the rounded pebbles of the river bed. Many discarded chips from the "factory" of olden days may still be seen lying here and there on the ridge. Perhaps it was once the home of a family, high above the river's uncertain floods and easily defended from the tigers and leopards that still haunt the hills today.

About two miles from this spot, towards the large village of Khedi Saoligarh, I also picked up two worked flints from the surface of a ploughed field. These *may* be of similar date, though the technique of striking is far inferior. I illustrate one of these also, for comparison with those of the Baraling site.

There must surely be an immense amount that amateurs, even during a casual walk or picnic in the country of this ancient land, can do to increase our knowledge of its past. It is partly in the hope of stimulating some such research work that this contribution has been sent for publication.

THE LADY IRWIN COLLEGE FOR WOMEN

By Mrs. H. RUSTOMJI FARIDOONJI
Honorary Secretary
And
Mrs. HANNAH SEN
Directress of the Institution

A Brief History

THE Lady Irwin College represents a distinctive contribution to educational thought on the part of Indian women. It owes its inception to a movement first started in Delhi at the Second All-India Women's Conference in 1928, a movement which was a practical expression of the real and intelligent interest taken by the Conference in all matters affecting women and children. Out of the welter of speeches and resolutions there emerged the All-India Women's Education Fund Association, a body of experienced workers with a determination to remodel education and relate it to the needs and demands of Indian life. Lady Irwin was the first President of this Association and Mrs. Rustomji Faridoonji its Honorary Secretary.

The Association was registered under Act XXI of 1860 in May 1929, and at its first Annual Meeting in January 1930, appointed an All-India Committee of educational experts from each of the provinces and some of the Indian States to enquire into the several resolutions passed by the Women's Conference as regards women's education and to find out a type of education which will suit the life and needs of the people. After very careful and detailed investigation, this Committee submitted a report in 1931 embodying a scheme of study and research in Home Science, Educational Methods and Experimental Psychology, for the carrying out of which an endowment and building fund of 22½ lacs was required. Unfortunately, this full enquiry took some time and the general meeting of the Association sanctioned the scheme about two months before Lady Irwin left India. What was worse, soon after her departure the economic conditions in the country got so bad that in spite of a most generous donation of two lacs of rupees from His Exalted Highness the Nizam of Hyderabad the fund amounted to four and a half lacs of rupees only. The original scheme, with its various proposals, had therefore, to be considerably modified, and it was decided that training in Domestic Science, coupled

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Indian child, promised the greatest measure of success and should be taken up immediately. With that ideal the Governing Body started the work of the college in November 1932 in spite of their small income. The college was formally opened by His Excellency the Viceroy in March 1933.

Aims and Ideals

The college provides courses of studies in Home Science as a fundamental step towards enabling the Indian woman to liberate the power of Science in her home, to add the beauty of Art to that home, and, conserving the best in Indian tradition, to raise society to a healthier and wider level of life and thought. It seeks through its trained teachers to carry the message of Hygiene and the Science of Living to every province and village in India. The method

Experimental work in applied Science

suggested is that these trained teachers on their return to their own provinces will train the primary teachers in the simple rudiments of Hygiene and Domestic Science in the vernacular. Later on, the Secondary teachers could be trained with a more advanced course and thus carry on the training with the help of new teachers as they passed out of this college right up to the University course and thus introduce this most necessary training for women in the education of Indian girls.

The Courses of Studies

The courses of studies cover a wide range of subjects intended in part for the efficient teacher and in part for use in home and civic life. A special Teachers' Course, with a year's training in Methods and Psychology, runs parallel with the Home Courses of one year and two years arranged specifically to meet the needs of wives and mothers.

In addition to the usual Domestic Science subjects of Cookery, Laundry, Housewifery and Needlework, the Home Course syllabus includes Elementary Anatomy and Physiology, Dietetics, Hygiene, First Aid, Home Nursing, Mothercraft, Eugenics, Gardening, Book-keeping, Civics and

Cookery class

Child Psychology. But the Teachers' Course is still more comprehensive and higher in standard, for it has a place reserved for the Sciences—Physics and Chemistry, pure and applied, Biochemistry and Biology.

These courses lay a strong emphasis on practical and laboratory work, and include visits to places and institutions of educative value. The practical side of the training is further developed, and a sense of responsibility aroused by the series of House Duties assigned to students in rotation, which entrusts to their care the entire management of the institution. Most of the visitors to the college have admired this

Laundry class

unique and useful feature. The Dean of the Department of Home Economics of the Kansas State College, during her short visit to Delhi, remarked that she had nowhere before seen the practical side of Home Science Training worked out with such thoroughness.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The twin arts of music and dancing also receive their due share of recognition. For among the optional subjects are Indian music, both vocal and instrumental, and classical Indian dancing. The success of this section is guaranteed by the active co-operation and financial support of the Delhi Women's League, the Local Committee of the All-India Women's Conference. Already several trophies have been won at inter-collegiate competitions. Indian Painting, Shorthand and Typing are also taught.

Believing that no system of education would be complete and no syllabus of studies adequate, without some degree of physical culture, the college encourages the playing of games. Tennis, Badminton and Basket Ball are among the favourite forms of exercise. A swimming bath, attached to the premises, offers another enjoyable recreation. The Games Committee of the Students' Union keeps alive this ardent interest

Students Gardening

through tournaments and challenges to other Colleges. Periodical Medical examinations and the keeping of health record cards give added importance to the health and well-being of the students.

The Building

The college is housed temporarily at 1, Sikandra Road, New Delhi. The building consists of lecture rooms, work rooms, a library, the students' common and dining room, and provides also living accommodation for the students and members of the staff. Recently the All-India Women's Education Fund Association acquired an extensive piece of land on which it proposes to construct the main college block with its up-to-date laboratories and cottage homes. Those cottages, of many sizes and grades, will be the centres of experience for conducting homes of families differing in size and income. In these translating the knowledge of the laboratories into the practical needs of the cottages, the Indian women will learn to evaluate all sciences and arts in terms of the requirements of home and life.

Needlework class

A Plea

This new outlook on education, this brave venture, is a proud achievement. That the Conference continues to think along these lines is evidenced by the oft-repeated resolution which was once again passed at its last Session in Calcutta.

> "This Conference feels that there ought to be a re-orientation of the entire system of education in this country and is of opinion that government and private institutions should introduce vocational training immediately in schools and colleges."

By far the most important profession foreshadowed in the term "vocational" is that of the wife, mother and home-builder. It is a career that over 99 per cent of women have followed for centuries and which more than 170 millions of them in India pursue today. Any attempt to re-orientate education into a meaningful system must take into account the realities of life, its practical requirements. From everywhere comes the cry that female education advances but slowly and that the percentage of female students is regrettably low. If the desire to remedy this defect is sincere, if Indian women earnestly wish to awaken an increasingly popular demand for education, it is imperative that school studies be related to Indian homes and to the call of Indian citizenship. Home Science, in all its aspects in its limited and wider applications, demands attention as an integral part of all education. But the teaching and the study of this subject should be secured not merely through an All-India high grade institution, such as the Lady Irwin College, but by means of local schools and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

colleges making use of the trained teachers to adapt the courses to their varying needs.

This will give some idea to our friends in Bengal of the work that is being done by this All-India institution. In starting this scheme the original Committee specially wanted to avoid duplicating the work that was already being done in different parts of India and took up this one branch regarding which they were told that the need was great and the paucity of trained teachers hampered the work in the provinces. Money is badly needed for both the building and for the Endowment Fund. Subscriptions are so graded that the richest and the poorest can help this Institution if they desired. A Patron pays Rs. 20,000, a Vice-Patron Rs. 10,000, a Life Fellow Rs. 500 and a Life Member Rs. 100. Besides that, there are Annual Fellows paying Rs. 25 a year and Members paying the nominal sum of Rs. 5 a year. The United Provinces has contributed over Rs. 40,000 for the work of this college and the Governing Body appeal to educated Bengal which is in the forefront of all national causes to help this cause of Women's education.

Communicated by Mrs. S. C. Mukherjee, Hon. Secretary, All-India Women's Conference.

LABOUR POLICY ON INDIA

By Major D. GRAHAM POLE

I have been much interested in reading an account of Sir Oswald Mosley's meeting in Stoke-on-Trent.

I do not propose to deal with his general statements about the failure of political parties to carry out their pledges and the need for reform of the machinery of Parliament. On many of these points we are all agreed, although we differ widely from Sir Oswald Mosley as to the remedies required.

What I do want to deal with is Sir Oswald's remarks on India—a subject about which he would admit that I do know something at first hand, after my many visits there, staying in Indian homes and trying to see things Indian through Indian eyes. Indeed, before going out to India, it was to me that Sir Oswald came for personal letters of introduction and recommendation to Indians, and he asked me in these letters to stress the fact that he was not only Labour, but Left-Wing Labour, and he then agreed that the government of India was a matter primarily for Indians.

Sir Oswald says that the Fascists are against the Government's Indian White Paper, root and branch. Well, we in the Labour Party are also against the White Paper, not, however, for Sir Oswald's reason that it is "the right and duty of Great Britain to remain and govern" in India, but because, according to Sir Oswald's own showing, we have not made such a brilliant success of the governing of this country that we should claim the "right" to govern India. How was this "right" acquired? The late Sir William Joynson-Hicks truthfully remarked that

"We conquered India as an outlet for the goods of Great Britain. We conquered it by the sword, and by the sword we should hold it. I am not such a hypocrite as to say we hold India for the Indians. We hold it as the finest outlet for British goods in particular, general, and for Lancashire goods in particular."

We believe that God has not yet made the people who are able to govern another people, and that freedom and the right to govern themselves is the right of all peoples.

Self-Determination

We fought a war for the self-determination of small nations. Indians ask why that self-determination should only apply in Europe and not in Asia. They are as much entitled to self-determination as is Belgium, or as we are. They had a civilization and culture while our ancestors were running about in their birthday suits decorated with woad.

Sir Oswald says it is our right to remain and govern because India owes everything to British rule. That is one of those sweeping statements so easy to make, but without any shadow of foundation in truth. He says it is our duty to remain and govern India because the withdrawl of British authority would result in a collapse into chaos and bloodshed. This is not the Left-Wing Labour point of view, but the Right-Wing Tory die-hard point of view. It is interesting to note that, speaking broadly, there has been much less chaos and bloodshed in the Indian States governed by Indian Princes than in British India under our rule—or, one might say, in Fascist Berlin and Vienna.

Sir Oswald says we possess today more effective and more humane instruments for the maintenance of law and order than in the past. Presumably Sir Oswald refers to our resort to bombing from æroplanes. All other civilized nations have expressed their willingness at Geneva to abandon this bombing from the air. We alone persist in our right to do so. We alone stand in the way of a convention which would put an end to it everywhere. If Sir Oswald considers bombing from the air a humane instrument, the Indians have another view.

Sir Oswald states that it is a profound illusion to suppose that our authority is challenged by the mass of the Indian population. If this really is his view, it shows under what profound illusions he himself is labouring. When Sir Oswald went out to India, I advised him to stay with Indians, in their

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

homes, to whom I gave him letters of introduction. In that way he would have more chance of realizing their point of view. Indians are very suspicious of friends of Indian freedom whose headquarters is at Government House and who, naturally, are supposed to share the "official" views. Yet throughout the length and breadth of India Sir Oswald and his wife were mainly the guests of the Governors, by whom, no doubt, he was informed that the mass of the Indian population are quite happy with our government.

Sir Oswald goes on to say that our authority is challenged only by a small class who at every opportunity themselves oppress the Indian masses. That again is as untrue as it is sweeping. But it interests me to recollect that it was to members of this "small class," who challenge our right to rule them in India, that Sir Oswald was anxious to have letters of introduction and recommendation from me.

Sir Oswald told his audience that 250 different languages and dialects are spoken in India. Quite true. But how many are spoken in this country? If the census were taken in this country by the same method as is employed in India, every French, German, Spanish or other visitor who happened to be in this country at the time the census was taken would go to swell the number of different languages spoken in this country. The fact really is that, although, according to the last census, there were some 225 languages spoken in the Indian Empire, Hindustani alone is spoken by over 120,000,000 people; Bengali by well over 50,000,000; Punjabi by nearly 25,000,000 and Tamil by over 20,000,000 people. These figures are all to be found in the Abstracts of Tables giving the Main Statistics of the Census of the Indian Empire taken in 1931 and published in Command Paper No. 4194 of 1932.

Religious Differences

Sir Oswald is also worried by the fact that India is "rent by every kind of racial and religious difference." Of course, there are many religions in India. Practically every known religion is represented there. Indeed, Christianity was in India long before it was in this country, and it has continued there ever since. But let us face the real point about this great diversity of religions. The population of India amounts to over 350 millions of people. But of this about 240 millions are Hindus. Nearly 80 millions are Muslims; nearly 13 millions Buddhists. And about 6¼ millions are Christians. These figures also are given in the Command Paper I have referred to.

Sir Oswald went on to say that what "was really suggested by the Government's White Paper was the handing over of India to a small governing class of Indians who were either great capitalists or professional politicians in the pocket of the financiers." This is sweeping and absolutely untrue, and there is no foundation whatever for this in the White Paper, and I challenge Sir Oswald Mosley to point out any authority for such a statement in the White Paper. If he really had read it, he would realize that it is not the intention of the Government to hand over to Indians at all, but to retain the whole real power, by a series of safe-guards, in Whitehall.

I see that Sir Oswald goes on to say that the strong hand of the British Government was necessary in India, and one of the reasons he gives for this is the necessity for extended irrigation. Is Sir Oswald not aware, even after his journeys from Government House to Government House through various Provinces in India, that even with the very limited amount of self-government that India has at present, the fact that Indian Ministers were put in charge of irrigation has meant that since the Montagu-Chelmsford Reforms were initiated in 1921, irrigation in India has gone forward and been extended tremendously.

If the Fascist programme is as well informed on other subjects as their leader seems to be on India it is little wonder that the electorate throughout the country has turned them down so decisively.

COMMENT AND CRITICITM

"Need our Schools Continue Godless?"

An Experiment in Religious Education at the Gokhale Memorial Girls' School

By A. Margaret Barr, M. A. (Camb)

There has recently been brought to my notice the article entitled 'Need Our Schools Continue Godless?' in *The Modern Review* for January last, and I feel sure that readers of that excellent journal would be interested to hear of an experiment which is being made in an Indian Girls' School with a view to answering that question.

First let me say a little about the article in question. With the first part of it I am in complete agreement. I agree that education from which all moral and religious instruction has been eliminated is a danger both to the State and the individual. I agree also that sectarian education is, if possible, an even greater danger still. With most of the next two pages of the article however, I find myself at issue. The writer describes, and, I gather, commends, the system in force in Minneapolis, where special schools have been started for religious instruction, to which the children from the public schools go for certain stated periods each week. After drawing attention to the principles underlying the scheme, he adds, "The main aim of the school of religious education is to give religion its *legitimate place* in the life of the child, and to aid in developing in the pupil high ideals of character and citizenship." Then on the next page he defines what he means by religion, distinguishing it carefully from ritual and dogma, and adds, "The function of the school of religious education, then, must be not to train the pupils in rituals and dogmas but to build character." So far so good. I agree. But there seems to me to be an inconsistency here and on a vital point. The writer rightly recognizes that religion is not ritual or dogma, and wants to give it its "legitimate place in the life of the child," yet apparently believes that that can be done in separate, special schools. But surely the one thiug most vitally wrong with the whole thought about religion in the modern world is the idea that religion and life can be separated. To give religion "its legitimats place

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the life of the child" we must bring it back to the very heart of his everyday life. For that, and nothing less than that, is its "legitimate place." I disapprove, then and profoundly, of the whole idea of separate schools and special teachers for religious instruction. Teachers should be specially qualified, of course, as they are to teach Mathematics or Science or art or any other difficult subject. But they should not be special teachers for that subject alone. or if the school is large enough to have such a specialist, he or she should at least be at the same time (like the Mathematics or Sanskrit teacher) a regular member of the ordinary school staff. If we cannot achieve this then children will inevitably grow up with the ever-deepening belief that religion is something apart from everyday life, something always associated with special places and special times and special people, instead of being given its legitimate "place" as the motive and main-spring of the whole of life.

With the latter part of the article I am again in complete agreement. Here the writer pleads for "a fully developed but non-sectarian programme in social education in our public schools," which might succeed in promoting wide-spread respect in youth for the social values of all religions"... a system which would "provide children with adequate and definite instruction in right living" both as individuals and as social units. I entirely agree, but I believe profoundly that to set up special schools for the purpose is the surest way of defeating that purpose.

Let me now describe the experiment which is being made at the Gokhale Memorial Girls' School in Calcutta. As the experiment was only started six months ago, it is impossible as yet to speak of it save with the utmost tentativeness, or to do more than explain what we are *trying* to do.

The school is open to Indian girls irrespective of religious creed. And though in practice this confines itself to Hindus, Brahmos, Muslims and a few Christians, in theory there is nothing to prevent it containing in addition representatives of all the other religions of India. The problem as it stands, however, is quite sufficiently difficult; and for some years the school authorities have felt that the girls should be given some form of religious instruction, but have realized, of course, that any form of sectarianism is completely out of the question.

Last November the writer of this article came to the school for the express purpose of trying to work out an experiment in religious education on universalist lines, in addition to teaching English to some of the senior girls, and being in charge of the Boarding house.

The aim of the experiment is to put the history of religion in some sort of perspective, to fill in the gaps in the girls' knowledge by giving them some information concerning faiths other than the one in which they have been brought up, to give them some understanding and appreciation of the social values taught by all religions, and above all to open their eyes to the fact that the religions of the world *at their best* do not conflict with one another but agree, at any rate on fundamental issues.

The method adopted is as follows: The Juniors are given just stories of one kind and another—myths, parables, legends, incidents in the lives of great religious leaders,—any stories, in short, ancient or modern, true or legendary, which have any sort of moral or religious value. The Middle School girls are given outlines of the lives of the founders of the historic religions and the main points in their teaching,—Zoroaster, Moses, Laotse, Buddha, Confucius, Christ, Muhammad. And with the Senior girls is attempted the more difficult task of studying the world's great religious books and comparing the teaching that is found in them, selecting for memorizing purposes such texts and short passages as are most famous for their beauty or universality.

Let me remind readers once again that this experiment is still in its very early infancy. It will be impossible to assesss justly its success or failure for some years to come—not indeed until the children now in the First Form shall have reached the top of the school, having passed through all stages of the experiment. That these girls will emerge with a finer sense of honour and morality, with higher ideals of citizenship and service, with a broadminded and tolerant attitude towards all forms of religious faith, and with a sincere desire to vindicate in their own experience the universal truths which are taught by them all,—that, in short, religion will for them have been given its "legitimate place",—this we dare not assert, but this and nothing less than this is our hope and aim.

Great political passion is a precious treasure; the feeble hearts of the majority of mankind have but little room for it. Happy the generation upon which stern necessity imposes a high political ideal which, great, simple and comprehensible to all, campels all the other ideas of the time to serve it.—TRIETSCHKE.

INDIAN PERIODICALS

Tagore on 'Man'

In an illuminating paper in *Visva-Bharati News* Rabindranath Tagore writes :

Man's endeavour strives from one nature towards another. It is only when his enquiries go beyond individual inclinations that his science is founded on universal knowledge. It is only when his efforts take him beyond all personal interests and the inertia of customary habit that he becomes विश्वकर्म्मा a world-worker. It is only when his love transcends his self-seeking that man becomes a Mahatma—a great soul—through his relationship with all creatures. One nature of man obscures him, the other gives freedom.

The astronomer observed that a planet had deviated from its orbit. He asserted with conviction that it was due to the attraction of some other unseen plant. It was observed that the mind of man also did not move along the course prescribed by its nature for the preservation of life. It deviated towards the uncertain, towards the transcendent. This led man to imagine the realm of the spirit. He asserted that commands came from there, it was there that his centre of being lay. Men wrangle and fight to decide who it is that presides over that realm. Whoever He may be and whatever name we might give to Him, He did not let man rest within the limits of animal life.

The sea becomes restless. There is the continual ebb and flow of the tides. The restlessness of the sea would by itself prove the attraction of the moon, even if that remained invisible. Even the new-born babe knows instinctively that the hunger which indubitably is in him has an object that is real also in the external world. Man's lifelong efforts have often been directed to things which have no connections whatever with his immediate physical needs. A life transcending death leads him on to the paths of adventure, not for the sake of self-preservation, but for the sake of immortality.

In Vedic language God has been called : *Avih* अविः denoting that his nature is Revelation. About him it has been said—यस्य नाम महद् यशः—His great glory is His name : His truth is in his great expression. It is the same with the nature of man : it is to reveal the glory of his soul. The creature preserves his life by taking in food from outside, the soul reveals itself by pouring itself out, and crossing nature's limits. Even the savage in his own way wants to transcend nature for the sake of his self-glorification, which according to him is the expression of his truth. He pierces his own nose and sticks in it a rod. Through a painful process he sharpens his teeth. He flattens his infant skull between wooden boards and deforms it. He concocts strange garments and hideous ornaments and endures insufferable pain and discomfort in putting them on. In all this he attempts to declare that he is potentially greater than what he can normally be. This greater self of man is contrary to nature. The God whom he exalts as his ideal is equally strange. A nursling of nature and yet man has this fighting attitude which always seeks to defy nature. Here in India we see people, some with hideous arm, some lying on a bed of thorns, some hanging with head down towards a raging fire. They declare in this way their superiority, their saintliness, only because they are unnatural. In the modern European countries also there are people who glory in facing unnecessary hardship which are called breaking records. Most of these they perform in order to glorify unnaturalness. The peacock feels proud in being a peacock : ferocious animals exalt in the success of their ferocity. But Man prides that in his exaggerations he is more real than in his normal reality.

—

South America and India

Mr. Subhas Chandra Bose offers a few valuable suggestions for the establishment of cultural contact between India and Latin America in *India and the World*. He writes :

South America, according to the South American Handbook, is one-half the area of the whole British Empire, and in 1931, despite the crisis, these Republics did the equivalent of about £612,000,000 of foreign trade, with a difference of about £120,000,000 in favour of their exports over imports.

Now it happens that what India produces is being bought by South America from other third countries, as England and the United States. We must try to establish direct contacts and sell our articles to South America, who will benefit a reduction in price instead of leaving all the benefit to the intermediaries.

A friend from Cuba suggested to me, among other things, that a ship as a floating exhibition of India should be sent by us to visit Central and South American countries. This should interest business circles. At each harbour contacts would be established on board the *S. S. India*.

Besides, in our leading cities there should be Consuls of each of the South American Republics. If the Consul is honorary he should be an Indian, not a foreigner. This would greatly help to facilitate information and further connections.

We should distribute in South America a pamphlet in Spanish with data and illustrations about India.

In order to co-operate with this new plan of India's expansion, this *Review* will publish a series of articles devoted to each one of these countries. The actual isolation between ourselves and that important branch of the Latin race must not continue.

The first steps in order to start bringing South America and India closer to each other could be :

(1) Study of Spanish. All the twenty Republics speak Spanish with the exception of Portuguese speaking in Brazil and French in Haiti. Commerce is acquainted with English nevertheless.

(2) Exchange of professors and students in order to promote personal contacts.

(3) Travelling in these beautiful countries.

(4) More information about trade and conditions.

Trade relations should exist as well with North America as with South America. India can sell direct

let us say tea, and obtain in turn : oil and cacao from Venezuela, silver from Mexico, coffee from Colombia, etc.

—

The Imperial Library of Calcutta

Mr. Rabindra Mohan Datta tells us in the same paper that the State libraries of most of the civilized countries are copyright libraries. On publication of books there a number of copies must be given to the libraries under the penalty of a fine. Only the libraries in India do not enjoy the privilege. So Mr. Datta writes :

Unless the Imperial library is made a copyright library, its growth must necessarily be slow. For making it a copyright library, the only thing the Government of India has to do is to amend the Indian Copyright Act, III of 1914, on the lines of the Imperial Act, and provide for the accommodation of books thus received.

With a little imagination, the Copyright Act can be so amended as to make the libraries at provincial headquarters recipients of all books published in the vernacular or vernaculars of the province, wherever published in India. We will make our meaning clear by an example ; many books in Tamil, Telegu and Malayalam are published by the Baptist Mission Press of Calcutta ; they are sent to the Bengal Government under the Press and Book Registration Act ; the Bengal Government after a time either sends them to the Imperial Library, where the majority of readers cannot use them, or simply destroys them. If these books were sent to Madras, they would have been of more use. Similarly with the Oriya books.

We also suggest that unless there is reciprocity between Britain and India in the matter of exchange of publications, unless the British Parliament is willing to amend their Copyright Act for having an additional copy of all new publications to be sent to India, we in India should have the Act of 1867 so amended as to stop the book tribute we have been paying to Britain for the last 70 years. Let the Government of India move in the matter and secure by amicable negotiations the just rights of India in the matter ; and we believe Britain will not be ungenerous if the matter is properly put to her.

—

Pramathanath Basu's Works

The following account of the works of the late Pramathanath Basu from *The Insurance and Finance Review* will prove interesting :

Pramathanath's explorations and discoveries regarding India's mineral wealth are strewn over the pages of the "Record of the Geological Survey of India" and the "Memoirs of the Geological Survey of India." It was Pramathanath who discovered the iron mines at Garumohisani, Badampahar, Panchpir and Kalimati, and it was he who made the Tata Iron and Steel works possible. While in Government service, he discovered the Manganese ores in Jubbalpore, Darjeeling coal, Granite in Tavoy and Mergui. The following articles and pamphlets published in the "Memoirs" and "Records", will show the extent of his researches and explorations in geology all over India.

1. Geology of the Lower Narbada Valley (Memoirs, Vol. XXI, pt. 1.)

2. Undescribed Fossil Carnivora from the Sivalic Hills (Vol. XIV, pt. 3).

3. Notes on the History and Comparative Anatomy of the Extinct Carnivora ('Geological Magazine,' Vol. VII, 1880).

4. Notes on Lighite near Raipur, Central Provinces (Records Vol. XXVII, pt. 3).

5. The Manganese-Iron and Maganese Ores of Jubbalpur (Records, Vol. XXI, pt. 3).

6. The Darjeeling Coal between the Sisu and the Ramthi Drivers (Records, Vol. XXIII, pt. 4).

7. On the Geology and Mineral Resources of Sikkhim (Records, Vol. XXIV, pt. 4).

8. Note on Mahismati or Maheshvara on the Narmada ('Proceeding,' Asiatic Society of Bengal, 1933).

9. Chhatisgar : Notes in its Tribes, Castes, and Sects ('Journal of the Asiatic Society of Bengal, Vol. LXI, pt. 1.)

10. Note on Granite in the district of Tavoy and Mergui (Records, Vol. XXXVI, pt. 3).

11. Note on the Geology of a part of the Tenasserim Valley (Records, Vol. XXVI, pt. 4).

12. The Geology and Mineral Resources of Mayurbhanj (Records, Vol. XXXI, pt. 3).

13. The Geology and Mineral Resources of the Raipipla State. (Own Publication).

Pramathanath was a social reformer and educationist of the first rank. He was one of the founders of the National Council of Education in the wake of the Swadeshi movement in Bengal. He was sometime Rector of the Bengal Technical Institute founded at Jadavpur under the auspices of the above Council. Pramathanath was Secretary to the "Indian Society" in London, and advocated the cause of indigenous trade and industry long before the Swadeshi movement, since he could foresee that India's economic salvation lay only in a proper industrialization and utilization of her enormous natural products in indigenous industries. He published a book on *Technical and Scientific Education* in the year 1886, the suggestions contained wherein were responsible for the many important reforms carried out in the curricula of the Calcutta University. He was to a large extent responsible for the introduction of geology as a subject of study at the Presidency College, Calcutta, where he acted as a Professor for some time. He founded the "Indian Industrial Association" in 1891, and was elected its Secretary. He presided over the "Bengal Industrial Conference" in 1891, and was elected Chairman of the Reception Commitee of "Indian Industrial Conference" in 1906. He encouraged joint-stock enterprises among his countrymen and established the Rangpur Tobacco Company, and the India Prospecting Company. He established a sugar factory and operated two coal mines near Asansol in 1895.

Pramathanath had an intense love for literature and maintained a keen interest in literature and philosophy all through his life. He has written several books in English as well as Bengali on Indian political and social problems. His *History of the Civilization during British Rule* (3 Vols.) is the most critical analysis of British rule in India. The following are some of his popular books :

1. Sawaraj—Culture and Political
2. Epochs of Civilization
3. Some Present-day Superstitions
4. Essays and Lectures
5. Survival of Hindu Civilization
6. Illusions of New India

The following pamphlets also caused much sensa-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tion among the intelligentzia of our country when they were first published.

1. The Root Cause of the Great War.
2. National Education and Modern Progress.
3. The Economic Aspect of the Montagu-Chelmsford Reform Scheme.
4. Give the People back their Own.
5. Degeneration—A World Problem.
6. An Eastern View of Western Progress.
7. Educational Reform in Bengal (1888).

Planned Economy

While the Indians have been clamouring for political and economic *Swaraj* for years, the Government of India has remained adamant and stuck to the principles of a by-gone age. So Mr. F. E. James, M. L. A. writes of the Government in *The Indian Review* :

It requires overhauling, in order to be more responsive to the new conditions and more adaptable for the execution of the national planned policies which are being forced upon all countries. That is why, during the Budget debate, I tried to focus the attention of the legislature on this aspect of the matter, and to suggest changes that could and should be made forthwith. The Government's attitude was a grudging and unwilling recognition that something perhaps was required, and a passionate claim that everything they were doing was right. Bureaucratic habits die hard, and it was not to be expected that suggestions for their change would be readily accepted. But the modification of the administrative machine will be forced upon them, for the old mechanism is no longer adequate. The trouble is that most of the present members of the Viceroy's Executive Council are men who have been trained in their early days in the prewar schools of liberalism, free trade, low tariffs and unrestricted individualism. In a country where economic nationalism is liable to become exaggerated, such an attitude is a useful corrective. It should not however be permitted entirely to dominate the policy of the country. The world is moving fast and economic changes are not, in India, waiting on political reform. The determination of all the countries to plan their national economy, to set their people to work in industry, to cut out unnecessary imports and to concentrate upon internal rather than upon international trade, is a fact which cannot be ignored. Those who are responsible for India's economic policy must keep in touch with what is happening in other countries and must be prepared to forget for ever the economics of the days before the war. The nation that is not prepared to organize is the nation that will go to the wall in the present economic struggle.

Internally the machine of government needs adaptation on the lines suggested above. Externally India needs a progressive policy of trade extension and by-lateral and multi-lateral agreements. If the British Commonwealth is to mean anything to India, the full economic advantage should be extracted from it. These are matters which transcend politics and which call for the most earnest study and co-operation from all citizens of India irrespective of politics, community, and race.

—

Dr. Sven Hedin's latest Expedition

Dr. Sven Hedin is now 68. He is still pursuing his explorations in Central Asia. A correspondent writes from China in *The Oriental Watchman and Herald of Health* :

A vast unbroken stretch of highway extending all the way across Europe and Asia from the Atlantic on the west to the Pacific on the east,—this is the dream of Dr. Sven Hedin, famous and intrepid Swedish explorer, as he set it before the writer on the eve of the departure of the Suiyuan-Sinkang Highway Expedition for the regions of Central Asia, in behalf of the Chinese government. Starting from his headquarters at Kueihua, Suiyuan, on November 10, [1933] Dr. Hedin is setting out across Mongolia toward Hami and Tihwa in Chinese Turkestan, possibly pushing on toward Chuguchak, Nigyuan, or Kashgar on China's westernmost borders, and returning through Kansu along the old imperial highway, to terminate his journey at Sian, capital of the province of Shensi. It is expected that about eight months will be required for this gigantic undertaking.

—

Health from Sunshine

Much has been said on the efficacy of sun-shine. We take the following from the same paper :

For growing babies, five minutes' exposure to the sunlight twice daily is an excellent practice. It has been found that daily exposure in this way increases the amount of phosphorus in the blood, and phosphorus is an essential element for growth. The amount of iron in the blood has been found to be increased after exposure to the sun's rays for a time.

Sunlight is death to germs, Few germs can withstand the sun's rays for one hour. Sunlight is also of benefit in the treatment of tuberculosis. The same invisible ultra-violet rays are responsible for the cure of certain skin diseases, chronic leg ulcers, etc.

In the absence of natural sunlight, artificial sunlight can be utilized in the treatment of rickets and tuberculosis. There are certain types of electric lamps particularly the quartz lamp, which produces a great quantity of ultra-violet rays. These lamps are extensively employed in the treatment and prevention of rickets and other deficiency diseases. They are also valuable in treatment of some forms of skin diseases. Such treatment should be under the direction of the doctor.

—

Contribution of the Kols to Indian Civilization

We welcome publication of the tenth volume of *The Dacca University Journal*, 1934, edited by Mr. P. K. Guha. It contains many valuable papers on important cultural topics. There is a paper on the beginnings of Indian Civilization by Dr. S. K. De. We read with interest the following extracts containing an account of the contributions of the Kols to the Indian Civilization :

In India the Indo-Aryans came in contact with two important types of people, the Dravidians and the Kol-Mundas, besides the Tibeto-Chinese whom we may dismiss for the present as they come into the field at a much later date when Hindu culture had been fully characterized and established. The commingling of these three peoples Arya, Dravida and Kol, has resulted in a most remarkable synthesis of cultures, *viz.* the Hindu culture as it is known today. The intermingling

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

has been so close and complex that it is difficult today to disentagle clearly the lines of development; but it is becoming more and more apparent that the Aryans were not single-handed in building up the culture of India and that the deeper substratum of this culture is to be found in the Kol and Dravidian contribution, which has been no less great.

The Kols are now confined roughly to west Bengal, Chote-Nagpur, north-east Madras Presidency and the Central Provinces; but on linguistic, ethnic and other grounds it has been surmised that they were in India before the Dravidians, and at one time overran the whole of the Gangetic plains from Western Himalaya to Gujarat and Maharastra in the west and to Bengal in the east, in which last place they were contiguous to their kinsmen, the Mons, the Khmers and other peoples, who at one time occupied the whole of Indo-China. The language which they speak is distinct from Indo-European and belongs to a linguistic family to which the name Austric or Austro-Asiatic has been given by Peter Schmidt.

Even where they preserved more or less complete isolation from the currents of Hindu civilization, it must have been almost impossible for them not to have been profoundly influenced by the irresistible influx of Hindu notions; they are thus no longer purely Kol or Austric. It Is necessary however, even if it is difficult, to separate and restore the Kol or Austric elements, and this can be done partly by a study of the present-day Kol people and partly also by helps derived from Indo-Chinese and Indonesian studies. When we have some general idea about the real character of Austro-Asiatic thought and culture we shall be able to trace it in ancient and mediæval Hindu thought.

Among the fundamentals of Hindu notions and ideals, of tansmigration, which is not an old Aryan belief but which developed in comparatively recent times, as perhaps of Kol animistic origin. Some customs and ways of life current among primitive Indonesians, who are the kinsmen of the Kols, have their counterparts in ancient and modern India. Kol myths and legends must have been Hinduized in Hindu mythology, for the legends and traditions of a country seldom die. But thorough investigation have not yet been made into these questions.

—

Need of a fresh Insurance Law

India has made rapid progress in life insurance business in these years. A law was enacted in 1913 to control this branch of business. To adapt it to the modern needs the law requires complete overhauling. Mr. S. C. Ray says in *Insurance World*:

(1) Operations of all classses of Insurance business should be regulated by law.

(2) The initial deposit of Rs. 25,000 may remain as it is but every company should be called upon to deposit another sum of Rs. 25,000 in some recognized Bank from which they will be allowed to draw money not exceeding Rs. 1,500 per month for meeting their current expenses. The main difficulties of a new Insurance office lie in first two years, and the deposit while checking to some extent formation of company does not help much in the transaction of the business while it is formed. The aforesaid deposit with the bank with limited withdrawal may solve the problem to some extent.

(3) The Government Actuary should be vested with more powers to check the activities of insolvent Insurance companies and provision may be made for the inspection of the books of Accounts of the company by the Government Actuary in order to ascertain the real position.

(4) There should be no exemption to foreign companies with regard to deposit.

(5) Non-Indian companies should be compelled to keep separate account with regard to their Indian operations and also to make a separate valuation of their Indian business They should not be allowed to distribute bonus on their Indian business out of profits on business written outside the country.

(6) Every foreign company should be required to invest in India the reserve against their Indian policies.

(7) The principal representatives of such foreign companies within this country must be Indian.

—

"Local time" and "Standard time"

The following appears in *The Educational Review*:

What generally goes by the name of "local time" is the relative angular distance of the sun from the meridian of a place or locality. It may be either apparent or mean "local time." The reading of the sun-dial shows the apparent solar "local times" of the locality in which the sun-dial is. If the "equation of time" with its proper sign be applied to the "local apparent solar time" we should get the "mean solar local time" of the locality. The local time is different for different places on the earth, unless they are exactly in the same longitude. In order to avoid this difficulty and to co-ordinate the activities of a country, a standard time is adopted by the ruling authority of the country. For example, in British India, the Government has adopted (from the first day of January 1905) a standard time for India as a whole, called the "India standard time" which is five hours and thirty minutes ahead of Greenwich *local time*. Railways and Telegraphs in India are guided by this time which is truly the "local time" of places 82°30' east of Greenwich Longitude. Similarly, each country adopts for convenience a "standard time" which differs by a constant amount of time from the "local time" of some prominent place which possesses an observatory whose meridian is taken as the standard. There is every likelihood of the Greenwich meridian being adopted as the standard meridian for the whole world. To find the "local time" of any place from the "standard time" of the country, the longitudinal difference of the meridian of the place and the standard meridian should be known and this difference converted into time at the rate of 15° per hour and 15' per minute should be added to or subtracted from the standard time, according as the place is to the east or to the west of the "standard meridian" of the country. Conversely, "the local mean time" derived from the reading of the sun-dial and the application of the "equation of time" may also be converted into the "standard time" of the country by applying to it the longitudinal difference between the meridian of the sun-dial and the standard meridian as in the previous case.

The Sad Plight of Jute-cultivators

Cultivators of jute are not satisfied with things of small profit. Jute has recently brought them immense gain, so the smaller cottage industries have been neglected. Mr. Sukumar Chatterjee

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

writes in *The Bengal Co-operative Journal* on the sad plight of the jute cultivators :

A suitable home-industry in which the spare time of the cultivators may be profitably employed and which is capable of universal adoption has yet to be found, but there are many occupations which cultivators all over the world actually follow in order to supplement their income. These are market gardening, fruitgrowing, rearing and catching of fish, poultry farming and dairying. These are, in fact, essential parts of farming, because apart from the addition they make to the cultivator's income, they enable him to obtain without payment a considerable part of his food, namely, fish, milk, poultry and vegetables. The income derived by the cultivators from these sources may be small, if taken individually, but in the aggregate, for he whole year, the amount is by no means negligible.

It is in respect of these subsidiary sources of income, so essentially important to the agriculturist, that jute has done the greatest disservice. The disparity between the price of jute and that of fish, milk, eggs or vegetables was so great that it almost seemed a mean and niggardly thing to take the trouble of producing them or to offer them for sale, and, of course, the land attached to the cultivator's homestead, where one would expect a kitchen garden, could be more profitably utilized for the growing of jute.

This feeling grew and strengthened through the quarter of a century ending in 1929, the year when the crash came, until the idea was deeply imprinted on the minds of cultivators that one lost caste by selling fish, eggs or poultry. In my discussions with these people, especially after the depression had set in, I had frequently to stress the fallacy that if a man did not lose caste by selling jute he could not lose it by selling fish or eggs. Arguments are, however, of little avail when deep-rooted prejudices hold the field, and it is only the continued suffering extending over four long years that is gradually altering the cultivator's angle of vision. In the Sub-Division with which the writer is at present connected, *fatwa* has recently been given by a spiritual leader of the Musalmans that there is nothing degrading in the sale of fish. The Namasudra population is waiting for a similar *fatwa* from their leaders who, up to the present time, have considered such occupation to be degrading. Cases are not rare where poor people belonging to this community, who are driven by poverty to sell fish in the market, are threatened with the penalty of being outcasted and several instances were brought to the writer's notice where Namasudras had for this reason been compelled to forsake the faith of their fathers and be converted to Christianity.

—

Rice-Bran as a preventive of Beri Beri

The following appears in *Scientific Indian* :

In the Philippines beri beri is a very common and fatal disease among the poor classes who live on a diet that consists principally of polished rice and is deficient in vitamine B. For a number of years the Bureau of Science has been making a standard extract of rice bran (known as Tikitiki extract) which contains vitamin B. This extract is widely used for curing or preventing beri beri. It has been estimated that for adults approximately 30 grams of high grade rice-bran contain enough of the antineuritic vitamin B, for their daily requirements as a preventive of beri beri. This is about 2 equivalent to 11 level (not heaping) tea-spoonfuls of bran or approximately 2 cubic centimeters of standard rice-bran extract.

—

Pottery manufacture in India

Mr. Kishen Kumar Nijhawan writes in *The Mysore Economic Journal* :

In India all the raw materials for the pottery manufacture are to be found in abundance. China-clays are found in Bengal, Bihar, the Panjab, C. P., Rajputana and Madras. Ball clays and other lower grades are found in Delhi, C. P., Bihar and the Punjab. Quartz is found all over India. Felspars are found in Ajmere, Delhi, Jubbulpur, and Dholpur and Gwalior States. It is possible that some of the deposits in India have not been excavated so far.

Today India is producing ceramic-ware out of Indian raw materials in all its phases though on a small scale, so small indeed that she cannot meet her own needs if required. Pottery of one kind or another is made in India at Delhi, Lahore, Gwalior, Calcutta, Benares, Bombay, Mysore and Thar Kathiawar. Red-clay industries are spread all over India. The only experimenting and teaching stations in India are Benares and Lahore, while in foreign countries a large number of institutions give instruction in this important industry.

In spite of the progress already made, the final stage of development of ceramics has not yet been reached. In some of its applications it seems to have reached near perfection, but in others much remains to be done and the progress of metallurgy and numerous other industries will give rise to fresh development in ceramics. Finally there still are many branches of life in which pottery could with advantage replace the materials now employed, on account of its indestructibility or the brilliance of its decorations.

—

The Religion of the Aimol Kukis

Mr. J. K. Bose contributes a paper on the above subject in *Man in India*. Part of it is as follows :

Chafion (the presiding deity of the field).—This is the deity of the fields and by the worship of this deity they [the Aimol Kukis] get abundance of crop. This deity can be worshipped only in the presence of the people of the superior moiety but the people of the inferior moiety can take the sacrificial meat. The place for residence of this deity is made near the village gate where a circular piece of land is cleared and surrounded by bamboo hedges. In it are kept the various symbols of the deity and the things for worship. Generally a small house is made and within it two baskets full of earth with various small plants are kept, outside the house there are some bamboo zu glassas, and water glasses, and baskets to keep rice and meat after the worship. They think that after the annual worship the soul (pitay) of various plants take these offerings and are pleased on them so they get abundance of crop and cotton and other cereals from the fields and jhums.

The worship is preformed in the month of Thamu (July) and 'Khulpu', the chief priest of the village officiates as the priest. On the day of worship all the village officers engage themselves in the making of those symbolical things and in the afternoon they start with those things towards the village-gate; the 'Khulpu' marches in front of the party with a red turban. When

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

may reach the place the 'Khulpu with his assistants first clear off the old things and replace them with new ones. Then the 'Shumpu' and the 'Tangba' (Village officers of lowest rank) sacrifice a pig and two cocks respectively, both at the same time. The pig is pierced with a bamboo knife and cocks are sacrificed by a Then a portion of these meats are put in the basket and the glasses are filled with zu and water.

After the sacrifice the priest invokes the deity with the following incantations:

"Oh, God of fields, we are invoking thee and offering thee pig, cocks and zu. Do thou be kind on us and take all these offerings. The souls of all directions (east, west, north and south) be ye kind on us and take this humble offering of this people."

Spread of literacy among the Bhils

The Social Service Quarterly writes editorially:

As a result of the work done by it [The Bhil Seva Mandal] during the last ten years, a number of young students are now completing their course of study at the schools run by the Mandal. Some of them go back to their fields to follow their ancestral profession but others whose families have not sufficiently large blocks of land often turn for their maintenance to casual labour. Some of the more intelligent among them can well be trained as village guides, as can the girls who have completed their education at the various Bhil Ashrams. The Bhil Seva Mandal hence proposes that such of the students as wish to settle down in their villages and conduct local schools should be encouraged to start these schools by the sanction to them of small grants amounting to five-sixths of the expenditure incurred by them. The remaining one-sixth of the total cost is met by local collections. The number of these village Panch schools is 20 and each has an attendance of about 30 pupils. The girls attending the schools get small scholarships of annas two to five derived from special funds at the disposal of the Mandal. It is a matter for satisfaction that the educational activities of the Bhil Seva Mandal have created a desire for better living and education among the Bhil population and that the alumni of the Ashrams are themselves meeting this need with the help of the Mandal.

Hinduism in the Philippines

There is wonderful ethnic and cultural similarity between the Hindus and the Filipinos. Dr. Dhirendra Nath Roy has brought forward this fact clearly in a paper in *Prabuddha Bharata*. He writes in part:

Besides these facts of lenguage relationships there have been many other facts lately unearthed. It has been found that in the island of Masbate the ancient quicklime method of the Hindus was used by the gold miners to excavate the rock. The relics found in the island of Mindoro seem to prove that it "seems to have been the very centre of Hindu civilizing influences." Mr. Russell says that "every settled town had a temple and most temples had collections of books." They were written in the native characters on palm leaves and bamboo and stored with the native priests. But unfortunately the Spanish people destroyed that precious heritage of the people. It has been said that "one Spanish priest in southern Luzon boasted of having destroyed more than three hundred scrolls written in the native character."

About the interesting folklores Professor Kroeber thinks that they are "quite demonstrably of Hindu origin and all are cast in Hindu mould. Inasmuch as many of our own fables are also known to be of Indian origin or patterned on Hindu examples, it is not surprising that these tales from the Philippines have a strangely familiar ring in our ears. It is no wonder, since both we and the Filipinos have derived them from the same source" (*Peoples of the Philippines*, p. 197). Images of bronze, copper and even of gold representing the god Shiva, one of the Hindu Trinity, have been discovered by archaeological exploration. There is one statue, supposed to be some Hindu god, which has been preserved at the Ateneo de Manila, a very ancient Catholic college. One Dutch archaeologist thinks that it is the statue of Ganesha. In Chao Ju-Kua's description it is found that "in the thick wood of Ma-yi, the ancient name for the island of Mindoro, are scattered copper statues of Buddha, but no one can tell the origin of these statues." The islands received an abundant supply of brass, bronze copper, tin armour and various types of weapons from India. "The characteristic sarong, turban, bronze bells and armlets and a variety of smaller ornaments appear to be Indian. The skin-tight trousers of the Sulu Moros are suggestive of Indian puttees" (Beyer, *The Philippines before Magellan*, Asia, Nov., 1921). The old names of coins used in the islands are of Indian origin. Indeed, the Indian influence is most obvious "in all the most highly developed ancient handicrafts in the Philippines."

—

City-planning

Architecture plays a great part in making the city beautiful. Prof. Claude Batley writes in *Journal of the Indian Institute of Architects*:

The very existence of a city denotes co-operation and, therefore, discipline, or planning, the earliest cities go as far back as man's efforts to combine in order either to defend his home or to trade with his neighbour.

The city plan owes much to the lay-out of the camps of the early military powers as the survival of the suffixes in India of 'gar' or in Europe, of 'castra', or chester', prove. It was the Romans who throughout their Empire did much to encourage the finer ideals of civic life ..

What a vision for our City Fathers of today; a city in which the civic control is unadulterated purity, which cleanses and refreshes the city and the district beyond it.

The old cities grew up for the co-operative defence against enemies who used carnal weapons, such as catapults battering rams and war elephants and the architects of those days were so succesful in devising their design that the frowning battlements and spike-studded gates often took the heart out of the besieger or ever they undertook its assault.

In our modern cities the enemies are still there but the weapons are different, dirt, disease, dacoity, ignorance and, worst of all, corruption.

Principles of Universal Peace

The following philosophical discourse on the principles of Universal Peace from the pen of Horace Holley appears in the *World Unity* and shall draw a school of thoughtful readers around it :

The duality mingled in all human affairs and conditions is the duality of body and soul. Man lives simultaneously in two different worlds, though far more conscious of the world of the body than of the world of the soul. This dual nature projects itself outward whenever important social problems stir individuals to the depths. It projects a spiritual content into questions which seem entirely and exclusively material ; it projects a material content into questions which seem entirely and exclusively spiritual. For there is duality throughout the history of churches as of governments. The spiritual and the material elements are ever intermingled, never isolated ome from the other, never purely spiritual and never purely material or physical. This intermingling is the mystery of human life on earth.

Thus, in considering the duality surrounding the supreme social issue of peace, the inevitable division obviously lies not between property and lack of property but between that interest which is local and that which is universal or human.

The question of peace is not a mere social question but a crisis. It cannot be determined by any form of popular referendum nor by any application of authoritative civil action. Peace is in reality the capacity of mankind to continue existence under the terms and conditions which destiny has laid down in this age.

The view of life which has been termed "local" in distinction to the view termed "universal" is inability to perceive and understand the area of operation of the law of cause and effect. People limited to localism in any form attempt arbitrarily to exclude the operation of cause and effect from any and all social areas outside that area of which they consciously form a part. Outside their government there can be no political reality ; outside their class no economic principle ; outside their creed no almighty God. Their consciousness dwells on an island, large or small, and admits no dependence upon the rest of the world.

Peace, then, is capacity to be educated and trained in the principles of that reality which applies to man as mind or soul rather than as physical body. Peace is a collective life, a mutual response to laws and principles which God has given to men as He has given other and lesser laws to animals. The "struggle for existence" is the law of the animal, and for the animal serves the aims of life. Man has passed from the domain of this law in an age which reveals ever more clearly the law of unity and interdependence.

—

India and the League of Nations

Impotency of the League is a question which at present haunts every thoughtful mind. We, in this country, doubt whether we can derive any benefit from the upkeep of the Geneva Show. Some say, we will be benificent if India gains her freedom. But Indians abroad advise the mother country to dissociate from the League, though a third group favours a wait-and-watch policy for the present. However, the following appears in the columns of *The Indo-Malayan Review* :

It is not easy to work up enthusiasm for the League of Nations in this country. Our people have long ago realised the futility of expecting the League to fulfil any of the high promises held out by its promoters at the time of its inception. Not only have we witnessed the League looking on in helpless impotence when might asserted its sway over right ; we have also seen it covered with contempt and ridicule at the hands of imperialist-minded nations in both the hemispheres. Moreover, during the fourteen years of its existence it has had progressively to forfeit what prestige and authority it could command in early years. Leaving aside the United States and Soviet Russia, which were never members, both Japan and Germany have forsworn their quondam association with Geneva and are now among those who consider the League more as a hindrance than a help to the peace of the world. Of the three other great powers, Britain and Italy have recently given expression to views and sentiments that more or less belie the belief that they are strongly attached to the League. We see, therefore, that, in the political field at any rate, the League has failed, and failed miserably at that—to make good. It is small wonder hence that India reckons as an unpardonable waste the large amount of money she spends year after year towards the upkeep of the Geneva show.

The Congress of Young Asia

Under the auspices of the Young Men's Cultural Organization a "Congress of Young Asia" was held in Japan, for the revival of the spiritual civilization of the Asiatic races, in which prominent Asiatic countries including India took part. The idea of such a Pan-Asiatic Federation is undoubtedly welcome. The noble and heroic ideals embodied in the programme of the Congress are reproduced below from the *New History* :

PREAMBLE

"In Asia lay the cradle of the human race and the origin of human civilization. Thousands of years before the Christian era, when humanity had scarcely emerged from barbarism, the Asiatic peoples had already built civilized institutions of their own. Humanity's cultural debt to Asia, thus, can hardly be overestimated.

The glory that was Asia and the granedur that was the Orient are no more. Freedom and justice have fled. Disruption and alienation, ignorance and injustice, oppression and exploitation have taken hold of the Asiatic peoples and bound up their destiny in shackles of iron.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Now is the time for the youth of Asia to revive the ancient traditions of the East—the spiritual culture which has persisted in the face of great vicissitudes. When the great inspirations of the past arise in the hearts of Asiatic youth, then shall a great light illumine the footsteps of the Asiatic races. Then shall a splendid new civilization and a better and happier humanity arise out of the ashes of the modern materialistic civilization "with the light of morning in its eyes."

PLATFORM

1. Asia shall be a happy home for the Asiatic races.

2. Firm conviction must be gained that the same blood and thought are interfused among the Asiatic peoples. A new spirit of Asia will be born in realizing this to be the case. This new spirit must be upheld by virtue of mutual understanding, sympathy, co-operation and unity.

3. The spirit of Asia demands freedom and justice—liberation of the Asiatic races from all forms of slavery and oppression.

4. Inspired by the glory of the past, the youth of Asia must unite and co-operate for the fulfilment of these noble aims.

5. The new spirit of Asia promises to humanity the rise of a higher and happier world from the ashes of the materialistic modern civilization."

—

Nepal and her relation to Britain

The following contentions of Mr. Wilkinson-Guillemard, C.S.I., C.I.E., based on an address in a discussion meeting, reproduced from the *Journal of the East India Association*, are perhaps not complete in themselves. There may be causes other than these:

What is our policy towards Nepal? A complete answer to this question was given by Sir Denys Bray in the aphorism, "We have no policy towards Nepal, only friendship. "This friendship has subsisted unbroken since 1816, and is now stronger than ever.

By way of parenthesis may I refer to the frequent question as to why, if Nepal is our friend, she excludes our nationals from her territory and makes herself a closed land? Her attitude has been much misunderstood but it is completely natural and reasonable and consistent with friendship. In the first place, she sees what has happened in India, and has observed that in the past penetration has led to influence, interference domination, and even annexation. Secondly, she has heard of Sir Lee Stack and goes in fear that something may happen to the British Envoy or other foreign functional if allowed to wander at large in wild places. Thirdly, she knows that Europeans on tour, especially as guests among a hospitable people, must have copious supplies, transport, and attendance, which it is difficult to provide in a poor, sparsely-populated country, where every able-bodied man is required for the army or agriculture. Lastly, as it has been the tradition for so long that foreigners should be kept out, any Government which abandoned that tradition might be suspected by an ignorant people, who would think that it a change of practice they intended a change of policy, and were betraying them.

—

Japan and the British Dominions

In order to promote trade relations between Japan and the British Dominions and the colonies, Hon. Mr. Koki Hirota, the Foreign Minister, is anxious for an exchange of ministers there; but this is not possible, as the British Government withholds diplomatic rights from the Dominions, which is occasioning considerable inconvenience in Japan's diplomatic dealings with the latter. The following note appears in the *Japan Weekly Chronicle*:

The *Asahi* says that with the steady advance of Japanese goods into world markets, Japan's trade relations with the British Dominions and the colonies have become more important than with the United Kingdom. In view of the situation, the Osaka journal says, Mr. Hirota, the Foreign Minister, attaches special importance to relations with British Dominions and colonies and is evidently bestowing much consideration on the matter of improving them.

As it is, the fact that the British Government withholds diplomatic rights from the Dominions and colonies is occasioning considerable inconvenience to Japan's diplomatic dealings with these countries within the British Empire. The Foreign Minister has been studying, in concert with Mr. Matsudaira, the Japanese Ambassador in London, measures aiming at the elimination of these inconveniences. His aim is apparently to exchange Ministers with the British Dominions and colonies as Ministers are actually exchanged between Japan and Canada, but so long as the British Government continues to deny full diplomatic rights to them, it cannot be realised. As an alternative, there is a strong body of opinion in Foreign Office quarters that Government delegates should be exchanged to attend to diplomatic matters generally.

The proposed device is, of course, intended as a provisional one, but the idea is to invest on these delegates with practically the same powers as are given to Ministers, their main duty being to promote trade relations between the countries concerned.

It is said that the British Government dose not regard the scheme with favour, but the authorities of India, Australia and South Africa are desirous of its realisation.

—

War Situation in the East

General Blucher, Chief of the Soviet Army of the Far East, after reviewing the strategic conditions of both the Communists and the Japanese in the East, has come to the conclusion that war-clouds are gathering on the Far Eastern horizon. Some fragments of his speech, delivered at the All-Union Party Congress are quoted below from the *Unity*:

But war is not in our plans. We do not wish to fight. What is the difference at root between the measures taken by the Japanese commanding staff in Manchuria and ours in the Soviet Far East? It is this, that the measures we have taken can only serve the ends of defense of our borders, while the measures taken by the Japanese commanding staff follow the direction of attack.

In the first Five Year Plan we have made in the Far Eastern Region more capital investments than the Czarist government made during its whole existence. The second Five Year Plan contemplates a mighty program of socialist industrialization there.

The second Five Year Plan gives our region the task of developing a great iron and steel industry, a ship-building industry, and a great extension of transport, food industries and consuming industries generally

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

As Stalin has stated, one of the most important tasks there is the development of a coal base in the Burian district. When you consider that there are an estimated hundred billion tons of coal in this district and two billion tons of iron ore and some copper reserves, you will see what importance we give to the Burian development. When we add the development of transport from Lake Baikal eastward, we shall make of the Burian district a second Kuznetsk Basin.

If war advances upon us in the Far East, the Special Far Eastern Army, from the soldiers to the commanding staff, devoted heart and soul to the Revolution, under the beloved leadership of our commanding Chief Veroshiloff, the Central Committee of the Party, and the great leader of our Party Stalin, will answer with a blow from which the foundations of capitalism will totter and in some places crash.

—

Indian Tea-Planter

Mr. George Cecil in *The Catholic World* gives a humorous account of a tea-planter in India, which may be read with much interest :

The problem, "What to do with our sons." has long been solved in England—so far as the "upper class" is concerned. The eldest son of a landed proprietor has served as an officer in the army until such time as he succeeded to the property ; his brothers have earned their living in equally honourable capacities, If there remained a son who having failed to pass examinations, had to be provided for, he was shipped off to a tea-garden in Ceylon or India, usually India. Other fathers disposed of their offspring in much the same manner, the tea-garden always being reserved for the dullard. . . . "Poor Jack is, alas, not bright ; no doubt he'll do well in India." ... The tea-garden was used as a sort of waste paper-basket.

Nowadays, much the same thing happens, only to a smaller extent. There is comparatively little demand for brainless lads, proprietors jibbing at paying salaries without receiving "value for money." On many tea-estates Scotsmen of the peasant class are imported, those who finance the concern preferring young men who learn quickly, take work seriously, and content themselves with a modest salary at the beginning. "Tea," in short, is no longer the happy hunting-ground of every stupid fellow who wants something for nothing.

When the Scots first made their appearance, they were viewed with extreme disfavour. These unwelcome people could neither ride nor play tennis ; they were not considered a social acquisition. By degrees, however, the established planters became accustomed to them, the dislike gradually vanishing, or at least giving place to superficial friendliness.

—

Free the Air from War

Aerial warfare, which is at present a vital issue, confronting international politics, is considered to be a curse to humanity. The remedy lies in the internationalization of all air-services. The following interesting editorial favouring a policy of elimination of air forces, appears in *The Month* :

The chance of abolishing military air-craft which, a year or so ago, was a real one, is gradually passing away. No one, not even an expert, can class fighting aeroplanes as anything but aggressive weapons : they become defensive only after aggression has begun—aggression which would not be possible if no country possessed them. The abolition would necessitate, of course, the internationalization and inspection of all air-services, so that civil machines could not at will be turned into bombers, and the cessation of the manufacture of air-bombs of every sort. Such a course is not impracticable for, nearly a year ago—in April, 1933—the Air Commission received a joint memorandum from the delegates of Japan, U.S.A., Canada and the Argentine, agreeing to the regulation and supervision of their civil aviation, if air forces were abolished in Europe. If Japan and America are thus in agreement, it is not likely that other nations will hold out. The common sense of the world regards the conquest of the air as, potentially, either an immense boon or a terrible curse to mankind. It is still in our power to eliminate the potential curse, since, as we have said, air forces are primarily engines of aggression and there is no Power but disclaims all ideas of aggression—and only very doubtful means of defence. The alternative to abolition is competition disguised as parity, with Germany joining in the race.

—

Avatars

An interesting study by "Wayfarer" of the ideas of Avatars appears in the columns of *Calamus*. The writer draws a painful picture of a modern Avatar of the World Religion, whose visions are of a United World but who are even now being crucified by the common crowd:

It is sometimes argued that there can be no world religion without the coming of a Great Teacher, an Avatar. It is pointed out that most religions have had their origin in some outstanding presonality, and it is suggested that the driving power and inspiration of such a personality is needed to create a world religion.

People who argue like this, usually claim that such an Avatar has, or has not, appeared. Those who point to the Avatar as having appeared (and it is not necessarily the same Avatar) are few. Those who say the Avatar has not appeared are many.

Accepting, for the moment, the idea that an Avatar is needed to make a religion, let us follow the argument from history to its logical conclusion. Avatars have never been recognized during their lifetime by more but a very few followers. They have been accepted only by succeeding generations. This means that the faith of those few who are sure the Avatar has come may be right. It also means that it is useless arguing that the Avatar has not come.

The Avatar of the World Religion may be living today. Or he may already be dead.

Kahlil Gibran, the Syrian poet, says he has met the Saviours. And he has seen them being crucified.

They are not crucified with the great crucifix,
And therein is their pain.
The world crucifies them every day,
But only in little ways.
The sky is not shaken,
And the earth travails not with her dead.
They are crucified and there is none to witness but the few.

It would not be difficult to point to persecuted individuals who are suffering today because they have had a vision of a United World. The unthinking crowd may even now be crucifying the Avatar of the World Religion.

Indian Labour in Ceylon and Malaya

The following report on the decline in employment of Indian labour in Ceylon and Malay appears in the *International Labour Review*:

In Ceylon the estimated Indian estate population fell from 740,000 in December 1929 to 651,000 in December 1932 and to 596,000 by 30 June 1933. In 1931, arrivals of estate labourers receiving assisted passages totalled 68,000 and departures of estate labourers 75,000, and in 1932 50,000 assisted labourers arrived and 58,000 labourers left. Until November 1933 the recruiting of Indian workers by *kanganies* (workmen employed on the estates for which they recruit) continued. Of the recruited labourers, however 2,157 were close relations of the *kanganies* and only 5,946 were other labourers. Another method of obtaining Indian labour for Ceylon is by granting free passages to workers in India who have been nominated by their friends or relations in Ceylon. During 1932, 5,320 workers were so registered.

In Malaya the movement back to India was more marked than in Ceylon. There was no recruitment of Indian labour during 1932 and except in a very few special cases the system of paying for the passages of Indian labourers was not applied. Immigration, however, was not restricted and during the year 17,734 Southern Indians arrived as deck passengers by the regular immigrant boat services. The main stream of migration, however, was towards India, 85,051 deck passengers leaving Malaya, of whom 56,476 were repatriated free of charge. The movement decreased during 1933 and by the end of August a balance of only 15,257 Southern Indians had left the country during the eight months of the year.

The Sinkiang War

Situated on the northern border of India, Sinkiang, formerly called Chinese Turkestan, the least known inhabited portion of the earth's surface, occupies an important strategic position for which Britain, Japan and Russia contend. The following editorial comment appears in *The New Republic*:

A three-sided war has been raging in what is probably the least known inhabited portion af the earth's surface—Sinkiang, formerly called Chinese Turkestan. Ostensibly the three contending factions are, first, the Mohammedan natives of the southern part of the province, around Kashgar; second, the latter Mohammedan tribesmen of the north; and third, the Chinese provincial government. Actually the Sinkiang war, in which many thousands have been killed and 2,000 massacred in a single night, is being fought among three of the Great Powers: Great Britain, Japan and Russia. But this statement, too, must be qualified. Russia is not really a party to the war, has shown no wish to conquer Sinkiang and has maintained extremely friendly relations with the Chinese provincial government. Since the building of the new Turksib railway, these relations had indeed become entirely too friendly and had involved too flourishing a trade to suit the ambitions of Great Britain and Japan. Both of these powers would like to occupy Sinkiang, as it occupies an important strategic position, since it lies on the northern border of India and since it could easily serve as a base for an attack on the Soviet Union.

It is generally taken for granted that the Japanese have been sending money and arms to the Mohammedan tribesmen of the north; and the charge that the southern rebels are armed with British rifles and are receiving direct advice from British agents in Kashgar has been made often and on weighty authority both Russian and Chinese. The struggle in Sinkiang is still undecided. The pro-Japanese faction was defeated by the Chinese provincial government in the north and thereupon moved south to fight against the pro-British faction, which had meanwhile set up an "independent" State. Meanwhile, a note of light comedy was injected into a situation full of danger for the world by a United Press report from London to the effect that Dr. Khalid Sheldrake, the son of a British pickle manufacturer, would soon be crowned as "King of Islamestan"—which is nothing else than Sinkiang or Chinese Turkestan, under a new name.

1936 or 1934?

After having a retrospective view of the past situations in China Mr. Chen Kung-Po, Minister of Industry, gives a graphic account of what would befall her in the event of a Russo-Japanese conflict. The following extracts are taken from *The People's Tribune*:

Since 1931 the perilous position of China has been clearly revealed to the world, but from the middle of last year I have seen in the newspapers and heard in private conversations repeated references to "1936". One may have ideas about the events of 1936, and of what China may become in that year, but nobody appears to have studied the reasons why 1936 should be so vital a point in China's history, which appears to be a very general impression.

While the year 1936 may be one of very great moment for other nations' it is this year of 1934 which actually makes the turning-point for us—which means our national life or death. If China's fortunes are decided this year, and the tide goes against us, there will be no chance for us to talk in 1936.

The immediate problem which confronts us is the possibility of a Russo-Japanese clash, the imminence of which causes us to be most apprehensive. The resumption of diplomatic relations between the United States and the U.S.S.R. may have delayed the danger or hastened it. Everyone has his own views on that point, but it goes without saying that China will grow relatively weaker and her position become more perilous following the resumption of Russo-American relations.

In the event of a Russo-Japanese clash, China is certain to be victimized. We have already had two bitter experiences—the Russo-Japanese war in the Three Eastern Provinces and the German-Japanese conflict at Tsingtao.

The situation in the event of another Russo-Japanese clash will be entirely different. Japan will no longer have an understanding with Great Britain nor will she see the American attitude so aloof as it was. Even if these two Powers declares their neutrality, they cannot help taking defensive measures along the coast to protect their interest in North China. Communications in the north and transport facilities along the coasts will be seriously interfered with and perhaps paralysed. China will not enjoy the independence and freedom even

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

of the smallest State, and her suffering will be appalling.

—

Sigmund Freud on War

Singmund Freud, the founder of the School of Psycho-analysis, describes in the columns of *The Modern Thinker*, a series of problems, which confronts Society, today. These are, whether 'War can be averted' or not, 'Is pacifism an Utopian dream ?' and 'What are the psychological factors that underlie the War drive ' etc. We quote below the concluding portions of his remark :

Let us bear in mind that in human beings the desire to hate and destroy is rampant. There are two kinds of desire in human beings : the one to retain and unite, which we call the erotic or sexual desire and the other to destroy or kill which we call the desire of aggression or destruction. We may justly call the erotic urge the life desire and the latter the death desire. It is clear then that there is no sense in even endeavoring to abolish the aggressive inclination in human beings. Although it is said that in happier parts of the earth where nature abundantly provides man's material needs, there are tribes that lead a life of tranquility where coercion and aggression are unknown, I personally find it difficult to believe. I wish I knew more about those happy people. The Bolshevists too, hope that they may abolish human aggression by satisfying material needs and in general creating equality among the people. I consider this an illusion. At present they are most carefully armed and hate is not the least of the ties with which they bind their followers together against those who defy them.

To find a formula for the indirect abolition of warfare, let us go back to our psychological studies. If the willingness for warfare is based on the desire for destruction, then it is obvious that if we try to bring against it its opposite, the erotic desire, it will be counterbalanced. That is, erotic desire in a wider sense, in a platonic sense, without sexual goal. (Psycho-analysis does not have to be bashful when it talks of love. Does not religion, too, say "Love thy neighbor as thyself" ?) This of course is easily suggested but difficult of fulfilment. The other kind of emotional unification can be achieved by identification. Identification can be created by anything which is common to humans. Upon this identification rests to a great extent the evolution of human society.

How long we will have to wait until the whole world become pacifist it is difficult to say. Perhaps it is not a utopian dream after all that the factors I have outlined and the justifiable fear of the terrible effects of a war may put an end to warfare. In the meantime we may say whatever helps the development of culture helps to avert war.

—

Bertrand Russell on Insects.

Insects have an advantage in their numbers. Another advantage is the fact that they eat our food before it is ripe for us. In the next [illegible] war, if the scientists on either side invoke [illegible] aid of insects and micro-organisms against [illegible] crops and man-power of the enemy, it is by [illegible] means unlikely that the pests and germs will remain the sole ultimate victors. Bertrand Russell writes in *The Modern Thinker* :

Amid wars and rumors of wars, while the acrimonious of Disarmament Conferences threaten the human race with unprecedented disaster, another conflict perhaps even more important is receiving much less notice than it deserves—I mean that between men and insects.

We are accustomed to being the Lords of Creation; we no longer have occasion, like the cave-men, to fear lions and tigers, mammoth and wild boars. Except against each other, we feel ourselves secure. But while big animals no longer threaten our existence, it is otherwise with small animals.

Once before in the history of life on this planet large animals gave place to small ones. For many ages dinosaurs ranged unconcerned through swamp and forest, fearing nothing but each other, not doubting the absoluteness of their empire. But they disappeared and give place to tiny mammals—mice, small hedge-hogs, miniature horses scarcely bigger than rats, and such like.

The mammals, having become supreme, proceeded to grow big. But the biggest, the mammoth, is extinct and the other large mammals have grown rare, except man and those that he has domesticated. Men, by his intelligence, has succeeded in finding nourishment for a large population in spite of this size. He is safe, except from the little animals—the insects and the micro-organisms.

Insects have an initial advantage in their numbers. A small wood may easily contain as many ants as there are human beings in the whole world. They have another advantage in the fact that they eat our food before it is ripe for us. Many noxious insects which used to live only in some one comparatively small region have been unintentionally transported by man to new environments where they have done immense damage.

Fortunately science has discovered ways by which insect pests can be kept under. Most of them are liable to parasites which kill so many that the survivors cease to be a serious problem ; and entomologists are engaged in studying and breeding such parasites.

Unfortunately, so long as war contiues, all scientific knowledge is double edged. In the next big war, the scientists on either side will let loose pests on the crops of the other, and it may prove scarcely possible to destroy the pests when the peace comes. The more, we know, the more harm we can do each other.

If human beings, in their rage against each other, invoke the aid of insects and micro-organisms, as they certainly will do if there is another big war, it is by no means unlikely that the insects will remain the sole ultimate victors. Perhaps, from a cosmic point of view this is not to be regretted ; but as a human being I cannot help sighing over my own species.

RELATIVE PUBLIC SPIRIT AND ENTERPRISE OF HINDUS AND MUHAMMADANS IN BENGAL

By JATINDRA MOHAN DATTA

[Mr. Ramesh Chandra Banerjee in his 'Hindu and Muslim Public Spirit in Bengal' in *The Modern Review* for March 1934 has anticipated me and has anticipated well. In the following article I shall attempt to leave out the matters dealt with by Mr. Banerjee. I began to collect materials some two years ago; and as the latest annual reports etc. were not always available the facts and figures are somwhat out of date. I have tried to be up-to-date, but have not sacrificed accuracy to up-to-dateness. If any body helps me by giving the later figures, whether in support of my conclusions or against them, they would be equally welcome. If any error or mistake has crept in, I shall be grateful if it is pointed out.

J. M. D.]

THERE is a general belief that the Muhammadans are not enterprising or public-spirited or are less public-spirited and less enterprising than the Hindus. We do not want to define public spirit; throughout this article we use it in the popular and loose sense of the term. We all understand what is meant by public spirit or enterprise. It is manifestation of character in the individual, and of tradition of service in the community. Hence by comparing the relative public spirit and enterprise of the two communities we get a measure of their respective fitness for self-control or self-government or their ability to carry on the work of civilized government.

Let us examine how far the popular belief is justified. Bengal is malarious; to prevent its spread and to control it, if possible, the Central Co-operative anti-Malarial Society was established by Rai Bahadur Gopal Chandra Chatterjee, M. B., C. I. E., in 1919. Even Miss Mayo has been compelled to praise its beneficial activities. It is responsible for the establishment of some 1640 subsidiary village societies throughout the length and breadth of Bengal. None of its Directors, none of its honorary organizers, none of its advisory committee are or have been Muhammadans; of the 72 medical volunteers, only 3 are Muhammadans; of the 6 gold and silver medals offered every year, only 1 Muhammadan has ever been found to deserve it; of Rs. 6,050 received as contribution in 1931, not a single pie has been paid by any Muhammadan. Of the secretaries of these 1640 village societies, 241 are Muhammadans. This works out to 21 per cent; while their proportion in the population is 55 per cent. Even this 21 per cent is not a true index of their public spirit; for in many cases a Muhammadan had to be elected as secretary to obtain facilities and grants from the communally-minded Muhammadan Chairman of certain District Boards and Local Boards. The writer could give specific instances, but refrains through fear of injuring the particular societies.

The Tuberculosis Association of Bengal is a semi-official organization for combating the disease. Any one can become its member by paying a subscription of Rs. 5 only, 3 per cent of its members are Muhammadans. No member of the medical committee, none of its life members, is a Muhammadan. Not a single pice has been donated towards its funds by them. And tuberculosis is more rampant among them on account of strict *purdah* in the congested *bustees*.

From the Report of the Mission to Lepers it appears that in 1929-30 out of a total of donations and subscriptions amounting to Rs. 39,424, the Muhammadans contributed Rs. 45 only. In 1930-31, out of a total of Rs. 22,532 their share was Rs. 75. Working out their percentage on the average for 2 years, it comes to 0·19 per cent. Rai D. N. Mallik Bahadur Trust Fund pays Rs. 2,000 annually.

From the Report on the working of the Albert-Victor Hospital for Leprosy at Gobra for 1928 and 1929 it appears that 211 Hindus and 95 Muhammadans were treated as outdoor and indoor patients. The income of the trust funds created by Hindus amounted to Rs. 2,907; but no such fund has been created by any Muhammadan. Excepting H. E. H. the Nizam, who paid Rs. 1,250 during his stay at Calcutta, no Muhammadan has contributed anything.

In the Bengal Provincial Branch of the Red Cross Society, only 3 per cent of the members and associates are Muhammadans. In the Nadia local centre only 7 per cent of the members are Muhammadans, although they form 61 per cent of the local population.

The Committee of the All-Bengal Women's Union for the promotion of social purity throughout Bengal is 40 strong. Out of 40 only 3 bear Muhammadan names; one of whom we know to be an Indian Christian married to a Muhammadan gentleman, and we hope the other two are Muhammadan by religion.

The Saroj Nalini Dutt Memorial Association is well-known throughout India for its welfare work amongst the Indian women. It has organized nearly 400 Mahila Samitis (or ladies' clubs,) throughout the length and breadth of Bengal. The central association has been

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

specially directing its efforts to the benefit of the Muhammadan community, and as a result 2 Muhammadan Mahila Samitis have been established. Out of Rs. 71,000 received as donations, the Muhammadans have contributed Rs. 2,000. Of its 151 life members 2 are Muhammadans; and of its 450 ordinary members only 23 are Muhammadans.

It appears from the Annual Report of the Calcutta Health Welfare Week 1933 that not a single Muhammadan contributed anything towards its cost.

At the time of the last serious flood in Eastern Bengal, the two Muhammadan Ministers of the Government of Bengal contributed Rs. 50 each towards flood relief, the Hindu Minister contributed Rs. 250. The flood affected the tenantry of one of the Muhammadan ministers; and he is getting Rs. 64,000 per annum—the same pay as the Hindu Minister.

Sir Prafulla Chandra Ray, who cannot be accused of the least communal bias, says about flood relief in 1922 and 1931 in his *Life and Experiences* at p. 256:

> "But, perhaps, the most significant fact about the flood is that it presents the problem of Hindu-Moslem entente in a somewhat more hopeful light. For the benefit of those who do not believe in the possibility of such an entente, let us point out that nearly 80 per cent of the suffering population were Mussalmans, but nearly 99 per cent of the help rendered—in men and money—came from the Hindus, and we are sure no Hindu ever grudged a single pice or a particle of energy that was spent on behalf of his Muslim brother."

The response is that the British Red Crescent Society sends money for the Muslim sufferers in the Bihar Earthquake and a special fund is started for rebuilding the Mosques.

In the *Review of Rural Welfare Activities in India 1932*, published under the auspices of the Indian Village Welfare Association of England, 13 different unofficial organizations are mentioned for their welfare activities in Bengal. Of these 13 only 1 is a Muhammadan organization which "ameliorates the condition of rural Muslims, encouraging education, hygiene, recreation, and thrift."

The Society for the Improvement of Backward Classes in Bengal and Assam was established in 1909, and has been doing good work since then. In 1932-33 it was imparting education to 11,813 boys and 5,260 girls in 444 schools, of these 1,830 were Muhammadan boys and 553 Muhammadan girls. They formed the second strongest class or caste among those receiving instruction. Public subscription during the year amounted to Rs. 13,941-14-11, but not a single pice was contributed by the Muhammadans. Contributions towards the Permanent Fund amounted to Rs. 35,537-8-0 and the late Sir Muhammad Shafi has been the only Muhammadan to contribute and he contributed Rs. 10. All credit to him, a Panjabi Muhammadan.

The Bengal After-care Association looks after the welfare of the juvenile convicts after release. Out of 77 subscribers to its funds 8 are Muhammadans. In the Employment Committee, which provides for their suitable employment, only 1 is a Muhammadan. None of the district correspondents is a Muhammadan.

While the Muhammadan politicians and the Muhammadan merchants could organize themselves into a Muslim Chamber of Commerce within 3 days of the announcement of the Premier's Communal Award, so that they might secure 1 out of the 5 Commerce seats allotted to Indian commerce none of the Muhammadan merchants would or could come forward, none of the Muhammadan politicians would or could induce them to be members of the Employment Committee and thus be instrumental in providing honest work for the juvenile ex-convicts, although a large proportion of such juvenile offenders are Muhammadans.

From the Annual Report on the working of Hospitals and Dispensaries under the Government of Bengal for 1929 (published late in 1931) it appears that large donations amounting to Rs. 40,545 were paid by the Hindus in Calcutta as against the Rs. 10,500 paid by H. E. H. the Nizam during his stay. No other Muhammadan paid anything. Outside Calcutta Rs. 96,788 were donated by the Hindus as against *nil* by the Muhammadans. In statement H, accounts of invested capital of hospitals and dispensaries are shown. It is rather difficult to estimate the relative contributions of the Hindus and the Muhammadans, for though we know that almost the entire sum of Rs. 9,28,000 of the Carmichael Medical College Hospital has come from Hindu sources, we do not like to be dogmatic in favour of the Hindus. So the method we have adopted is that if a Hospital or a Dispensary is named after a Hindu or a Muhammadan, we take the capital to be donated by a Hindu or a Muhammadan as the case may be: for example, Bidhan Nath Bose's Dispensary, Barrackpore, with an invested capital of Rs. 1,55,000 is taken to be donated by a Hindu; while the capital of the Hoogly Imambara Sadar Hospital, Rs. 18,... is taken to be a Muhammadan gift. In this way the Hindu contributions total Rs. 1,72,000. As against the Muhammadans Rs. 9,25,000 form 16 per cent. Muhammadan's contribution are concerned only. So far as the benefits are concerned, 30 lac Hindus were treated as against 34 lac Muhammadans, although the bulk of the Muhammadans live in non-malarious and healthy Eastern Bengal districts. The year 1929 is an exceptional year in favour of the Muhammadans. In 1926, for example, the Hindus donated Rs. 1,55,000 as against *nil* by the Muhammadans.

The Muhammadans are overwhelmingly ... The Bengal Home Crafters' Associa...

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

started in 1928 to demonstrate improved agricultural methods has got 2 Muhammadan members out of 71.

In 1930, the Bengal Government appointed Irrigation Committee to consider the advisability of the formation of provincial waterways board, creation of a department of waterways, etc., under the presidency of Mr. Hopkyns. The Committee toured throughout Bengal for 2 months, especially in Eastern Bengal and invited evidence from all and sundry. Only 29 Muhammadans gave evidence out of 168 ; and several of them jointly in groups.

From the Annual Report of the All Bengal Libraries Association, it appears that all the office-bearers and members were Hindus in 1928. Of the 183 libraries affiliated, only 11 are founded or organized or maintained by the Muhammadans; and some 4 or 5 though organized and mainly financed by the Hindus are maintained jointly with the Muhammadans. Of those we made enquiries some 76 are organized, founded, financed and maintained exclusively by the Hindus.

In the Calcutta University Institute for students reading in the local colleges, we find that of 1466 student members only 7 came from the Islamia College, *none* from the Calcutta Madrassah as against 21 from the Sanskrit College (Report for 1929-30). All the donations for the ambulance work came from the Hindus. In the inter-collegiate recitation competition, not a single Muhammadan got any prize or honourable mention in English, Bengali, Sanskrit or Hindi; of course the 3 prize-winners in Urdu were Muhammadans. Those Muhammadans whose mother-tongue was Bengali could not compete. The most significant thing is that all the donors of medals and prizes were Hindus, of the 478 members of the General Committee representing the elite of Calcutta, only 3 were Muhammadans.

In the Calcutta University registered graduates have the right of electing a certain number of senators; but they have to pay an annual contribution. Only 6 out of 788 registered graduates are Muhammadans; and if the registered graduates do not elect any Muhammadan for want of suitable qualifications, the blame must be laid on the Hindus, as they must be guilty of being communally minded.

Of the college teachers the Muhammadans are less than 6 per cent. It is not the communal bias of the Hindus or the over-partiality of the Government in favour of the Hindus which is responsible for so low a percentage. Of the graduates produced by the Calcutta University since 1857 not more than 6 per cent are Muhammadans. Khan Bahadur Aziz-ul Haque, B. L., M. L. C., in his *Plea for Separate Electorates to Bengal* complained that amongst the University Professors and Lecturers in the Calcutta University the Muhammadans are conspicuous by their absence. May we ask him in reply, how many, if any, Muhammadan M. A.'s or M. Sc.'s there are in, say, Experimental Psychology, Comparative Philology, Anthropology, Geology, Botany, Zoology, etc? and if there is 1 Muhammadan there are at least 10 better qualified Hindus. Speaking of the intellectual achievements of the Muhammadans it would not be uninteresting to compare the number of papers submitted by them to the Indian Science Congress—an all-India body.

At the session held in 1932, the president of the plenary session is a Hindu, of the 9 sectional presidents 6 are Hindus, but no one is a Muhammadan. And 1932 is not an exceptional year. None of the general presidents during 1914-1932 was a Muhammadan ; none of the sectional presidents during the same period in Agriculture, Chemistry, Zoology, Botany Geology, Medical and Veterinary Science, Anthropology and Psychology was a Muhammadan. Only 1 Muhammadan was a sectional president during these years. None of the members of the Council, Executive Committee, Secretaries, Treasurers, etc., was a Muhammadan. Of the papers read (in 1932) 1out of 57 in Agriculture, 7 out of 118 in Mathematics and Physics, 3 out of 221 in Chemistry, 2 out of 41 in Zoology, 11 out of 123 in Botany, *none* out of 36 in Geology, 1 jointly with Hindu out of 42 in Medicine and Veterinary Research, 1 out of 22 in Anthropology and *none* out of 28 in Psychology are by Muhammadans. They contributed 26 out of 693 papers or less than 4 per cent of the total. This is not an exceptional year, in 1930 the Muhammadans contributed 22 out of 671. Of the 225 permanent members 5 are Muhammadans; of the 252 sessional members 8 are Muhammadans and of the Associates only 2 are Muhammadans ; of the 96 members of the Reception Committee 2 are Muhammadans.

They have contributed largely in Botany, we may therefore expect to find their largest percentage in membership in the Indian Botanical Society. Only 3 out of 86 life and full members, and 1 out of 49 associates are Muhammadans. As this is an all-India Society, the Muhammadan's all-India percentage of about 22 should be remembered for comparision.

The membership of other scientific societies, such as, the Indian Chemical Society, Physical Society, Calcutta Mathematical Society, Indian Mathematical Society, Calcutta Geographical Society, etc., shows a paucity of the Muhammadans.

All the Indian scientific journals are founded and conducted by the Hindus. *Current Science*, a monthly journal devoted to Science on the lines of the celebrated *Nature*, is published with the editorial co-operation of 21 different scientists; but none of them is a Muhammadan. *The Bulletin of the Calcutta Mathematical Society*, *The*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Indian Journal of Psychology, Journal of Physics, The Indian Physico-Mathematical Journal, Journal of the Indian Chemical Society, Quarterly Journal of the Geological and Mining Institute have all one feature in common—the absence or paucity of the Muhammadans amongst its contributors and conductors.

Taking the all-India institutions into consideration, we find no institution founded by the Muhammadans corresponding to the Bose Research Institute founded by Sir Jagadish Chandra Bose, the Indian Association for the Cultivation of Science founded by the late Dr. Mahendralal Sarkar, the Bhandarkar Oriental Research Institute of Poona or the Indian Institute of Science at Bangalore. Speaking of the Bose Institute the capital value of its endowments is over 10 lacs, the entire amount of which has been furnished by the Hindus, of its life members and associates only 1 per cent. is Muhammadan. Similar is the case also with the Indian Association for the Cultivation of Science.

Coming to the literary (as opposed to purely scientific) societies, the position of the Muhammadans is not better. Only 7 per cent of the members of the Asiatic Society of Bengal are Muhammadans. The membership of the other learned societies like the Indian Philosophical Society, Calcutta Psychical Society, Indian Economic Society etc., are almost exclusively Hindu. The Bengali Muhammadans' interest in Bengali language and literature is evidenced by the fact of their being 11 Muhammadans out of 1,100 members of the Bangiya Sahitya Parishat (the Bengal Academy of Literature), an institution of over 40 years' standing. Of course, the Mussalman Bengalis have a separate Sahitya Parishat of their own.

The number and variety of magazines in Bengali may be taken as an index of the development of all round activities of the Bengali society. Their number and the class to which they belong, so far as we have been able to ascertain them, are shown in the table below :

Class	Conducted by Hindus	Muhammadans
General	35	4
Ladies' journal	4	
Economics	5	
Health	5	
Co-operation	2	
Cinema	4	
Agriculture	3	
Children's magazine	5	
Radio, etc.	2	
Science	1	
Insurance	1	
Religion, Philosophy	4	
Local Self-government	2	
Miscellaneous	7	2
	80	6

The influence of a magazine can be estimated from its circulation. Some of the first class Hindu magazines claimed a circulation running up to 15,000 before the present economic depression; even now they may have a circulation not below 10,000. On the other hand, the maximum circulation that can be claimed for a Muhammadan magazine is 2,600. In size and get-up they cannot compare with the Hindu. We have not taken into account the caste magazines, as caste is a Hindu specialty.

Of the 158 members of the Indian Journalists' Association of Calcutta, only 18 are Muhammadans; and of the 98 journals represented therein 9 are conducted by the Muhammadans.

Turning now to the commercial activities of the Muhammadans, certain facts and figures would not be uninteresting. In the membership roll of the Bengal National Chamber of Commerce (before the establishment of the Muslim Chamber of Commerce) we find 3 Muhammadan names out of 307. There is not a single Muhammadan member in the Bengal Chamber of Commerce; the number of Bengali Hindu members being some 5. We are told that there are no Bengali Muhammadan members of the Indian Chamber of Commerce and of the Marwari Chamber of Commerce.

None of the members of the Calcutta Stock Exchange is a Muhammadan.

The Bengal Provincial Banking Enquiry Committee remarks that the Muhammadans play an insignificant part in the trade of Bengal.

We now turn to the activities of the Muhammadans in the field of Insurance. All the 14 Indian-owned and edited journals in English and the different provincial vernaculars are founded and edited by Hindus. The 3 insurance magazines issued from Calcutta are all conducted and edited by Hindus. The 3 Insurance Associations and Institutes in Bengal are conducted by Hindus, not a single Muhammadan being among its committee members or Secretaries, of the 20 Indian Life Insurance Companies with their head offices in Bengal, we find 15 Muhammadan directors out of 152; and if we leave aside the one exclusively Muhammadan recently started, the figures come to 7 out of 144. In the governing body of the Commerce College there is 1 Muhammadan out of 14. In the *Who's Who of Indian Insurance* we find 3 Muhammadans out of a total of 234. We read in the *Insurance World* for April 1934 that "at present out of about 140 Indian insurance companies there is only one that is being conducted by Muslims."

Recently we have heard much about the employment of the Muhammadans in the Calcutta Corporation. About 17·5 per cent of its employees are Muhammadans; but of the members of the Calcutta Corporation

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

operative Death Benefit Society, less than 13 per cent are Muhammadans.

The Bengal Muhammadans are very loud in claiming representation proportional to population. They claimed reservation proportional to population, and they have got it in the new Bengal Municipal Act. At the first all-Bengal Municipal Conference held in June 1932 to consider the new Municipal Bill, only 11 Muhammadans attended! The President, the Chairman of the Reception Committee and the organizers were all Hindus.

At the preliminary meeting held at the Senate Hall to celebrate the Centenary of Raja Ram Mohun Roy only 21 Muhammadans were found out of 363. And this proportion in a land where they are 55 per cent; and to honour a man to whom distant America, France and Japan are paying homage.

Many gentlemen of taste and culture present birds and animals to the Calcutta Zoological Gardens, one of the largest and best organized gardens of the world; the number of such Muhammadan donors is 3 out of 55.

Of the 111 endowments held under the Charitable Trusts Act of 1890 in Bengal totalling Rs. 16,43,000 only 2 are the gifts of the Muhammadans, and their aggregate value is Rs. 30,700.

If one goes through carefully the membership lists of the various Ward Health Associations or Committees under the Calcutta Corporation, one is struck by the paucity of Muhammadan names.

Amongst the subscribers or shareholders of the Calcutta Public Library, which later on under the control of Government has developed into the Imperial Library, a Muhammadan name is a rarity.

Of the various public, charitable, literary and scientific societies named below, the strength of the Muhammadan membership or their proportion of contribution towards their respective funds are either insignificant or below 5 per cent of total strength. It would be tedious to the readers if we went on giving details.

(1) Bengal Social Service League.
(2) Calcutta District Charitable Society.
(3) Society for the Prevention of Cruelty towards Animals.
(4) The Refuge.
(5) Society for Protection of Children in India.
(6) Agri-Horticultural Society.
(7) Albert Institute.
(8) All-Bengal College and University Teachers' Association.
(9) All-India Cow Conference Association.
(10) All-India Homoepathic Association.
(11) Anthropological Society of India.
(12) Association for the Advancement of Scientific and Industrial Education of Indians.
(13) Association of Apprentices for Accountancy and Auditing.
(14) Association of Engineers.
(15) Automobile Association of Bengal.
(16) Bengal Co-operative Orgainzation Society.
(17) Bengal Land-holders' Association
(18) Bengal Olympic Association.
(19) Boy Scouts Association.
(20) British Indian Association.
(21) Calcutta Chess Society.
(22) Calcutta Temperance Federation.
(23) Economic Society.
(24) Calcutta Geographical Society.
(25) Indian Association.
(26) Indian Life Saving Society.
(27) Indian Society of Oriental Arts.
(28) Children's Fresh Air Society.
(29) Indian Medical Club.
(30) Institute of Incorporated Accountants.
(31) Insurance Institute.
(32) Calcutta Blind School.
(33) Calcutta Deaf and Dumb School.

So far as it is individually possible we have tried to be accurate and exhaustive. There are errors of omission and if there are errors of unconscious commission, we shall be thankful if they are pointed out.

EDITOR'S NOTE.—Hindu Bengalis are by no means as public-spirited and enterprising as they ought to be. They are backward. It is only because of the greater backwardness of Mussalman Bengalis that the former shine by contrast. As Mussalman Bengalis are going to be invested with a greater share of real or nominal political power than Hindu Bengalis, both ought to be at least equally public-spirited and enterprising. It would be something if Mussalman Bengalis founded and maintained as many educational and other institutions for the exclusive benefit of their co-religionists as the Hindu and Christian Bengalis have established and maintain for the benefit of all communities.

The collapse of liberty on the continent of Europe is in every case attributable to the failure of men of progressive ideals to cohere and co-operate on the only issues of immediate moment. Survival of liberty has been subordinated to the triumph of particular groups.—Mr. LLOYD GEORGE

Book Reviews

Books in the principal European and Indian languages are reviewed in The Modern Review. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, The Modern Review.

ENGLISH

SCEPTICISM AND CONSTRUCTION : *By Charles A. Campbell* : *George Allen & Unwin Ltd., London.*

Mr Campbell's book has been before the public for some time now and while it has established the author's reputation as a clear and acute writer it has not equally established his constructive originality. The author set out to prove that Bradley's half-hearted disbelief in the reality of the world should be pushed to its extreme limits, and not only the Bradleian theory of the Degrees of Reality but also the non-relational cognition of the Absolute should be abandoned. He tries to prove in the manner of Kant that Noumenal Truth is unattainable by the human intellect and that its highest achievement lies in articulating "final phenomenal truths" by which he means such truths as are "intellectually incorrigible" or insusceptible of revision or modification under the conditions of finite experience. The author tries to prove that the experience of self-activity, moral experience and religious experience are such incorrigible truths, for unlike illusions (which, by the way, is the name given to Religion by Freud) they cannot be removed by fuller knowledge and yet at the same time they cannot be said to give us an intellectually coherent knowledge of Reality as a whole. "Reality in its true character must be pronounced to be disparate from each and every thought-product." Even the felt unity of immediate experience, postulated by Bradley, is not a fact nor even a thought unity ; hence it cannot be said to be mental in character in any sense and the main thesis of Idealism is not proved.

But the author is not willing to go all the way with Spencer and to declare roundly that Reality is unknown and unknowable. He claims that we have a knowledge of Reality but only in a negative way, namely, as what it *is not* rather than what it *is*. The validity of this position rests ultimately upon the significance of the negative judgment, that is, whether without knowing any positive content it is possible to say what a thing is not. The author draws from this position the consistent conclusion that Reality being unknowable in its true nature the coherent theory of truth is inadmissible and to finite mind correspondence with another is the highest attainable truth, although he admits that ideal truth must be envisaged as an experience in which thought and reality are no longer disunited. The shadow of Kant is unmistakable here. The author's attitude towards religious experience is vacillating for while he uses it to prove that it is based on two contradictory beliefs that God is perfect and that evil exists to be combated, he feels at the same time that its factual character is not so sure as that of moral experience and of self-activity. He thinks that the unknowability of God proceeds not from characterlessness but from the infinite dimensions of His attributes of power, wisdom and goodness—a position with which even the most devout man would thoroughly agree without subscribing to the sceptical aspect of the author's philosophy. The author admits however that although philosophy is unable to find the form of God, direct experience possibly can, but in that case God would be supra-rational. Obviously such a God cannot be known to be personal and no historical individual can serve as a medium between Him and man. "Surely the right attitude to the historical exemplars of goodness is not to sit at their feet but to stand on their shoulders."

The book is a most helpful introduction to the ethical problem and the careful reader will profit much by a perusal of the author's review of the problem of freedom and moral obligation. Though the ethical portion is disproportionate and the reader would have liked a fuller treatment of the philosophical issues involved, there is no reason why the author should not get credit for his acute discussion of moral principles and theories. He fights for the autonomy of the moral experience without reference to its religious significance and for a direct experience of free will-energy. He even fights the cause of Indeterminism and admits that the end of the individual as such is relative to the culture of the individual involved and need not be considered from an absolute standpoint.

The author reacts negatively to all absolutistic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

philosophy that professes to characterize Reality in a positive fashion and jeopardizes the reality of finite initiative. He might have discussed the whole thing in his own way without reference to Bradley whose philosophy he professes to develop but whose *Essays on Truth and Reality* he studiously ignores.

H. D. BHATTACHARYYA

POETS OF OUR TIME: *Eric Gillett, M. A. (Cantab), Professor of English Language and Literature, Singapore. With an introduction by J. C. Squire. Thomas Nelson & Sons, Ltd. 1932. 2s. 6d.*

An anthology of contemporary poetry, in which A. E., Hilaire Belloc, Laurence Binyon, W. H. Davies, Walter de la Mare, John Masefield, W. B. Yeats figure with others, is always welcome; "a simple lyric may outlive many ambitious monuments" —as Mr. Squire says in the introduction, and the lyrics selected have the advantage of being pure lyrics, free from any *doctrinaire* taint. Notes by the compiler given at the end of the volume will increase its usefulness as a text-book.

THE HEART OF HINDUSTHAN: *Sir S. Radhakrishnan. Messrs. G. A. Natesan & Co, Madras. Re. 1. 1932.*

A collection of seven essays on the subject written by Sir Radhakrishnan and published previously in the Hibbert Journal and other periodicals. The usual lucidity of the author's exposition is here and the fact that in an incredibly short time the book has run to a second edition is a sufficient testimony of its popularity. Messrs Natesan & Co. have been well advised in bringing out this handy volume and making it avilable at a cheap price.

PRIYARANJAN SEN

RABINDRANATH AS SEEN THROUGH HIS "GARDENER": *By Govind Balwant Makoday, Gwalior, C. I. 1933, Pp. 48.*

In paying this tribute to Rabindranath the author tells us something about the poet's views on art and certain general questions. Incidentally he also enunciates his own views on art, which appear to be of an utilitarian character. The author is sometimes carried away by his enthusiasm and his style seems to be a little verbose. But this is excusable in an essay frankly written as a tribute.

The printing and get-up ought to have been better.

NIRMAL KUMAR BOSE

THE REORGANISATION OF EDUCATION IN CHINA. *By the League of Nations' Mission of educational experts: C. H. Becker of Berlin, P. Langevin of Paris, M. Falski of Warsaw, and R. H. Tawney of London. Published by the League of Nations' Institute of Intellectual Co-operation, 2, rue de Montpensier, Paris I. Pp. 200 Medium 8vo. Illustrations and Maps. Price not mentioned. The Book Company, Ltd. College Square, Calcutta.*

The authors of this important, informing, interesting and very useful book are all distinguished educationalists in their country. What they have written for China other educationally undeveloped countries of Asia will be able to utilize by some necessary adaptation. They have treated of the educational situation in China, national education and foreign influences, the spirit of teaching especially in science, language and writing, principles of administration, financial organization, the teaching staff, the distribution of schools over the country, rational utilization of schools, social selection of school children and students, the school system, primary education, secondary education, university education, adult education, and conclusions and suggestions for preparatory measures of reform.

INDIAN PROBLEMS: SPEECHES BY LORD IRWIN. *Pp. 376 Medium 8 vo. With a portrait of Lord Irwin. Cloth Price 12s. 6d. net. George Allen & Unwin Ltd.*

This volume of Lord Irwin's speeches is representative, but not exhaustive. The speeches included in it were delivered before the two Central Legislative bodies; before the Chamber of Princes; at University Convocations, Universities, Colleges, and other educational institutions; at agricultural conferences; at various clubs; to different commercial bodies; &c., and at Toronto University, 1932. They are distin guished by his clearness of style and suavity of tone. They enable the reader to understand his policy in regard to various Indian problems.

KESHAB CHANDRA AND RAMKRISHNA. *By G. C. Banerji, retired District and Sessions Judge, B. & O. Ordinary binding Rs. 2, cloth Rs. 2-8. Pp. 402+xviii. Crown 8vo. with portraits of Ramkrishna and Keshab. To be had of the Author at Gyan Kutir, Katra, Allahabad.*

According to the author, this book is "a statement placing before the public the true spiritual relationships that subsisted between the God-intoxicated soul. Paramhansa Ramkrishna and Samanvaya-Acharya Brahmananda Keshab Chandra Sen." He "holds both of these great men in the highest estimation." With reference to certain matters M. Romain Rolland has informed the author that his (Rolland's) lack of knowledge of those things led him into certain errors in his work on the Paramhansa "which I shall try my best to rectify later on."

The author has rendered a distinct service to the cause of truth by writing this book.

INFORMATION ON THE WORLD COURT: *By J. W. Wheeler-Bennett, Hon. Secretary, Information Service on International Affairs; Hon. Information Secretary, Royal Institute of International Affairs; and Maurice Fanshawe, Director of Inquiries and Reports of League of Nations Union; with an introduction by Sir Cecil Hurst, G. C. M. G., K. C. B., Legal Adviser to the Foreign Office. Issued under the auspices of the Information Service on International Affairs. George Allen and Unwin Ltd., Museum Street, London. Price 10s. net.*

Sir Cecil Hurst says in the introduction:

"Submission to the National Law Courts is a thing we all understand: it seems so natural that we have ceased to think anything about it; but the idea of being placed under the control of some international tribunal, a Court where the judges are mainly foreigners, men who do not understand our laws and who talk foreign tongues, that is something new, and not to be acquiesced in without careful consideration.

"This is why it is essential that we should know all about the Court under whose rule we are going to place ourselves for the future.

This book is designed to tell us the story of how the Court came into being, how it is constituted, the laws which it applies, the work which it has done and the procedure which it follows in deciding the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cases which are brought before it. These are all matters with which seriously-minded people in the country should make themselves acquainted. The reason is not far to seek. If the Court at The Hague is to be accepted as part of the international life of the country, the people must have confidence in it; there can be no confidence in an institution about which we know nothing."

The book supplies the information needed. The authors are in a position to do so. They have given a full account of the origin, personnel and procedure of the Permanent Court of International Justice, and a review of the cases and of the important work done for the peace of the whole world, together with the text of the Statute, Court Rules, and other documents.

That a Court of Arbitral Justice is a necessity is being recognized more and more. For, "disagreements between States are bound to come," and to settle them without recourse to war is a distinct gain not only to the parties concerned but also to humanity at large.

C.

ANCIENT SOLUTIONS OF MODERN PROBLEMS: *By Shri Bhagavan Das, M.A., D.L. Theosophical Publishing House, Adyar, Madras, India.*

This is a lecture delivered by Dr. Bhagavan Das at Allahabad. Dr. Das like many others feels that the world today is groaning under the weight of modern civilization with its machinery, armament and maladminstration. And he suggests that the world could be cured of these evils only if it could be persuaded to live according to the maxims of conduct laid down by the ancient thinkers of India. Dr. Das apparently belongs to the same class of thinkers as the authors of the *Republic* and the *Utopia*. But like them he has to recognize that, after all, instead of leaving things to the inherent goodness of mankind, society has to undertake legislation of some kind at some stage or other. But who should make the laws? "The men of wisdom obviously" (p. 53), says Dr. Das. So said Plato also. But how would the men of wisdom and none else, be sent to the legislatures of the world? To this neither Plato nor Dr. Das has given any satisfactory answer. And the democracies of the world are still groping for a solution of this problem.

Although there is much that is commendable in Dr. Das's scheme of social organization, some of his *obiter dicta* will cause surprise in many quarters. For instance in p. 65 he makes the astounding statement that Sambuka, the Sudra, who was beheaded by Rama, King of Ayodhya, for alleged participation in religious rites which were open only to the Brahmins (*Ramayana*, vii.76), was *"the Health officer of Ayodhya."* This would be quite interesting if it were true; but Dr. Das gives no authority for this statement and the Ramayana does not support him.

We are not one of those who believe that ancient wisdom has solved beforehand all our difficulties of today. If the past generations were really so wise, the evils of the present should have been forestalled. But we have our miseries in spite of the wisdom of our forbears. That is no reason, however, why we should not draw inspiration from the wise men of the past, whenever possible. And any attempt at social reconstruction may receive considerable help from similar attempts in the past.

U. C. Bhattacharjee

HISTORY OF SHAHJAHAN OF DELHI *By Banarasi Prasad Saksena, M.A., Ph. D. (Lond.) The Indian Press, Allahabad; p. xxx+372.*

This well-written and scholarly monograph on Shahjahan by Dr. Banarasi Prasad Saksena opens with a highly appreciative foreword by the eminent historian, Sir Wolsley Haig. It is undoubtedly the first attempt to fill a blank in modern researches on the rule of the Mughal Emperors of Hindustan. In print and get-up, method and treatment, Dr. Saksena's book bears a family likeness to Dr. Beniprasad's History of Jahangir. It deserves every praise as a distinct and original contribution to the history of Medieval India.

It will be sheer injustice to Dr. Saksena to judge his work as the last word on the reign of Shahjahan which is due not to the author's limitations as a scholar but to the rigid limit of time and space forced on him by the exigencies of a University examination. The political history of Shahjahan as treated in this book may not at first appear strikingly original because here the author had to encounter the disadvantage of traversing a field for the most part explored by Dr. Beniprasad and Sir Jadunath Sarkar. However, on a closer study one cannot fail to notice that Dr. Saksena has been able to throw interesting sidelight by utilizing some hitherto unutilized MSS. on this period.

There were two episodes in the early career of Shahjahan, namely, the invasion of Bengal by the rebellious Prince Khurram and his relations with Malik Ambar of Ahmadnagar, which might have been studied by the author with greater advantage. Of these two Malik Ambar episode has recently been studied exhaustively by Dr. Jogindranath Chaudhuri, Ph. D. (Dacca University). But the other topic still awaits investigation. The author nowhere refers to the exteremely rare MS. of Baharistan-i-Ghaibi by Mirza Nathan first brought to the notice of scholars several years back by Sir Jadunath Sarkar. This MS. contains enough materials for a very interesting chapter on the early career of Shahjahan. Another important source, which was not available to Dr. Saksena in England was a valuable collection of letters in the Jaipur Archives, written by Mirza Raja Jai Singh to Shahjahan and his sons, and *farmans* and *nishans* received by him from them. Sir Jadunath Sarkar has got transcripts of about 1000 documents of this nature.

"Shahjahan in his (Dr. Saksena's) hands," says Sir Wolsley, "is not the virtuous sovereign with hardly any blemish on his character as depicted by contemporary Indian chroniclers, nor on the other hand is the monster of moral depravity as described by some European travellers." This is true no doubt but somehow we miss Shahjahan *as a man* in Dr. Saksena's book. Shahjahan was, as everybody will admit, a compound of Dara and Aurangzib. Dr. Saksena has brought out clearly the Aurangzib in Shahjahan, a pious Muslim, a destroyer of temples, a repressor of infidelity, who enforced some of the provisions of the so-called Charter of Caliph Umar on his Hindu subjects. It is indeed possible to multiply more instances of Shahjahan's bigotry than those given by Dr. Saksena; *e.g.*, a local officer rewarded by Shahjahan for carrying on a *jihad* converting a remnant of Hindu population of Dardu 40 miles south of Jalalabad and throwing of Chris icons into the Jamuna (Waris, 107 *b*; Lahori, I. It cannot be denied that this is the picture

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Shahjahan as he would have liked to portray himself, and as a matter of fact the official history of his reign depicts him as such. But a man is not always what he poses to be. Things, which in the opinion of the Emperor and his Court-historians appeared not fit to be recorded, have been gratefully commemorated by his Hindu subjects as marks of their ruler's liberal and catholicity of heart. Dr. Saksena, we are sorry to say, has failed in his duty as a historian by omitting mention of these facts side by side with Shahjahan's acts of bigotry. We should like to draw the attention of the author to a few facts :

1. Temples were repaired and bebuilt during this reign as Jain inscriptions of this period show.

2. Shahjahan restored the temple of Chintaman in Gujrat, (desecrated by Aurangzib)—to the Hindus.

3. Shahjahan received very kindly a deputation of Hindus, headed by Kavindracharyya Saraswati, a Maratha hermit and scholar residing in Benares, and in response to his prayer abolished the pilgrim-tax on Hindus (Introduction, Kavindracharyya Samgraha ; Gaekwad Oriental Series).

4. A *farman* of Shahjahan granted to Goswain Vithal Rai of Vallabhacharyya sect confirms the grant of Mowza Gokul "by His Majesty *for his use and the expenses of the Thakordwar*, tax-free and exempted from payment of dues.)" (*Imperial Farmans* by K. M. Jhaveri).

Indeed after Akbar, Shahjahan received the highest encomium from his Hindu subjects for his benevolent and paternal rule, though occasionally marked by outbursts of intolerance.

There is room for improvement on Dr. Saksena's chapter on Cultural Institutions, as the author admits. The defect has been mainly due to the author's omission of Fakira literature from his bibliography, and also the inadequate use of Abdul Hamid's *Padshah-nama*. The author might have with very great profit used Sher Khan Lodi's *Mirat-ul-khiyal* in writing biographical notices of poets of Shahjahan's time.

Considering the bulk of Dr. Saksena's book and the range of topics dealt by him, errors of fact and of judgment are comparatively very few. The following perhaps require revision ;

i. "Lal Khan, a son-in-law of Tansen (History of Shahjahan, p 268). If we are to accept the authority of Shahjahan's Court-historian, Abdul Hamid, Lal Khan was *the son-in-law of Tan Sen's son Vilas Khan* (*Damad-i-Vilas pisar-i-Tan Sen ast* ; Pad. iii. 5.)

ii. "Rao Amar Singh, sister's son to Raja Jai Singh" (p. 319). Amar Singh was *not* "sister's son to Jai Singh" ; but the *husband* of the Rajah's sister, by whom Amar Singh had one son Indra Singh, and a daughter, Indra Kumari. Indra Kumari was married to Sulaiman Shukoh. A letter written by Dara to Jai Singh (Jaipur Archives) makes this point clear.

iii. "Dara's minor son Sulaiman Shukoh built a name for himself in the fort of Qandahar, besieged it and conquered it" (p. xriii). Khafi Khan who misquotes *Lataif-ul-Akhabar* also attributes this childish pantomime to Sulaiman Shukoh. But we have by our side a MS. of *Lataif-ul-Akhabar*, in which the whole affair is attributed to Dara. Sulaiman Shukoh, so far as history goes, was not present at Lahor at this time. Mr. Khusrav's plot (p. 10). There has on this point perhaps been an error of judgment on the part of the author, who without critically sifting evidence, accepts the version against Khusrav. We should remember that *within a few months* of the betrothal of Asaf Khan's daughter to Prince Khurram this affair happened and men whom Khusrav is said to have taken into confidence were a brother, and a nephew of this Asaf Khan, and confession was made to no other person than the Diwan of Khurram. This plot was not hatched not by Khusrav *but against Khusrav.*

We most sincerely congratulate Dr. Saksena on the publication of his book, which has added considerably to our knowledge of the subject treated by him. We wish this valuable work wide publicity and general acceptance.

K. R. QANUNGO

HINDU PHILOSOPHY AND ETHICS OF THE GITA : *By S. Subrahmanya Sastri, M. A., Retired Professor of Philosophy, H. H. The Maharaja's College, Trivandrum. Printad at The Bhaskara Press, Trivandrum, pp. 32.*

This booklet attempts in three lectures a presentation of Indian Philosophy. Prof. S. Subrahmanya Sastri, M.A., has very creditably performed his task. Most of the expositions of Hindu philosppy are written in a way unsuitable for the Western reader, but this booklet is an exception. Without sacrificing any of the deeper principles of Hindu philosophy the author has been able to present a synthetic account of Hindu philosophical doctrines in their complete form. The style is pleasant and the expositions are lucid. The ethics of the Gita has been very well brought out.

THE HEART OF BHAGAVATAM : *By Susarla Srinivasa Rao, B.A. Printed at Sri Vyasa Press, Tirupati, 1931. Re.1-4. pp. 179.*

Mr. Susarla Srinivasa Rao, B.A., has given in this book 367 verses selected from Srimad Bhagavat Purana with translations and expositions in English. The selection was originally made by Sri Jayatirtha Swamin also known as Vishnutirtha. It is claimed that the right spirit of the doctrines of Bhagavata could be appreciated by a perusal of these verses. The Bhagavat Purana itself is a very big book. Needless to say that the selections deal with only one aspect of the Bhagavat Purana, *viz.*, the philosophical doctrine of Bhakti. The Puranas contain other matters than philosophy and there has been no attempt to give any information regarding such topics. The translation has been on the whole satisfactory. The notes enable the reader to appreciate what the author thinks to be the true spirit of the verses.

THE BHAGAVAD GITA (STUDENT'S EDITION) : *By D. S. Sarma, M. A., Professor, Presidency College, Madras. The: Current Thought Press, Pycroft's Road, Triplicane, 1930, pp. 299.*

Professor Sarma has prepared this book for the use of students. In the preface he has discussed the age of the Gita and is wise in saying that the student is warned that the account given is largely a matter of hypothesis and imagination. The form and message of the Gita as also a synthetic presentation have been attempted. The translation of the verses is true to text. The notes at the end of the book will be found to be very useful. The author has also given the synopsis of Mahatma Gandhi's and Aurobindo's views on the Gita.

MUSINGS ON THE BHAGAVAD GITA : *By Nehal Chand Vaish, M. A., B. Sc., LL. D., Barrister-at-Law, Member, Bar Council of the High Court and*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Allahabad University Court. Published by S. N. Basu, M. B., (Cal.), Allahabad, 1931. Price Rs. 4. Pp. 560.

The Bhagavad Gita has drawn all sorts of people to its fold and numerous and varied have been the interpretations of the doctrines of the Gita. Dr. Vaish is a lawyer and is also a student of Moral and Mental Science. He frankly admits that he has deviated from the views of Shri Sankaracharyya, Ramanuja and others. He has given an exposition of the Gita according to his own experience in life. He has pressed the reader to appreciate the teaching of the Gita by the exercise of his own judgment rather than view it through the eyes of great pandits. It will be seen that Mahatma Gandhi holds similar views. The translation has not been always happy. The book will no doubt interest those who would like to study the different interpretations of the Gita.

PRANAYAMA, Pt. I: *By Srimat Kuvalayanda, Kaivalyadhama, Lonavla (G. I. P.) Bombay, India, 1931. Price Rs. 2-8. Pp. 156.*

Most of the books that have appeared in English on Yoga by popular writers are on pseudo-scientific lines. Although this book is not altogether free from that defect the author has given a fairly correct account of the physiological processes concerned in Pranayama. The book is intended as a practical manual for those who want to take up Yogic exercises. There are photographs of the different postures that a Yogi is advised to adopt during Pranayama exercises. The explanations and descriptions are clear and the book will be useful to both Eastern and Western readers.

G. Bose

CHRISTIANITY IN A CHANGING INDIA—*Clifford Manshardt, pp. 248, pub. Association Press Calcutta, price, cloth Rs. 3 only, paper Rs. 2 only.*

Bernard Shaw in his recent play *On the Rocks* has a Prime Minister who is so busy making speeches that he has no time to think as one of his principal characters. The Prime Minister for reasons of health goes away for a holiday, and decides to take the opportunity to study Marxism, with the result that he returns a firm believer in Marxism. Many missionaires in India remind one of Shaw's Prime Minister, they are so busy talking, and doing things that they have no time to think of the importance of what tkey are doing. Dr. Manshardt's book would be a very good thing for them to read since it could hardly fail to stir them into active thought. Most probably a good many people will condemn the book out of hand, but those who read and think will be glad that the book has been written.

The main theme in the book is that in Christianity quality is more important than quantity. Christianity should not mean the mere intellectual acceptance of Christ as God, but the proving of this acceptance by a life based on the standards of Christ. People in India will believe the assertions of the Christians that Christ is God, when they see the Christians practising what they preach. One of the most interesting chapters in the book is that in which the problem of Church and State is discussed, and the part played by the Christians in the Civil Disobedience movement is investigated. What is said is true enough, that missonaries especially those concerned with educational institutions are receiving government money, and therefore often become virtual defenders of *status quo*. The idea that the mission should carry on their schools and colleges without government aid is countered by the argument that to refuse government aid would mean closing down a great many institutions. This may be true, but one cannot help wondering whether keeping them open on these terms is not really a "second best" policy, and whether a "second best" policy is likely to attract people to Christianity. It is true that the surrender of the Government grant would mean the cutting down of salaries, and considerable financial sacrifices, but it is probable that sacrifices of this sort would do more to spread Christianity, which after all is what is aimed at than the present policy of "making the best of a bad job."

Christopher Ackroyd

KHANDAN THE PATRIOT: *By S. P. Vankataramani.*

A story of India in the making: the book contains excellent description of railway mismanagement. Every railway Agent should read it.

LYRICAL THOUGHTS: *By B. B. Poonegar, Bombay.*

There are fifty-one poems which give evidence of vast culture.

SILENCE SINGS: *By E. A. Pires, Bombay.*

The poems are of exceptional merit. The subjects include even the bullock-cart.

PARVATI: *By T. Venugopal, Bezwada.*

A story of post-puberty marriage. Every Indian will be interested in this true story. Social evils are admirably dealt with.

TWENTIETH CENTURY ADDRESSES: *By Dickinson and Sharma.*

The object of this book is to develop critical faculty among students. We were delighted with the address on Jargon. Every author should read it.

FLUTE TUNE: *By B. N. Bhusan.*

There are many sublime poems in this little book. Mr. Bhusan has many admirers, and many new readers are bound to be attracted by the charming poems.

Critic

THE LEAGUE OF NATIONS IN THEORY AND PRACTICE: *By C. K. Webster and Sydney Herbert. George Allen and Unwin Ltd. 10s. Pp. 320.*

Professor Webster is a famous name in the field of International Relations. The book under review which he has written in collaboration with his colleague, Mr. Sydney Herbert, is the fruit of many years of study and thinking. He has had again the advantage of frequent visits to Geneva where he came into intimate contact with the working of the League machinery. The book begins with an introductory chapter on the international organizations as they existed before the outbreak of the war in 1914. It then discusses the influences of the war itself on the outlook of the leaders of different nations. It shows how many men of outstanding ability became convinced of the necessity of organizing an international body for the solution of common problems and the peaceful settlement of international disputes. It then takes us behind the secrets of the body which was responsible for the drafting of the League Covenant. After the discussion of these historical preliminaries, the book deals

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the different factors of the League constitution. The Assembly, the Council and the Secretariat of the League, all come in for a detailed treatment. Their composition and their inter-relations are all brought out into clear relief. Along with them the permanent Court of International Justice is also given sufficient attention.

Once the mechanism of the League organization is fully described, its duties and achievements come in for discussion. By illustrations the book points out as to what the League has done during the few years of its existence for the pacific settlement of disputes, and for the reduction and limitation of armaments. It devotes a chapter to the consideration of the Minorities problem in the different countries of Europe which was specifically committed to the charge of the League for solution. We are also acquainted by the book with the manner in which the League has discharged its obligations in connection with the mandatory States. The achievements of the great experiment at Geneva in other fields of activity have also been elaborated with care by the authors. How again side by side with the League of Nations is working the international Labour Organization is also fully emphasized in the book. Within a compass of three hundred and odd pages, the authors have given us a vivid and detailed idea of the working of the League of Nations.

NARESH CHANDRA ROY

METAPHYSICS: *By Mahendra Nath Dutt. Published by Pyari Mohan Mukherjee, B.L., from 3 Gour Mohan Mukherjee Street, Calcutta. Price 12 as. Pp. 99 and xii.*

This treatise, as its name suggests, deals with subjects relating to the prime course of things, such as Time, Space, Causation, Vibration and Concept. Some of these problems have for sometime past been given great prominence not only in Contemporary Physics and Mathematics but also they play a prominent part in Contemporary Metaphysics. Eminent metaphysicians of the Neo-Realistic School like Russell, Whitehead, Alexander and a host of others have tackled these problems from the philosophical point of view and Einstein, Eddington, Robb and other great scientists have treated them from the scientific stand-point. But it is doubtful if these have yet been properly understood by ordinary people. These problems remain even now as highly abstruse as before. So it is gratifying that the author has attempted to establish the theory of the doctrine of continuity in the cosmic universe in his own way. His ideas are all Indian but tinged with his knowledge of the Western philosophy and science. In some places the author objects to the Western conceptions, *viz.*, the conception of atoms and molecules by Western thinkers and has given new theories in their place. Some of these seem to be very interesting and illuminating, but some of them, I am afraid, need further explanation for the absence of which they seem quaint and unconvincing. However, it must be admitted that the author has succeeded within this limited scope of about one hundred pages in showing that in dealing with these problems science and philosophy have one common basis. For this reason alone a patient perusal of this treatise will give some food to philosophers and scientists to meditate upon.

SUKUMAR RANJAN DAS

FRENCH

LA FEMME AMERICAINE DANS LE MARIAGE MODERNE: *By Madame Sonya Ruth Das, D. Litt. (Paris): being her thesis for the doctorate presented before the Faculty of Letters of the University of Paris. Published by Marcel Giard, 1 Rue Soufflot, Paris.*

The problem, as suggested by the book, is limited by time and space; Survey of Modern Marriage from the point of view of American women. But the author has successfully transcended the limitations by treating the subject from a comprehensive sociological point of view. One feels that she has not only been studying the problem for years but that she aspired to make some positive contribution to the much vexed question inducing so many tragedies and comedies. Very appropriately, therefore, the book opens with chapters on the development of personality and the new conception of marriage. Then follow detailed analyses of the conditions of divorce, the state of the family and the status of the married woman with special references to American womanhood. A highly suggestive and interesting chapter deals with Modern Marriage in American Literature showing forcibly what a fruitful field of social investigation lies unexplored in the jungle of contemporary novels and fiction. The concluding discussion on new sexual morality, maternity rights, revisions of conjugal status and the protection of children lead naturally to a dignified and altruistic winding up of the thesis which was honoured with the doctorate of the University of Paris. We congratulate the author on the publication of this thought-provoking volume, which is worthy of her intellectuality and liberal culture, and urge the women scholars of India and the Orient to make exhaustive surveys of their respective marraige systems along the line of Dr. Sonya Ruth Das.

LA SAINTE VIE DE MAHATMA GANDHI: *By Eleni Samios. Published by Editions Delachaux and Niestle S. A., 26, Rue Street, Dominique, Paris; pp. 174.*

This is a sincere and artistic homage of a daughter of Modern Greece to the Indian Saint. Towards the end of the book the author definitely says that "the book is an act of faith." She has offered this noble life to the coming generation of European children so that they may come to understand and appreciate the Universal principle of Ahimsa or Non-violence manifested through the life of Mahatma Gandhi.

The whole book is composed with delicate artistry and pathos of a musical composer. Gandhi appears before the Grand Opera and is made to recite his own story in a most moving manner. Though cast in the form of a monologue, the piece offers many dramatic interludes, gradually leading us to a climax wherein Gandhi decides to offer his life for the sake of the untouchables through the epic fast. The book is a moving testimony of the fact that there are many men and women in the Occident who take India, and her great sons and daughters, seriously, nay, reverentially.

KALIDAS NAG

GERMAN

DIE NORDISCHE RASSE BEI DEN INDOGERMANEN ASIENS: *By Prof. F. K. Guenther, Jena (Germany). J. F. Lehmanns Verlag, Munich, 1934.*

Very keen interest is shown in these days in Germany in racial problems not only of the German

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

people but also of other nations. Prof. Guenther is a well-known writer on this subject. He has published in J. F. Lehmann's Press, Munich, a number of books on Races in Germany, Nobility and Race, Races in Europe, Racial History of the Romans and the Greeks, etc. The book under review has just been brought out. It treats of the nordic race among the Indo-Germans of Asia. Prof. Guenther investigates the question of the original home of the Indo-Iranians, goes in quest of the nordic element in Asia and shows that it has for the most part been engulfed by other races in Asia. Some of the Brahmans of India, especilly in the North-west of the country, still preserve it intact. Professor Guenther belongs to that group of European scholars who believe in the antipathy of Buddhism towards life. He is of the opinion that Buddhism symbolizes *tedium vitae*. Prof. Guenther seems to forget that the history of Buddhism is brimful of glorious examples of heroic deeds of men and the worldly grandeur of empires. If Prof. Guenther were in the right, no Asoka had been possible, and Japan would not have been able to become such a mighty power in the East. It is very dangerous to ignore the historical achievements of a religion. One should not keep only the doctrines in view which govern and mould the life of ascetics in Buddhism, but pay attention to its practical aspect which is mirrored in the doings of its votaries as a nation. Moreover, the attitude of a religion changes very often, when the world with its manifold problems rears its head again and again before it. This has been the case with Christianity, too.

I would like to remark here, in order to avoid misunderstanding, that I am not a Buddhist, but a Brahmin from the Panjab.

P. TARACHAND ROY

HINDI-ENGLISH

THE KALYANA KALPATARU: *(God Number). Edited by C. L. Gosvami, M. A., Sastri, Gorakhpur, January, 1934. Pages 1-308.*

Special numbers of the *Kalyan* in Hindi—which are like so many useful independent works—intended to present in a lucid and popular form different aspects of Indian culture and literature have already been accorded enthusiastic reception at the hands of the general reader. It is this reception that has induced the authorities of the Hindi *Kalyan* to bring out an English edition in the form of the *Kalyana Kalpataru*. The number under review consisting of articles on theistic topics from the pens of a galaxy of renowned scholars is absolutely non-sectarian in character.

It opens with the texts and translations of the daily prayers of the most popular of the religious systems of the world and contains articles about the conception of God according to them. It is profusely illustrated with representations of a good many well-known religious teachers who flourished at different periods of time in various parts of the world. Some of these illustrations are multi-coloured and highly attractive. Every one who has any religious tendency will go through the volume with not a little interest and much profit.

CHINTAHARAN CHAKRAVARTI

BENGALI

RABINDRA-JIBANI, or LIFE OF RABINDRA NATH TAGORE. *By Prabhat Kumar Mukhopadhyay. Librarian and Professor, Visvabharati. Volume I. from 1861 to 1912. Price Rs. 4; with illustrations Rs. 5. Pp. 16+519 Demy 8vo. Cloth. To be had of the Author at Santiniketan, and at the Visva-bharati Bookshop, 210 Cornwallis Street, Calcutta.*

This is the first detailed biography of Rabindranath Tagore. The author has taken great pains to collect materials from some members of the Tagore family, from some persons connected with the poet or the Visvabharati and magazines and other publications. He has also had the advantage of talks with the Poet himself on many matters. His collection of materials has thus been rich, though not exhaustive, as he has not apparently taken advantage of the proximity of the older professors of Visvabharati.

The book gives an adequate idea, not only of the works of the poet published up to 1912 at present available, but also of those which the poet wrote in his younger days but has not allowed to be republished. It thus enables one to follow the growth of his mind and art. From it one can learn Tagore's views in relation to all important questions and problems which have agitated the public mind from the time of his early manhood. It will be found that he has all along tried to think independently. One aspect of his personality shows that he has all along been, to use present-day political parlance, a constructive non-co-operator. So far as the matter contained in the book is concerned it is an excellent work. All who want to know Tagore as a poet, a novelist, a story-writer, a dramatist, an essayist, a journalist, a maker of songs, a public man, an educationalist, etc., must read this book. All future biographers of the poet will have to use it until it is superseded. At present it is indispensable. The literary and typographical execution leaves much room for improvement, as there are many spelling and grammatical mistakes. The printing is neat. Some of the illustrations have a superior artistic quality.

MANER KHELA, or MIND'S PLAY. *By Bijoy Lal Chattopadhyay. Pp. 96+viii. Crown 8vo. Price Re. 1. Gupta Friends & Co., 11 College Square, Calcutta.*

This is a fair popular presentation of psychic analysis. The author's style is elegant. It is a pleasure to read what he writes.

He should avoid the occasional use of English words in the midst of Bengali sentences. In Bengali book English words should always be translated, or when their Bengali equivalents cannot be found or coined, they should at least be transliterated.

ENGLISH-BENGALI-SANSKRIT DICTIONARY. *By Binode Bihari Kavyatirtha. Pp. 479+viii Crown 8vo. Cloth. Arya Publishing House, Silchar. Price Rs. 2.*

This is a very useful little dictionary for Bengali school children,

FINANCE AND INSURANCE

India's Foreign Trade in 1933-34

The *Accounts relating to the seaborne trade and Navigation of British India for March 1934* which has just been published gives us detailed statistics of the Import and Export trade of British India for the last three financial years. As our currency policy and indeed our National Economy itself depend to a very great extent on our export surplus, an analysis of this important publication is called for. Such an analysis would not only help us in estimating our position in the world trade, it would also be important for other reasons as well. The movements of the Foreign Trade of a country for the year just ended would roughly show how far the forecasts of 'recovery' throughout the world are justified by the Trade Returns. Apart from the psychological influences which no doubt play an important part in these matters, it is through the mechanism of the International trade that the forces leading towards recovery or otherwise make themselves felt in the principal countries of the world. A depression which has been worldwide should naturally be succeeded by a period of recovery which also is worldwide in scope. In a previous issue we referred to the possibility that it is the upward thrust in industry provided by the N. R. A. in America which is partly at least, responsible for the slow trade revival that has been marked in most of the industrial countries. It is not possible at this stage to say how far the "recovery" artificially promoted in the U. S. A. is instrumental in provoking "revival" elsewhere, but that there is a strong possibility of a causal connection, we think, there are few who would deny.

By a study of the quantity and value of the goods internationally traded we may form a judgment whether the improvement is merely fortuitous or whether there is a substratum of economic permanence underlying it. It is common knowledge that international trade today is characterized by bilateral agreements and "quota" schemes. In view of this fact, even more important than the study of International trade as a whole is a study of the relative importance of the countries traded with. Again, in view of the appointment by the Legislative Assembly of a Committee to examine the effects of the Ottawa Agreement, the study of relative shares of other countries in our foreign trade has become very important.

We are nowadays constantly hearing of "Economic Nationalism" and "Economic Planning" both of the ideas generally going together. From the point of view of both of these ideals, a detailed study of our imports and exports has become essential. Within the limits of these notes, all these aspects cannot be possibly dealt with, besides a complete study of the problem with reference to our industrial possibilities and other national economies, though badly wanted, would require an amount of painstaking research and expert knowledge which is totally beyond the scope of these notes. We would merely try to analyse here some of the informations relating to the Foreign Trade of India which are available in the publication mentioned.

Before we do so it is necessary that we discuss some definitions used. Thus Imports include goods landed, whether they are intended for "home consumption, bonding or re-exportation," and such articles in the passengers' luggage as are dutiable. The weight recorded is the net weight and the values of goods imported or exported represent, according to the provisions of the Indian Sea Customs Act of 1878, Sec. 30.

> "The wholesale cash price, less trade discount, for which goods of the like kind and quality are sold or are capable of being sold at the time and the place of importation or exportation, as the case may be, without any abatement or deduction whatever, except in the case of goods imported, of the duties payable on the importation thereof."

That is, the value of the exports is the market price less the trade discount, and the value of the imports is the market price less trade discount minus the import duty. The countries from which the imports come are the countries from which they are consigned, and not necessarily the countries of origin. So also the countries to which the exports are sent are not necessarily the countries where they are consumed. Owing to the high tariff walls in most countries, the exporting countries are generally the countries of origin and the importing countries the countries of consumption unless the countries referred to are without any sea-board.

Since the imports include the re-exports, for the purpose of ascertaining the Balance of Trade or of accounts, we should take the export both of Indian merchandise and of foreign articles (*i.e.* the re-exports). For the purpose of studying the effects of the protectionist policy or the importaace of the imports on our national economy, the net imports (gross imports minus re-exports) should be considered. Since however the re-exports do not amount in India to more than three to four per cent of the total Imports, we will not be liable to any serious error if we take the figures of total imports for all purposes.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Since the onset of the depression the net results of our foreign trade have been as follows :

	(In crores of Rupees,*) 1930-31	1931-32	1932-33	1933-34
Exports (Indian merchandise)	220.49	155.89	132.41	146.31
Re-exports (Foreign merchandise)	5.14	4.66	3.22	3.42
Imports	163.01	125.72	132.27	115.02

The net imports and the Balance of trade in merchandise were as follows :

	(In crores of Rupees) 1930-31	1931-32	1932-33	1933-34
Net Imports	157.87	121.06	129.05	111.60
Exports	220.49	155.89	132.41	146.31
Balance of Trade in merchandise	62.62	34.83	3.36	34.71

In addition to this there were heavy exports of gold during these years,—57.98 crores in 1931-32, 65.53 crores in 1932-33 and 57.05 crores during 1933-34. So also we have to include private import of silver and export of currency notes. As against these, we have to consider Council Bills, sterling purchases in India, payments in India to Local Bodies, etc. against proceeds of sterling loans floated by them in London, as also remittance by other means and to other countries.

The total visible Balance of Trade has been as follows:

	(In crores of rupees) 1930-31	1931-32	1932-33	1933-34
Balance of Trade in merchandise:	62·52	34·83	3·36	34·71
Balance of Transactions in treasure:	—24·45	55·65	64·93	57·23
Visible Balance of Trade:	37·60	90·48	68·29	91·94

We can account for a part by means of Council Bills, purchases of sterling and other Government remittances to the U. K., interest drafts on India in respect of Government of India securities less sterling transfers on London sold in India and Transfers of Government securities.

The residuals amounting to 37·52 crores in 1930-31, 56·16 crores in 1931-32, 19·66 crores in 1932-33 and 31·50 crores in 1933-34 have to be explained by remittance of funds from U. K. in other ways or from other countries, or as being due to temporary accommodation.

It will be seen from the above that our net imports have dwindled from 157·87 crores in 1930-31 steadily to 111·60 crores in 1933-34 which is a decrease by about 29·4 per cent. Of this a part at least must be attributed to the protectionist policy we have adopted. At the same time, our exports had a catastrophic drop on the 1930-31 figure by 29·2 per cent. during the single year, 1931-32 and by 10·5 per cent. more during the next year, that is, by 39·7 per cent. on the whole. But for the enormous export of Gold, there would have been a crisis in the Indian Finances during the first part of 1933-34.

During 1933-34, there has been a very decided improvement in our export trade which has increased by 10.6 per cent on the previous year's figure. The position is incomparably sound as compared with the previous year, though the export figure is still much lower. This is because the Balance of Trade is much higher.

The Balace of Trade in merchandise fell to Rs. 34.83 crores in 1931-32 which is a dangerously low level since the needs of the Secretary of State are nearly 35 crores annually. The export of about 58 crores worth of gold during the latter half, however, led to a substantially active balance in favour of India. In 1932-33, however, the export surplus fell to only 3.36 crores which is only about one-tenth of the Secretary of States' needs. A serious financial dislocation would have resulted unless it were for the exodus of gold on so large a scale. During this year about 65.53 crores worth of gold moved from India to the United Kingdom. During the year 1933-34, the export surplus has gone up to 34.71 crores which is just equal to the figure for 1931-32. The average balances of trade in marchandise before the depression were as follows :

	(In crores of rupees) Balance of Trade in Merchandise	Total Visible Balance of Trade
1922-23	90.01	29.75
1923-24	144.88	96.23
1924-25	155.01	60.74
1925-26	161.13	109.25
1926-27	79.47	40.14
1927-28	81.98	49.79
1928-29	86.47	52.11
1929-30	78.98	52.73

From the above table it will be evident to what extent the changing conditions of the depression have adversely affected the secular position of India in International Trade.

Before entering into details, we note the changes in the following major subdivisions of the Imports and Exports. Class I consists of "Food Drink and Tobacco," Class II of "Raw materials and produce and Articles mainly manufactured" while Class III consists of "Articles wholly or mainly manufactured."

IMPORTS

	(in crores of rupees) 1931-32	1932-33
Class I	18.24	20.49
Class II	20.85	94.53
Class III	83.89	132.58
Total	126.37	

It is clear from the above that though 1932-33 has been the worst year so far, the value of Imports as a whole in that year has been

* The figures do not include the value of Railway materials imported direct by the State Railways.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

highest, the increase being substantial (12.6 per cent) with respect to Class III. Again, although we have reasons to believe that forces leading to recovery have been already operating during 1933-34, we find that the total import trade has fallen by 12.9 per cent from the 1932-33 level and is still below the 1931-32 level, by 8.7 per cent. If any general observation we are to make, it is that in India probably the level of income was still going lower in 1933-34 while in other countries, the level of income had distinctly come up. If the "Recovery" is due to world factors, as there are ample reasons to believe, it is reasonable to expect that owing to backward economic organization, the wave of prosperity should take some time in making its effect felt in our country.

The following is the corresponding table relating to Exports :

Exports

(in crores of rupees)

	1931-32	1932-33	1933-34
Class I	44.34	37.32	36.02
Class II	66.98	54.92	68.93
Class III	42.62	38.48	39.92
Total	155.89	132.41	146.32

With the "return of prosperity," the value of our exports has risen, though it is still below the 1931-32 level, the increase being the most remarkable in case of raw materials (class II). This is only as it should be.

Coming to greater details, the most important variation in Class I Imports has been with regard to sugar. The value of sugar imported was Rs. 617 lakhs in 1931-32, Rs. 423 lakhs in 1932-33 and only Rs. 271 lakhs in 1933-34. The decrease in 1933-34 is by Rs. 152 lakhs (36 per cent) as compared with 1932-33 and Rs. 346 lakhs (56 per cent) as compared with 1931-32. In this particular case the phenomenal decrease is clearly due to the high tariff. The other important change is with regard to tobacco for which the decrease is Rs. 24.78 lakhs (25.6 per cent) on the 1932-33 value (Rs. 96.94 lakhs). Under class II, the most serious decrease has been with regard to raw cotton and oils. The former shows a decrease of Rs. 370 lakhs on the previous year's figure of Rs. 725.7 lakhs, which means a decrease of 51 per cent. As regards the latter, the total export during 1931-32 was Rs. 972 lakhs from which it has progressively declined to Rs. 681.3 lakhs during 1930-34, a decrease by Rs. 271 lakhs or by about 30 per cent. Under class III, we find an *increase* in the imports of "Cutlery, Hardware, implements and instruments" by Rs. 61 lakhs, of machinery by Rs. 180.8 lakhs, of silk yarns and manufactures by 75.6 lakhs and of woollen yarns and manufactures by 89.8 lakhs, over the 1931-32 figure. The import of the last three items has been less in 1933-34 than in 1932-33. The highest increase is under machinery which registers an increase of about 20 per cent over the previous year's figure.

As regards Exports under class I, there has been a serious decrease with regard to "Grain, Pulse, and Flour" as compared with the previous year. On the other hand, tea shows a decided improvement. The decrease in the former case is by 433 lakhs (27 p. c.) and 862 lakhs (42 p. c.) as compared with 1932-33 and 1933-34 respectively, while the increase in case of the latter is by Rs. 269 lakhs (15.7 p. c.) over 1932-33. Under Class II, except for oilcake almost all the items show an increase over the previous year's figures, and except for rubber, seeds and wool, the figures are well over the 1931-32 values. The most noticeable increases are with regard to Raw Cotton (Rs. 628 lakhs), Seeds (Rs. 235 lakhs). Hides and skins (Rs. 148 lakhs), "Gums, resins and lac" (Rs. 123 lakhs) and Jute (Rs. 120 lakhs). The percentage increases over the previous year are 30.4, 20.8, 53.5, 90.0 and 12.3 respectively. In Class III, the only articles which have shown any serious decrease on the last year's figures are when we compare the 1933-34 returns with the 1931-32 figures. We find the same thing—while "Hides and Skins," and "Woolen yarns and manufactures" show decided increase, yarns and manufactures of Jute and Cotton show a serious decline. "Hides and Skins" show the largest increase (+Rs. 107 lakhs, or 22.4 p. c.) while the most serious decreases are with regard to "Cotton yarns and manufactures" (—Rs. 56 lakhs, or 17 p. c.), and "Jute yarns and manufactures" (—Rs. 34 lakhs, or 1.5 p. c.). If we compare with 1931-32, Cotton yarns and manufactures have fallen by Rs. 209 lakhs (43.5 p. c.) and Jute yarns and manufacture by Rs. 54.9 lakhs. (2.5 p. c.). In the former, the effect of Japanese competition is evident.

It will thus be seen that on the whole the imports have declined as compared to the previous year, the only substantial increases being under the heads "Cutlery, Hardware and Implements" and "Machinery." The increase in the import of machinery is certainly beneficial to the national economy. If this decline in imports had taken place together with an increase on the level of national income, we could be reasonably sure that our country is becoming more and more self-sufficing as regards manufactured goods. As regards exports, it is encouraging that the position of tea, hides and skins, seeds, raw cotton and jute is definitely better than in the previous year and except for cotton and jute yarns and manufactures, most items show either an increase or only a small decrease. On the whole we think we are justified in concluding that India's position, so far as her external trade is concerned, is distinctly brighter than in the previous year.

Indian Insurance

Life Assurance Companies and Income Tax

For some time past Indian Life Offices have been challenging the equity of the present practice of making the income tax assessable on the annual average of the actuarial surplus. In a case before the Lahore High Court, the Bharat contended that on "such parts of the surplus as are distributed amongst the participating policy-holders, being expenditures necessary for the earning of profits," no income-tax should be assessed on it but the High Court did not agree with the contention as, in their opinion, "any expenditure incurred solely for the purpose of earning profits would ordinarily precede and not follow the accrual of profits." The "Laksmi" is also contesting the equity of such assessments on the ground that 'bonus distributed among the participating policy-holders represent the return of the excess amount collected in advance from the policy-holders" and as such cannot he considered to constitute the "income, profits and gains" of a company. If any tax were to be assessed it would be assessed only upon the surplus which are distributed to shareholders as dividends. Mr. H. E. Jones, who has made a deep study of the subject, read an interesting paper on the "Indian Life Assurance Companies' Assesment to Income Tax," in the last session of the Indian Insurance Conference, where he made referrences to the practice in England. Before the appointment of the Royal Commission on Income Tax in 1925, the Income Tax authorities in England had the option to assess Life Assurance Companies. to income tax either on the profits as actuarially ascertained or on their "Interests less Expenses" whichever was higher. But since then the Law has been amended "excluding such proportions of the profits, for the purpose of Income Tax" as belonged to or was allocated to or reserved for or expended on behalf of policy-holders or annuitants. This is what appears to be a fair and equitable basis of assessment and obtains almost everywhere excepting India where, curiously enough, the Income Tax is assessed on the whole-actuarial surplus, whether it be meant for the policyholders or the shareholders.

"The Empire of India" Results

The Empire of India is one of the "Big Five" of the Indian life offices and although measured by the standard of new business it stands fourth, it easily comes out as the second best with a life fund of about Rs. 382.25 lakhs. Evidently it has no craze for huge business figures, and its reputation as an intrinsically safe and sound life office is unquestionable. During the year ended February 28, 1934, the Company has written a business of Rs. 1,38,24,000 distributed over 7602 policies, which marks an increase of Rs. 25,68,000 over the figures of the previous year. The total number of policies at the end of the year was 57,639 assuring a sum of Rs. 11,16,64,855, inclusive of bonuses and assurances. As regards investments the Empire follows a conservative policy and restricts itself to investments in Government and other securities repayable at par at fixed dates. At the end of the year the total assets amounted to Rs. 4,37,51,613. The Life-fund which stood at Rs. 3,82,25,855, showed the satisfactory increase of Rs. 19,09,831. An additional source of strength to the Company consists in the various Reserves it has set up,—the Life Insurance Fund Reserve, The Investment Reserve, the Surrender Value Reserve,—which, in all, amounts to Rs. 34,73,819. The low expense ratio of the Company is specially gratifying, being only 22.1 per cent last year. With its rigorous selection of lives, favourable mortality experience, low premium rates and economical management the Empire of India is certainly eminently worthy of setting an example to late-comers in the field.

Per Capita Insurance in India

India possesses the record of having the lowest *per capita* insurance. While this is doubtless a deplorable reflection on the stage of our insurance development, it is at the same time an encouraging indication of the scope, opportunity and duty that lie ahead of us. In opening the Mysore Insurance Offiice the other day Mr. S. P. Rajagopalachari, Member of Council, Government of Mysore, made certain interesting observations. Comparing the position of Indian Insurance with that of other countries he said that the total life insurance on the books of all the Indian companies put together comes to only a fraction of the total insurance written by a single large company in the U. S. A., Canada, or even Japan. Hardly five per cent of the insurable population are protected by insurance and according to the calculations of an expert, said Mr. Rajagopalachari, the total sum assured by all the Indian companies worked out to only about Re. per head of the population as compared to Rs. 300 in Britain. According to the figures quoted by Sir P. Thakurdas on the occasion of the Diamond Jubilee Celebration of the Oriental the total number of policies existing in India is 7,14,000 assuring 168 crores which works out to Rs. 4-12 per head of the population as against Rs. 2,000 per head in the U. S. A., and Rs. 4 in Japan. Sir P. C. Ray in his presidential address of the last session of the Indian Insurance Conference gave as his estimate that "one person in every 500 holds an insurance policy on his life and the *per capita* insurance in India is only Rs. 5 whereas in America practically out of every three persons hold policies and the *per capita* insurance is Rs. 2,600." Although these estimates vary being approximately based on different kinds of data, the fact remains certain that in spite of the remarkable progress

Digitized by Arya Samaj Foundation Chennai and eGangotri

Indian Insurance in recent years our *per* insurance is still the lowest in the world.

ORIENTAL'S BRILLIANT RECORD

The Diamond Jubilee Celebration of the Government Security Life Insurance Ltd. is a landmark in the history of Indian Insurance. The six decades that the has lived, have been a period of remark- achievement. From a humble beginning in it has steadily forged ahead and today as India's biggest life office, with rami- all over the country and even beyond Its progress reads like a romance by of the odds it had to fight in overcoming determined opposition offered by interests strongly entrenched. In 1884 ten years the company came into being—the Oriental a total assurance of Rs. 159¼ lakhs with an income of more than Rs. 6¾ lakhs and fund of about Rs. 14½ lakhs. By 1914, these rose upto Rs. 1237 lakhs, Rs. 72½ lakhs Rs. 473 lakhs respectively. Remarkable as advance was, still more so was the progress during the decade following 1923. In year the Company issued 7790 policies Rs. 174 lakhs whereas in 1933, 38,191 have been issued for an aggregate of Rs. 704 lakhs. The total number policies issued during the decade was 2,42,120 an assurance of Rs. 5005 lakhs and the premium income increased from Rs. 79 to Rs. 219 lakhs. An idea of the magni- position attained by the Oriental will be from the fact that at the end of 1933, had on its books a total business of more Rs. 4793 lakhs, with an annual income of Rs. 343 lakhs, and a fund exceeding 430 lakhs, having so far paid away more Rs. 1527 lakhs in claims. With such records in the past the Oriental may reasonably look forward to a still brighter future, may justly claim to be an ideal and for all Indian indigenous institutions.

RESULTS OF THE NATIONAL INDIAN

Established in 1906 under the aegis of Messrs. & Co., the National Indian Life Insurance has passed its adolescence, and its early years well utilized in building itself upon a foundation. It cannot, of course, boast new business figures nor of an expansion as its age would presuppose. As a matter younger companies have made much headway. But if the National Indian has less energetic in pursuing a policy of expansion, that is because it has always aimed at quality than quantity. During the year ended Dec. 31, 1933, the National Indian received 2506 proposals for Rs. 36,41,850, of which 1656 resulted in policies assuring on the aggregate a sum of Rs. 24,27,350, showing an increase of Rs. 5·75 lakhs over the figures of the previous year. While this is satisfactory, we are inclined to advise the Company to make endeavours for a more vigorous expansion. The National Indian is fortunate in having Sir R. N. Mookherjee at its helm and any attempts made by it towards expansion should be amply rewarded. Apart from anything else, the name of Sir Rajendranath is in itself a guarantee of sound and cautious policy.

Foreign Insurance

INSURANCE-MINDED U. S. A.

The United States of America lead the world in insurance. Her tremendous progress in this direction reads more like fiction than fact. The enormous proportions of insurance in the U. S. A. constitute positive proofs of the excellent habits of "thrift and economy" of her people, and their sense of obligation to their dependents. The financial development of a nation, it is said, is measured by the *per capita* insurance it carries, and judged by that standard the U. S. A. is by far the most advanced country in the world. I just quote a few facts and figures to shew the tremendous nature of the operations of the Insurance companies in the U. S. A. In 1932, a sum of about 5269 millions was paid into Insurance Companies as premiums for all kinds—fire, life and casualty. This imposing figure represented 12 per cent roughly of the national income. At the end of 1932, life insurance alone had assets $20,700 millions, as against $18,800 millions in 1930 and $ 17,000 millions in 1929—distributed every year over the "whole sweep of sound American trade, commerce and enterprises." During the three years 1929-1932, insurance companies of all classifications in the U. S A. paid the policyholders and the beneficiaries to the extent of $11,722½ millions. In 1933 new life business alone amounted to $13,000 millions and although it was about 10·4 per cent less than the figure of the previous year, the fact must be remembered that conditions were anything but favourable. Exact figures are not yet available, but it is estimated that during the year life offices will have disbursed $3100 millions; $2175 millions going to policyholders, and the remainder of $925 millions to widows and orphans.

INDIANS ABROAD

By BENARSIDAS CHATURVEDI

Arya Samaj in the Colonies

Whosoever happens to go to the colonies cannot but be struck by the wonderful work that the Aryasamaj has been doing there for the social and educational progress of the Indians settled in those parts. In fact, it is our conviction that one must go to the colonies to realize the potentialities of Aryasamaj as an institution for the regeneration of Hindu society. Schools for boys and girls that are being conducted so efficiently bear testimony to the managing capacity of the Aryasamajists in the colonies. The Aryasamajists abroad are a small minority compared to the followers of other social or religious organizations, but they are a compact body fired by enthusiasm and determined to do their work wholeheartedly. It was really unfortunate that these colonial Aryasamajists had so long been neglected by the Aryasamajes at home who did not appreciate the work of their compatriots abroad. This period of negligence has happily now passed and it appears from the booklet, 'Videshon Main Aryasamaj' published by the Sarvadeshika Sabha of Delhi that the Home Aryasamaj is now alive to the problems of social and educational progress of our countrymen overseas. We have already referred to the above-mentioned booklet in these columns and are now placing a few suggestions before the authorities of the Sarvadeshika Sabha for consideration.

The first thing that the Sabha ought to do is to invite a small conference of workers who have been in the colonies and who have got

personal experience of the situation there. The foremost among them are Sjt. Bhai Parmanand, Principal Ram Deva, Shrimati Shanno Devi, Shriman Mehta Jaimini and Swami Shankaranand. The conference may be held in October next and in the meanwhile the Sabha can invite full report of work done by the different Aryasamajes in the colonies along with their suggestions. A questionnaire printed in English, Hindi and Gujerati should be widely circulated among colonial Indians.

Foreign Mission Department of the Aryasamaj has to be organized on a sound basis. Unfortunately this work has not received the serious attention that it undoubtedly deserves.

Broad outlines and policy of the work to be done in the colonies may be settled by the conference but there are certain problems that require immediate and thorough discussion in the press.

The Sarvadeshika Sabha ought to send a deputation of at least two workers to see the condition of Aryasamajis in the Colonies. Sjt. Sudhakarji, the Secretary of the Sabha, and Swami Bhawani Dayal will make a good combination and they should be sent to East Africa and Mauritius for the present. The Sabha has got funds at its disposal and ought not to grudge this expenditure. I wonder if the Sabha realizes that this tour is absolutely essential for the proper organization of the Foreign Mission Department.

There have appeared from time to time complaints in the Press regarding some of the preachers that have gone to the colonies. The writer of the booklet, "Videshon Main Arya samaj," has referred to these complaints. They require thorough investigation at the hands of responsible people.

Steps should be taken for the compilation of a bigger history of the Aryasamaj in the colonies. The President and Secretary of the Sabha have already declared their intention to publish this book and the work should be begun without any further delay. We may add here that it was nine years ago that a resolution to this effect was passed at the Dayanand Centenary at Muttra in February 1925 and the work has already been delayed too much.

There are not less than three millions of our countrymen in the colonies and out of them more than two millions are Hindus. They stand in need of our guidance. A number of them are fairly well-to-do and it is almost certain that the Foreign Mission Department of the Aryasamaj will find adequate financial support if the work is taken up in right earnest. I have given these suggestions not as an Aryasamajist. In fact, I do not belong to that Society but I strongly believe that Aryasamaj is the only organization among the Hindus that can be entrusted with this important work of connecting India with Greater India culturally.

INDIAN WOMANHOOD

Miss Leita Najmuddin

Miss Leita Najmuddin stood first among the girl candidates in the Matriculation Examination of the Panjab University. She beat all previous records by securing 689 marks. She is only 14 years.

Srimati Nilima Dutt

Srimati Nilima Dutt of the St. Stephen's College, Delhi, was awarded the M. Makhan Lal Gold medal for being the best Hindu Lady candidate in the University at the 12th Convocation of the Delhi University.

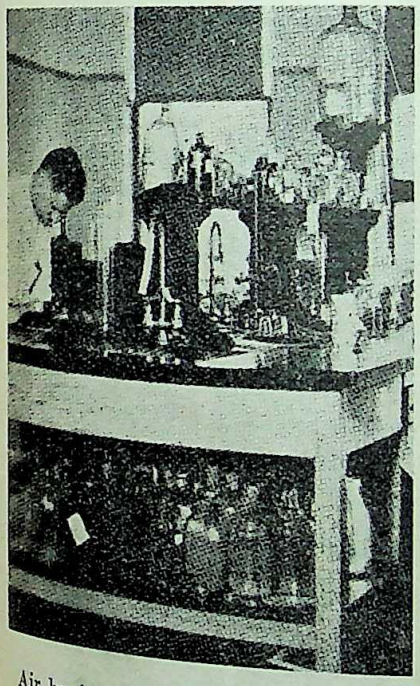
GLEANINGS

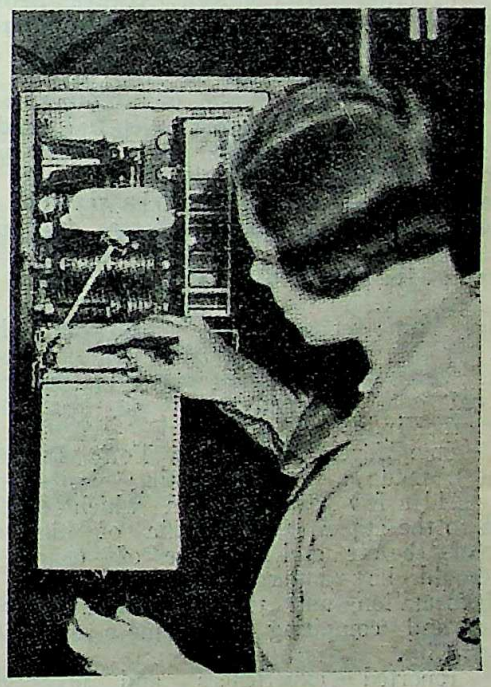
Making the City Smokeless and Dustless

Mellon Institute's [in Pittsburgh] election to present its pure air campaign plans to medical societies is consistent with its handling of the problem from the very start of its investigation. It is a matter of record that campaigns against smoke and dust get satisfactory results only in cities where physicians take a leading hand. There is also the oft-repeated Institute declaration that save pure air is primarily a medical consideration, the necessity for medical leadership cannot safely be disregarded.

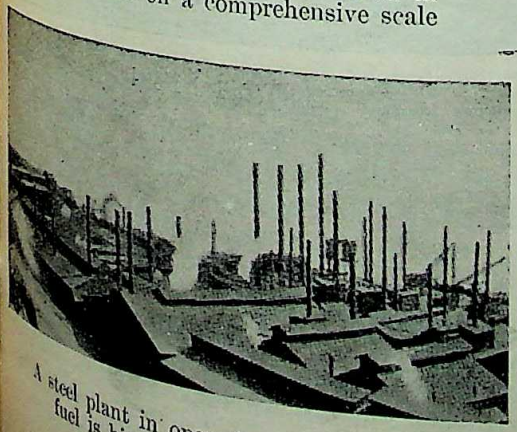
Along with the promulgation of the modern campaign plan, the Institute has expressed the opinion that an unusual opportunity exists to make progress in the restoration of hygienically pure air to the cities, and it urges medical societies to assert their leadership. It is pointed out that the scientific research workers, engineers, and others who would be entrusted with the execution of a municipal program want to know what substances, now present



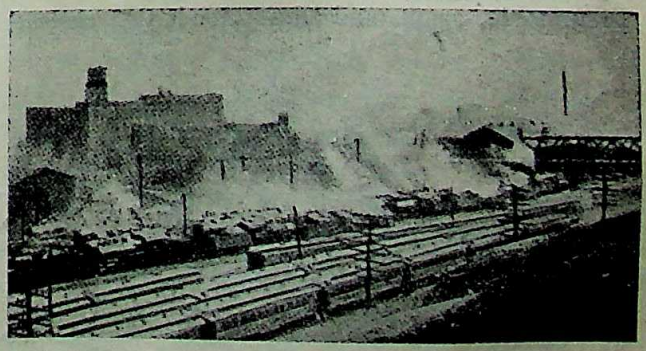
Air hygiene studies are carried on in laboratories on a comprehensive scale



Air pollution is found by recording ultra-violet rays received from sun



A steel plant in operation. The principal fuel is bituminous coal that is being properly used in the furnaces



Smokeless firing of locomotives. Engines in the Pennsylvania yards in Pittsburgh ready for rail service

Digitized by Arya Samaj Foundation Chennai and eGangotri

in city air, must come out to make that air conform to the necessities of human comfort and health. They wish to have the physicians set the limit for smokelessness and dustlessness.

For the benefit of the layman who might be constrained to think the physicians have been unduly hesitant or dilatory in asserting their leadership in this important matter, it should be explained that only recently have leading combustion engineers and other related specialists fully demonstrated their ability to fill a prescription for the smokeless and dustless operation of small as well as large fuel-burning plants, to be done practically and at reasonable cost. In these demonstrations, of course, they are employing appliances, processed fuels, and firing methods brought to perfection in the last few years. Under these altered circumstances, it can now be said with assurance that, if the physicians will write a prescription setting up reasonable standards of dustlessness and smokelessness, the engineers can fill it without committing fuel consumer, to costly, experimental ventures. Always heretofore there has been the objection from some quarters that while pure air is a city asset of fundamental value its attainment could not be secured save at undue expense. Thanks to the efforts of inventors, research workers, manufacturers, and progressive fuel producers, that objection no longer holds good. Eighty percent of the solid particles now emitted by stacks where solid fuel or refuse is burned can be kept out of the air by tested appliances and processes that are not burdensomely expensive. In many cases, a large percentage of the cost would be returned as direct savings.

It has been reported that certain derivatives of tar will, through repeated irritation, cause cancer of the skin. These derivatives are among the constituents of soft coal and oil smoke, and may also enter the air from other industrial sources.

Dr. Jerome Meyers, of the New York Department of Health, made a very interesting partial survey in this field a few years ago, in which he called attention to the apparent parallelism of high smoke content of the air and incidence of cancer. This study should be resumed in the light of most recent information and the improvement in the gathering and compiling of cancer statistics in New York City.

Other reported experiences and investigations include other harm done to health by dust, gases, or unburned (atomized) oil coming from stacks, and various metallic oxides and chemical substances thrown off by domestic and commercial incinerators and industrial plants.

Preventable smoke and dust clouds that obstruct solar radiation and fill the nose, throat and lungs with irritants are perilous.

The Long-Tailed Fowl

One of the most peculiar specimens of fowl I is produced only in Oshino-mura, Nagaoka-gun, Kochi prefecture. There are white and pale violet colored fowls. Only the cock has long tail while the hen does not differ from any common hen. The longest tail measures about 26 feet. These cocks live about 10 years. The best long tailed cock is worth more than Yen 3,000. They are very frail and naturally difficult to raise. About 30 eggs a year laid, and it is difficult to raise even one cock even out of 200 eggs.

NOTES

Lying Anti-Indian Propaganda in Great Britain

In recent years there has been a much larger volume of anti-Indian propaganda in Great Britain and America than perhaps ever before. The object is obvious—to prevent any real transfer of power in India to Indian hands. There have been many lying propaganda books. One of the latest is "Letters of an Indian Judge to an English Gentlewoman," published by Messrs. Lovat Dickson. In a preliminary note to this book the publishers say that they have satisfied themselves that the letters are genuine. The Indian opinion on the contrary would and must be that they are fictitious and constitute lying propaganda of a not too clever character. In fact the forgery is quite transparent.

The "English Gentlewoman" to whom the letters are alleged to have been addressed remains incognito. So Indians cannot cross-examine her. All the letters except one are anonymous. The one which is signed bears the signature of "Arvind Nehra," who is said to be or to have been an Indian Judge and a delegate to the Round Table Conference in London. Now, "Arvind Nehra" is not and cannot be an Indian name, though "Arvind" is reminiscent of Aurobindo Ghose and "Nehra" of Jawaharlal Nehru. In the second place, to the best of our knowledge there has never been—at least recently, an Indian High Court or District Judge of that name. In the third place, no Indian Judge was a delegate to the R. T. C. In the fourth place, no provincial Governor has ever been assassinated by an Indian—in any case none during the R. T. C. sessions. In the fifth place, there is no province named the "Northern Provinces" over which the assassinated Governor was said to have been ruling.

Let us now look at the story told in the letter signed by this Arvind Nehra. This man was said to have received his education at Cambridge. Cambridge Colleges and Cambridge men ought therefore to be able to spot him. It is curious that both Aurobindo Ghose and Jawaharlal Nehru were educated at Cambridge. When at the Round Table Conference, one day while taking a stroll on the road, Arvind Nehra saw a poster, **"Governor of the Northern Provinces Assassinated,"** and wrote he to the "English Gentlewoman":

> "Horrified, as you may imagine, I bought a paper, and learn it is my son, my first-born son Arvind, who has done this thing. He has announced that it is for India's freedom he has struck a blow. He lies, I hear, in the hospital, because he has also tried to shoot himself."

Hindu fathers do not give their own proper names to their sons—no Hindu whose proper name is "Arvind" will name his son "Arvind." This is an additional reason for concluding that the letters to an English *Gentle*woman are a forgery. Let us, however, proceed with the story, as told in *The Hindustan Times*.

The judge returns to India. Proceeding to the hospital where his son lies, he finds the 'Senior Police officer in charge' at the bedside of the assassin. Is it the rule in India for Senior *Police* officers to be in charge of hospitals? Of course, in imaginary countries they may be! This Police Officer is a friend of the judge. So when the two friends met, the policeman shook his head and said: "It is a terrible thing for you. The best thing that can happen to the boy now is. . ." He did

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

not finish the sentence, but his meaning was quite clear. He meant that death in hospital would be the best thing that could happen to the boy. The boy, however, recovered. But death came to him nevertheless in another way. The "Head Superintendent of the Hospital," another friend of the judge, now appeared on the scene and gave him some tablets for sleeplessness, warning him that more than two at a time would be fatal. So this hospital had two heads, the Senior Police Officer in charge and the Head Superintendent! Let that pass, however. We need not follow the story step by step. Evidently, the judge, taking the hint given by the Head Superintendent of the Hospital through the 'warning', gave more than two of these tablets to his son—the two heads of the hospital conniving, of course. So there occurs the following sentence in his next letter to the English *Gentle*woman: "My son has died in his sleep, quietly and without pain."

Hence, the readers of this book are to conclude that in India Judges, senior Police Officers in charge of Hospitals and Head Superintendents of Hospitals—all Indians, are indirectly promoters of terrorism and conspire to defeat the ends of justice and, therefore, Law and Order and Justice must not be transferred to Indian Ministers!

The fertile brains of some other British *gentle*man or *gentle*woman should be equal to inditing other genuine letters to prove that no department or subject should be transferred to Indians.

The British Sedition Bill

Two different kinds of government cannot co-exist in the same State—whether the state be called empire or commonwealth does not much matter. When Britishers speak of the British Commonwealth of Nations, they refer to Canada, Australia, etc., but not to India. Similarly, when they speak of the British Empire, they have India in view particularly—not Canada, Australia, etc. Britishers govern their own country and India. They do not govern the Dominions. So the government of Great Britain and India must tend to be similar in course of time. This is inevitable. As Britishers do not want that India should have self-rule of the British pattern, they have been obliged to take a leaf out of their rule as it exists in India. The British Sedition Bill is an attempt—perhaps unconscious and unintentional,—to Anglo-Indianize British rule in Britain. It seeks to circumscribe the liberties of the British citizen, though not to the same extent as British-made laws in India have done.

Increasing England's Air Force

England desires to increase the number of her aeroplanes and her air force, so that she might occupy the first place in air warfare instead of the fifth, as she does at present. This does not look like disarmament or reduction of armaments. All States which are increasing their armaments say that they are doing so in order to promote the cause of peace!

At present France is strongest among nations in the air arm. What will be her reaction to England's desire for the first place?

Mahatma Gandhi and the Nobel Peace Prize

Unity of Chicago writes:

The *Christian Century* has nominated Mahatma Gandhi for the Nobel Peace Prize. There could be no more obvious, nor more impossible, suggestion. Obvious, because the Indian saint is pre-eminently the greatest man of Peace in our time! Alone among the world's leaders he preaches and practises those principles of non-violence and brotherhood which lie at the heart of every peace gospel ever given to mankind. But this suggestion is also impossible because the record of the Nobel Peace Prize shows that the trustees of the award are not engaged in honouring peace champions of this Gandhian type. It is true that they once decorated Jane Addams—and then spoiled their own action by dividing her prize with Nicholas Murray Butler, who is about as much of a peace man as Marshall Pilsudski, of Poland, who has been significantly nominated for the Prize this year! But with such chance exception, the Nobel Prize has gone consistently year after year to statesmen and diplomats who have walked the familiar and well-trodden ways of world polity. No the Peace Prize has never quite been able to rise above the level of dynamite and arms in which it had its origin....In this age of wars and rumours of wars, it should have been easy to bestow this Prize upon those heroic men and women who have outlawed war from their hearts and are striving at fearful cost of labour and reputation to do away with it for ever!

Lord Lloyd on "Britain's Great Heritage"

On May 24 India was described as a country with "hundred Irelands inside it" by Lord Lloyd in a speech at Exeter. But actually there is not yet a single Ireland in India—the "hundreds" are all potential. He said that 'the country had been ruled not so much by the sword as by British impartiality.' Let it be assumed that there has been "British impartiality." How would Lord Lloyd then explain the genesis of a hundred Irelands in India, if they really existed? Impartial rule may produce contented Utopias, not discontented Irelands. As a matter of fact, as we have said above, owing to the difference in the Irish and the Hindu temperaments, there is actually not yet a single Ireland in India. Whatever impartiality there may have been is being replaced by discrimination against the Hindus. Such discrimination would be at its highest if the White Paper constitution or something worse were given to India. Hence, a corollary to Lord Lloyd's dictum looms in the future, namely, that the less there is of British impartiality the more there must be of the British sword. 'Lord Lloyd inquired into the rights of Mr. Ramsay MacDonald and Mr. Baldwin, "the transient figures of the fleeting moment," to hand over Britain's great heritage without consulting the people.' Which people? Not the people of India to be sure! He said that 'the surrender of China, Ceylon and Egypt was closing the avenues of employment for the British people.' Exactly. And therefore India, which provides employment to so many Britishers, must not be surrendered to Indians! By the by, China, Ceylon and Egypt should not have been classed together. China was never a British possession or protectorate; at the worst, part of it was within the British sphere of influence. Egypt was a British protectorate and is not yet really independent. Ceylon is still a British possession, without real self-government.

Lord Lloyd added, if the Conservative Party would not guard the interests of Britain as well as of India they could not be surprised if more and more people of Britain perferred the Black Shirt to the White Paper. He agreed that Britain had pledged to make experiment of self-government for India but not at any particular moment and in a particular way.

The Indian view is that there is as much difference between the Black Shirt and the White Paper as there is between tweedledum and tweedledee. It was extremely truthful and generous for this lord to admit that Britain had *pledged* to make *experiment* of self-government for India but *not* at any particular moment and in a particular way! That is to say, the *pledge* was to make the *experiment* on the Greek Calends, in his opinion.

Two British Supporters of the White Paper.

So far as India is concerned, there is really nothing to choose between those Britishers who like Churchill, Lloyd and others, denounce the White Paper and those who, like Sir Laurie Hammond (ex-governor of Assam) and Mr. Edward Villiers (ex-president of the European Association in India), support it. The former denounce it because it does not in their opinion sufficiently safe-guard the political and economic interests of Great Britain by adequately restricting the political and economic freedom of India. The latter support it because they think that it does adequately safe-guard the political and economic interests of Great Britain by restricting the political and economic freedom of India quite sufficiently, while at the same time it professes or pretends to give an instalment of self-government to Indians. It is probable, too, that the former, the die-hards, as they are called, condemn the White Paper with the additional object of deluding Indians into the belief that "it must be a very valuable boon, otherwise why should these sahibs be so unwilling to grant it to us."

At a London meeting, in supporting the White Paper, Mr. Edward Villiers laid stress on securing "Indian good-will," as if Indians were dying to get the White Paper and their good-will could be had by giving it to them! The surest means of obtaining their ill-will would be to force the White Paper on them. Sir Laurie Hammond thought or pretended to think that there would be some risk in transferring the government of India from British to Indian hands, but he considered it to be a "preferable risk," as if the White

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Paper really purported to make any such transfer and as if the constitution outlined therein involved any risk of loosening of the British hold on India! Sir Laurie laid down the proviso that the transfer, which in his opinion should have been made fifteen years ago, should be accompained by three conditions, namely, "adequate finance, entry of Indian States into the Federation and adequate safe-guards capable of enforcement."

But there can be no adequate finance so long as there is a highly paid British army of occupation in India, so long as there is a very expensive civil administration with lavishly paid British personnel at the top, and consequently so long as there is quite inadequate expenditure in the 'nation-building' departments.

The entry of the Indian States into the Federation is calculated to nullify popular government. For the States, according to to the White Paper, would have a disproportionately large number of seats in the Federal Legislature to be filled, not by men elected by the States' people, but by nominees of the Princes. Thus their entry will prevent the transfer of power from British hands to those of the representatives of the people. It will also, as we shall show below, prevent India from ever becoming a Dominion, not to speak of her becoming independent.

And then Sir Laurie wants "adequate safe-guards," too. Indians understand what they mean. They are a negation of freedom.

States' Entry into Federation and Prevention of Dominion Status

It is common knowledge that the entry of the Indian States into the Federation and the assigning to the nominees of their Rulers an excessive number of seats in the Federal Legislature are calculated to reduce to impotency the forces of nationalism in that Legislature. But it is not so generally understood that their entry into the Federation is calculated also to prevent India from ever becoming a Dominion. The following extract from an address delivered in Poona on the 15th May last by Mr. R. G. Pradhan shows how an India federated *a la* the White Paper is not likely ever to become a Dominion:

"Its basic principle of an All-India Federation with paramountcy as regards Indian States vested in the Crown with its perpetuation of existing relations between them and the British Government—which relations will ever debar them from attaining Dominion Status—and with its denial of any recognized place in the constitution to the people in the States, will be found to be a permanent and serious barrier to our own full growth into a Dominion, much less into an independent nation. The scheme as regards the Centre is so cleverly and ingeniously devised as to delay indefinitely, if not altogether to prevent, our becoming a Dominion as defined in the Statute of Westminster, and to prevent absolutely our claiming independence as a right constitutionally arising from Dominion Status.

"In the first place, the achievement of Dominion Status is extremely problematical. But suppose at some remote period, it is achieved somehow and Federal India then claims the constitutional right to secede. That claim will be countered by the cogent argument that it cannot be conceded without disintegration of the Federation itself; in other words, that Federal India as such cannot claim independence constitutionally, inasmuch as it contains two elements, one of which does not and cannot have Dominon Status owing to the paramountcy of the British Crown. It is this constitutional implication that has made the British Government so much enamoured of the scheme of an All-India Federation.

"I shall put it differently. The British Government is confident that it will be able to put down any attempt on the part of India to sever the British connexion by force. But the question assumes a different aspect when a Dominion wishes to exercise the constitutional right to secede. Such exercise of a constitutional right cannot be put down by force. So the rise of such a situation itself must be provided against and what should be done is to devise a scheme which will prevent such a claim being made, and even though made, being constitutionally recognized. And this is what has been done in the White Paper Scheme."

Mr. R. G. Pradhan's argument appears to us flawless and shows up the cunning statecraft of the authors of the White Paper. His reasoning may induce a mood of despondency in those who want India to be by constitutional methods a Dominion and afterwards, if need be, an independent country. But those who believe in any revolutionary method may perhaps rejoice that, by preventing constitutional evolution, the White Paper has been unintentionally promoting their cause and facilitating recruitment to their ranks.

Ignorance or Deliberate Misrepresentation?

It is said to be generally believed in Great Britain that the White Paper is acceptable to the majority of Indians. If so, it shows the Britishers' prevailing lack of correct information

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

relating to India, their indifference to obtaining such information and the success which has attended the efforts of British bureaucrats, news agencies and journalists to prevent correct information relating to India reaching the people of Great Britain. The ignorance of the generality of Englishmen may be excusable. What is inexcusable is the ignorance of leading men and those who have spent years in India. Yet they, too, display such ignorance, or (shall we say ?) indulge in deliberate misrepresentation. At a meeting of the East India Association in London, addressed by Sir Frederic Sykes, ex-Governor of Bombay, on May 15 last, Sir Hugh Cocke said that he believed that "by far the greatest body of opinion in India, both European and Indian, favoured the White Paper." He may believe or pretend to believe whatever he likes, but so far as Indian opinion goes, exactly the opposite of what he believes is true.

Congress and Council Entry

It has been decided at the meeting of the All-India Congress Committee held at Patna that those Congressmen who think that they can do some good to the country by entering the legislatures will have the liberty to do so, No-changers continuing to do other kinds of Congress work outside the Councils. These are to be of a constructive kind. For Mahatma-ji's statement of April last, advising the discontinuance of civil disobedience by all except himself, has been endorsed by the A. I. C. C. Congress candidates for the legislatures will be nominated by a Parliamentary Board of the Congress, of which the personnel has been already selected. Dr. Ansari is the chairman of this Board. During his absence in England Pandit Madan Mohan Malaviya will act as chairman.

Though civil disobedience has been reserved for Gandhiji at his suggestion and advice, he has said that he will try to act in such a way that the starting of civil disobedience may not be necessary.

Considering all these circumstances, Government may be fairly expected to lift the ban against all Congress bodies so that the holding of a plenary ordinary session of the Congress may be possible and Congressmen may not be hampered in doing constructive work. It has been announced that the next session of the Congress, the 48th, will be held at Bombay in October this year.

The decision to carry on the campaign of elections to the Councils by a Parliamentary Board of the Congress itself seems to us more satisfactory than by a separate Swarajist party, though connected with the Congress. There is no essential incongruity between Council work, provided no Congress principles are violated in the process of doing it, and constructive work outside the Councils. Should Congress undertake civil resistance in the future, either in the sole person of Mahatma Gandhi or as a body, Congress members of the Legislatures will simply have to come out of them, if called upon to do so.

It has been contended that, as at Lahore Congress in full session assembled prohibited Council entry, the ban on Council entry can be lifted only by a plenary session of the Congress. Logically and technically this appears to be the correct position. But if preparations for contesting seats at the forthcoming general elections can be commenced only after a full Congress session has lifted the ban, there must be much delay, and much precious time must be lost. Perhaps this practical consideration has led the A. I. C. C. to take upon itself the responsibility of lifting the ban. This may be technically wrong but not morally so. Moreover, as Mahatma Gandhi is still practically the dictator and as he has given his opinion in favour of those entering the Councils who want to do so, there is no real harm in anticipating the verdict of a full session of the Congress held under his lead.

It has been our opinion that, under the constitution of India as it stands at present and is likely to be in the near future, Swaraj cannot be won on the floor of the Council Chambers, though some useful preventive and constructive work may be done there. We note that at the Patna A. I. C. C. meeting the opinion was expressed by some men that Swaraj could not be won by Council work.

There was also opposition to Council entry there by an important minority. But it is noteworthy that no resolution was moved

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in favour of the actual resumption of civil disobedience now or in the immediate future.

Congress and the Communal "Award"

Neither at the Swarajya Party's conference at Ranchi nor at the meeting of the A. I. C. C. at Patna was the Communal "Award" of the British Prime Minister either accepted or rejected. The motive behind this silence was good. The desire was that the country should offer united opposition to the Government's dual policy of real repression and so-called reform. But, as was anticipated by us, this silence has satisfied neither the supporters nor the opponents of the so-called Award. The supporters—for the most part communalist Muslims, have expressed dissatisfaction at Congressmen not declaring themselves unequivocally in favour of the Premier's Communal Decision. On the other hand, members of the Hindu Mahasabha and some Hindu members of the Congress also have not been pleased with this Congress attitude of sitting on the fence—they want out and out and open rejection of the Communal Decision. Dr. Ansari made a statement saying that a Constituent Assembly to be called hereafter would deal with the matters dealt with by the Premier's so-called Award. This, too, did not satisfy any party. So Pandit Madan Mohan Malaviya and Mr. Aney have had to come out with statements of which the purport is that, as Congress stands for national unity and joint electorates, it cannot tolerate even for a short period any arrangement like the Communal Decision which makes for national disruption and disintegration and separate electorates.

Messrs. Malaviya and Aney's statements cannot please Muslim communalists. Perhaps they will displease some, if not all, Muslim nationalists also. For there is this difference between Hindu and Muslim Congressmen that whilst Hindu Congressmen—at least many of them, openly denounce Hindu Mahasabhites, few, if any, Muslim Congressmen denounce their co-religionists of the Muslim League and the Khilafat Conference. So, all Muslims who will enter the legislatures, whether on the Congress, Muslim League or Khilafat Conference, may be able to work together particularly as Maulana Shaukat Ali is going to contest a seat in order to preserve Muslim solidarity in the Central Legislature.

The Hindus, on the other hand, may be divided into four or more parties. There will be Hindu Congressmen, and in addition there may be Hindu Mahasabhites, Hindu Liberals, Hindu Sanatanists, Hindu Harijans and Hindu nondescripts.

It would be desirable, and it would be advantageous, to have in the country Parties, if any, only along political and economic lines—not along communal, sectarian, caste or socio-religious lines. But if the latter kind of party cleavage be inevitable under present circumstances, the fewer the parties in a community the better it would be not only for that community but for the nation as well.

For these reasons, it would be best for all communal parties to join hands with the Congress, as that is the biggest organization and is also non-communal. It is and has been trying to keep itself non-communal though many Muslim leaders had said before and have recently also asserted that it is a Hindu communal body of Hindu Mahasabhite complexion. The fact is, whoever does not cry ditto to everything that communalistic Muslims demand or say is dubbed as communal, the inference being that the communalist Muslims are the only real nationalists and non-communalists in the world!

Communal Unity

The condition, laid down by British imperialists for their acceptance of any Indian nationalist programme of constitutional advance, that it must be an agreed programme of all parties, is mischievous and meant to prevent all real reform and progress. When Canada got self-rule by a new constitution it was not after fulfilling any such condition. The condition was not laid down in her case that the French and the British settlers—the Catholics and the Protestants—and the aboriginal Indians also must submit an agreed and united petition for a new constitution before it could be granted. On the contrary, the British Government of the day of their own accord gave Canadians a constitution which

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

produced unity, which was lacking before. In the case of India the British Government has done no such thing. On the contrary, to the Round Table Conference, which was called ostensibly to devise means for Indian constitutional advance, not a single nationalist Musalman was invited and, originally, no Congressman also. The White Paper produced by the arbiters of India's destiny in London creates more political divisions and parties among the inhabitants of India than existed before and exist now. If, instead of following such methods, the British Government had given India a constitution like or approaching that of any of the British Dominions or like those of the States in Europe constituted after the war, it would have on the whole produced contentment in India and made for her progress. We mean progress of all communities.

The fun of the thing is that when British imperialists insist upon an agreed draft constitution or programme, they do not name the parties who must agree. To say that the Hindus and the Muslims must agree is of no use. For there are parties in both the communities. And if the parties in existence at present agreed, a dissenting new party might be born over-night mushroom-like, and it would be sure to be used by British die-hards to disprove the fact of Hindu-Muslim unity. Moreover, these are not the only communities in India. There are the Christians, the Sikhs, the Buddhists, the Jains, the aboriginals, and so on. So, even if the major communities agreed, the minor ones could and would be trotted out for disproving Indian unity.

There never was in any subject country, nor is there at present, such complete unity as British imperialists insist upon in the case of India. Why speak of subject countries alone? Is there such complete unity in any free and independent country?

So the best course for the British parliament and people to follow would be to do the right thing and shame the devil—the devil in British imperialists and die-hards and in Indian communalists and job-hunters.

There is a vicious circle which should be plain to all. There cannot be any communal unity in India so long as the domination of British officials lasts, and their domination cannot terminate with the voluntary consent of the British people so long as there is not communal unity. So it is best for all Indian communities and groups to try to secure greater and still greater political rights *separately* and *independently* without laying stress on unity.

Communal unity presupposes the absence in any community of any group which is so lacking in self-respect as to prefer British favours to national solidarity. It also presupposes the lack of power on the part of the British rulers to outbid the national leaders in the matter of advantages that may have to be promised to selfish groups to purchase either their acquiescence in national subjection or their adherence to the cause of national freedom.

Maulana Shaukat Ali has declared that he is dying for unity. Mr. Jinnah, Sir Muhammad Iqbal, Maulvi Shafi Daudi, etc., are dissatisfied with the decisions of the A. I. C. C. in Patna. It is necessary, therefore, to know on what exact terms they can unite with non-Muslims in a national struggle for freedom. The terms must be definite and final. It should also be stated whether all the advantages which they want are wanted for a definite period to be stated exactly, or for ever, or during their pleasure. Supposing non-Muslim leaders agree to all these terms, the Muslim leaders laying down the terms should state beforehand that they would not only not be a party to other Muslim leaders, who may spring up, driving a bargain with the British Government for still greater advantages but would denounce and fight such bargaining.

Turkey for Turks

Istambul, *May 25.*

Thousands of foreigners employed in the professions or who are artisans (notably 1,200 of Maltese extraction but not speaking their mother tongue) are precariously situated as a result of the Government's approval of a law whereby certain professions are reserved for Turkish nationals. The law states that from this week foreigners employed as chauffeurs, hair-dressers, tailors, shoe-makers, stock exchange clerks and musicians will cease work while delays (?) ranging from three to twelve months are given to foreigners employed as general labourers, waiters, actors, printers, chemists, Government employees and others (?).—*Reuter.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

When Congressmen enter the Central Legislature will any of them introduce a Bill there for reserving some professions and the best-paid services for Indian nationals ?

"Nationalism Suits Hindus" !

A Muhammadan contemporary has more than once quoted Mahatma Gandhi as having said words to the effect that the Hindus are Nationalists because it suits them to be so. We do not remember to have read any such utterance of Mahatmaji. But as evidently some at least of our Musalman countrymen are under the impression that Hindus are or profess to be Nationalists because Nationalism is of advantage to them, the notion requires a little examination.

The Musalmans referred to above will, we hope, agree that those Muslims who want separate electorates with seats reserved for them and weightage in addition where their co-religionists are a minority, desire these things because they consider these to be advantageous and advantages suit them. Now, Hindus are in a minority in Bengal, the Panjab, N.-W. F. Province and Sind. But no conference of Hindus in any of these regions has asked for these advantages as their first choice. On the contrary, they have as their first choice or only choice asked for joint electorates without reservation of seats on the population basis, and of course they have not asked for any weightage. Their Nationalism has impelled them to agree to forgo the advantages which Muslim minorities have got everywhere. So Nationalism may be said to suit these Hindu minorities in the sense that disadvantage suits Hindus where advantage suits Musalmans.

It may be said, of course, that in India as a whole Hindus are a majority, and, therefore, Nationalism suits them. But they are not responsible for the fact that they are a majority in India—they have taken pretty good care to be a dwindling majority for centuries ! Afghans, Turks, Japanese, Persians, Britishers, Frenchmen, Germans, etc., are majorities in their respective countries and are Nationalists. Perhaps because Nationalism suits all of them. Neither History nor Geography tells of any people who are Nationalists *for the reason that Nationalism does not suit them.* But History and Geography do tell of one and only one country in which the majority has been reduced to the position of a minority in a famous official document and in which the majority community has agreed to an important minority community having weightage in provinces where they are a minority and also in the Central Legislature. And that country is India. Perhaps it may, therefore, be humbly claimed that Hindus are Nationalists even when and where Nationalism does not suit them !

"The Dismemberment of China"

Such is the title of one of the fortnightly *Foreign Policy Reports* published by the Foreign Policy Association of New York on April 24, 1934. It begins thus :

> "Japan's recent conquest of Manchuria and Jehol has rounded out ninety years of territorial losses by China, starting with the British annexation of Hongkong in 1842. During this period China has lost control of roughly 2,400,000 square miles of territory out of a total of nearly 4,500,000 once ruled by the Manchu empire. Of these lost territories, France has annexed Indo-China ; Britain has taken Hongkong, Upper Burma, and Sikkim, and dominates Tibet ; Japan has annexed Korea, Formosa and the Pescadores, and controls Manchuria and Jehol ; and the Soviet Union dominates outer Mongolia. While the seizure of Manchuria therefore constitutes merely the latest in a long series of similar episodes, it has also a special significance with respect to developments in the immediate future ; for the loss of Manchuria has had an unsettling effect throughout the remaining outlying territories of China, and may be the prelude to a new era of territorial dismemberment."

The Report continues :

> "The seriousness of this threat becomes clear when it is realized that the eighteen provinces of China proper have been dominated historically by a double ring of outlying territories. The outer ring consists of Manchuria, outer Mongolia, Singkiang and Tibet. Three of these areas are already subject to foreign control, while the fourth—Singkiang or Chinese Turkistan—is now in the throes of political upheaval. The inner ring consists of Inner Mongolia on the north and "Inner" Tibet on the west, separated by the narrow western tongue of Kansu province. Inner Mongolia has been recently organized into the four new provinces of Jehol, Chahar, Suiyuan and Ninghsia. Of these Japan now occupies Jehol and the strategic eastern edge of Chahar, near the city of Dolonor, which dominates the passes leading further into Mongolia. "Inner" Tibet is composed of the newly organized provinces of Chinghari and Hsikang. During the past two years large sections of Chinghai and Hsikang provinces have been occupied by British-trained Tibetan troops.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"China's outer ring of territories has thus been almost wholly lost, while the inner ring is under partial foreign occupation and in immediate danger of complete alienation."

The Report is carefully documented and treats of China's land and sea frontiers, race and religion on the border, the three Mongolias, "Inner" Tibet, revolt in Sinkiang, and Yunnan a French sphere, and contains a map. It concludes thus :

"In the test over Manchuria, the historic 'open door' policy of the United States, with its corollary requiring the maintenance of China's territorial integrity, has apparently suffered a decisive set-back. More than at any time since 1900, tendencies leading toward the dismemberment of China are definitely in the ascendant."

Shrapnel and Poison Gas

"The Arbitrator" (England) states that at the close of the World War there were 1,500 blind men, victims of battle service, in Great Britain. Recent figures, however, show that since then, 500 additional service men have lost their sight from the effects of shrapnel wounds or gas poisoning.

"By the way," asks the bulletin of the Webster Groves, Missouri, Peace Council, "do you happen to know what country is now taking the lead in the production of poison gas ? The great plant at Edgewood could produce in two months more poison gas than the Germans used throughout the War."—*World Events.*

Literary Activity in Soviet Russia

No country in the world, according to recent claims of the *Soviet Union Review*, publishes as many books as Soviet Russia. In 1932, it contends, the U.S.S.R. issued more scientific works than were put out in Germany, Italy, France, and England combined. The Soviet Press, which is largely restricted to the governmental viewpoint, has 7,000 papers with a circulation of nearly 40,000,000. In 1912, Russia published 133,562,000 copies of all books ; in 1932, the figure is said to be 1,300,000,000.—*World Events.*

India at the Olympic Games

The Berlin *Olympic Games News Service* states :

At the meeting of the India Olympic Committee during the celebration of the All-India Olympic Games of 1934 at Delhi, the invitation to the XI Olympied at Berlin was accepted. India will defend her old mastership in hockey ; and also in various other events Indian competitors will meet the best athletes of the world at the Olympic Games, 1936.

University Teachers and Politics

The Aligarh University Inquiry Committee of 1927-28, presided over by Sir Ibrahim Rahimtoolah, made the following observations and recommendation with respect to members of the staff of that University seeking election to the legislatures :

> Our attention has been drawn by many witnesses to the effect produced on the academic atmosphere of the University by members of the staff standing for election to a legislature and taking part in politics.
>
> The political duties assumed by these teachers of the University are by no means inconsiderable. In addition to attendance at the meetings of legislatures, both (Dr. Ziauddin and Dr. Hyder) have sat on important Government commissions and committees and have been absent from duty for long periods of time. It is not surprising, therefore, that many witnesses have represented that the interests of the students have suffered.
>
> In 1926 Dr. Hyder was re-elected and is now serving on a Government commission. Mr. Habib, Professor of History, was also selected a member of the provincial legislature. Dr. Ziauddin did not stand for re-election. Aligarh appears to be in danger of being used by some members of the staff as a stepping-stone to political advancement.
>
> The work has suffered by the frequent absence of teachers of the University on political duty. It has also been pointed out in evidence that during those election contests numbers of students have been absent from the University for the purpose of canvassing.
>
> We recommend, therefore, that university teachers should not be permitted to stand for election to a legislature. Should at any time a seat in the legislature be given to the Aligarh University, then there would be no objection to a teacher of the University standing for that seat.

The Allahabad University had a salutary rule on the lines of the Aligarh University Inquiry Committee's recommendation. But it has been, we hear, recently repealed, to facilitate Dr. Shafaat Ahmed Khan's political activities. It is rumoured that, as Dr. Khan is an official favourite, the Allahabad University authorities are afraid of the historico-political Doctor someday becoming the U. P. Education Minister and having it out with them.

Compulsory Education in U. P.

The U. P. Government has, it is said, resolved to spend Rs. 100,000 for making a beginning in the direction of compulsory education. A not too early beginning.

Glimpses of U. P. Administration Report for 1932-33

Some extracts are given below from the Government Report on the administration of the United Provinces of Agra and Oudh in 1932-33, the headings being mostly our own :—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Position of the Congress

"Any account of the political events of the year must, for practical purposes, be little more than an account of the activities of the Congress party, for it alone, among the shifting and overlapping interests of Indian politics, possessed for a short time a single policy and programme and an organization with some effective hold over large numbers of its followers. Outside the Congress and its offshoots there was less than the usual political enthusiasm, for most classes and communities were too absorbed in their own domestic difficulties to do more than record their reactions to the proposals for reform."

The Liberal Party

"The Liberal party, while disapproving of the Congress programme, was dissatisfied with the White Paper and continuously demanded the release of political prisoners so that the Congress party might participate in the discussions on the reforms."

The future Programme of the Congress

"On the future programme of the Congress, opinion was divided. One section [of the Press] favoured the capture of the legislatures, while another showed sympathy with the views of Pandit Jawahar Lal Nehru, who, in a series of articles entitled 'Whither India?' stated that India's immediate goal was the abolition of all special class privileges and vested interests, and the severance of the British connection."

"Political and Communistic Propaganda"

"'The *Chand* published an article urging that Indian Chiefs should be pensioned off and their States annexed to form a single State. Some papers sought to represent Russia as a modern Utopia for peasants and labourers, and the *Mazdoor* claimed that Russia afforded a proof of the administrative capacity of the peasants and their superiority over capitalists in the art of government. The same paper advocated the immediate establishment of a labour party in India in order to capture the legislatures and establish a government controlled by peasants and 'workers'."

Political prisoners

"Many papers regularly published complaints of the ill-treatment of political prisoners in several jails in this province, particularly at Fyzabad, and the death of two political prisoners in the Andamans jail was followed by a prolonged campaign against the transfer of political prisoners to those islands."

"Muslim affairs"

"Aerial bombing on the North-West Frontier evoked vehement protests, especially from the Muslim press. British policy and administration in Palestine were bitterly criticized by the same press, and some papers, usually moderate in tone and supporters of Government, affirmed that there could be no Anglo-Muslim *entente* in the face of the 'Anglo-Jewish crusade' against the Arabs."

Warning to the Princes

"Some papers warned the Princes that their security lay, not in depending on the paramount power for help, but in winning the good-will of their subjects and in helping Indians generally towards the attainment of *Swaraj*."

Terrorist Outrages in Bengal

"Newspapers of all shades of opinion condemn the terrorist outrages in Bengal but considered the measures adopted by the Bengal Government for the suppression of terrorism would merely aggravate the evil, which could only be eradicated by the removal of the root causes of political and economic unrest."

Cow-killing at Bakr-Id

"In a pamphlet published by Maulvi Mahadeo Prasad of Benares University it was alleged that India was the only Muslim country where cows were killed at Bakr-Id."

The Round Table Conference

"Newspapers generally expressed keen disappointment at the proceedings of the Conference, especially at the concluding speech of the Secretary of State, and urged that no constitution with the proposed safe-guards in military and financial matters could be acceptable to Indians. The *Sind* characterized the reform scheme as reactionary, while the *Hamdam* described the Conference as a fools' paradise."

"The Communal Award"

"The comment was general that the excessive fragmentation of electorates was prejudical to national interests, and was a manifestation of the Government's Policy of 'divide and rule.'"

"The Viceroy's Bihar Relief Fund"

In a communication sent to us from New York Dr. Haridas T. Muzumdar writes:

"I cannot understand the psychology of our people. You have started in India what is euphemistically called 'The Viceroy's Bihar Relief Fund.' Why the Viceroy's? Has the Viceroy donated a year's salary for the relief of the victims of the earthquake tragedy?"

Dr. Muzumdar is mistaken in thinking that the people of India have started the Viceroy's fund. It is called the Viceroy's Fund because it was he who started it. No doubt the richer people have contributed to it, for obvious reasons, in preference to other funds started by men of the people. As regards the Viceroy's own contribution that was for him to decide.

Glasgow Indian Union

We have been asked by the honorary information secretary of the Glasgow Indian Union (c-o the Glasgow University) to state that

"The "Glasgow Indian Union" has an Information Department which supplies information to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

student intending to come to Glasgow to proceed with further studies.

Realizing the difficulties met by the newcomers in this country, and also the lack of information to those who intend to come over here, the Glasgow Indian Union has taken up the task of offering help to them. In case any individual student wishes to consult us, we will be glad to supply full information about the University of Glasgow and the various Colleges in Glasgow. The Glasgow Indian Union will help the newcomers with reception, lodgings, etc., if previously informed.

Some general information regarding exemptions from preliminary and first science examinations for the degree of B. Sc. in Engineering at the Glasgow University, have been sent to the Principals of most of the Colleges in India. During the last two years a good number of Indian students have come to Glasgow to attend the course of Sugar Technology at the Royal Technical College, Glasgow,—a three year course for the Diploma of the College.

Laudable Public Spirit of Senhati Ladies

Senhati is a village in the Khulna district of Bengal. Forty ladies of that village have set a noble example of practical philanthropy, as described in the following news item :

Khulna, May, 2.

The members of the Senhati Mahila Samity (a branch of the Saroj Nalini Nari Mangal Samity) have set an example in the direction of village welfare. A big reserve tank, which mainly supplied the drinking water of the majority of the villagers, has now fallen into disuse owing to the growth of excessive weeds. Repeated representations to the authorities of the Local Board for clearing these having proved of no avail, about 40 ladies, young and old, set themselves to the task and, after working for full four days, cleared the tank of the weeds. The Secretary of the Samity has now requested the chairman of the District Board to make arrangements for disinfecting the tank—Associated Press.

World Population Trends

The Commonweal of New York writes :

"Professor Charles Richet, winner of the Nobel Prize for Medicine in 1913, has just issued a remarkable world population survey from which he draws three conclusions : (1) Yellow and mixed races are increasing in rate five or six times more rapidly than the white races. (2) Among the white races Europeans increase the least. (3) Among the European peoples the most civilized nations show the least population increase. If the trend continues at its present rate, the Asiatics will have increased 140,000,000 in the next ten years, the American nations by 35,000,000, the Europeans by 20,000,000. While Shanghai shows an increase of 55 births per thousand population annually and Tokyo 44 per thousand, New York increases only 19 per thousand annually, and neither London nor Paris has shown any birth increase in the last decade. On the basis of the present increase rates Professor Richet estimates that New York will be the world's largest city in 1944, with Tokyo second and Shanghai third ; London will be out-ranked by Berlin and Moscow. M. Richet held it impossible to estimate populations more than ten years ahead, but stated that if the present rate of increase continued, Tokyo would become the world's largest city by 1955."

So far as India is concerned, there is at present greater increase of population among the poorer and illiterate classes than among the middle class literate people—particularly in the Hindu community. There are several causes at work to lower the birth-rate among literate classes. The number of young men and young girls who remain unmarried—at any rate till a more advanced age than before—has been increasing, and there is also a progressive use of contraceptives among them. There are other causes also at work. If all these causes continue to work, the Hindu cultured classes may be swamped in course of time, if they do not in the meanwhile dwindle and die out.

Anti-war Demonstrations in America

The New Republic of America writes :

It is, we think, both significant and important that in a large number of colleges throughout the country many thousands of students last week participated in anti-war demonstrations. We do not assume that such demonstrations, even on a much wider scale, will have any very important effect upon the likelihood of any given war in the future, or even that all of the demonstrators would live up to their anti-war principles when to do so might mean persecution and imprisonment. But we feel it is a healthy thing for so many young men and women to be thinking about the war problem and we assume that their interest in all probability extends to the causes of war, which in the modern world are so largely economic and an outgrowth of private capitalist enterprise. Among the demonstrators were Communists, Socialists and young people who are of neither of these faiths, and they showed an ability to co-operate for common ends that their elders have sometimes lacked. In some colleges, counter-demonstrations were arranged by students who (having been on the average four years old when the Great War ended) feel more friendly toward militarism ; and it was probably a good thing that the pacifist marchers should realize thus early that their ideas are not accepted by the whole community. In a few places, the police were called in to beat up the participants in the anti-war parades ; and this, also, was doubtless educative to the students, who got a vivid illustration of the fact that the way of the peace-maker is hard.

Sir C. V. Raman's Academy of Science

We had come to know some weeks ago that Dr. Normand, Director of the Meteorological

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Survey of India, had refused to be a member of Sir C. V. Raman's "Indian Academy of Science." We now find that the news has been published in newspapers in places so far apart as Lahore and Calcutta. We know that Dr. Normand has given Professor Raman some salutary advice, too, all of which has not appeared in the papers. So we shall not publish it in part or in its entirety.

It was not so very long ago that Sir C. V. Raman "conceded" the scientific leadership of Calcutta, though he has been latterly reported to have spoken of Calcutta scientists as a coterie or a clique. Wrote he in the sixth anniversary number of the *Calcutta Municipal Gazette*:

> It would be folly, however, to believe that Science can only flourish in monastic seclusion away from the surge of human life. Nothing could be further from the truth. Science derives her strongest impulses from the desire to serve human needs as well as from the purely philosophic desire to understand Nature more deeply. Hence, to be in touch with life, to understand the claims for service made by Humanity and to attempt to satisfy them, makes for true scientific progress. Further, Science cannot do without libraries and laboratories, and she must have the means to free her votaries from the necessity of otherwise earning their daily bread. If Science chooses to live and work in seclusion, she runs the risk of losing the sympathy of those who can provide her with resources. Thus, Science and Humanity need each other, and they both can flourish only when their obligations to each other are understood and discharged.

Typical Paris

In view of what has been said, it is not surprising that at least in some great centres of human life, we do also find flourishing schools of scientific research. Paris is a typical example of a great city which is not only the political and social but also the intellectual capital of its country. Calcutta claims a similar privilege so far as Bengal is concerned, but an impartial observer would probably also concede without hesitation that the proud privilege she once enjoyed of being the Imperial Capital has not yet disappeared in the sphere of scientific activity. She owes her prestige and influence in the sphere of learning to her century-old tradition of culture and research, to the long line of eminent scholars, both Indian and European, whom Calcutta has numbered and numbers among her citizens, and not least to the efforts of such men as the late Dr. Mahendra Lal Sircar and Sir Ashutosh Mookerjee, who strove to create the facilities for higher studies and research that others now enjoy.

Calcutta's Lead

Conceding the fact that Calcutta exercises a leadership in scientific research which extends far beyond the limits of the Province of Bengal, it must be a matter of pride and personal concern to every one of her citizens to see that such leadership is maintained for the future.

So those who strive to maintain the scientific position of Calcutta may not be an intriguing clique or coterie but only patriotic citizens.

Promoting Drink and Drug Habit in Bihar

In the course of his presidential address at the annual meeting of the Indian Mining Association, Jharia, Mr. Mrinal Kanti Bose said:

> The Royal Commission on Labour, speaking about the condition in 1928, said that the Dhanbad Sub-Division collieries, which employed 55,000 male workers, were responsible for the consumption of country spirit to the value of six lacs and seventy thousand. The licence fees on the consumption of country rice beer brought a revenue of 1,20,000. Besides there were ganja and other intoxicating drugs. The Commission estimated that the total expenditure incurred by these miserable colliery workers in drink and drug in 1928-29 was ten lacs of rupees. The Commission recommended that the drink and drug shops should be gradually closed in the interests of the industry and of the workers. But we find today that far from giving effect to the recommendation of the Commission the Government has reduced the price of country spirits, so much so that one bottle of country liquor which was formerly sold at annas eight or annas ten, is being sold at annas two now. The result is that the drink evil has become more widespread. It is idle to say that the illicit distillation would supply the want, if the Government stopped or reduced the sale of liquor. In 1930, due to picketing for six months, the liquor and drug shops were closed but illicit distillation did not supply the demand. You may punish illicit distillation, but why pander to a vice by making the satisfaction of it incredibly cheap? Mahatma Gandhi could not stop the practice, the labour unions cannot. The evil could be brought under control only by State action—absolute prohibition.

Mr. Bose added:

> The large majority of the workers do not turn up on Monday for the effect of intoxication begun from Sunday. The collieries have, therefore, been forced to close on Monday. Even on Tuesday the attendance is poor. The effect continues on Wednesday. If anybody wants to see how human beings are systematically brutalized, let him come to coal areas. The workers cannot find the bare necessaries of life, but drink and drug have been made cheap for them so that they may maintain an existence of forgetfulness. Can anybody expect the workers to be efficient in such conditions? Can industry prosper with workers so debased?

Flood-stricken Orissa

It is mentioned in the papers that Mr. Damodar Das, whom Gandhiji had deputed to inquire into the condition of the villages devastated by floods last year, has reported that relief is still necessary. When last we

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

weather we visited some flood-stricken villages in Cuttack district we came to the conclusion, which we published in the papers at that time, that help would be required for six months or so. But perhaps that help was not then forthcoming. Hence the inhabitants of many villages are still in distress.

Vernacular Medium in the Panjab

It is stated that candidates for the Matriculation and school-leaving certificate examinations in the Panjab will be allowed the option of answering questions in the vernacular from 1937 onwards, except in the subject of English. That means that the examinees must be taught through the medium or vehicle of the vernacular. But which vernacular? Properly speaking there is one predominant vernacular in the Panjab, namely, Panjabi, which is spoken by the mass of the people, whatever their religious persuasion may be. But among three different religious communities there are zealous advocates of Urdu, Hindi and Panjabi.

Maithili in Bihar

This reminds us that in Bihar there is a considerable section of the intelligentsia who want that Maithili should be recognized by the University and the education department as an independent language. They assert that it is spoken by one-third of the population of Bihar, and it has also a literature of its own. Its script is almost the same as that of Assamese and Bengali.

We do not wish to pre-judge the claims to recognition of any vernacular or any script of India. But perhaps the gradual approximation and the ultimate unification of several allied vernaculars would be desirable.

Tornado in Sylhet

The benevolence of the generous public has not yet been equal to the task of relieving the victims of the earthquake in Bihar. Yet now the same public must attend to the needs of those who have been reduced to destitution by a destructive tornado in Sylhet. And there is scarcity of food, if not famine, in parts of the Mymensingh and Jessore districts.

Babu Rajendra Prasad's Appeal

In the course of a few weeks Bihar will have its rainy season. Owing to the earthquake, in many areas there the levels of the land and of the river beds have changed. So floods and water-logging are anticipated. And these may cause outbreaks of various diseases. Babu Rajendra Prasad has therefore issued a timely appeal for medical workers to volunteer their services. Medical practitioners of both sexes will be required.

The Transfer of Sylhet to Bengal

There are areas now included in the province of Assam which are really parts of Bengal and which formerly formed parts of the administrative province of Bengal, as their prevailing vernacular is Bengali. The district of Sylhet is one of these areas. The Bengali inhabitants of these areas, who form the majority, have for years expressed a desire to have them included in the administrative province of Bengal. And hitherto generally the Assamese have opposed their transfer to Bengal. But recently some leading Assamese gentlemen have petitioned the Government of India to transfer Sylhet to Bengal. We are not aware why they want this transfer now. On linguistic and similar other grounds, if Sylhet is to come back to Bengal, we do not see any reason why the Bengali-speaking regions of Cachar and Goalpara should not also come back to Bengal. If there is to be a transfer, all the Bengali-speaking areas should be given back to Bengal.

We must add that we have not been ardent advocates of the transfer of Sylhet and other Assam districts to Bengal. Nor do we advocate such transfer now. It is not necessary to say why. What we contend is that, if there is to be any such transfer, justice and logic would require the transfer, not merely of Sylhet, but of all Bengali-speaking areas in Assam to Bengal.

The Bengali-speaking areas tacked on to Bihar should be similarly transferred to Bengal.

Textile Workers' Strike in Bombay and Nagpur

The textile workers' strike in Bombay began more than a month ago and is still

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

going strong, though the police have fired on the strikers on several occasions, killing some and wounding many more. Firing is resorted to in India more frequently than in Great Britain, though the situations to be faced and controlled may be more menacing in Great Britain than in India. Bullets for (imaginary or real) bricks, is the maxim here.

As neither the millowners nor the workers evince any disposition to yield, it was and still is the duty of the Bombay Government to call a conference of both parties to settle the points in dispute. A better course would be for both parties to choose arbitrators in whom they have confidence. Wise Governments and wise employers of labour do not try to break the spirit of the people. They rather take advantage of it by directing it into profitable channels.

It has been contended on the part of the capitalists that Bombay wages are higher than elsewhere in India. That may or may not be true. But when wages are taken into consideration, living costs also have to be taken into consideration. And they are high in Bombay.

Both parties should be interested in saving the cotton industry in Bombay from ruin. If they go on fighting, they would be helping Japan and Lancashire. Moreover, the industry may be diverted more and more to other provinces in India.

Cotton mill operatives in Nagpur also have struck work. As in Bombay, so in the Central Provinces, the leaders of the people and the Government ought to take steps for the early termination of the strike.

Terrorism Again

It is greatly to be regretted that terrorism of all kinds still persists in Bengal, as indicated by the attempt to shoot the Governor of Bengal at Darjeeling, who fortunately was not hurt, and by the steps taken to combat it.

Sir John Thompson, formerly Chief Commissioner of Delhi, has recently expressed his views on terrorism, condemning it in unequivocal terms. The attempted assassination of the Bengal Governor gave him the occasion for his observations.

Congratulating the Bengal Governor and his daughter on their fortunate escape, he added that unhappily it was impossible to suggest that legislation in accordance with the White Paper policy would result in the disappearance of terrorism from India. It would almost certainly persist, whatever type of constitution was secured, though it would inevitably diminish as the Indians were increasingly entrusted with their own affairs. Then he uttered a timely warning and expressed his firm conviction that it would increase if reactionaries in England succeeded and their view prevailed that there should be no constitutional advance until terrorism disappeared.

Corruption in British Municipalities

The following paragraphs have been published in some British and Indian papers:—

The Ministry of Health sent out a stern warning to municipal authorities throughout Britain.

That warning indicated that graft is rampant in certain towns and cities.

And the order was: "Stamp out graft!"

The chief forms of graft which the Ministry is determined to suppress are:

Acceptance by councillors of gratuities—not always money—from contractors and

Giving highly paid jobs to councillors' relatives.

An urban councillor secured well-paid positions with the local authority for four members of his family and three other relatives.

A rural district councillor placed two sons, two daughters and three other relatives in well-paid positions in the local council offices.

A concise statement of the law as it affects councillors is to be sent to all those likely to be affected.

Corruption in municipalities is a disgrace wherever it exists. Its existence in Britain would not make it less disgraceful in India, if and where it exists.

Britain's Silver Deal and India

According to the *United Press*,

Sir Montagu Webb who only recently sent a cablegram to President Roosevelt in connection with the free mintage of silver, has issued the following statement to the press:

"There is a talk of Great Britain making another 'token' payment next month to the U. S. A in silver. India should be keenly on her guard lest another twenty millions of her precious monetary metal are quietly removed without her permission and then not properly paid for."

"Last year, it will be recalled, in pursuance of the Hilton-Young policy of monetary restriction and silver demonetisation, 20,000,000 ounces of India's silver were without the Indian Legislature's permission, quickly shipped to the United States under arrangement with the British Government. But when, last year, the U. S. A. generously accepted 20,000,000 ounces of silver from Great Britain as a 'token' payment towards Britain's Liabilities to the U. S. A., President Roosevelt credited Great Britain with the same "fifty pence per ounce" that India had been compelled (by her own default) to pay to U. S. A. for her silver in 1918-19.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"But Great Britain only credited India with 20 and ⅓rd pence per ounce, which was, of course, more than the current market rate at the time. But why was India not credited with the full 50 pence per ounce that she had paid?

"Therefore, it is of vital importance that, if England makes a 'token' payment in silver to the U S A next month, she does not do so by withdrawing precious metal from the working of the Reserve Bank of India Act. The recent issue in Calcutta by the Government of three crores of rupee notes based not on silver, but on the Government of India's sterling paper balance lying (quite uselessly and unnecessarily) in London, is now secretly working to push India off silver (just as they themselves have been forced off gold) so that India with a paper currency 'here' based on a paper currency 'there' may be more easily controlled within the sterling (paper) area in which London money powers are working to 'enmesh' and control the whole world."

Industrial and Commercial Enterprise in Bengal

Presiding at the first quarterly general meeting of the Bengal National Chamber of Commerce last month, Mr. Nalini Ranjan Sarker referred among other things to Bengal's backwardness in industries. Said he:

The causes underlying the backwardness in the development of our industries are common knowledge. The foremost among these is the shyness of capital in this province for investment in industrial and commercial enterprise. This is due, firstly, to the exaggerated importance attached to investment in land prompted by a desire for safety and acquisition of the social standing conferred by the ownership of lands; secondly, to the lack of confidence in industrial investment on account, perhaps, of the sad experiences in connection with our early industrial ventures accentuated by the lack of business enterprise and industrial opportunities.

As Mr. Sarker is an experienced and successful man of business his suggestions and advice, some of which are quoted below, are worthy of serious consideration:

Here, in Bengal, we shall have to depend for necessary capital primarily on the pooling of the scattered resources of its not very wealthy people. Such a state of affairs generally demands that an industry to be able to raise sufficient capital must inspire the confidence of the small investors. This is essential in view of our past experience of failures.

It seems to me that the only way out of the difficulty lies in an organized effort to start some model industrial, commercial and financial concerns—at least just a few such as would be assured of active public support and encouragement. In my speech at the last Annual General Meeting of the Chamber, I suggested the establishment of a voluntary development trust. My idea was this. We should first decide by an examination of all relevant facts what particular industries we can profitably develop in Bengal.

I am convinced that it should not prove difficult to raise sufficient capital for a few model institutions if only before we embark upon any venture and seek the patronage of the investing public, we place before them all relevant facts as well as the opinions of experts in support of the soundness of the scheme. It is also necessary that only such persons should be associated with the promotion as well as management of these model ventures as will enjoy the confidence of the public in respect of their honesty and efficiency.

No company should, I think, be promoted or floated, in these circumstances, unless adequate capital money has already come into the hands of the promoters, or is perfectly assured. And if the requisite capital money be not forthcoming within a reasonable period, say, one year, or so, then all the money so far collected, should be returned to the subscribers without any deductions whatever. But, of course, this cannot be done, after the company has been formed, *i. e.*, after its registration. The only way to return the money after registration, is by sending the company into liquidation.

The promoters should themselves shoulder the risks of preliminary expenses, etc., without any expectation of recovery unless the company is actually formed. Even when the company is actually started, they should not look for profits for some-time. Only by this kind of disinterested service can confidence in joint-stock enterprise be restored and firmly established.

What I want to impress upon you is that in the matter of promotion of new companies in Bengal, means will have to be devised by which the share capital should be preserved in full as trust money unless and until the company can secure adequate share-capital to enable it to bring the concern to a stage of actual working. If within a reasonable time such a stage is not reached, the shareholders should be paid back in full.

In this country, directors of companies are generally satisfied with merely attending meetings and accepting fees for such attendance. It should, however, be remembered that their responsibility is great, inasmuch as they are vested with not inconsiderable powers for control and direction. To induce them to take more interest in their respective companies, I would suggest that they may be paid an additional remuneration cut of the profits of the concerns with which they are associated.

Possibilities of Salt Manufacture in Bengal

Mr. B. N. Sasmal has published a timely note on the possibilities of manufacturing salt in Bengal. He writes that

The Bengal Government has not yet spent a single farthing out of 13 lacs of rupees which have come to its hand from the additional salt import duty, though there was the definite assurance from the Central Government that the proceeds of the duty would be devoted to the development of Salt sources in the provinces which consumed the imported salt.

He is right in holding that

The real grievance of the people that the Government has not yet made any serious attempt at developing Salt industry in Bengal on a successful basis still remains to be removed.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Press-note misleads the public as to the possibilities of salt manufacture in Bengal with statements which cannot but raise doubt in our mind as to the real motive behind the notes sometimes issued by the Press-officer and sometimes by the *Associated Press*.

His contention is that,

"if the salt industry be taken up in right earnest both by the Government and the public on scientific and improved methods there is every possibility of its success in Bengal."

Perhaps in Bengal coal is as cheap as, if not cheaper than, in any country exporting salt, and therefore the discouraging argument based on coal prices need not prevent entrepreneurs in Bengal from undertaking the manufacture of salt on modern improved methods. In Mr. Sasmal's opinion,

> The process of boiling is the best alternative to solar evaporation and is adopted by all salt producing countries save and except some desert places like Aden and Karachi. It has been adopted by Burma with success and shall have to be adopted by us in Bengal also. If Liverpool and Hamburg can manufacture salt from sea-water by boiling and export the same profitably to Bengal from a distance of thousands of miles with heavy transport costs, is there any earthly reason why Bengal alone should be frightened to give up salt manufacture at the supposed difficulty of cheap coal alone ventilated in newspapers for ignorant public consumption without any attempt to remove the same in the course of the last three years ?
>
> As to crusts of salt—the villagers on and near the sea-board are following the old crude process of manufacturing without any sort of encouragement and advice from the Government, and are producing salt which can stand competition even with that of Liverpool and Hamburg.
>
> The cost of factory salt cannot exceed 6as. per maund as far as we know from the results of factories run on scientific lines in all advanced countries and specially in Burma. So if we add Re. 1-9as. as the duty on salt the price of one maund of factory salt together with retailers' profit and freight charge cannot exceed Rs. 2-5 as. which is much below the price of duty-paid imported salt which is fixed at Rs. 2-13 to Rs. 3.3as. given out in the press-note by the Press-officer.

Mr. Sasmal concludes with an appeal.

> I appeal to the public of Bengal and the pioneers in the field of salt industry to concentrate their attention, energy and money on learning and adopting the Burma process of salt manufacture and put pressure upon the Government to train up young men at its own cost in Burma salt works and help the new salt concerns with funds for which they are unable to start factories on scienfic methods out of the proceeds of the additional duty on foreign salt so that Bengal may produce her own salt in the next few years without depending on foreign supply for the same.

The Late Sir B. B. Ghose

The late Sir Bipin Behari Ghose was a younger brother of the late famous jurist and patron of education, Dr. Sir Rash Behari Ghose. Like his famous brother Sir Bipin Behari took to the profession of law after finishing his university education. He made his mark as a lawyer and was promoted to the High Court bench, where he distinguished himself as an impartial judge. After retiring from the High Court he officiated for some time as a member of the executive council of the Bengal Governor and of the Governor-General of India. He took great interest in educational and other public institutions for the promotion of public good. He kept up his cordial relations with his old class-fellows, among whom the present writer is one, and was a gentleman in every sense of the term and a man of varied culture.

Animal Sacrifices in Madras Presidency

At the time of writing this note we do not know whether the ghastly animal sacrifices at Ellore fixed for the 27th May last were performed on that day.

> On or about April 25 K. Bapayya and other trustees of the temples situated in the East and West streets of Ellore and persons conducting the said Jathara announced by beat of tom-tom that the festival known as Poleramma Jathara will be celebrated at Ellore on May 27. This Jathara or festival is celebrated to propitiate the deity Poleramma, who is supposed to influence the small-pox epidemic. The celebration of the Jathara consists chiefly of animal sacrifices such as goats, pigs and fowls. The heads of the animals sacrificed will be piled in a mound before the goddess and it is alleged that between 5000 and 6000 animals will be sacrificed on that day in the public street. Later in the night buffaloes will be sacrificed.

Mr. T. Prakasham and other enlightened gentlemen of Ellore and Madras have moved first the District Magistrate and finally the Madras High Court, though unsuccessfully, to obtain an order prohibiting the horrible sacrifices, are entitled to great credit.

Under the auspices of the South Indian Humanitarian League a public meeting was held in Madras on the 20th May last at which the following two resolutions were passed unanimously :

> "That this meeting of the citizens of Madras convened under the auspices of the Humanitarian League have learnt with profound consternation that lives of 30 innocent goats are to be sacrificed to the Yaga that is proposed to be performed at Kumbakonam, and wish to protest against the proposed such sacrifice involves wholesale slaughter

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

animals, and appeals to the organisers to give up the sacrifice and introduce such inanimate substitutes such as cocoanut, etc."

"A further 'Aj-medh,' goat sacrifice, is reported to take place at Katpadi near Thiruvannamalai about the same time. This meeting expresses strong protests against this Yagam as well and authorizes the President to send similar representations to the organizers."

The speakers were all Hindus versed in the Shastras. There was general concurrence in the view that the Upanishads taught a higher religion, including *ahimsa*, than the religion of animal sacrifice inculcated in the Rigveda.

The Buddha's Birth-day

The 27th of May, the day fixed for the sacrifice of 6,000 animals at Ellore, was this year the anniversary of the day on which the Buddha was born, attained enlightenment and entered into Nirvana. On that day and on the next public meetings were held in different places for showing reverence to the great teacher and for dwelling on his teachings and the significance of his personality.

At one of these meetings presided over by Mahamahopadhyaya Pramathanath Tarka-bhushan, principal of the Benares Hindu University Sanskrit College, the Pandit said:

It was a significant feature of the history of India that in the darkest hour of its history when the nation lay groping for a ray of light amid the encircling gloom, an "Avatar" had always come to the rescue of the nation and helped it to find its way to the path of progress and enlightenment. Lord Buddha was the greatest of all 'Avatars.' The truth that this Prince of Peace tried to inculcate through his teachings and deeds was that every man must strive to be a man in the truest sense of the word. There was nothing higher in this world than man. Reason—and not a blind, superstitious adherence to the Sastric injunctions, must be the guiding star in a man's voyage through life. Man must try to understand everything by the light of his reason and judgment. Lord Buddha preached the gospel of non-violence. That was his legacy to humanity, and India of the present age would do well to participate in this noble and rich heritage.

Mr. Subhas Bose's Activities in Europe

Though in a weak state of health, Mr. Subhas Chandra Bose has been making strenuous endeavours for establishing cultural contact between India and various European countries.

Organization and inauguration at Vienna on May 3 of the Central Indo-European Society has resulted in a tremendous call on Sj. Sabhas Chandra Bose's time and energies. An Indo-Czech Society is already functioning in Prague.

Under pressing invitations from pro-Indian friends in these countries, Sj. Bose has for the last few weeks been travelling in Czechoslovakia, Austria, Hungary, and Germany. He is now in Bucharest and will shortly proceed to Yugo-Slavia. Leading intellectuals, like Rene Fullop Miller, have extended tremendous response.

He has also received requests from several Turkish societies in Angora for delivering addresses on India and Indian questions. He has received invitations, too, for visiting the Turkish industrial centres. Proposals are under consideration for the establishment of an Indo-Turkish society.

Ghose Travelling Fellowship for a Lady

This year for the first time the Calcutta University has bestowed a Ghose Travelling Fellowship on a lady student. She is Miss Sakuntala Rao, M. A. She passed the M. A. examination of the Calcutta University with credit twice, once in English and then in Sanskrit. She has also obtained the Sanskrit title "Veda-tirtha" after passing an examination. She has been a research scholar under Professor Dr. D. R. Bhandarkar. She is engaged in preparing a thesis for obtaining the title of "Sastri", *i. e.*, one versed in the Sastras.

Calcutta Mayoral Elections Fiasco

It is to be hoped that the persons and parties concerned will be able to arrive at some agreement which will prevent Calcutta from being disgraced in the eyes of the world more than she has already been by the recent Mayoral elections fiasco. It would be a calamity if Government were compelled to interfere and take drastic steps. It should be remembered by all concerned that all the kinds of public welfare work for doing which the Calcutta Corporation has been brought into existence are not being properly carried on owing to the absence of a properly elected mayor.

"Bharati Works" & "Bharati" Pens

Some days ago we had occasion to visit Messrs. G. C. Law and Co.'s "Bharati Works." This factory manufactures different kinds of fountain pens of different prices. All the parts, except the iridium-pointed gold nibs, are manufactured

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in the factory. We were shown all the processes. These nibs will also be made as soon as the demand for fountain pens increases. We use a "Bharati" pen. It writes well and is as good as foreign pens of the same model. Some of the machinery also, used in the factory, have been manufactured there. Besides fountain pens, the factory makes pencils, pen-holders and nibs. We found the workers actually making all these things and could theoretically follow the processes.

Calcutta's Drainage Outfall

Calcutta is a cosmopolitan city. In it literally more persons from the different provinces of India earn their livelihood and make money than in any other Indian city. Its health should, therefore, be the concern of all provinces of India. And its sanitary condition depends to a great extent on its drainage. It should, therefore, be a matter for satisfaction for the whole of India that

> After more than four years of deliberation and through a maze of expert opinion, Dr. B. N. Dey's scheme for the disposal of the drainage outfall of Calcutta has been accepted by the Bengal Government. The conference of representatives of the Calcutta Corporation and the Government of Bengal have, after enquiry, been able to arrive at the decision that Dr. Dey's scheme would function satisfactorily and that action should be taken thereon forthwith.

Rabindranath Tagore in Ceylon

On his arrival at Colombo in the evening of May 9th last, Dr. Rabindranath Tagore received a warm welcome. Next day *The Ceylon Observer* published the following account of his landing :

> Despite the very wet weather and the late arrival of the ship, a large crowd had assembled from an early hour in the afternoon. Ticket-holders were accommodated on the lower landing. As Dr. Tagore came ashore he was garlanded by Sir Baron Jayatilaka, who also sprinkled perfume and offered sandalwood paste. "I extend to you a hearty welcome to this Island and hope your stay in our midst will be very pleasant," said Sir Baron in greeting the poet. The Mayor of Colombo then offered Dr. Tagore a welcome to the City.
>
> As he walked up the stairs, the poet received a rousing ovation from those present. From the jetty he drove, in the company of his Secretary, to "Sri Ramya," Colpetty, the residence of Mrs. Helena Wijewardene, whose guest he will be during his visit to Colombo.
>
> KINSHIP WITH CEYLON
>
> Interviewed by an "Observer" representative last night, Dr. Tagore said he was no politician, but as an impartial observer he saw some ugly tendencies in recent developments in international affairs. Dr. Tagore said that he felt a certain kinship with Ceylon. In her vegetation and scenery, Ceylon was in a way very like Bengal, although the latter did not have so much rain.
>
> "I am very happy to be back once again in Ceylon" he said, "and I hope my special mission this time would be a success.
>
> "I know your hospitality and this time I am sure my experience in the past will be repeated.
>
> "As I have said, I have a special mission this time. I have brought something from India, some aspect of the culture, some delight of her arts and I hope you will realize that it is of eternal value.
>
> "With politics I am not concerned. My mission is of spiritual delights, of art and beauty far and wide. I have no other gifts to offer you. I am not a politician. I do not want to reform the world.
>
> "I do not know sufficiently of your culture," he said, "but I do hope you have a contribution to make to Indian culture. Politically you may have been apart from India, but culturally, you are part and parcel of India. You are really Indians. The blood which runs in your veins is the same as that of Indians. We want you to come to us and share our heritage."
>
> Editionally it wrote, in part :
>
> Ceylon should welcome in more than one way the visit of the distinguished Indian poet, Dr. Rabindranath Tagore, who arrived here yesterday on what may be described as a mission of cultural assistance. Never was the need for such an impact with all that is best in Indian poetry, music and art greater than at the present time when there is an increasing tendency to ignore the spiritual values of the indigenous arts and to glorify the catch-penny amusements of the modern machine age. No better *guru* could Ceylon have wished for in her ascent to the gleaming mountain tops of all that is pure and beautiful than the Sage of Santiniketan, who has combined the idealism of the seer with the practical qualities of a man who gets things done. Dr. Tagore's vision is not limited by the boundaries of his own country, and his effort to harmonize the cultures of the East and West has had the most encouraging response from savants all over the world.

He was accorded a civic reception by the Colombo Municipal Council at a special meeting held at the Town Hall and presented with an address of welcome. The Indian Mercantile Chamber of Ceylon gave him a separate reception. "A crowd of people, who had gathered opposite the Chamber gave Dr. Tagore a rousing reception."

The presentation of his musical play "Shap-Mochan" fascinated and made a deep impression on the spectators and audience. Column after column of appreciation appeared in the papers in Columbo, for which we have no space. We can quote only detached sentences from a few papers. *The Ceylon Observer* wrote :

"Gorgeous colour flooded the stage." "India of the past was presented fittingly to India of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

present in all its glamour and music." "This is a cultural event not to be missed by any one."

The Ceylon Independent wrote :

"The play is a compact poem in which every movement fulfils a purpose, in which every detail is placed in a harmonious relation to the general purpose, and which also reveals that a static beauty can convey more than the impetuosity of passion of most occidental plays."

"The dances were also exquisite."

"The melodies were really wonderful."

The Daily News of Colombo expressed the opinion :

"Since the unknown artist put the last finishing touches to the frescoes on the face of the rock at Sigiriya, nothing greater in the way of oriental art has been achieved in this Island than that created by the Tagore players in the presentation of "Shap-Mochan."

The pictures from Santiniketan exhibited in Colombo have also been highly appreciated.

The Poet's addresses were largely attended and made a deep impression. Some of the subjects were "The Challenge of Judgment," "Ideals of Indian Art," "A Message to Youth," "Ideals of an Indian University," etc.

His visit has given a great impetus to the forces making for a national renascence in Ceylon.

Four Ministers for Sind !

The Dow Committee "makes provision for accommodation on the assumption that no less than four Ministers may be required" for Sind. This for a deficit province containing less than four million people ! No wonder we are told that

"the future University of Sind is to be provided by the autonomous Government of Sind but by means of a novel scheme under which two educational officers, employed by the Sind Government, one of them a British Professor of English, are to go round Sind with a beggar's bowl appealing to fatty lords of money-bags and wealthy widows to commemorate their name or that of their departed dear ones by subscribing funds to raise the University !"—*The Sind Observer.*

Similarly, Sind is to have a High Court by "waving a wand."

Art in the Panjab

An academy of art has been recently founded in the Panjab with the artist Mr. M. A. R. Chughtai as the protagonist. As he is a Panjabi, the event is a fresh proof that the art movement has taken root in that province.

Art Exhibition in Karachi

Mr. Vinayak S. Masoji, an artist of Maharashtra, who has received his training in Santiniketan, exhibited some of his paintings at Karachi last month. They were all duly appreciated. Seeing that there is enthusiasm for art in Sindh it may be expected that some Sindhi artists will come into prominence ere long.

Howard League on Death Penalty in Bengal

The latest criminal law amendement Act of Bengal (and of Assam, too) imposes the death penalty for the offence of carrying arms with intent to commit terrorist crime. It is not unlikely that such legislation may be undertaken for other provinces also.

Lord Mainhead of Exeter, President of the Howard League for Penal Reform, has written a letter on behalf of the League to Sir Samuel Hoare, Secretary of State for India, expressing the deep regret with which it has heard of the new legislation. The greater part of the letter is reproduced below. It will be noted that the arguments contained therein were brought forward in the Bengal Council by the opponents of the Criminal Law Amendment Bill.

"The Howard League fully appreciates the seriousness of the terrorist menace and the strain placed upon magistrates and the public servants who were working in constant danger of assassination. They realize that it is the bounden duty of the Government of India and the provincial Legislatures to provide adequate protection to these men. They are convinced, however, that security from crime, whether committed by terrorists or others, can never be gained by mere severity of punishment. They are supported in this view by the whole history of capital punishment at home and abroad ; and far from believing that Bengal terrorism can be stamped out by a brutal penalty which has failed signally in every other country, they are convinced that the imposition of the death penalty for this crime is singularly impolitic. For it is not to be expected that the young men and boys of the terrorist movement will be deterred by the fear of death from a course to which they have been impelled by fanatical, however misdirected, patriotism. It is indeed possible that the added risk will mean greater glamour and therefore additional strength to the terrorist movement.

"Apart from the question of expediency, my committee would urge that this country should not

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

at this time, when barbarous and arbitrary punishments are being restored in many lands and applied with special harshness to political offenders, extend the scope of capital punishment, with its risks of irremediable injustice (all the greater when the offence is one depending on the unexpressed intention of the accused, apart from any overt act), in any part of the British Empire. Still more strongly would they protest against a law which would inflict the death penalty on the young men and boys, many under twenty years of age, concerned in the terrorist movements."

Peaceful Revolution in Bulgaria

In the absence of details it is not possible to judge whether the bloodless revolution which has taken place in Bulgaria will be good for the Bulgarians. But in any case it is good news that it has been a peaceful change. One reform at least, however, which has been effected is in the right direction. The new cabinet ministers of Bulgaria are to receive only £430 each per annum, which is equal to about Rs. 5733 at the present rate of exchange. Many Indian deputy magistrates get higher salaries than this, though India is the poorest country in the world under civilized rule.

Detenus to be Trained

The Bengal Government have resolved to give detenus training in short-hand, book-keeping and type-writing in the Berhampore camp. Experience will show what this training will be worth. But whatever its value, it should be welcome as giving the detenus something to occupy their minds in jail.

Bengal Dacoities and Guns

Week after week many dacoities are reported in Bengal, indicating, for one thing, the unsatisfactory economic condition of the province. During the week ending May 19 last there were 48 of them, in four of which guns were used. In the previous week the number of dacoities was less. As it is not reported that any of the dacoit gangs were terrorists and four possessed guns, it would not be right to presume that unlicensed guns are procured, possessed and used only for terroristic purposes.

By the by, why are not the police able to stop the illicit traffic in fire-arms ?

Mr. MacDonald on Democracy and Freedom of the Press

At the ninety-fourth annual dinner of the Newspaper Society in London Mr. MacDonald said in the course of his speech :

> I am in favour of a free Press and if I live to the age of Methuselah that belief will never go. A free Press is a condition of a free democracy and a free democracy is a condition of a free Press.

Reading these two sentences, Indian journalists might be in a hurry to criticize Mr. MacDonald and to ask him, "Why don't you then break our chains ?" But they should read his words carefully. He says, free democracy and a free press go together. But India is not a free democracy and the British National Government, of which Mr. MacDonald is the head, does not intend that it should be one. Why then should India have a free press ?

Horrible Hecatomb at Ellore

In a previous note we have written that the news of the actual performance of the ghastly animal sacrifices in Ellore has not yet reached us. It has now come.

> Ellore, May 2
>
> Five hundred animals and 500 fowls were sacrificed on Sunday to appease the goddess of small-pox. At midnight 8 buffaloes were decapitated. The chief priest wearing clothes soaked in the blood of the slaughtered animals led a procession through the town. Along the route rice mixed with blood was strewn. —*United Press.*

This beats Kalighat hollow.

In each of numerous slaughter houses of big cities in Europe and America much larger numbers of animals are killed every day. But the difference is that they are killed to propitiate the stomach of carnivorous human beings, not any deity.

Wars in Two Hemispheres

Fighting has been going on in Arabia and in some South American countries. These wars could not have gone on if some European countries had not gone on supplying them with arms and ammunition. And these European countries are among the leading members of the League of Nations, of which the main object—the *raison d'etre*—is the establishment and maintenance of world-peace.

The League of Nations and India

It is common knowledge that the main object of the League of Nations has not been gained. But it has done much useful work in other directions. It has investigated many economic and labour problems; inquired into and published reports on the traffic in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

women and children and the trade in opium and other drugs; appointed committees to report on malaria, leprosy, sleeping sickness, tuberculosis, etc., and tried to create and maintain intellectual co-operation among nations. This is not an exhaustive list. But owing to India's subject condition and other causes, she has not derived much benefit from the Leagues' labours—she has not, in fact, received much direct attention. But in spite of that fact we are not in favour of severing connection with the League, as our country should preserve all the contact, direct or indirect, little or great, which it has with other countries and strive for more, as Mr. Subhas Chandra Bose, for example, has been doing.

As an indication of the small interest which the League takes in India we will mention one little fact. In the "Index to the Monthly Summary of the League of Nations," Vol. XIII—1933, India is not to be found, though one finds Argentine Republic, Assyrians, Australia, Austria, Bangkok harbour, Bolivia, Bulgaria, China, Danzig, Denmark, Germany, Greece, Greenland, Guatemala, Hungary, Iraq, etc. That means that, though India suffers from a plethora of political, economic, social, sanitary, hygeinic and educational problems, none were directly tackled by the League.

Chittagong Scratched !

Reuter cabled the news a few days ago that "Chittogong has been scratched for the Derby." This will not bring any solace to the Hindus of Chittagong, nor will it mean any humiliation to the Bengal Government. For it does not mean that the Chittagong Policy of that Government, including collective fines, cufew orders, home internment *en masse*, etc., has been reversed. It means that a race-horse named Chittagong has been withdrawn from competition at the Derby race !

Sir Shadilal on Independence of the Judiciary

Sir Shadilal sat on the bench of the Lahore High Court for a long term of years during fourteen of which he was chief justice. On his retirement he has been elevated to the judical committee of the Privy Council. His reply to the tributes paid to him by the Bench and the Bar of the Lahore High Court contained observations on the independence of the judiciary in Britain and India which are worthy of serious attention —particularly as they are the words, not of a "disgruntled political agitator", but of a man whose distinguished services have been appreciated and recognized by the British Government.

> The essence of political liberty as recognized by British courts, observed Sir Shadilal, was that justice should be administered with complete impartiality and those who were innocent should receive and enjoy freedom. The Chief Justice mentioned a recent English case in which a communist, who had been convicted for breach of law, claimed damages against the head of the London police on the ground that the bundle of papers which the police had lawfully seized had been detained longer than was justified. The case was tried before the High Court and he was awarded for this ordinary mistake £30 as damages.
>
> "Would it be improper to ask," continued Sir Shadilal, "what would be thought of the judge in India who, imbued with the traditions of British justice acted in a similar manner ? Would he not thereby subject himself to disfavour and even resentment, which would be manifested in no uncertain manner ? These and other disadvantages have sometimes to be borne 'sub silentio' by a person who is true to the oath which he solemnly takes on accepting the office of His Majesty's Judge."
>
> He quoted from the memorandum prepared about two years ago by Judges of the Supreme Court of Judicature in England in which it was pointed out that for two centuries it had been considered essential that judges' security and independence should be maintained inviolate.
>
> It was long ago said that there could be no true liberty in a country where judges were not entirely independent of the Government, and the soundness of the remark had never been questioned.

Continuing, Sir Shadilal observed that no reasonable person could take exception to this authoritative pronouecement.

> "It is, however, said that these doctrines of the English constitution cannot find a full scope in this country, where there are peculiar circumstances which tended to impair the independence of the Judiciary. On principle I am unable to see any valid ground for making such a distinction, and I trust, no Judge of this court will ever depart in the slightest degree from the solemn promise which he makes before entering upon the execution of the duties of his office even if he is subjected to personal disadvantages."

Sir Shadilal concluded :

> "The confidence of Indians of all schools of thought in the even-handed justice as administered by High Courts is the greatest bulwark of the British rule in this country and that a person, who does any act tending to shake that confidence causes the greatest possible harm to that rule."

A Legal Dead Letter in India

On taking over charge of the office of Chief Justice of the Lahore High Court Mr. Justice Young received addresses from members of the Bench and the Bar.

> Replying to the addresses Justice Young referred to accumulation and delay in the disposal of cases in the High Courts in India and suggested various remedies.
>
> "Justice delaved is justice denied" said His Lordship and observed litigation ought further to be reduced by a courageous modification of the personal law of the Hindus, especially that of Mitakshara.

For expediting the disposal of cases he has also suggested that the number of holidays enjoyed by the Judges ought to be curtailed.

Proceeding his lordship said :

> "To no man will we sell, to no man deny and to no man delay justice or right. This great declaration of the Magna Carta is almost wholly a dead letter in India."

Pandit Jawaharlal Nehru's Health

It has been reported in the papers that Pandit Jawaharlal's Nehru's weight in Dehra Dun Jail is less than what it was in the Alipore Central Jail. He had already lost weight at Alipore. A further loss of weight must cause anxiety. Dehra Dun is believed to be a healthier place than Calcutta. The authorities of the Dehra Dun Jail should lose no time in scrutinizing the living conditions of the Pandit there.

The Chamber of Princes

Dailies all over India have recently published long accounts of what the Princes or their Ministers have been doing or have been thinking of doing to revive the Chamber of Princes under its original constitution or to reconstitute it in a different manner. But whatever they may do, their only security lies in making themselves constitutional monarchs and giving their subjects a popular constitution and the reign of law. However buttressed, antocratic rule cannot last.

Fruit Culture

Though India is an agricultural country, it imports fruit from abroad worth about two crores of rupees per annnm. Physicians have been increasingly advising greater consumption of fruit. Indians should pay far greater attention to fruit culture and fruit research. There is enough land in India suitable for growing a large variety of fruits for internal consumption as well as for export.

Sir Henry Page-Croft on the Safety of Christians in India

Sir Henry Page-Croft had written in a letter to the Archbishop that in India the fury of the Hindu or the Muslim against the Christian was now suppressed by the British arm ; but was ready to burst out when that arm was withdrawn. But Sir Henry has been thrown overboard by many missionaries and other Christians.

There have been numerous Christians in India from before the age when the British emerged as a civilized people.

Legislation in Indian States Against "British-Indians"

It is greatly to be regretted that "British-Indians" should be considered foreigners in any Indian State and that any Indian State should legislate against them under extraneous pressure. But that is what is happening, as the following messages show :

> Bombay, May 26.
>
> The "Sun" publishes the draft of a Bill which the Bikaner Darbar proposes to pass into law in order to deal with foreign subjects who reside in Bikaner State, either temporarily or permanently or pass through or travel in the State.
>
> The Bill does not affect the subjects of the State or law-abiding and peaceful foreigners.
>
> The Bill 'inter alia' provides that any foreigner may be ordered to remove himself forthwith from the precincts of the State.
>
> It also empowers the Government to apprehend and detain a foreigner who refuses ro remove himself.
>
> It further demands that every foreigner should report himself to the authorities within forty-eight hours of his arrival, giving full particulars.
>
> No foreigner is to travel through the State without a pass or permit.
>
> Section 17 says that if a traveller is found without a permit he may be apprehended without a warrant by any officer exercising the powers of a Magistrate or by any commissioned officer not below the rank of a Sub-inspector.—Associated Press.
>
> Bangalore, May 26.
>
> A Bill to introduce Extradition and Foreign Jurisdiction Regulatlon in Mysore on the lines of the British Indian Act will be introduced at the ensuing sitting of the Legislative Council at Mysore next month.
>
> The procedure that was being followed in the case of Mysore subjects being surrendered for trial before British Courts was under the Chief Commissioner's notification. But in a specific case brought to the notice of the High Court the validity of the Notification having the force of law in the State was negatived in the light of the revised Treaty of 1931—United Press.

Burma Retrenchment Committee

Even the sweepers and the punkha-pullers have been recipients of the tender mercies of the Burma Retrenchment Committee. But the President of the Committee has pronounced the opinion that, if the five per cent. cut in the pay of the fat-salaried officials be continued, it will make them "discontented, slack and corrupt employees"! Pouring oil on oily heads has never been a rarity.

Ireland's Progress Towards Republicanism

The following message is an indication of the determination of de Valera and his party to make Ireland a republic :

Dublin, May 25.

The Dail passed the Bill for the abolition of the Senate by 54 votes to 38.

Before the passage of the bill Mr. de Valera expressed his views on second Chambers forcibly at the Dail.

Mr. de Valera declared that a second chamber formed an effective safe-guard for neither the constitution nor people's liberties. Many in Europe existed only for the preservation of ancient rights and privileges.

The House of Lords in Britain, which had always been an ally of the Conservatives, was regarded as a sort of historical monument, only tolerated as long as it did not really become obnoxious.

The French Senate also opposed workers' holidays, prevented enfranchisement of women and opposed every modern social development.

Declaring Ireland's right of absolute freedom, Mr. de Valera opined that the majority of the people want.d a republic.

He said that a republic was not declared because the repetition of the civil war of 1921 was not wanted. But if the "threats of hostile action against the Irish people" were withdarwn, they would see how long Ireland would be without a republic.

Mr. McDermot on behalf of the Opposition declared that a million of Free State citizens had racial and other ties with Britain.

Mr. de Valera retorted that three-and-a-half million were dissatisfied with the membership of the Empire.

The Bill is expected to be rejected by the Senate but in any event can become law in about a year.—Reuter.

Holland Against Export of Arms to Belligerent Countries

Geneva, May 26

Holland is the latest and thirteenth country to agree to the League's proposal for embargo on war munitions to Bolivia and Paraguay. No reply hitherto has been received from Czecho-Slovakia, which is one of the largest sources of supply for arms trade in South America.—Reuter.

Bravo Holland !

The Late Prof. S. C. Roy

Professor Suresh Chandra Roy, M.A., B.L. who retired long ago from his chair in Morris College, Nagpur, and was an Emeritus Professor of that College, recently died in Calcutta at the age of about 75. He was one of those pioneers of education who strove hard in the latter half of the nineteenth century to promote higher collegiate education, for which no facilities existed at the time within the Central Provinces. He was one of the three Indian graduates who joined the Morris College when it was formally opened in June, 1885. For more than 36 years he taught Mental and Moral Science at the Morris College and was very popular among the students. He was intimately connected with the Nagpur University and served as a member of its University Court, Academic Council, Faculty of Arts and Board of Studies in Philosophy and various other sub-committees. He was the first President of the Nagpur Philosophical Society. For a quarter of a century he worked as Secretary of the Dinanath Boys' School in Craddock Town, Nagpur.

C. P. Government and Jubbulpore Municipality

The Central Provinces Government has been pressing the Jubbulpore Municipality to dismiss the "ex-civil-disobedience convicts from their employment," saying that otherwise Government grants to that municipality amounting to Rs. 20,000 would be suspended. But the president of the municipality continues to assert the right of local bodies to choose their own servants. These ex-"convicts" are six in number. As they were not guilty of any moral turpitude, we do not see why their dismissal should be insisted upon. Ex-"convicts" have served even as Ministers of Provincial Governments. The fact that civil disobedience has been withdrawn should also weigh with the Central Provinces Government.

League Policy and British Empire Policy

A leaflet published by the League of Nations Union, London, concludes thus :

Let no one think that support of a League of Nations policy is contrary to British interests. In

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the words of the Rt. Hon. H. A. L. Fisher, late President of the Board of Education:

"The Policy of the League is the Policy of the British Empire."

Yes, the Policy of the British Empire is the Policy of the League.

Supplying Japan with Arms

The Daily Herald of London says:

"British and European firms have arranged to supply Japan with munitions for the conquest of China and these munitions are being manufactured in India in the hope of keeping the whole thing secret."

As arms and munitions cannot be manufactured in India without the knowledge of the Government of India, that Government should be in a position to either confirm or contradict the news.

What would Great Britain and its allied European powers gain by making Japan still more powerful? Moreover, China has not been fighting them, nor does she intend to do so. Is there any secret plan of parcelling out China?

Uplift of Chota Nagpur Aborigines

When Mahatma Gandhi visited Ranchi, a reception committee was formed there for welcoming him, with Mr. Sarat Chandra Roy, the distinguished anthropologist, as its chairman. The address presented by him to Mahatmaji contains passages relating to the education and uplift of the aboriginial population of Chota Nagpur which deserve careful consideration. Some of these passages are transcribed below.

> In this District the aborigines, who number about ten lakhs out of a total population of about 16 lakhs, form the most important factor in its population. And the problem of their education and social uplift is at least as important as, if not immensely more important than, that of the depressed classes. And we must hang down our heads in shame at the thought that though Government and the Christian Missions have done and are doing much for their education, we Indians have shamefully neglected our duty towards them.
>
> We Hindus have so far stood much more aloof from the aborigines than even from the Harijans, and taken still less interest in their welfare. So far perhaps it has been in a way good for the aborigines; for, if they had entered the Hindu fold with its existing caste-divisions, they would undoubtedly have been relegated to as low and degraded a position in Hindu Society as that assigned to the Harijans.
>
> As for the aborigines themselves, if the caste-Hindus look down upon them as untouchables, the aborigines, or at least a large proportion of them, in their turn, reciprocate the feeling and avoid as much contact with the Hindus as they can. Though they have been an oppressed race, fortunately they cannot be called depressed. Being outside the caste-system, no barriers except their own lack of means and opportunities prevent the full development of their intellectual and spiritual capabilities. The So-called *Shuddhi* movement and similar other movements begin at the wrong end and necessarily end there, after helping to swell the number of depressed castes. And the activities amongst them of a certain class of avaricious *Gosains* and *Gurus* produce the same deplorable result. The inclusion of aboriginal tribes in the lowest grades of Hindu Society has had, in many cases, the disastrous result of introducing amongst them the vices of the lower orders of Hindu Society to which they had been strangers till then without bringing any compensating advantages worth the name
>
> The first and essential thing required for the uplift of the aborigines is, therefore, not their Hinduization but the spread of education on right lines amongst them. As far as we Hindus are concerned, what is as essential for our own purification is the eradication, even from our subsconscious minds, of the untouchability-feeling where it may lurk when all outward manifestations may have been suppressed. The feeling of inner purity or attention to the growth of *Sattvaguna* or spiritual tendencies is quite different in kind from the untouchability-feeling connected with caste or race.
>
> With this idea our Society here freely admits aboriginal pupils to our schools. In our humble view, to have separate schools for Harijans exclusively, in this District, would be to create a cleavage where none really exists. And further, for the social and economic progress of the country the elevation of the aborigines to our own level of culture is as essential as the similar uplift of the Harijans.

Turkish Women to be Enfranchised

It is welcome news that a committee appointed by the Turkish Government to examine the question of the enfranchisement of women has recommended that women should have the right to take part in elections on the same terms as men. This push further Mustafa Kemal Pasha's work for the complete emancipation of Turkish women. Turkey has already got rid of polygamy, the purdah, education has been made compulsory for girls, and careers and occupations are now open to women in offices, factories, hotels, shops, etc.

THE MODERN REVIEW

JULY 1934

VOL. LVI., No. 1 WHOLE No. 331

THE PRESENT POLITICAL SITUATION

BY R. G. PRADHAN, B.A., LL.B., EX-M.L.C., ETC.

MY object in this paper is to review the present political situation and to consider how best, in the present circumstances, we may work for the attainment of our national goal. The turn that events have recently taken makes such a review and consideration both opportune and necessary.

The outstanding features of our internal political situation as it is being moulded by ourselves are (*i*) the suspension of civil disobedience, and (*ii*) the lifting of the boycott of legislatures by the A. I. C. C. Both these decisions are of great importance, and it is not quite easy to foresee exactly what colour they may give to our national politics for some years to come. Externally, we are confronted with a scheme of constitutional changes, the exact nature of which will only be known after the publication of the Report of the Joint Parliamentary Committee, but which, it may be predicted with confidence, will not be better or less illiberal than that embodied in the White Paper. Besides these new elements of the situation, the problems of Hindu *Sangathana*, of Hindu-Moslem unity, of the status of our countrymen in our Indian States, and of the economic order that should be established so as to ensure a reasonable standard of well-being and comfort for the masses and the lower middle classes, have produced and are producing varied currents of thought and activity.

Since 1921, our political life and movements have been dominated by the spirit and methods of direct action. We have employed the weapons of non-co-operation, non-payment of taxes, and civil disobedience, hoping that thereby we may be able to awaken the conscience of the British, and to bring moral pressure to bear upon the Government so that they may be persuaded to agree to a political settlement such as may ultimately eventuate in the full fruition of our national aims and as therefore we can accept without derogation to our national self-respect. Our national movements have passed through various phases and vicissitudes of fortune, but our objective has always been definite and clear, *viz.*, either Dominion Status, or complete national independence. It may seem preposterous to talk of national independence when even the semblance of dominion status is so remote or problematical ; but in politics, grudging and inadequate practicalism must be met by growing idealism, particularly when such idealism, being rooted in sound principle, cannot be regarded as mere utopia, in the unknown and unknowable evolution of national destinies which no doubt are largely the products of human designs and endeavours, but from which the working of the Divine in time and in the conflicts of races and nations cannot altogether be eliminated.

The voluntary sufferings and sacrifices

THE PALACE DOLL
By Debi Prosad Roy Chowdhury
Oriental Press, Calcutta

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

which we have undergone during the last twelve years have not, it must be regretfully confessed, succeeded in bringing about those tangible results at which we aimed. We have succeeded neither in appealing to the reason of the Government nor in awakening their conscience, nor in producing a change of heart, or spirit or will in them, nor in exercising such pressure upon them as to make them bend to our will. Mahatma Gandhi's soul-force has produced no effect whatever upon the fundamental political policy of the Government, though in one respect, *viz.*, the Communal Award in its relation to the depressed classes, that soul-force, when it was backed by the higher soul-force manifested in the unity of the Hindus in the matter, led to a modification of the Award. Except to this limited extent, our soul-force has not triumphed over the repressive, the legislative and the political forces of the Government. It is open to a protagonist of soul-force to argue that it has failed, not because it is in its nature incapable of succeeding, but because it was not manifested on an adequately wide and intensified scale. It is also arguable that a movement even of soul-force must become national both in thought and deed before it can hope to succeed, and that the failure of our soul-force movement is only another illustration of the truth that a partial or sectional movement cannot hold its own against the immense material and political resources of an astute and powerful foreign Government adept in the arts of ruling a subject population. Our past history, it may be said, records many an instance of our struggles for preserving or regaining our national independence having failed because they did not crystalize into united national movements. The Rajput, Mahratta and Sikh movements in the 16th, 17th and 18th centuries failed because they did not embody the spirit of All-India national patriotism. The movement of 1857 failed also for the same reason. And Mahatma Gandhi's movement of Satyagraha or soul-force has failed not because of its inherent inefficacy but because it did not receive adequate response from all communities and classes of India. These arguments are not without any force whatever. In terms of logic or *a priori* reasoning, it is possible to conceive that even the hard and hardened hearts of our rulers may melt at the sight of millions of our people patriotically and cheerfully courting imprisonment and undergoing the hardships and tortures of jail life, in the cause of their country. But, humanly speaking, in the present circumstances and conditions of India, such a national mass movement of soul-force or civil disobedience does not seem to be a practicable proposition. Mahatma Gandhi expressed the hope that ten millions of people would follow him in the practice of civil disobedience. That hope has not been realized, and he has found it expedient to suspend it step by step and to reserve it exclusively to himself, at any rate for the time being. We may regret the failure of all these Congress movements ; we are bound to take note of the length to which the Government may go in meeting such movements. But we must transmute all our experiences into principles and guides for future policies and programmes.

On the other hand, I do not think that these movements have been barren of any good results or are utterly destitute of moral value, or of political significance. Our national consciousness has grown ; our spirit of resistance has risen ; our ideals are being crystalized and are taking wider forms so as to embrace social and economic issues. Come what may, there is no possibility now of our taking wrong and injustice lying down ; and we are being led to think more and more about a social, a political and an economic order in which we can find our national self-realization at the highest level. Even the region of religious thought and life, I may observe in passing, is being re-surveyed in the light not only of our own vast accumulated religious experiences but also in the light of Western developments of thought regarding the relations between science and religion. The fact is India is having a new birth and what we have witnessed and are witnessing around us is the pangs and the travails thereof. Apart from these indices to the moral significance of our movements, they have also led the Government not only to take the offensive but also to be on the defensive. Pandit Jawaharlal Nehru was imprisoned for his alleged continuance of the no-tax campaign in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri.

violation of the Gandhi-Irwin Pact ; but the U. P. Government realized that some measure of relief must be granted to the peasantry if it was to be weaned from Congress influence. Sir Frederick Syke's scheme of rural uplift is but a governmental reaction to Congress agitation and work among the masses. I should not be surprised if all the provincial Governments were to be busy devising ways and means for stemming the tide of nationalist and socialist influence upon the masses.

These are observations of a general character, perhaps they are even platitudinous. But they are necessary in order to make the general situation clear and to enable us to see it in the proper perspective. I now proceed to examine it in some detail.

There is a consensus of opinion that Mahatma Gandhi has done well in suspending Civil Disobedience. This suspension may mean suspension *sine die*, which will be virtual withdrawal or abandonment, or it may mean discontinuance for some time. Apart from expediency, I do not think that Civil Disobedience should in no circumstances form part of our armoury for fighting freedom's battle. Its justification may be determined by the policies and attitudes of Government and by the readiness and determination of large united sections of the people to resort to it with a fair measure of persistence. Granted that it may not succeed ; at all events it is a moral method of lodging national protests in justifying situations. We cannot therefore agree to absolute and permanent surrender of a legitimate weapon. The only way to prevent its use is for the Government to broadbase their authority upon the will and consent of the governed.

Now let us see what the decision of the A. I. C. C. to lift the boycott of legislatures exactly means. I shall quote a material portion of the resolution passed by the All-India Congress Committee on the subject. It says,

> "In as much as there exists in the Congress a large body of members who believe in the necessity of entry into the legislatures as a step in the country's progress towards its goal" etc., etc., and further on "The Board shall select only such Congress members as candidates as will be pledged to carry out in the legislatures the Congress policy as it will be determined from time to time."

In speaking on this resolution Mahatma Gandhi said,

> I shall retain my disbelief in the legislatures as an instrument for obtaining Swaraj in terms of the masses...Council-goers hope to reap limited benefit for the nation through the councils. There is no doubt in my mind that the benefit would be insignificant when compared to the energy that must be spent on it. The Parliamentary work must be left to those who are so inclined. I hope that the majority will always remain untouched by the glamour of council work. In its own place it will be useful.

From this it will be seen that Mahatma Gandhi still does not believe in council-entry, though he has not now used such condemnatory language about it as he more than once had done in the past. In spite of his lack of faith in legislatures he has begun to realize that at least in its own place council work will be useful. It cannot yet be concluded whether or not a majority of members of the Congress is in favour of council-entry. The resolution of the A. I. C. C. as it stands simply recognizes that a large body of the members of the Congress believe in the necessity of entering the legislatures and that they believe in it as a step in the country's progress towards its goal. And acting on this recognition, the A. I. C. C. has passed a permissive resolution allowing those who have faith in council-entry to work for it and requiring that those Congressmen who may be elected to legislatures on behalf of the Congress must work in them subject to the control of the All-India Congress Committee. As I understand the resolution, the Congress is not yet committed to council-entry. If and when the Congress meets in October next, it may accept one of the following alternatives, *viz.*, (*i*) Vetoing altogether the resolution passed by the All-India Congress Committee. (*ii*) Without deciding whether a majority of Congress delegates is or is not in favour of council-entry, it may adopt the resolution as passed by the All-India Congress Committee, and (*iii*) though a majority of Congress delegates may be found not to be in favour of council-entry, yet the Congress may decide to allow those of its members who believe in council-entry to contest elections or otherwise to take part in them. I will not hazard a prophecy ; but I feel certain that under the powerful and almost compelling influence of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mahatma Gandhi the first alternative will not be preferred by the Congress. If the Congress decides by a majority to favour council-entry, it will mean that the majority of Congress men have begun to realize that legislatures should not be boycotted.

In October last, the Democratic Swaraj Party was formed at Bombay. I have joined that party and naturally feel interested in the question of the relations between it and the Congress. In this connection, may I make a few personal references, so as to clarify my own position? I had hoped that the deliberations of the Round Table Conference would result in a satisfactory settlement of our political and constitutional problem. I expressed that hope in my books viz. *India's Struggle for Swaraj* and *Principles of the Constitution of the United States of India* and in the speeches I had occasion to make on the subject in the Bombay Legislative Council. In the first issue of an English journal which I started in September 1932, and which unfortunately had to be discontinued, in describing the general policy of the paper, I wrote as follows:

> I do not yet despair of India's legitimate development taking place as an integral and equal member of the British Commonwealth. When I feel convinced that such development is not possible within the British Commonwealth, I may withdraw my present support of the British connection.

Then came the White Paper. Lecturing on the White Paper at Nasik in May 1933, I publicly declared that in view of the nature and trend of the proposed constitution, I no longer thought or hoped that the legitimate development of my country would, within a reasonable period of time, take place within the British Commonwealth; and I decided to join or rejoin the Congress. I had some correspondence with Mr. Aney, the then President of the Congress, in which I conveyed to him my desire to become a Congress man, making it plain, however, that I did not approve of the boycott of Councils and would work within the Congress for lifting it. When therefore the Democratic Swaraj Party was formed, I had no difficulty in joining it and even accepting the condition that a member of the party must be a member of the Congress, when Congress organizations would function again. Such having been my own personal reaction to the policy of the White Paper, I am bound to consider the question of the relations between the Democratic Swaraj Party and the Congress. A meeting of the Central Committee of the Democratic Swaraj Party was held on the 13th May to consider what should be its attitude with regard to the Swaraj Party formed at Ranchi. The All-India Congress Committee has scrapped that party. No doubt the situation arising out of the decision of the A. I. C. C. will be carefully considered at a meeting of the Central Committee of the Democratic Swaraj Party to be held in July next. I for one shall feel very happy if conditions will come into existence, favourable to the discontinuance of the Democratic Swaraj Party as a separate body. At the same time, I must make it clear that, as far as I can see, there are three grounds of difference between the Democratic Swarai Party and the A. I. C. C., *viz.*, (*i*) the attitude of the Democratic Swaraj Party towards council-entry is not exactly the same as that of the A. I. C. C. The Democratic Swaraj Party does not believe in the boycott of the legislatures; (*ii*) the Democratic Swaraj Party is opposed to the Communal Award and does not accept it as a settled fact; while the A. I. C. C. has neither accepted nor rejected it but adjourned it *sine die* for the consideration of a constituent assembly if and when it is convened; and (*iii*) the Democratic Swaraj Party feels a certain amount of scepticism about the soundness of Mahatma Gandhi's methods; it thinks that Mahatma Gandhi should not be so much guided by his inspirations and intuitions, and that he is at times unduly and unnecessarily uncompromising, and at other times launches upon the country changes of policy as sudden as to be almost volcanic. In spite of these difficulties, I for one have every hope that an understanding will be reached between the Congress and the Democratic Swaraj Party. If the Democratic Swaraj Party feels assured that there is no possibility of a sudden reversion to the now discarded policy of boycott of legislatures, such an understanding may be facilitated even though it may involve the extinction of the Party.

I now come to the White Paper. I wish to go somewhat deeply into the matter. I make a distinction between the White Paper Constitution as it relates to the Centre and as it relates to the provinces. In its relation to the Centre, it is open to grave objections of a fundamental character. Its basic principle of an All-India Federation with paramountcy as regards Indian States vested in the Crown, with its perpetuation of the existing relations between them and the British Government—which relations will ever debar them from attaining Dominion Status—and with its denial of any recognized place in the constitution to the people in the States, will be found to be a serious barrier to our own full growth into a Dominion, much less into an independent nation. The scheme as regards the Centre is so cleverly and ingeniously devised as to delay indefinitely, if not altogether to prevent, our becoming a Dominion as defined in the Statute of Westminster, and to prevent absolutely our claiming independence as a right constitutionally arising from Dominion Status. In the first place, the achievement under the scheme of Dominion Status is extremely problematical. But suppose at some remote period, it is achieved somehow, and Federal India then claims the constitutional right to secede. That claim will be countered by the cogent argument that it cannot be conceded without disintegration of the Federation itself; in other words that Federal India as such cannot claim independence constitutionally, inasmuch as it contains two elements, one of which does not and cannot have Dominion Status owing to the paramountcy of the British Crown. It is this constitutional implication that has made the British Government so much enamoured of an All-India Federation. I shall put it differently. The British Government is confident that it will be able to put down any attempt on the part of India to sever the British connection by force. But the question assumes a different aspect when a Dominion wishes to exercise the constitutional right to secede. Such exercise of a constitutional right cannot be put down by force. So the case of such a situation itself must be provided against, and what should be done is to devise a scheme which will prevent such a claim being made, and even though made, being constitutionally recognized. And this is what has been done in the White Paper Scheme.

The position as regards the provincial part of the White Paper constitution is different and better. It gives us a vantage-ground of which the best use can be made, if only we would make it. Provided that ministries consist of able, independent, and patriotic men devoted to principles and determined to promote measures necessary for the healthy growth of national life, and provided further, that adequate funds are available for giving effect to large schemes of improvement, a lot of good can be done. And in case, the Governor opposes such measures and goes on exercising his veto situations may arise in which he will find it impossible to have ministries at all. The result will be that either he will have to yield or the constitution itself will have to be suspended. The suspension of the constitution in such circumstances need not be regretted, as the ultimate consequences cannot fail to be beneficial.

Now let us realize exactly what we mean when we say that the White Paper scheme must be rejected. One thing is certain. The scheme in its present form or in some worse form, is going to be thrust upon us, unless Mr. Winston Churchill succeeds in wrecking it. If Parliament prefers to accept Mr. Churchill's lead and to wreck it, it is its business and we are not concerned with it; our opposition cannot be given up or weakened because it may furnish him with an additional weapon for wrecking it. We shall not be in sack-cloth and ashes if it is wrecked. But I do not think that the scheme will fail to pass through the present Parliament. We shall be confronted with the proposed constitution as an actual fact. What shall we do then? When we say that it should be rejected, do we mean that the new legislatures should be boycotted? That cannot now obviously be our meaning in view of recent developments. All that our rejection of the scheme would mean is that we declare that we do not accept it, that it is imposed upon us against our will and consent, that we protest against it, that its principles are not binding upon us, that we shall work it only under protest, that we shall make what use we can of it with the sole object of promoting our own ends and ideals.

A survey of the present political situation must take some note of the new currents of political and economic thought flowing into our country. Socialism and communism have each its exponents in India and perhaps we may have Fascism also. I belong to a generation which was nurtured and nourished on Western political radicalism combined with our own metaphysical and religious view of life as expressed in the *Bhagvadgita*. I have been studying and thinking over these different systems ; and on the whole, my inclinations are more towards Socialism adapted to our own conditions than to Fascism or Communism. But what I wish to stress is this : our chief objective is and ought to be to win political power. How is it possible to establish a communistic, a socialistic or a fascist state unless we first succeed in winning political power? It is on that objective that all our attention and energies must be concentrated ; and the ranks of our nationalist movement must not be divided by uncompromising insistence on differences as regards the very type of the State to be ultimately evolved. Our political problem is already difficult and complicated. It is not wisdom to add to its difficulty and complexity by unnecessary emphasis on issues which are themselvas controversial and which cannot be successfully tackled, without winning political power.

I now come to the second and more difficult part of my paper. This survey of our present political situation is by no means inspiring. We had to retreat and we have retreated. But what about the future ? Can I or can anyone point to a royal road whereby we may reach our national goal most quickly ? The goal seems to recede more and more in the distance. The hopes of four years ago have been dashed to the ground. The plain truth is that there is no royal road to the achievement of freedom. Freedom's battle is going to be long and arduous and will make a great demand upon our perseverance and constancy in purpose. We may not, we ought not to, despair ; but the realities of the situation must be faced. Hindu-Moslem unity is an essential condition of success and it must be achieved. I have always said and written that the achievement of this unity will be a greater manifestation of our national soul-force than individual acts or a partial movement of civil disobedience. I am fully conscious of the difficulties in the way of Hindu-Moslem unity ; but they are not insurmountable and I believe that they can be overcome and the unity brought about. Pandit Jawaharlal Nehru's idea of a national convention or the idea of a constituent assembly is magnificent ; but is it practicable without Hindu-Moslem unity ? What will be the value of such a convention or assembly if the majority of Moslems remain aloof from it? We may not, we ought not to, give a blank cheque to Moslems ; but without doing so, efforts must continuously be made to bring about such unity. Even leaving aside for a moment this question of Hindu-Moslem unity, is there any real organic unity among Hindus themselves ? We are about 23 crores in number ; the Moslem population *all over the world* is about 25 crores. Of these there are 7 crores in India, 5 crores in Indonesia, 2 crores in Western Asia, about 2 crores in Siberia and China, 5 crores in Africa and about 2 crores in the Balkan States and South Russia. Though scattered over so many countries, they have a sense not only of religious but also of social solidarity. Though we inhabit one and the same soil, we have no such sense of solidarity. Hindu *Sangathana* is absolutely necessary, but it must be organic and real, not superficial. It is my strong conviction held for the last forty years that so long as there are castes, sub-castes, and untouchables among us, Hindu *Sangathana* can never go deep. The Hindu society must be reconstructed on a non-caste basis and then only Hindu *Sangathana* will be a real, living and potent fact.

So the work of realizing Hindu and Hindu-Moslem unity must go on side by side with work of a purely political nature. Constructive work is one of our watchwords and rightly so. This work must be done not only in cities where it is comparatively easy but also in towns and villages where it is difficult. I think it is not now possible to avoid political parties ; they will probably increase in number. I would therefore suggest that besides party organizations, in every district there should be a non-party Association whose sole duty shall

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be to carry on constructive work on agreed lines. Such work should include adult education, education in the elements of political science and in citizenship, the building up of a non-caste, non-communal patriotic spirit and the promotion of *Swadeshi*. It should be purely educative and free from any more propagandist colour than may be inherent in the work itself.

I am glad that the neo-Swaraj Party recognized the value of foreign propaganda. Mahatma Gandhi has hitherto belittled its importance but I hope that he will now realize it. In thinking of India's future, I often think of the policy of the Philippinos in promoting their cause of national independence. They maintained a national embassy in America with a view to impressing upon the Americans the justice of their demand for independence. The American Legislature has recently passed a Bill promising independence to the Philippine Islands in ten or twelve years. America has set a noble example which Great Britain ought to follow. What America has done she can certainly do, if only she has the will to do it. But I know she has no such will. And yet our national work should always include a department of foreign propaganda. Such propaganda should be carried on mainly in America, Switzerland and Great Britain.

Apart from concrete programmes, I insist on the right state of mind being preserved and maintained in all circumstances, through thick and thin. Whatever may happen, however far-off may be the attainment of our national goal, however depressing the situation may at times become, we must always be true, loyal and devoted to our ideal. We must cherish and worship it in the shrine of our hearts. Our national struggle may sometimes be attended by reverses ; what struggle has there been in history which was all victory and no defeat ? But a reverse or even a series of reverses must not weaken our *morale* and our flag must never be lowered, much less hauled down. The fight must be fought to the finish, whatever changes in methods or programmes or tactics may be made. In the serene confidence born of faith in the justice of our cause and in its ultimate victory, we must steadily advance towards the goal. Sometimes the advance may be quick ; more often it may be slow ; at times we may have to halt and wait for a more favourable season for pressing forward. But I for one am as sure as that the day follows the night that the victory and the glory of the victory will be ours, if only the flame of our devotion to our ideal is kept burning with undiminished and untarnished radiance.

INTERNATIONAL LAW AND TRUSTEESHIP

By BAMAPRASANNA SEN GUPTA, M.A., B.L.

Trusteeship the Back-Ground of the Modern Theory of Colonization

STARTING originally on a different basis altogether, namely, economic exploitation, pure and simple, the conquests of England had to give place to the theory of trusteeship, which ultimately became the back-ground of the modern theory of colonization. This principle has been definitely recognized by America in relation to the Philippines and is now more or less theoretically recognized as the sole justification for the government of one country by another in all cases. None in the twentieth century can possibly defend that they are holding empires for any other purpose save for looking after the interests of people, unfit, due to their comparative backwardness, for self-government. Logically this leads to the conclusion that the ruling race owes a duty to the governed and the civilisation at large to educate its wardens to such capacity and to renounce government over them as soon as the people are so fit.

The Principle in International Law

International law and the society of nations have in modern times emphasized this doctrine often as opportunities occurred for it, till the principle has been finally accepted in the cases of mandated territories by the League of Nations—thanks to the insistence and idealism of ex-President Wilson. International law in the course of its development has striven in its own way to exhibit that the regulation of the relations between the sovereign and subject States does not always affect only the States concerned but touches the humanity at large and should therefore form a matter of concern for international law and international machineries. The theory of "trustee-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ship" so clearly embodied in Art. XXII of the Covenant of the League of Nations, may be traced for its first germ in utterances of idealists like Elphinstone, Metcalfe and Macaulay. But the theory took no definite shape at that time, it ended there with utterances and pious wishes.

The Principle in Practice

The principle however was put into practice in the cases of the administration of Bosnia and Herzegovina by Austria-Hungary, which task was assigned to her by the Treaty of Berlin subsequent to the Russo-Turkish War, as well as that of England over Egypt. The incidents referred to however arose in this way.

The concert of European Powers had ever been keen in presenting before the Porte proposals for the reform of administration of his Christian subjects and often brought in moral pressure to atone for the inhuman atrocities that Turkey perpetrated on the neighbouring Christian States under their subjugation.

When in 1875, the Muhammedan aggression and atrocities reached almost their climax and the slaves in Herzegovina, revolted as a consequence of the relentless Turkish oppression, a Note (known as Andrassy Note, after the name of the Austrian Chancellor of the time) was prepared which contained a scheme of reforms to be pressed on the Sultan for conciliating the insurgents at Herzegovina. The Note was prepared by the governments of Russia, Germany and Austria and comprised in its proposals for reforms "(*i*) the improvement of the lot of the peasantry; (*ii*) complete religious liberty; (*iii*) the abolition of the farming of taxes; (*iv*) the application of the local taxation to local needs; (*v*) the appointment of Commission, half of Moslems, half of Christians, to supervise the execution of these reforms and of others recently promised by the Porte."* The Note could not however be presented to the Porte in 1875 because of the diplomatic intervention of the British Cabinet that was of opinion that the Note was inopportune and that Turkey ought to be given time to carry on the reforms, which by *'irade'* of October 2, 1875, the Sultan had promised to all his Christian subjects. It was however presented to the Porte in January 31, 1876 and Great Britain gave a reluctant assent to it. The Note was accepted by the Porte on February 11, with one reservation. But the Sultan who had been very enthusiastic about promises was lacking in action and the Powers realized that "unless energetic steps were taken by the Powers to stop the spread of the conflagration it would soon wrap the whole of Balkan Penninsula in flames." Accordingly the Berlin Memorandum' was drawn demanding 'the adoption of an armistice for two months; the repatriation of the Bosnian exiles and fugitives; the establishment of a mixed Commission for that purpose; the removal of Turkish troops from the rural districts of Bosnia; the rights of the Consuls of the European Powers to see to the carrying out of all the promised reforms. Lastly, the Memorandum stated that if within two months the three Imperial Courts did not attain the end they had in view (*viz.*, the carrying out of the needed reforms), it would become necessary to take "efficacious measures for that purpose." The Memorandum could not however be presented because of the refusal of the British Government to sign it and consequently the concert was broken up.

Next came the massacre of the Christians in the Balkan Mountains by the Turks as a return to the murder of some Turkish officials there. This completely alienated British sympathy from the Turks. Lord Derby wrote to Sir Henry Elliott on August 29 that "the impression produced here by events in Bulgaria has completely destroyed sympathy with Turkey. The feeling is universal and so strong that even if Russia were to declare war against the Porte, Her Majesty's Government would find it practically impossible to interfere." And so it came to pass. In the war of 1877 between Russia and Turkey, Great Britain remained neutral, and Austria who ever dreaded Russian extension of power kept herself aloof from the struggles. At the Treaty of Berlin in 1878 some Christian States got independence and Bosnia and Herzegovina were placed under the administration of Austria-Hungary, who was to rule there as trustee so long as the people were not fitted to rule themselves.

An analogous incident took place in the history of Egypt. As early as 1798 when the French conquered Egypt and continued occupying it for three years till 1801, British statesmen were alive to the sense of the strategical position of Egypt for safeguarding Indian Empire but England took no step for occupying it at that time. The French conquest and occupation for three years weakened considerably the power of the Mamelukes, a Christian military caste in Egypt, before whom the authority of the Sultan over the country had dwindled to mere shadow. This caste was however finally ruined by a collision with Mohamed Ali, an Alban soldier with strong following, who first in Sultan's name and finally in defiance of his power won the allegiance of the different races of the country and set himself as the virtual lord of the land. In 1823 this powerful Pasha conquered the northern Sudan and formed Khartum as the southern bulwark of his realm. In 1821, he built up an army and navy and was on the point of overthrowing Turkish power in Syria, when Great Britain intervened and by the capture of Acre compelled the ambitious Pasha to abandon his northern schemes and own once more the suzerainty of the Porte. From that time till the Great War Egypt was virtually under the suzerainty of the Sultan though actually a protectorate established by Great Britain exer-

* J. Holland Rose's "*The Development of the European Nations.*" P. 164.

Digitized by Arya Samaj Foundation Chennai and eGangotri

alone the supreme authority in the administration of the country.

What These Examples Show

These examples show that the relations between the subject and sovereign States are no longer considered as the domestic affair of any State but are matters for concern of the civilized world. So long strong individual States took upon themselves the responsibilities in interfering where interference seemed to them necessary but now the League of Nations has undertaken to do it. No doubt in the case cited the States in violation of all legal principles exploited their trust and appropriated all the profits of the countries and the trusteeship served only as preliminary steps to ownership. But this could happen only because of the unscrupulousness of the trusted powers and the absence of stronger forces to check them. The move though made in the right direction could not be rightly executed and that in the absence of a definite international public opinion.

Art XXII of the Covenants of the League of Nations

The principle of trusteeship however with regard to backward races has been finally accepted in international law by Art. XXII of the Covenants of the League of Nations, which in the opinion of some "creates a new Magna Charta for the weak, backward undeveloped peoples of the world." It runs as follows: "To those colonies and territories which as a consequence of the late war have ceased to be under the sovereignty of the States formerly governing them and which are inhabited by peoples not yet able to stand by themselves under the strenuous condition of the modern world, there should be applied the principle that the well-being and development of such people form a sacred trust of civilization and that securities for the performance of this trust should be embodied in this Covenant.

The best method of giving practical effect to this principle is that the tutelage of such people should be entrusted to advanced nations who by reason of their resources, their experience of their geographical position, can best undertake this responsibility, and who are willing to accept it, and that this tutelage should be exercised by them as Mandatories on behalf of the League. . . ." The concluding paragraph of Art. XXII is to the effect that "a permanent Commission shall be constituted to receive and examine the annual reports of the Mandatories and to advise the Council on all matters relating to the observance of the mandates." It is also provided that "the majority of the Commission shall be nationals of non-mandatory Powers."

This system, which is a kind of compromise between the proposition advanced by the advocates of annexation and the proposition put forward by those who wished to entrust the colonial territories to an international administration * aims at a better system of administration of backward people than prevailing at present in colonies, dependencies, protectorates or spheres of influence "in the sense that it would more effectively secure the liberty, material welfare and opportunity for development of the native inhabitants, and that it would more effectively secure the opportunity of all States of the world to equal participation in the trade resources of these areas." †

Three classes of mandates have been created *viz.*, (i) the class A; territories formerly belonging to the Turkish Empire are of this class. The Covenant says that those communities that formerly belonged to the Turkish Empire "have reached a stage of development where their existence as independent nations can be provisionally recognized subject to the rendering of administrative advice and assistance by a mandatory until such time as they are able to stand alone." (ii) the class B; these are established over peoples such as in Central Africa, whom the mandatory must govern "under conditions which will guarantee freedom of conscience and religion, the prohibition of abuses, such as, the slave trade, the arms traffic, and the liquor traffic, and the prevention of the establishment of fortifications or military and naval bases and of military training of the natives for other than police purposes and the defence of territory, and will also secure against opportunities for the trade and commerce of other members of the League". (iii) The class C; these are over peoples such as in South-Western Africa and the "South Pacific Islands" which, because of the sparseness of their population, or their small size, or their remoteness from the centres of civilization, or their geographical contiguity to the territory of the mandatory are to be administered under the laws of the mandatory as integral portion of the territory of the mandatories. It is expected, as that seems to be the only logical conclusion, that the 'C' class mandates will, in the course of time, pass to the 'B' class and next to 'A' class and ultimately to the status of independent territories, when the education and other requisites of their inhabitants have developed sufficiently to justify their inclusions to the society of higher nations.

The question naturally crops up here as what is the status of mandated States and their inhabitants and in whom legally lies the sovereignty of these territories. Unfortunately, the answer to that is not free from difficulty. There are three opinions on the matter. According to Lee "The allied Powers, by creating the mandatory system have placed the sovereignty of all mandated areas in suspense during the operation of respective mandates."§ Mr. Quincy Wright is however

* *Vide* League of Nations, Permanent Commission's Minutes 1st Session, 1921, p. 6.

† Quincy Wright's *Sovereignty of Mandates* in American Journal of International Law, 1924, p. 691.

§ Lee's *The Mandates for Mesopotamia and the Principle of Trusteeship in English Law*, p. 19.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of opinion that it will be a close approach to truth in ascribing sovereignty of mandated territories to the mandatory acting with the consent of the Council of League.* There are, however, some † who regard the mandatory as the real sovereign of the mandated States, the system of mandates being to them nothing but annexation with a promise of future liberation. That the mandated territories are not considered to be under the sovereignty of the mandatories nor are the inhabitants of these territories taken to be nationals of the mandatories are established by the decision in *Christian V. Rex* by the Supreme Court of South Africa, where it was laid down that "the Government of South Africa is not possessed of *Majestas* in the full sense of that term; in other words, it is not a sovereign and independent State ..... The signatories must have intended that such possessions should be dealt with as provided by Part I (The League of Nations Covenant) of the Treaty and they were placed at the disposal of the principal Powers merely that the latter might take all necessary steps for their administration on a mandatory basis..... The intention of the signatories seems to have been to place certain overseas possessions relinquished by Germany upon a basis new to international law and regulated primarily by Article 22 of the Treaty. In the same judgment the League of Nations has been referred to as "an association of states which, while retaining their own sovereignty and status, have agreed with one another to pursue a certain line of conduct in international affairs as laid down in the Covenant and to co-operate in certain matters of general concern. It functions through an Assembly, a Council and a permanent Secretariat, but none of these have any compulsory power over the individual states..... It is not a State, it owns no territory, governs no subjects and is not endowed with the attributes of sovereignty". The elaborate report submitted by M. Van Rees of the Parmanent Mandates Commission on the system of State lands in 'B' and 'C' mandated territories also shows that mandated territories are not considered to be under the sovereignty of the mandatories. He says that "under the mandate system the mandatory State is merely the governor of the territory which does not belong to it". § The conclusion is further irresistible from the disclosure made by representatives of some mandatories that States with which they had commercial treaties refused to give the benefit of these territories to goods from mandated territory, which is obviously considered as outside the Empire of the mandatories. Great Britain was unable to obtain favoured treatment as provided in their commercial treaties for goods from Tanganyika and South Africa being also similarly unable to obtain such treatment for goods from South West Africa *

It is seen that the inhabitants of the mandated territories whether native or of European origin do not automatically become nationals of the mandatory. "Persons under 'B' and 'C' mandates cannot be drafted for military service outside the mandated territory except for necessary defence; they are entitled to freedom of conscience and religion and to protection from slave, arms and liquor trade, they have a right to petition the League of Nations for redress of grievances and that they can enjoy the diplomatic protection of the mandatory while abroad". The Permanent Mandates Commission after considering the reports of the Sub-committee that was appointed to examine the question of the national status of these inhabitants presented some resolutions that were passed in the following terms:

"The Council of the League of Nations having considered the report of the Permanent Mandates Commission on the national status of the inhabitants of territories under 'B' and 'C' mandates:

In accordance with the principles laid down in article 22 of Covenant:

Resolved as follows:

(i) That the status of the native inhabitants of a mandated territory is distinct from that of the nationals of the Mandatory Power and cannot be identified therewith by any process having general application.

(ii) That the native inhabitants of a mandated territory are not invested with the nationality of the Mandatory Power by reason of the protection extended to them.

(iii) That it is not inconsistent with (i) and (ii) above that individual inhabitants of the mandated territory should voluntarily obtain naturalization from the Mandatory Power in accordance with the arrangements which it is open to such Power to make with the object under its own law.

(iv) That it is desirable that native inhabitants who receive the protection of the Mandatory Power should in each case be designated by some form of descriptive title which will specify their status under the mandate."

Only in case of South Africa authority was conferred on the mandatory to confer British nationality on the Germans of South-West Africa provided however that every such inhabitant might decline and those who did so might remain and would not be disturbed or molested in any way. No decision, however, with regard to the status of inhabitants in class 'A' mandates has ever been made but in view of the fact that these territories are provisionally recognized as

---

independent, that their inhabitants it is evident cannot be assimilated to the nationals of the mandatory.

The question remains for us to consider as to how the mandates are to terminate finaly, and the limit of the power of the mandatories in regard to these territories. The 8th paragraph of Art. 22 says, "The degree of authority, control or administration to be exercised by the mandatory shall, if not previously agreed upon by the members of the League, be explicitly defined in each case by the Council". Further in case of amendment of mandates the consent of the Council of the League is necessary. Neither the Council nor the League nor the mandatory can amend the mandates though the two together may do so. In the modification of the Palestine Mandate excluding the provisions relating to a Jewish National Home from the trans-Jordan region, modifications were actually proposed by the mandatory and became effective on approval by the Council. The amendment must however be in conformity with the letter and spirit of Art. 22, the powers of the Council and the Mandatory being defined within the bounds set by the article, they, too, cannot go beyond it.

It is contemplated in Art. 22 that communities under 'A' mandates as also under 'B' mandates will gradually evolve into complete independence while the 'C' class will pass as 'B' class and then in its usual course evolve into independence. According to Article 1 of the Covenant two-thirds of the Assembly may admit new members to the League and by inclusion of the madatory as a member of the League, the mandate may be *ipso facto* terminated. The mandatory may also renounce the mandate or legally terminate it with the consent of the Council, subject however, to the same limitations as in cases of amendments.

The League again seems to have retained no power to transfer a mandate to another state so long as the mandatory meets the terms of the mandates. Neither can the mandatory effect the transfer as is seen from the discussion in the Permanent Mandate Commission and the Council of the League over the assumed transfer of the mandate of Naum from the British Empire to Australia.

There are administrative recommendations and judicial decisions that provide for the observance of the conditions of mandate by the mandatory. In case the mandatory persists in violating the mandate, it would possibly justify the League to choose a new mandatory by replacing the present one, who has forfeited the trust reposed in her by the League. Prof. Henry Gondy says, "Undoubtedly on legal principles failure by the mandatory State to carry out its instructions will warrant revocation.....Nor is it clear what remedy the mandate will have, if the mandatory State neglects its duty under the contract, though probably withdrawal of the mandate would follow". *

Sir A. B. Keith on the other hand remarks that "the commission, of course, has no authority over the mandatory and the Council and the Assembly alike have not means of enforcing their views on the mandatories other than through the general procedure of the League of Nations which normally implies unanimity of opinion". † Generally however the League in terminating the mandate will have to follow the procedure as suggested by Prof. Keith and before taking any action a decision by the Permanent Court of International Justice will have to be obtained. In case the Court decides that the mandatory has violated the mandate, the final paragraph of Art. XIII of the Covenant, which runs as follows, will be applicable. The final paragraph as referred to is to the effect that "The members of the League agree that they will carry out in full good faith any award that may be rendered and that they will not resort to war against a member of the League which complies therewith. In the event of any failure to carry out such award, the Council shall propose what steps should be taken to give effect thereto".

The Essence

From the above it is quite evident that the administration of the mandante remains not the domestic concern of the mandatory but becomes an international concern, "the sacred trust of civilization", and the entire civilized world, those who are members of the League, (it practically now includes every civilized State save America and Russia) takes upon itself the responsibility to see that the trust is executed and the mandatory discharges its duties for the well-being and development of the inhabitants of the mandated territories.

Other Results Logically to Follow

Logically other results also seem to follow. The members of the League that are Imperial Powers, cannot possibly after this consistently refuse to follow the lead given by the League in the direction. Their policy, therefore, towards their own colonies and dependencies are bound to be shaped by the general principles of the League. International law has not yet gone far enough to hold that the relation between ruling States and their colonies and dependencies are matters for regulation by international bodies. So far the principle is confined only to mandated territories, but the extention of this principle to other subject territories is logically only a question of time.

The League, again, has appointed Great Britain, France, Belgium and Japan as the mandatories and these (over and above America) are the imperial States that count. These States cannot possibly follow one policy with regard to mandated States placed in their hands and another with

* *Journal of Comparative Legislation* 3rd. Sec. Vol. I, pp. 180, 181.

regard to States that came in their charge long ago.

Again, some subject States, *e.g.*, India and Egypt, have been taken as original members of the League and provided with representations in the Assembly and if their suzerain States flagrantly violate the principle of trusteeship in administering their territories while at the same breath advocating it in the case of mandated territories, the representatives of these subject States can at least invoke the moral pressure of the civilized world against the violation and in exceptional circumstances bring about the active intervention of the League. In the equal membership of India in the League of Nations, the seed has been sown which must, sooner or later, lead to the extension of the principle of Article 22 to subject territories other than mandated ones.

The next step, therefore, in the evolution of thought regarding acquired territories will be the recognition of the fact that the theory of trusteeship is not applicable only in cases where the mandatories and mandated States are concerned, but holds good everywhere, where the relations between suzerain and subject States are involved, and that all imperial states have the obligation to the civilized world at large for the administration of all colonies and dependencies to which full self-government has not been conceded. The admission of India and Egypt as original members of the League is a further instalment of the recognition of this principle and the consequent obligation of the suzerain States. The progress of this idea is naturally very tardy and interested attempts are doubtless being made and will continue to be made for a long time to prevent the logical development of the idea by eye-washes and camouflage, but if the progress is sustained, that end is bound to come, or the League of Nations will stultify itself. The history of the world, wherever there has been a struggle between a great idea and established facts, has always shown the triumph of idealism over convention and it is to be hoped that here too there will be no exception to the rule.

A NEW ORIENTATION OF WESTERN SOCIAL PHILOSOPHY

By H. N. SINHA, M.A.

Professor, Morris College, Nagpur

In recent years there has appeared a protest against the accepted values in social and political systems of the West. Eminent thinkers have begun to apply a pragmatic test to these values which have been found wanting in the context of the life in the 'Great Society.'* To this pragmatic inadequacy has been traced much of the evil in the Society and the State. Effectual remedies have, therefore, been suggested by offering a new synthesis of social life. This has resulted in an orientation of the social philosophy of the West, which in its broad principles, bears a close resemblance to the social philosophy of Ancient India.

The protest starts with a clear note of warning against the functional validity of the State and Society. When Earnest Barker speaks of the "Discredited State,"† on which Prof. Laski pours his poignant sarcasm; when Profs. Krabbe* and Duguit† assign new values to law in its political setting; when Dean Pound‡ preaches a new philosophy of law—its new social and ethical content; or when Prof. Tawney analyses the diseases of a society, that is all for "acquisition" and not for fulfilment, there is the surest indication of an attitude of mind that refuses to acquiesce in the existing order of things.

Prof. Tawney thinks that the Western Society has come to one of its turning points in history when "it should consider whether what it has done hitherto is wise, and if not wise to alter it."§ The turning point consists in the gradual disappearance of social equilibrium due to a lack of proportion between social rights and social functions, or what we may simply say between rights

and duties. Rights, he contends, are not properly related to functions, a phenomenon which in its social back-ground creates anomalies, and a temper that finds expression in the attitude of the Socialists, Syndicalists, etc. That these anomalies react on the political structure is also true. For, like the chasm between rights and duties of the individual there is a chasm between the rights and duties of the State. In the words of Prof. Laski, who is never tired of emphasizing the latter point, the modern state possesses rights which "do not involve, save as an act of grace upon its own part, an assumption of proportionate legal responsibility."* It is owing to this twofold—social and political—significance of this single phenomenon that Prof. Tawney's views are worth examining.

The rise of rights he traces to the gradual liquidation of the ethical competence of the State and the universal purpose of religion. Paradoxical as it may appear, it is a grim truth. For, when religion receded to the background, and thus made way for the supremacy of the State, individual rights replaced the synthesizing purpose of religion. This fact could be best explained in the words of Prof. Tawney himself. "During a great part of history men had found the significance of their social order in its relation to the universal purposes of religion... When the Reformation made the Church a department of the secular state, it undermined the already enfeebled spiritual forces which had created that sublime, if too much, elaborated synthesis." Clothed itself with many of the attributes of the Church arose the State. But in the eighteenth century "both the State and the Church had abdicated that part of their sphere, which had consisted in the maintenance of a common body of social ethics." That is to say, "opinion ceased to regard social institutions and economic activity, as amenable, like personal conduct to moral criteria." The result was the disappearance of "the idea of purpose," which consisted in "the conception of men united to each other and of all mankind as united to God, by mutual obligations." When mutual obligations, the purpose of social structure, ceased to influence the minds of men, what remained "was private rights and private interests, the materials of a society rather than a society itself." People "found in the beneficence of natural instincts" all the elements of the divine and did not hesitate to identify their instinct with God. "The result of such ideas in the world of practice was a society which was ruled by law, not by the caprice of governments but which recognised no moral limitations on the pursuit by individuals of their economic self-interest. In the world of thought it was a political philosophy, *which made rights, the foundation of the social order*, and which considered the discharge of obligations, when it considered it at all, as emerging by an inevitable process from their free exercise."*

Thus arose the theory of natural rights of man, which received its consecration from the French Revolution. In the meanwhile sovereignty of the people had been accepted as the basis of political practice in England, and the American and the French Revolutions imparted to it a comprehensive content and sacred character.† Sovereign national state, maintaining the rights of the individual came into existence. At this juncture opened an era of great industrial expansion. This expansion has been fully accomplished in the last century and a half, during which period the operation of the right of the individual, unrelated to adequate social service, has landed the nations of Europe in the unhappy predicament in which they find themselves today. They are today, according to Professor Tawney, in the throes of an Acquisitive Society, of which the tendency is *not* to "secure the fulfilment of tasks undertaken for the public service but to increase the opportunities open to individuals of attaining the objects which they conceive to be advantageous to themselves."§ Indeed as he says the interest of such a society is "to promote the acquisition of wealth." And since wealth controls the vital tissues of a society, and since the modes of its acquisition as well as the fields of its operation bind together the hinterland of states, the ramifications of this

society are therefore not only of national but of international importance. It is not necessary to discuss in this connection how the currents and cross-currents of capital, the extra-territorial interests of nations bear closely upon the problems of peace and security in the world today. In one of his latest essays Prof. Laski very correctly depicts how parties with vested interests seize upon that strong sentiment of the people, called nationalism, to wage wars, that are always to their own benefit.* This is only another way of saying that wars are waged by nation-states and that with their sovereignty they get a fillip from the operation of an acquisitive society. Therefore, the magnitude of competence for good and for evil of such a society could not be judged except in the context of sovereign state.

The State is the guardian of public order and of the rights of the people at home and abroad. For the successful fulfilment of these functions it has been invested in popular thought and traditional theory with sovereignty. The connotation of sovereignty is "the right to act without being called to answer for such policy as it (State) might consider essential to its aims.... In England for example the Crown cannot be sued save by permission of the Attorney-General. All sorts of limitations surround the effort to sue the American State ; ....."† Here lies the similarity between the claims of the Sovereign State and acquisitive society—claims to possess rights unrelated to adequate responsibilities. Indeed each supplements the other in its activities within as well as without national frontiers. Hence there is a good deal of truth in the saying, as Wells§ and many others have said, that claims of Sovereign States are incompatible with the needs of world peace.

To sum up then, in the social sphere the failure to relate adequately rights and duties creates fissures that manifest in the class-struggle, while in the political sphere it creates antagonism between nations that threatens to undermine the world-peace.

The structure of such a body-politic therefore needs, in the opinion of Prof. Tawney, radical overhauling. The new structure, he suggests, should be the Functional Society, instead of the Acquisitive Society Europe has today. Built upon the idea of purpose, it adopts the technique of creative functions. The social emphasis is to be laid on the performance of service rather than the enjoyment of rights, rights disproportionate to duties, rights based upon individual instincts. To use his own words: "A society which aimed at making the acquisition of wealth contingent upon the discharge of social obligations which sought to proportion remuneration to service and denied it to those by whom no service was performed, which inquired first not what men possess, but what they can make or create or achieve might be called a Functional Society."*

This view of social reconstruction, though it smacks of Socialism, is very different from Socialism. Tawney stresses creative functions of the individual which should determine his social status and rights. He does not, like the Socialist, stress merely the equalizition of the incidence of wealth in Society. That, indeed, makes a world of difference in his view point. For, if creative work is made the basis of rights, social esteem may be considered as an adequate supplement to, if not the absolute substitute for, equal distribution of wealth in return for the individual's function in Society. Each supplementing the other would create a more appropriate standard of social values than otherwise. That is to say, a right might be conceived in terms, other than merely equal distribution of wealth. Not that equalizing the incidence of wealth as far as possible is of doubtful effect ; but that, that alone does not make for an adequate standard of social values. If creative work is made the basis of the new Society then it is not hard to imagine how many creative functions could not be adequately valued in terms of wealth only. In a Socialist Society, for example, it will be difficult to determine the claims and values of a Newton, a Lincoln, a Cavour or a Tagore in terms of wealth. Hence while the inadequacy of the Socialist doctrine of equalizing

the incidence of wealth as the only means of social reconstruction is apparent, the principle of adopting creative work for the same purpose is far more satisfactory. And again this has the advantage of harmonizing natural or providential inequalities in man with the standard of values in Society.

At any rate, whether with the principle that Prof. Tawney suggests, the reconstruction of European society is or is not feasible, it is beyond doubt that the structure of ancient Indian Society the ruins and ashes of which remain today, had been built upon the very same principle. It was in India that "the main subject of social emphasis" was "the performance of functions." Dharma or social obligations formed the foundation of society. Of course, religious obligations came in that category of social obligations, for religion like many others, is a social institution, and Indian Dharma was extremely comprehensive in connotation. It exactly expresses what Prof. Tawney would have for the foundation of his Functional Society. But it has also its inherent weaknesses, which result from crystallizing functions in groups. Further if it does not relate itself to the peculiar environment in each age, it is likely to degenerate into a system of castes as in India.

But on the whole a Functional Society does not possess, Prof. Tawney himself says, that drive and force which is the hall-mark of an Acquisitive Society. In a telling passage, he analyses the facts and foibles of an Acquisitive Society, and unwittingly offers an explanation of the fall of ancient Hindus.

"The secret of its triumph," he says, "is obvious. It is an invitation to men to use the powers with which they have been endowed by nature or Society, by skill or energy or relentless egotism or mere good fortune, without enquiring whether there is any principle by which their exercise should be limited,... By fixing men's minds not upon the discharge of social obligations, which restricts their energy, because it defines the goal to which it should be directed, but upon the exercise of the right to pursue their own self-interest, it offers unlimited scope for the acquisition of riches, and therefore gives free play to one of the most powerful of human instincts. It assures men that there are no ends other than their ends, no law other than their desires, no limit other than that which they think advisable. Thus it makes the individual the centre of his own universe, and dissolves moral principles into a choice of expediencies. .. Under the impulse of such ideas men do not become religious or wise or artistic: for religion and wisdom and art imply the acceptance of limitations. But they become powerful and rich. They inherit the earth and change the face of nature, if they do not possess their own souls."*

Prof. Tawney goes on in this strain to condemn the Acquisitive Society. He says people in such a society lose their own souls; but nevertheless "they inherit the earth." We have only to look back to our Pre-Muhammedan days, to become convinced of the grim truth, that India could not inherit the earth because she possessed her own soul. Prof. Tawney's ideas have the stamp of the Orient—the soul, religion and God ;† but how far Europe is capable of realizing them in her life is difficult even to conjecture.

---

* *Acquisitive Society*, pp. 32-34.

† Is it because he was born in Calcutta ?

There must be a firm assertion of principle and of decorum. Personal considerations must not affect the truthful and uncompromising discharge of public duty by members of the House, even if private friendships have to suffer thereby.

TRUSTWORTHY INDIAN HISTORY

(A Review)*

By JABEZ T. SUNDERLAND

IT is very encouraging that of late we are getting reliable, and in a large measure adequate, histories of India under British rule. written from India's side, which let us know the real nature of that rule as the Indian people have felt it, and answering the question, whether they have regarded it as a benefit or an injury. We have numberless histories, long and short, in the form of books and of encyclopaedia articles, written by the British describing the rule from their side. Naturally, these almost without exception have represented it as a great blessing to the Indian people,—something which has been slowly lifting them up from semi-barbarism toward real civilization, and giving them for the first time a true religion and a wise, just and benevolent government. Great Britain has had the ear of the world, and as a consequence these histories have gone everywhere, creating the almost universal impression that their picture was true. That it was not true the Indian people have always affirmed, but they possessed no adequate histories of their own to tell the real facts as they saw and experienced them.

As has been said, of late a change is coming. They are getting histories written by their own scholars, which, sooner or later, will let the world know (if in spite of British censorship and almost universal prejudice they can reach the world) that the British domination of India has been exactly the same kind of thing that forcible rule of one nation by another has been, everywhere in the world, and has produced exactly the same kind of effects. That is to say : materially and economically it has exploited the people of India, and spiritually it has been a tremendous force operating all the while to create in them a slave mind.

Of the histories of British rule written by Indian scholars, I may name, as probably the best up to the immediate present, the monumental volumes of Ramesh Dutt and Major Basu. Now, however, we are given another work, fresh from the press, which seems likely to be assigned a place beside these, namely, *Landmarks in Indian Constitutional and National Development (1600-1919)*," by Gurmukh Nihal Sing, Professor of Political Science in the Hindu University of Benares. Professor Singh's book is large (710 pages), well printed, attractive in make-up, and thoroughly documented. Its first 50 pages are devoted to *The Company Rule* in India, from the formation of the London Company in 1600, and the landing of the first traders in India, down to the Mutiny. The rest the great body of the work, gives us *India Under the Crown*, down to and including the terrible tragedy of Amritsar in 1919.

The author traces clearly, in much detail, and with a notable fairness of spirit to all parties (British as well as Indian), the beginnings and tantalizingly slow progress of what are called "Representative Institutions," and "Reform Schemes," particularly the famous "Morley-Minto Reforms" and the "Montford Reforms." What is very important, in connection with this, he gives us a fairly full history (perhaps the best we have) of the "Indian Nationalist Movement" and its organized heart, the "Indian National Congress," unraveling with a skilful hand the various undertakings of the Government to meet the demands of the Indian people for self-rule, by granting them something having the appearance of self-government but in reality only a mockery, or by offering to them something really good with one hand and taking it back with the other. The British have made great claims that they were introducing "Constitutional Government" into India, as a great boon. Professor Singh shows how little the great word "constitutional" can be made to mean, and how "Constitutional Government" may be so shaped as to be as autocratic as any other-form of government.

It is difficult to select out any part or parts of this important book before us, as more interesting or more valuable than the rest. But whatever else is missed by readers, they should not miss the last chapter on "The Amritsar Tragedy."

* *Landmarks of Indian Constitutional and National Development (1600-1919) Gurmukh Nihal Singh. Benares, India, 1934.*

A leader must not try to please. He who tries to please is weak in the eyes of the man upon whose pleasure he depends. He who wishes to lead the way must himself represent the standard of what is pleasing.

GEORGE BERNARD SHAW'S MEMORIES OF RODIN AND OTHER GREAT ARTISTS

A VISIT TO THE SUMMER-HOME OF THE WORLD'S MOST FAMOUS WRITER

By MICHAEL LORANT

A room at the Malvern Hotel, in Malvern, some time ago.

George Bernard Shaw is sitting crosslegged in a chair and talking "nineteen to the dozen."

Professor Strobl, the famous Hungarian sculptor, is modelling the great jester's head in clay, visibly aflame with inspiration. I, the humble scribe, am the only inactive member of the party. I just listen.

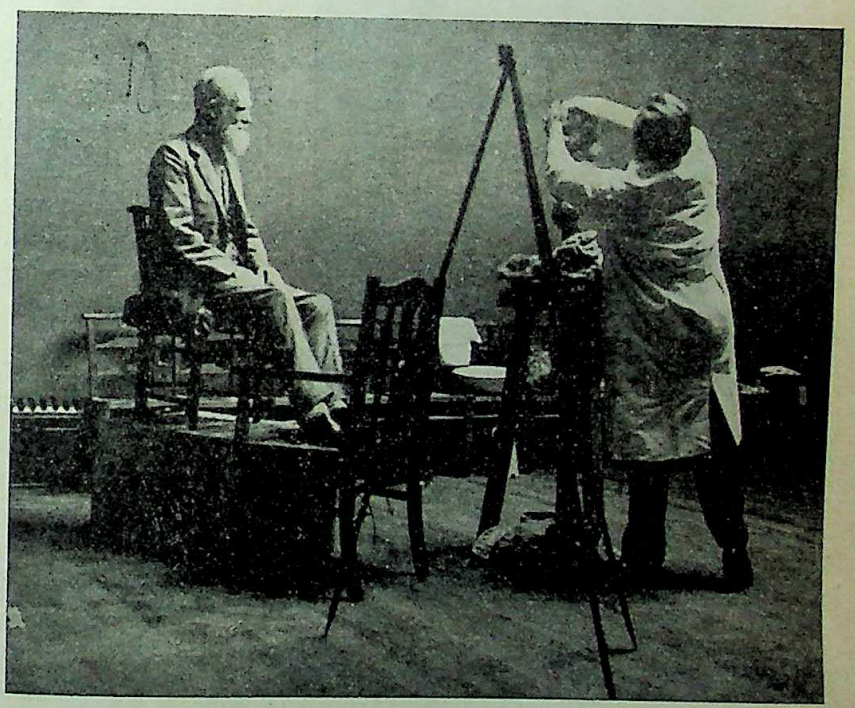
I could not put a word in edgeways even if I wanted to, which I do not. G. B. S.'s talk is highly entertaining, and the matter of his talk is made doubly fascinating by his manner of delivery. It clearly shows that he is out to entertain George Bernard Shaw rather than the sculptor and the scribe.

He talks easily, with a youthful zest that is amazing in a man of his years. Sometimes he ends a sentence with a loud chuckle, one bushy eyebrow darting up out of alignment with the other. But all the time he gives the impression of a bundle of electricity, vital and sparkling, and restless even in repose.

How he acquired his present cast of countenance is one story which he obviously enjoys telling.

Ordinary mortals are content to wear whatever features Nature has given them, and the majority of us are probably thankful that Nature has not been even less kind to us. Not so G. B. S. It appears that he has deliberately moulded his face to a definite pattern.

"When I was a boy," he says, "Gounod's 'Faust' was much in vogue. My mother was an opera singer and I often went to see and hear her in this play. I was particularly struck by the appearance of Mephistopheles—the conventional mask, you know. I thought the Devil had a most interesting face, shrewd, intelligent, with nothing commonplace in it, and I decided to develop just such a face. This ambition never left me, and although I had a round face then, through sheer force of concentration on the wish that it should be so, my face gradually became longer and longer, until it assumed the Mephistophelean expression it bears today. The process is still going on, and if I lived to be a hundred my



George Bernard Shaw sits for a Hungarian artist. Prof. Sigmund Strobl, head of the Budapest Academy of Fine Arts, making a bust of G. B. S. at Malvern

Digitized by Arya Samaj Foundation Chennai and eGangotri

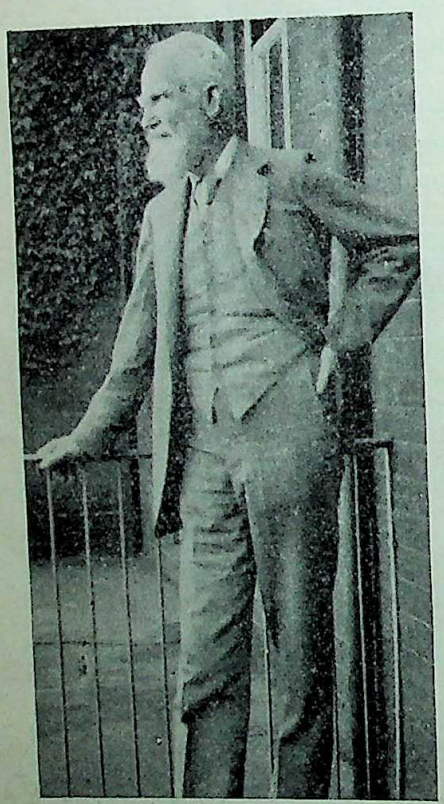
face would be as long as this"—and he extends his arms wide to indicate length.

The occasion reminds him of sittings he gave to some other sculptors, Rodin and Prince Troubetzkoy amongst them.

Of Rodin he says :

"Rodin had no interests outside his art. He was the most painstaking sculptor I have ever met. I gave something like thirty sittings, in as many consecutive days, at his studio in Meneon.

"Rodin took a large number of profiles, adjusting my face by a fraction of an inch



George Bernard Shaw
Photo : Michael Lorant, London

for each—spinning my head round by degrees. He took an immense number of measurements and made so many pencil marks on the clay that he used up three pencils before the sittings were over.

"To keep the clay moist he used to take water into his mouth and spit it on the model. But so deeply absorbed was he in his work that at the end of each sitting I was soaking wet, as if I had been out in the rain without an umbrella.

"Somewhere near the thirtieth day I asked him when the bust would be finished.... 'Finished ?' he said in surprise ; 'why, I have hardly begun !'

G. B. S. as seen by Lorant

"From the clay model he made two casts, one in marble and one in bronze. The bronze one is in my possession, while the marble one is in Dublin. For some unfathomable reason my friends and admirers have covered this marble bust with their pencilled signatures.

"Rodin was a passionate collector of pebbles. He would go out to the beach, or into the street, and pick up any pebble presenting in his imagination a resemblance to human features. He also collected large pieces of rock, and for the same reason. At first he accommodated these treasures in glass cases in his own house, then, when the collection grew too big for that, he rented a separate building for them.

"It was a sign of the highest favour on the part of Rodin to present someone with one such pebble or piece of rock.

"To judge by his bust of me, Rodin saw me as a French *petit bourgeois*. Of course, all the other sculptors who have made busts of me have endowed me with some of their own national characteristics.

"For instance, Prince Troubetzkoy, the Russian sculptor, saw me as a Russian intellectual.

"Prince Troubetzkoy's method of work was the exact opposite to that of Rodin's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Troubetzkoy worked very fast. He took hardly any measurements, relying almost entirely on his vision and inspiration.

"Davidson, the American sculptor, apparently saw me as a profound philosopher."

From sculptors G. B. S. turns to Shakespeare, and as Professor Strobl is an Hungarian he comments on Shakespeare's popularity in Hungary.

"It is only natural that Shakespeare should be more popular in Hungary than in England. Shakespeare wrote three hundred years ago, in the language of three hundred years ago, which the average Englishman does not fully understand. On the other hand, the first Hungarian translation of Shakespeare was made only eighty years ago, in language that Hungarian theatre-goers understand. So Shakespeare must be more effective in Hungarian than in English."

ANNUAL REPORT OF THE INDIAN STUDENTS' ASSOCIATION, DRESDEN, GERMANY

DURING the year 1932-33 the Indian Students' Association gave farewell to two of its members, Miss Zora Mumtaz, former president of the Association, and Dr. Y. G. Lele, former secretary. Miss Mumtaz had a brilliant career in the famous Mary Wigman Dancing School and took her diploma with considerable distinction. She has now returned to India and is a teacher in a dancing school in the province of Bombay. Dr. Lele took his doctorate in Mineralogy. His thesis has been highly praised by the professors. He has also returned to India.

In the second week of November 1933, a meeting of the Indian students' Association was convened by Mr. S. C. Roy to elect the office-bearers of the winter-term of 1933-34. Mr. S. A. Ali was elected as Secretary and Mr. S. C. Roy as Indian Representative to the Foreign Students' Union of the Dresden Polytechnic University. Mr. N. S. Bhagawan, who presided over the meeting, welcomed the new members Mr. K. P. Jha and Swami Jnanananda Giri on behalf of the Association. Mr. Jha, who has been recently elected as a Member of the Association of German Engineers by submitting an original thesis, is taking practical training in different engineering concerns. Mr. Giri is engaged in working on Indo-German Philosophy and writing books thereon.

A Ball is arranged every year by the Foreign Students Union in Dresden to help poor Foreign and German Students, studying in the Dresden Polytechnic University. This year, for the second time, the Indian Students' Association took part in the Ball.

Professor Reuther, formerly Rector of the Polytechnic University, and his wife, and Professor Meister and his wife and daughter were kind enough to help the Indians in making the Indian Section a success. Prof. Reuther, who had been in India several times and had the opportunity of studying Indian Architecture, built the Indian Section after the Indian style to represent true Indian character. Our National Flag, which was also placed there, added to the beauty and grandeur of our section. Twenty-six nations had their different sections, but our section was conspicuous and highly appreciated. The success

Indian Dinner Party with Mr. Subhas Bose

Left to Right:
Mr. J. Giri, Mr. B. S. Sarma, Mr. K. P. Jha, Mr. S. C. Bose, Mr. S. C. Roy, Mr. N. C. Chatterjee and Mr. S. A. Ali.

Digitized by Arya Samaj Foundation Chennai and eGangotri

of our section was mainly due to the experience and hard labour of Prof. Reuther, to whom we owe our gratitude. We are also thankful to Mrs. Reuther, Prof. Meister, his wife and daughter. Some of the Indians were present in their characteristic national dress. We sold there chiefly eatables prepared in Indian fashion. Two of us got some pecuniary help out of the profit of the sale proceeds of the Indian section.

By the first week of April a meeting was convened by Mr. N. C. Chatterjee to elect the office-bearers for the summer-term. Mr. S. A. Ali presided. Mr. Chatterjee was elected Secretary of the Association and Mr. Roy, as previously, Indian Representative to the Foreign Students' Union of Dresden Polytechnic University. A resolution was passed in the meeting, that a memorandum should be drafted by Mr. Chatterjee to submit to the German Authorities for representing the grievances of Indians residing in Germany, on the lines adopted by the Indian Associations of Berlin and Munich.

Our Association had the pleasure to have the company of Sreejut Subhas Chandra Bose for a couple of days. Sj. Bose arrived in Dresden from Berlin on the evening of the 11th of April, 1934. We Indians, several Press representatives and some German friends attended the station to welcome him. Sj. Bose who was a bit tired, requested the Press representatives to meet him next morning. We arranged his stay in Hotel Europahof, one of the best hotels in Dresden. Next morning, after giving an interview to the Press representatives, Sj. Bose went, accompanied by some of us, to see the beautiful surroundings of Dresden. In the evening, Sj. Bose and some of the Indians visited the famous opera of Dresden. On the 13th an interview was arranged with the Mayor of Dresden, who sent Mr. Kipping, the City-councillor, to visit Sj. Bose and to accompany him in seeing some of the municipal works. Mr. Zorner, Mayor of Dresden, received Sj. Bose in the Town Hall and showed him round. Sj. Bose had a high appreciation of the Town Hall, which is known to be the best in Germany. Afterwards he visited the world-renowned Hygienic Museum.

Indian Ball in Dresden, 1934

Sj. Bose gave a lunch party to the Indians and a photograph was taken. In the afternoon he gave an interview to Prof. Reuther of the Dresden Polytechnic University to discuss about the situation of the Indian students here. In the evening he left Dresden for Prague. All the Indians accompained him to the station and gave him a hearty send-off.

KEY TO THE FRONTISPIECE

The Palace Doll

The artist has depicted the petrifying effects of the stone-walls, and the still more rigid walls of conventions of the palace on human emotions.

This stately lady—a royal plaything—has all the outward display of beauty and grace of feminine form, enhanced by the craft of the weaver and the artisan. But the glow of youth and life is no more there, than in a waxen doll—such is the soul-destroying effect of unnatural bonds of royal life. Like the "Lady of the Shallot" her life is but a shadow and reality means death.

PROTECTION OF AFRICANS AGAINST INDIANS BY EUROPEANS

By RAMANANDA CHATTERJEE

On the 5th of June last Reuter sent the following message from Pretoria :—

> An important step for appeasing British and Dutch racial prejudice has been taken by the amalgamation of the Nationalist Party, led by the Prime Minister, Mr. Hertzog, and the South African Party, led by General Smuts, embodied in an agreement wherein the leading principle will be Government of the country in the spirit of South African national independence.
>
> The maintenance of the existing relationship between members of the British Commonwealth is affirmed ; also co-operation with the other members of the British Commonwealth.
>
> The agreement sets forth, *inter alia*, that the Party stands for the protection of the European, the coloured and native populations against Asiatic immigration or competition but maintaining the existing rights of Asiatics now legally domiciled in the Union.

By 'Asiatics' are meant for the most part 'Indians'.

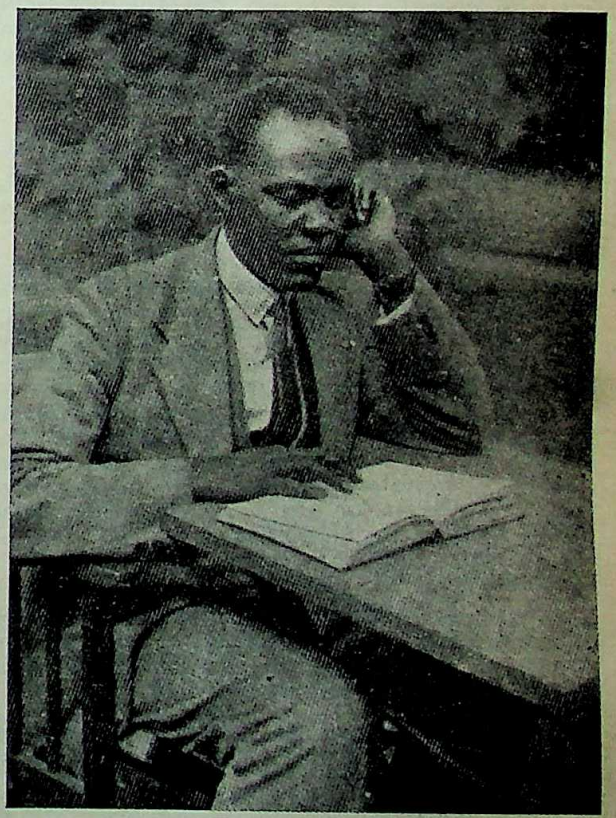
The last paragraph of the message produces the impression that in Africa it is the Asiatics, *i. e.*, Indians for the most part, who have enslaved, oppressed and exploited or intened to enslave, oppress and exploit "the European, the coloured and native populations", and so the three aggrieved parties require protection.

It is not my intention to say anything in this article in defence or elucidation of the position of Indians in any part of Africa. I want only to give the reader some facts to enable him to judge whether the white population of Africa are protectors of the native Africans. The facts will be taken from a book named *An African Speaks For His People*, by Parmenas Githendu Mockerie, with a foreword by professor Julian Huxley, published this year by Leonard and Virginia Woolf at the Hogarth Press, London.

Professor Julian Huxley says in his foreword that this volume is most definitely the personal production of the author, who is a Negro of the Kikuyu tribe. What he writes in this book is not, of course, applicable in every detail to the treatment of Africans by Europeans in all parts of Africa where Europeans are the rulers. But what Europeans have done and intend to do in Kenya is typical of their actions elsewhere in Africa.

Europeans have told the world public that they have introduced improved systems of administration. But professor Julian Huxley says :—

> "It is a surprise to most people to learn that many East African tribes were democratic in constitution, [which "provided full liberty for every citizen to express his opinion,"] and that the new system of rule by native chiefs, imposed by Government, is to them a step backward, while they regarded the native Government of Uganda, often held up as a model of indirect rule, as savouring of tyranny."



Parmenas Githendu Mockerie

But let me proceed to the book itself, which consists of six chapters on a Visit to Europe, Life in Kenya, Kikuyu Tribal Institu-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tions, Kenya under British Rule, Education, and a Social Survey in Kikuyu, with an appendix containing the Memorandum of the Kikuyu Land Board Association. There is no trace of emotion in what the author has written. It is a calm, clear and judicious statement of facts, leading the reader to believe that Mr. Mockerie is a truthful writer.

He, with another Kikuyu delegate, went to England "to represent the Kikuyu people before the Parliamentary Joint Select Committee on Closer Union in East Africa, which was sitting in London." The two delegates left Nairobi by train to take a steamer for England. At the Nairobi station,

> Among the crowd were a few Indians and a white detective. One of the Indians discouraged me while I was shaking hands with people on the platform by saying to me, "How can these poor people succeed in their struggle; don't they realize that only money talks?" This made me think that the Indian was an enemy of our cause but I realized later when I arrived in England that he was trying to give me a hint. I replied to him that although money talks, the committee, which we were going to see, treat the representatives of the poor in the same manner as those of the rich. He may have had some experience of British politics in the past of which I had no knowledge.

This knowledge, which disillusioned him, the author acquired after reaching England, as narrated by him in the passages quoted below:

> After a few days' stay in London we learnt that the Joint Select Committee would not see any more witnesses on East African problems. The hint that I was given by an Indian at Nairobi Station that only money talks began to revive in my mind. To my surprise we received an intimation from the secretary of the Committee that the hearing of witnesses had been closed. Nevertheless we submitted the K. C. A's memorandum in which were embodied the wrongs from which Kenya Africans were suffering.

The author adds:—

> It is curious that when the memoranda which were submitted to the Committee from different individuals were published in the official Blue Book our memorandum was not included.

The future historian, depending on the infallibility of parliamentary Blue Books, will write that, though these Africans were asked to choose and send their own witnesses to the Joint Select Committee, they sent none—they did not even submit a written memorandum; whereas the fact is the witnesses were not allowed to appear before the Committee and the memorandum submitted by them was not printed in the Blue Book! Thus is history made by imperialists! This memorandum is reproduced in the appendix at the end of the book. The extracts which I shall make from it will show why it was not thought prudent to include it in the Blue Book.

Some of the author's experiences in the journey show how even educated Negroes are treated in Africa and elsewhere by Europeans.

> On our way in the train we ordered supper and asked for a table to be provided in the dining-car for both of us. The steward told us that as we were Africans (we were travelling second class) we were not entitled to use the dining-car, which was reserved for Europeans. He said that the meal could be brought to our carriage and we could eat it there. I said to him that we would not mind being served in the carriage, as the important thing was not the dining-car, but to see that our stomachs were not empty. I asked the steward how much we would pay, and he answered that our supper would cost us four shillings each, the same amount as that paid by the Europeans. He added that we would be served after them. It was very late when he brought the supper, and when I tested the soup it made me feel sick, as it was very cold, being what was left after the Europeans had been served; and afterwards I could not fall asleep because I felt hungry, for although I had paid for the supper I did not eat it.

At Magadoxo, an Italian Somaliland seaport,

> We went on the shore and tried to get a taxi to take us about the town. We could only find one, which we tried to get into, but the driver told us that it was reserved for European passengers, so we walked on and came to a street which was guarded by policemen who prevented us going through it, because the only people who could go through were Europeans.

But he is fair to the Italians. He adds:

> I was pleasantly surprised at the relations between Europeans and Africans at Massawa, an Italian Colony on the Red Sea, where I found Africans mixed with Italians in Italian hotels; this was the first time I had seen Europeans catering for Africans in their hotels.

Sometimes European Christian missionaries are more unbearable than other Europeans, because to racial arrogance a European missionary may add his "spiritual" and "theological" contempt for the heathen. The author unluckily met such a missionary in his voyage. Says he:

> On the boat we were well treated by the European passengers except by a missionary who had been in Kikuyu for sixteen years and was going to Italy for furlough. We had a little quarrel with him when he told us to stand up when a European was strolling on the deck beside us. We told him we were not acquainted with

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

some of the passengers, and if we stood up whenever a European was passing we should get tired before we got to our destination. At this reply he became very angry and began to rail against African societies, how they collect funds and organise themselves and become independent of the missionaries. Next morning, when I found he refrained from speaking to me, I reminded him of the Biblical phrase "Let not the sun go down upon your anger." From this time onwards we were friendly until we left the boat.

In August 1931, when Dr. Drummond Shiels, then Under-Secretary of State for the Colonies, gave a lecture at Farnham in Surrey, it was pointed out during question and discussion time that, in Kenya,

> African societies were not free to hold meetings on political and economic matters unless the organisers had a written permit endorsed by a European officer, on which the nature, place and duration of the meetings was specified ; * * *

According to recent estimates the population of Kenya consists of 3,000,000 Africans, 45,000 Indians, 12,000 Arabs, and 17,000 Europeans. To the Kenya Legislature Europeans return 11 members by election, Indians 5, and Arabs two.

> The African community has no direct representation on this official body, although its direct taxation to the Central Government is greater than that contributed by the non-Africans.

In order not to exceed the space at my disposal I have to pass over much relevant and telling matter. I shall conclude with some extracts from the memorandum which the African delegates submitted to the Joint Select Committee but which has not been printed in the Blue Book.

The Kikuyu Land Board Association which sent Mr. Mockerie and Mr. Kenyatta to England to give evidence before the Joint Select Committee, is described in its Memorandum in the following words :

> Our Association is not only gagged but crippled and tied by hands and feet, for we are not only denied the freedom of speech and press, but we are also forbidden from holding meetings and even collecting funds to enable us to make our voice reach the ears of the civilised world.
>
> Our honest efforts for making the truth known to the outside world and especially to the British people is construed as seditious and revolutionary while in reality we are rendering a real service to the British people by acquainting them with the real feelings of the people whose destinies they have taken upon themselves to rule and control. It is nothing short of treachery and trickery to make misleading and untrue statements in a flattering manner with a view to please the authorities in a manner which will win their favours.

"The Land We Lived In" is described in the Memorandum thus :

> In the days when, what is known as "Kenya Colony" was to the civilised world "Terra Incognita,".....we the Kikuyu people lived in this Country as nature meant all mankind to live.
>
> The land with ravines, the rivers, the forests, the game and all the gifts that nature has bestowed on mankind was ours and above all we had the FREEDOM.
>
> It is true our safety was endangered by the occasional inter-tribal warfare, raids by slave traders, pestilence and famine, but we often wonder if we are safe from such misfortunes today. We were nevertheless a free people in the truest sense of the word.

Then follows a description of "The Land We Live In", from which we reproduce a few passages below.

> Our land was never won by conquest, by the force of arms, nor even by peaceful penetration. There was a period when all the three nations, the French, the German and the British, sought to enter into friendly treaties with us. Some of the old Chiefs preferred the British and entered into friendly treaties, the copies of which we did not keep as we never doubted the word of the White Man, but all these treaties were forwarded to and approved by the Foreign Office. It was represented to us that the Union Jack was the symbol of Peace, Justice, Light and Liberty, and indeed these symbols can still be traced on the coins which were introduced by the Imperial British East Africa Company in the commencement.....We were told there would, as the result of the new friendship, be no more inter-tribal wars, no raids by slave-traders and that we will enjoy a perfect freedom and peace in our country.

But these simple-minded Africans have been disillusioned.

> It is true that the scourge of the inter-tribal warfare and slave-raiders' invasions have ceased in the sense we knew them before the British advent, but while the number of men who have been killed in the Great War, in which we were not in the least interested or involved, has probably exceeded the number who were killed in the local warfare for a preceding century and while we have enjoyed immunity against slave-raiders, we are expressing the true and innermost feelings of our people (which probably no chief will be frank enough to tell you, fearing that if they dare tell the truth it might result in their rank or position being reduced) when we say that it is felt that the whole nation has been enslaved in their own country without being removed along with any slave gangs, the only difference being that while the slave-traders provided the slaves with a home and were responsible for their food and upkeep, we have been robbed of our homes in our own homes and such endless restrictions have been woven round us by means of a series of foreign laws the multiplicity of which baffle even the intelligence of professional lawyers. We feel we are treated like wild animals brought into captivity for whom even the ordinary consideration of space for free movement according to the captured animals is no longer available.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

As regards deaths from disease, the Memorandum observes:

While the Medical Department has done a lot to save us from disease and pestilence the number of our people who succumbed to the ravages of the Influenza of 1919, a by-product of the Great War, has probably exceeded the number of all the victims of local disease and pestilence for a whole generation.

The Word "Reserve" is next explained:

The term "Reserve" in reality does not mean a location which has been reserved for us but in practice means an unfenced detention camp out of which we dare not move with any degree of of freedom.

As for game and fuel, etc.

We cannot dream of touching the plentiful game which was once under our domain. If we dare touch a stick of fuel in the forests which were at one time ours, we have to pay the penalty, we have to pay heavy rents and taxes for remaining in a state of captivity on a fraction of what was at one time our own land, we have lost all the cultivation land which had been dearly bought by our ancestors from the Wandorobo.

Real slavery has been introduced in a disguised form.

We are forced by various circumventing influences to submit to a form of slavery in the shape of labour which is designed to be excluded from the sophisticated definition of slavery or forced labour, but which in effect means nothing but real slavery and forced labour.

All these and various other statements in the Memorandum are supported by extracts from statements made by British administrators and missionaries.

The fact that the native Africans have been deprived of their land "has been described by the British administrators themselves as 'Robbery of Land'." This is proved by extracts from the report on Native Land Tenure in Kikuyu Province.

The Africans have no hope of undoing this "Robbery of Land".

What could our helpless people do to challenge this glaring "Robbery of Land". They were at that stage hopelessly incapable, owing to their ignorance, of making any representation to the Imperial Government to counteract the activities and hunger of the European settlers for obtaining other peoples' land, they (the Kikuyu) were certainly neither then nor are they now in a position to regain their land by the force of arms.

The reason is obvious.

Had our land been thus robbed by any other native tribes armed with similar weapons as ourselves, the Kikuyu would certainly have given their lives for their property, but confronted by the people with the latest and most formidable weapons of precision and destruction such an idea was and is unthinkable.

The result has been complete distrust of the British Government.

But forcible misappropriation of land completely shattered to pieces the confidence of the Natives for the word of the Sirkari who had promised that they had come to our land as our friends and protectors.

No wonder then that the Memorandum says:

What was originally meant and promised to be a friendly State to the British people was proclaimed a protectorate and subsequently annexed as a "Colony" in 1921! Without any consultation with or information to the aborigines.

Regarding a War Time Pledge it is stated:

When the Great War broke out and the Government was in dire necessity of men, our people were asked to supply men. We were naturally not very enthusiastic in helping a Government who had deprived us of our homes and land in the past, and it was at this juncture that a definite pledge was given to the Wakikuyu by His Excellency Sir Henry Conway Belfield, on August 20th, 1914 (S. 211) *that there will be no more interference with our land in future.*

After this promise the Africans supplied men to the Carrier Corps. How was the promise kept?

As a final reward for the war services rendered by the Kikuyu community, the Land Settlement Commission, notwithstanding the definite assurance given by the Governor on August 20th, 1914 (S. 211), recommended that 83,000 acres of the Kikuyu Reserve Land and 20,000 acres of the Forest Reserve land between Kikuyu and Kijabe should be given to the European Soldiers who had served in the same War...

Not only this, but while these [native African] men were on War service the hut and poll-tax was collected with great severity from their mothers and fathers ..

Some paragraphs are devoted in the Memorandum to the subject of "Extermination of Natives", from which I gather that in May 1917 the population of the Kikuyu Reserve was 968,703. In November 1929, the population had been reduced to 708,394, showing a decrease of 260,309.

"Out of this decrease 27,096 are traced as having gone on European firms as squatters."

These figures clearly show that...the number of Wakikuyu who have either perished or are leading a life of exile, being scattered all over Africa, is no less than 233,213. This staggering figure, showing the victims of the European invasion of our country, is enough to disintegrate any virile community, and serves as an indication of the complete annihilation of our people in the course of a short period if the process of driving us out of our homes continues by the diverse ways and means which have been at work heretofore.

LITHUANIA, THE MYSTIC LAND OF SONGS

By A. POSKA

Editor's Note—The following telegrams appeared in the dailies last month:

Riga, June 7.

The garrison at the Lithuanian capital, Kovno, attempted a *coup d'etat* to establish dictatorship under ex-Premier Voldemaras who was exiled from the capital in February last. Censorship prevents the ascertainment of details but a semi-official report says that some firing occurred at the night time but no harm was done.

Riga, June 8.

The insurrection has failed. Voldemaras has been arrested. It is likely that the Government will be reorganized and include some of Voldemaras' adherents, perhaps Voldemaras himself.

A later telegram relating to Lithuania's ex-premier runs as follows:

Kovno, *June*, 18

The ex-Premier of Lithuania, Voldemaras, was court-martialled for high treason and sentenced to 12 years' hard labour for participation in the recent attempted military *coup d'etat*.

So little is known of Lithuania in India that the article printed below from the pen of a Lithuanian scholar now in our midst will, it is hoped, prove interesting and instructive.]

WHERE the Baltic in its bend on eastern shores washes out amber, there lies the mystical country of ever-sounding songs, Lithuania. In the past the country was entirely cut off from the rest of the world by impenetrable marshes and lakes from South-West, by thick endless forests and lakes from the East and North and by the Baltic Sea from the West.

Modern Lithuania lies between Russia, Germany, Poland and Latvia.

The *topography* is marked by low plains with some small hills covered by thick forests, marshes and turf-fields. The country is watered by the Nemunas and its tributaries.

The *climate* is semi-continental: with long rather cold and windy springs, short temperate summers, long dark, foggy and rainy autumns and chilly but bright winters. The length of day and night varies from 5 to 17 hours. Sunny days vary from 80 to 120 per year. Very dry or extremely rainy years are rare.

About three-fifths of the ground are cultivated—the rest are forests, marshes or lakes. The chief products of the country are rye, wheat, barley, oats, potatoes, vegetables and, especially, flax and linseed. Amongst the trees oak, birch, fir and pine are prominent in the forests, while pear, apple, cherry and plum trees in the gardens yield most delicious fruits. Of minerals alabaster, amber and salt are found, and there are, in some parts, very effective springs of healing, sulfuric iodized and other mineral water.

A new generation of young Lithuanian in national dress

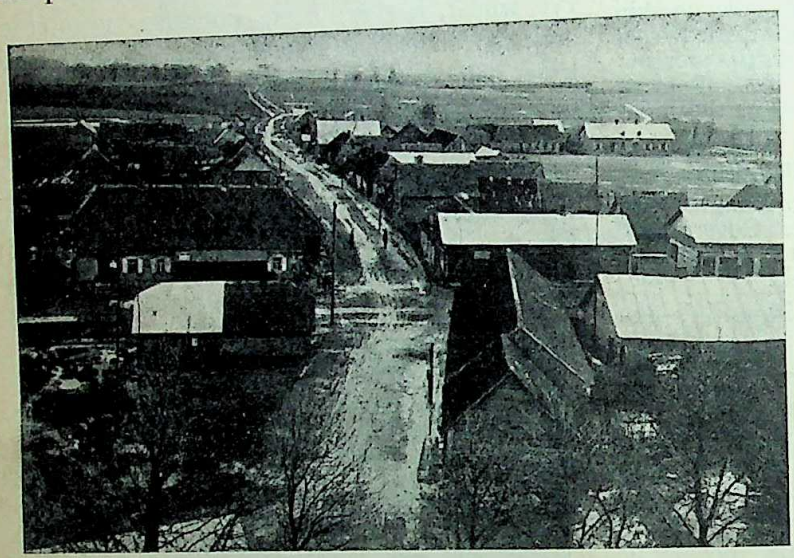
The *inhabitants* are mesocephalic, of middle stature, strong built, with greyish blue-green eyes and light brown hairs: more phlegmatic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

than sanguine in temper, inclined to individualism and endless optimism. Cultivation is the only occupation in Lithuania.

The *Language* is one of great antiquity, as many scholars have pointed out, extremely rich in expressions and affectionate and diminutive forms and most akin to old Indian and Persian languages still surviving in Europe.



Author's Village Home

The *Folklore* is very rich and peculiar for its mysticism-animism. The riddles and proverbs are marked by a philosophical outlook and show a keen appreciation of life and its problems. The songs are of extreme importance in Lithuanian life, and possibly Lithuania is the richest land in songs in the world.

As regards *art* wood carvings, wood architecture, linen weaving, knitting and embroidery are highly admired. In recent times, there has developed a style of painting which is fully Lithuanian in character. Lithuanians are great lovers of fine art: *everything bears ornaments and shows a very keen taste for pure art.*

The *Society* is entirely democratic: Lithuanians never recognized any distinction between themselves. No imported ideas of nobility and class has survived on Lithuanian soil.

The *Government* is a democratic Republic modelled on the Swiss and U. S. A. constitutions. The economic conditions, in spite of present depression are fair and the State budgets balanced with a surplus.

The *history of the country* on archaeological evidences tells us of the presence of man even in the last inter-glacial period. Some excavations of pit dwellings in early paleolithic age are not earlier than 6000—12000 B. C. It seems that Lithuania in this time was an island, only accessible by water from South-East, where abundance of big warship (petrified) relics are found in present-day marshes of Pinsk, Minsk and Mozurians.

The *history of the Lithuanian people* presents one of the confusing problems not yet grasped in true line of authentic speculations. Before the Lithuanians came into present-day Lithuania, there lived Northern Mongolian people, the Finns, in this land. Before the pressure of civilized Lithuanians, knowing uses of metal arts, Finns retired to northern Taiga, taking with them many improvements in stone-instrument making, stories and words. The retirement was very slow and peaceful—and even now in Finland there is very great respect for Lithuanians and deep sympathy. Songs and legends are common amongst both nations. According to Dr. J. Basanius Lithuanians came from Asia Minor *via* Balkans. The traditional mention of the Danube, mountains, vast steppes etc., also support this theory. The character of the nation is a bridge linking oriental mysticism with northern persistence and steadiness. Authentic written documents directly mentioning Lithuanians are of very late date, that is, from 10-11 century A. D. There are some allusions to the Lithuanians as Scythian cultivators in Herodotus and as the country of amber, in Homer but these have no historical value.

So the early history of the people is obscure from want of any documentary proof. But the great abundance of folklore and peculiar customs still persisting and not yet scientifically analysed, presents us with some idea of early life. Lithuanians must be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

regarded as having lived in steppes, because the old Lithuanian was an extremely good horseman. According to rather late accounts of foreigners, a Lithuanian just a year and a half old could gallop on horseback. The horse and a young Lithuanian—so to say,—almost are one and indivisible unit, as evidenced by the songs and stories. The

The Resurrection of spring. The Ice of the Nemuna river drives with them houses from distant villages

only occupation considered honourable is cultivation of land and even now a Lithuanian is ready to go to the end of the world to get some land of his own, when he loses it at home. The Lithuanian is very fond of learning, and thousands of them travelled to distant kingdoms for acquiring knowledge, rejecting material business (which is even today hated by real Lithuanians), as Lithuanian lore reminds us.

Abundance of religious songs and myths give us some idea of the early stage of Lithuanian creed, which appears to have been entirely animistic. To the old Lithuanians everything is alive, even the stone on the path suffers from the marching foot, and he associated on friendly terms with everything.

The Lithuanian mind in the past was not able to conceive the idea of the Devil—enemy of every thing good. To him every one can be hostile, if offended. Consequently, nearly every concrete noun is accompanied by its attribute or sacred name. There is no place of fear in Lithuanian psychology, as long as he is kind to every one.

Amongst later development of religion we find more concrete idea of one God in the expression of association with Nature. *Ugnis* (fire) takes offers to *Perkunas* (thunderbolt), who claims several hundreds of men, animals and houses (even now, in spite of mechanical precautions) and who is invoked in hymns as *Dievaitis* (son of God). There are half a hundred "gods" but those mythological personalities are of very doubtful existence and have no basis in Lithuanian folklore and are probably imaginative creations of early Christian missionaries. Their notice of spring and river worship, however, is based upon a foundation of facts

One of thousands of Kurgans where lie buried bones of forefathers, and where sacred fire burned in olden days

confirmed partially by modern practice in today's Lithuania.

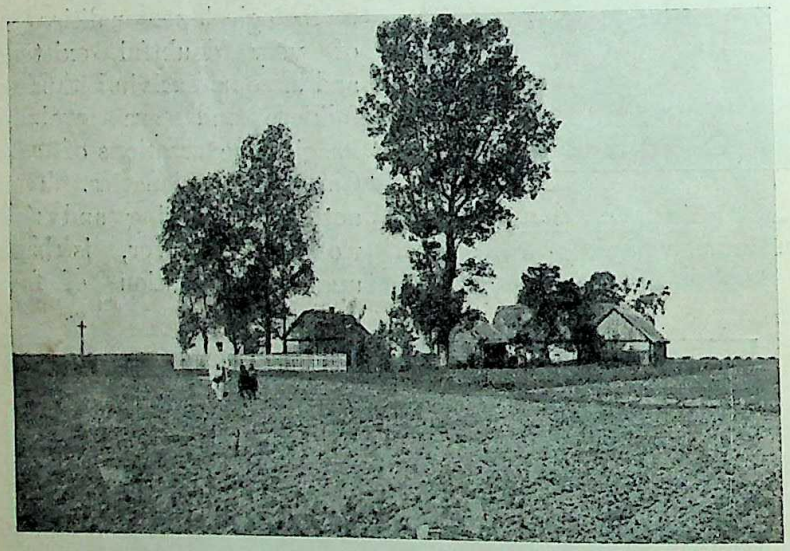
The respect of the burial mounds, or Kurgans where the forefathers of the people found their last resting place, where in olden days eternal fire was kept burning, persists to this day. As evident from stories Lithuanians used three methods of disposing of the dead: common burning on pyre, in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

some cases hanging in the trees and burial. In connection with these funeral rituals are left, although recently Christianized, millions of wayside or cemetery crosses of very peculiar designs—from the point of view of architectural and carving art—the only adjuncts of this forgotten funeral ritual.

Even the unparalleled and eloquent legends concerning the life after death do not explain the enigma of their origin. Peculiarly oriental in character, with their very original ornaments and form of architecture, these homes for the souls of deceased ancestors, present the great problem of migration of symbols and diffusion of architectural modes. The oldest iron tops link them in design with



Typical farm in Lithuania with the cross in front of it expressing the religious feeling of the population

Buddhistic monuments of Taxila and modern iron tops of Hindu temples in Bengal and Orissa (as far as I can gather from pictures).

When the peaceful life in the thick forests, cultivated only in patches, was disturbed by invaders the Lithuanians sought refuge for their women and children, and deposited their wealth, in artificially made islands in the turf marshes and the lakes, approached by paths of stone or timber work hidden under water. the confluenee of two rivers *Dviupa* was held to be a holy place where they built an artificial mound by joining at some distance the rivers by canal and the excavated earth was used for increasing the height of the mound. These mounds, or Kurgans, are commonly of triangular in form and some yards higher than the surrounding land, and eternal fire was kept burning and other religious rites were performed there. Formerly the eternal fire was kept under thousand-year old oak trees in sacred-groves. In later days when invasions became frequent the mounds were fortified by huge oak palissades, stone and burned clay works. A bloody drama of invasion from the West was enacted nearly every year. In times of war Lithuanian women heroically defended the homes, while the men fought in distant parts of the country.

In the early stages of Lithuanian society the "elder" was priest and offered incantations, dances and flowers to *Dievas* (Deity), asking for help, or in thanksgivings. In a much later period we find regular class of "vaidilas" (actors) with a chief *Krivis* (priest) and consequently "Krivi-Krivis" (priest of priests). Later we learn of the presence of priests and vaidilas in battle-fields with the *kankli*, a musical instrument, just like the Indian *Svara-mandala*." From the earlier period we hear of the Sun as daughter of God, and the "Perkunas" (Thunderbolt) as a son of God and serpents as messengers of God, etc.,

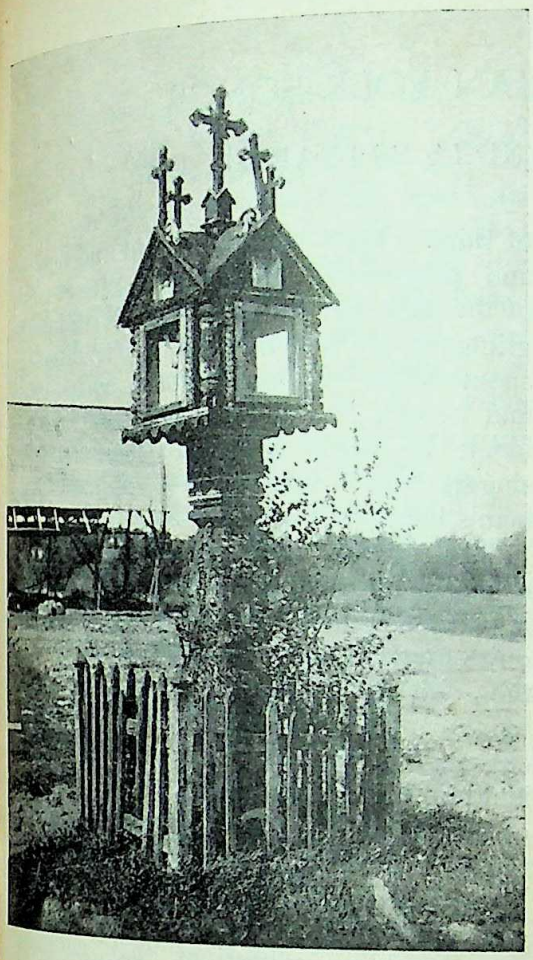
Slowly with the non-concentration of the life in mounds, authority of Krivis became predominant and pilgrimages to such centres of fire worship *viz.*, Parusne, Satrija, Rambynas Palanga, took place, increasing the popularity of Krivis.

Lithuanians in olden days lived in farms quite apart from one another but never so far that the bark of a dog could not be heard from one home to the other. In the districts people elected the "Seniunas" (elder ones) who judged in cases of dispute.

In war time the people of the country gathered in one of the mounds of holy fire and elected 'Karalius" (king, but literal meaning, chief warrior) who as soon as war was over retired with one-third of war spoil while in peace time the chief priest or

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



Wayside cross—chapel containing inside Christian icons originated from old Lithuanian hero cult

Place for collecting human bones washed away by rain in cemeteries

"kunigas" (priest) was a king. (Scandinavian *King*, German *koenig*, English *king*).

When continuous attacks on all sides started to subdue Lithuania, some of the *kunigaikstis* (son of priest, prince, duke) became more powerful and started to exercise their power continuously over the "Seniunas." In early 11th century A.D. Lithuania showed tendencies of becoming united, and soon the first Lithuanian life-long king Mindaugas (lit. who trampled on many) came into power and from his time expansion of the rule of Lithuanians began. Mindaugas accepted Christianity and baptized his court along with the greatest part of Lithuania. But the European crusaders, Orders of Teutons and Livonians, started to attack Lithuania again seeking to subjugate Lithuanians. When the real intentions become clear of the goal of Christian Cavaliers, Mindaugas denounced Christianity and began a 500 years' struggle against its invasion by force.

Dare to begin everything that must be done! Therein lies the greatness and the characteristic of leadership. Any one can dare to do afterwards.

GLIMPSES OF INDIAN FOLK-SONGS

By Professor DEVENDRA SATYARTHI

INDIAN Folk-songs are a great national asset of India. Much of the kernel of the cultural heritage of India lies in them. They are the Elysian shrines of Music and Poetry with their doors open to the millions of India. Spontaneous self-expressions of the people as they are, in them we feel the joys and sorrows of the open-air life of Rural India. They help us to become more intimately acquainted with the people who work hard to obtain the necessaries of daily life.

In ancient India the life-currents of the masses always flowed in the interior, in the villages, where life still dances like a song, far away from the busy haunts of materialism. "Villages are like women," says the Poet Rabindranath Tagore.

> "In their keeping is the cradle of the race. They are nearer to Nature than towns, and are, therefore, in closer touch with the fountain of life. They have the atmosphere which possesses a natural power of healing. It is the function of the villages, like that of women, to provide people with their elemental needs, with food and joy, with the simple poetry of life, and with those ceremonies of beauty which the village spontaneously produces and in which she finds delight."

Indian saints and philosophers always preferred village-atmosphere for their universities and ashramas. For most of the poets and singers, too, villages were the only centres of life. Court-poets and singers who led town-life were very few. While the court-poets and singers enriched the classical literature of India, the country-poets and singers did a sweet and sound service to Indian Folk-Literature by composing and transmitting innumerable life-lit lyrics and melodies which are still echoing in the village-atmosphere of India. The masses have treasured them up in their minds and give them out in the shape of what we call folk-songs.

Even today country-poets and singers are not rare in Indian villages. For each event of life they compose new songs, which become popular and traditional in the course of time. They sing both old and new songs and please the masses with sweet messages of the past and the present. With interesting glimpses of mytho-heroic traditions, the spontaneous rhythms of the collective weal and woe of the nation and with the various ideals of social life, the country-poets and singers enrich the folk-heart and 'when a man's heart overflows, he sings'.

As regards the external and internal form of most of the Indian folk-songs, their language is simple and easy, similes and metaphors quite homely, metres natural and rhyming, and the objects described or referred to quite familiar. Each song has its own beauty and charm. If one is a flow of tears, the other is a cup brimful of smiles; if one is a dream of the past, the other is a spring-melody of the near future; if one is a romance of love, beauty and youth, the other is a wail of ripe old age, awaiting death. Each song has its own rambling vibrations that entertain the children of the peasantry with a novelty of method.

Dancing, too, goes hand in hand with many of the Indian folk-songs and makes them more pleasant and sweet. With the millions of simple, innocent and child-like sons and daughters of Mother India, singing and dancing is a passion, radiant with Love and Beauty. There occur refrains in many of the Indian folk-songs. They make the poetic light and shade all the more full, free and lively. It is only in these refrains that we find the truest expression of the Indian folk-songs and dances.

Indian folk-songs are India's precious 'gems of purest ray serene'. "The pathos, the fine poetry and the commonsense which are embodied in these songs of the people," says Pandit Madan Mohan Malaviya, "deserve to be preserved and popularized. I have no doubt that if a proper selection is made of them they will be regarded as a necessary part of the study of poetry at our universities

Different languages are spoken in different parts of India. Each language is full of many varieties of folk-songs. There flows the Ganges of folk-songs in all parts of India and quenches the thirst of the thirsty with its sweet waters of Music and Poetry.

It is very difficult, no doubt, to reproduce in translations the original touches of rhythm, melody and local colour, which are the eminent characteristics of the folk-songs. The translations of Indian folk-songs from various Indian languages, given below, are neither very close nor too free. The writer of these lines has tried his best to reproduce the original matter and spirit of the songs.

A boatman returns home after many years and wants to please his sweet-heart with ordinary village-products—betel-leaves and nuts. Hear how she refuses to receive these love-tokens and sings :

Thy betel-nuts I will not take, O love!
Nor will I take thy betel-leaves.
Always a way-farer thou art, my love!
What love from a way-farer can I expect ?
Like an earthen pitcher is a way-farer's love
If once it breaks, O who can repair it, my love ?
Thy betel-nuts I will not take, O love !
Nor will I take thy betel-leaves,
(A Bengali Folk-song)

In the following song a maiden asks her father to choose a bridegroom for her and says what sort of bridegroom she would not like and what would she like to have :

Marry me not, O marry me not, O father !
O marry me not, to an aged man, O father !
No time shall I find to comb my hair—
Before widowhood comes to me, O father !
Marry me not, O marry me not, O father !
O marry me not, to a man in service, O father !
Orders of his master, O the orders of his master—
Will send him abroad, O father !
Marry me not, O marry me not, O father
Marry me not, O father, to a man of distant land
Offer my hand, O offer my hand, O father
Offer my hand, O father, to a shepherd of my sweet Motherland.
(A Goddi Folk-song from Kangra hills)

Here is a song, which well illustrates the heart of a love-lorn bride :

Feast upon my body, O crow !
And satisfy thy hunger :
Eat not—O eat not my eyes, crow !
For still I long to have a glimse of my love.
(A Hindi Folk-song from U. P.)

A village-swain is expressing his love for his sweet-heart :

Some sing street-songs and the others adore—
The river-bank-pebbles in their lore ;
There is a *Kacha* road in 'Utman Jaiee'
Really a life-giving thing to me,
A short path, a dirty way, no goal it has.
But the way of Paradise, the happy abode of my sweet-heart—
Springs out of this tiny path.
(A Pashto Folk-song.)

Here is a young bride putting her pathetic feelings into tune :

O none should tease me,
And none should trouble me :
I am but a friendless sparrow,
And far from here is my parental nest.
Far off are the mounds of my mother's village,
And far its pretty hills :
Far off are the transparent waters of my mother's village,
And far are its green lands.
O none should tease me,
And none should trouble me :
I am but a friendless sparrow,
And far from here is my parental nest.
(A Gujrati Folk-song.)

The bride seems to be sick of her mother-in-law's ill-treatment and her song touches pathos on the one hand, and motherly love on the other.

Here is a boatman's song :

O thou, my gem-studded boat !
At top-speed thou art going in the Airavadi :
Onward thou art going like a dancing girl,
And dancing waves of the Airavadi are following thee.
(A Burmese Folk-song.)

A village-swain is inviting his love for dancing :

Come, my love, O come, my bee !
Hand in hand shall we dance :
Believe me, my love, O believe me, my bee !
Hand in hand shall we dance.
(A Sawara Folk-song.)

Here is a shepherd's song :

On the top of that far-off hill
There stands a Jaru plant, my love !
Only two flowers—blossomed flowers there are on it,
One for thee and the other for me, my love.
(A Khondh Folk-song)

The following is a spring song :

Withered are the flowers—
Jessamine, Champa, Motia and Bela :
Nothing but dry blades of grass they are
As compared with the fresh flower of love.
(A Nepali Folk-song.)

Here are some cradle-songs :

Sleep, sleep, my child, sleep
Even the leaves—O even the leaves are asleep.
The bazar is asleep, O the road is asleep.
Sleep, sleep, my child sleep.
(A Bengaii Cradle-song.)

Weep not, my child, weep not
Smile and sing and go to sleep.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Sleep, sleep, my child, sleep
O my honey-sweet child, sleep.
(A Marathi Cradle-song.)

Here is thy swinging cradle,
And it is hung with silken ropes :
A Nurse from Kabul hath come
To rock, my baby, thy sweet cradle.
Sleep, sleep, my baby, sleep.
In thy swinging cradle, my baby, sleep.
(A Punjabi Cradle-song.)

What is my baby made of ?
O what is my baby made of ?
Whether of gold or of silver :
O what is my baby made of ?
To thy mother thou art as dear, my baby !
As the clove, she wears on her nose.
To thy grandfather and mother thou art as dear, my baby !

As the collyrium of their eyes.
To the strangers thou art as dear, my baby !
As a little gentleman, O as a little gentleman.
Come, my baby, beating and slashing—
(Anyone who disturbs thee in thy way.)
Come after touring throughout Bihar.
(And bring for us beautiful presents)
Bring for thy mother a mokhana cloth
And for thy dear sister, a pretty sari.
Come after touring throughout Bihar
And bring for thy paternal aunt a sari made at Jagali.
(A Bihari Cradle-song.)

The Bihari mother compares her baby with some of the objects dearest to her heart and in this way shows her love for her child. Again she mentions some of the articles of finery, which are very much affected by the women of Rural Bihar.

O thou art a sweet present of my gods, my baby !
O thou art a cherished boon of my prayers, my baby !
Live long, O live long, my baby !
When once to thy mother's lap hast thou come, my baby !
To offer flowers I ran to the temple of Siva,
The Lord was pleased and I got thee, my baby !
O thou art my ready cash, my baby !
O thou art my fragrant rose, my baby !
Live long, O live long, my baby !
When once to thy mother's lap, hast thou come, my baby.
(A Gujrati Cradle-song.)

A time lamp lightens the whole house,
The moon lightens the whole sky,
A tiny lamp lightens the whole palace
My tiny child lightens the pupil of my eye.
(A Telugu Cradle-song.)

It is sad that educated Indians know very little of their folk-songs. Living in towns they have totally forgotten the weal and woe of the masses. In their own motherland, India, they are living like non-Indians. Glimpses of Indian Folk-songs will give them snap-shots of Rural India and her open-air life.

WORLD FELLOWSHIP OF FAITHS

By IDA M. GURWELL

I. Brotherhood Assembled

THE World Fellowship of Faiths held in Chicago in 1933, was probably the greatest Conference ever held in the United States of America. Especially is this true from the standpoint of spiritual significance; its ramifications; and its sincere effort toward solving the problems that throughout the world confront mankind.

This great spiritual force organized in England in 1910 as the "Union of East and West," (for cultural unity); in the United States in 1920 as the "League of Neighbors," (for racial unity); and in 1924 as the "Fellowship of Faiths," (for spiritual unity); proves the World Fellowship idea has long demonstrated the power to cross Chasms of Prejudice through Understanding.

From a Parliament of Religions held during Chicago's First World's Fair, forty years ago, through successive stages has been propagated a new force, keeping pace at all times with progress. The present organization is an entity, sharing responsibility with practical religious groups as well as economic, but with a truly spiritual background. The purpose of the World Fellowship of Faiths is to unite the Inspiration of all Faiths throwing the light of religious consciousness upon present problems thereby hoping to help mankind develop a new Spiritual Dynamic competent to master and reform the world.

The opening meeting was indeed picturesque. As colourful as Grand Opera with tones and personalities as varied. Leaders from almost every known religion were here assembled. Representatives from Buddhist, Confucian, Hindu, Jain, Jewish, Mohammedan, Shinto, Sikh, Tao, Zoroastrian, and Christian. Many less known religions found a place here too, each hoping to help the world through its contribution.

The theme of the opening meeting was "Peace."

At this meeting, in the presence of men from all lands, was presented a bronze plaque in commemoration of the Kellogg-Briand Peace Pact. In presenting the medal to the former Secretary, Mr. Kellogg, Prof. Charles S. Braden said,

> The Fellowship of Faiths link together the spiritual forces of the world which in their highest and best expression, have, almost without exception, condemned war and promoted peace. It is natural that in this the first World Fellowship meeting, on this day internationally known as the anniversary of the Kellogg-Briand Peace Pact, we should wish to express in some public and tangible way our interest in the ideal of peace by presenting a medal to Mr. Kellogg, who in securing the signing of this pact has performed one of the most significant acts in the whole peace drama of the centuries.

There were fifty or more foreign delegates on the platform who seconded the resolution to make the 27th of August the anniversary of the signing of the Peace Pact, a day to be internationally observed as World Peace Day. An audience of twenty-five hundred people, enthusiastically and unanimously adopted the resolution. Greetings came from many eminent men who could not be present: Mahatma Gandhi, Sir Oliver Lodge of England, Romain Rolland of France, Rt. Hon. Arthur Henderson of England, and others. Some of the messages were read. It is impossible to do more than give a part of these messages.

Mahatma Gandhi said.

> Fellowship of Faiths attainable only by mutual respect in action for Faiths.

Sir Oliver Lodge cabled:

> What Nations have to realize is the guiding and helpful power of the Spiritual World.

The message received from Romain Rolland of France is vibrant. His words blaze; his sentences flow with the force of spring floods. He says,

> There is no thought, real, living, complete, without action. He who acts his thought must in his action as in his thought, reach always toward the universal, toward the Truth and the Life, not of one alone, but of all beings. One is the more alive the more one embraces life—the more one's own well-being enlarges to become the well-being of others, and the duty of those most

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

alive, is to nourish with their substance those less alive. The sublime cry of Vivekananda—'My God! the suffering people'—is a fitting appeal to our energies. He who loves God let him defend Him among the millions of those who are oppressed by injustice and social inequality.

Rt. Honourable Arthur Henderson of England, President of World Disarmament Conference, Geneva, in his message gives definite thought to freedom, justice and progress, which are essential conditions of a truly civilized society. He says,

> I pray that the gathering of the representatives of all faiths this year will mark the turning of the tide and bring about a revival and regeneratoin of the spiritual powers and agencies by which the civilization of all mankind will be promoted.

Then came the following greeting, in part, from Mirza Bashir-ud-Din Mahmud Ahamad, Khalifa-Tul-Masih II, Head of the Ahmadiyya Movement in Islam, Qudian, India :

> I am deeply interested in the aims and objects of the World Fellowship of Faiths, for in these I see a fulfilment of the declaration made by the Holy Quarn 1350 years ago, namely, that there is no nation in the world to which a prophet of God has not been sent, and that unmixed evil can never find a lasting foothold in the earth..One who seeks the triumph of his own faith by finding fault with others, is woefully misguided.
>
> Those, therefore, who strive to keep people acquainted with the truth, that every faith possesses some beauty in one form or another, render a meritorious service in keeping the standard of Truth erect. It is for this reason that I think the World Fellowship of Faiths is rendering a great service to the world, and it is necessary that the efforts of this movement shall be extended and helped in all parts of the world.

General Executive Kedarnath Das Gupta, of India, England, and America, opened the first meeting with an ancient Sanskrit invocation. Mr. Charles Frederick Weller, another General Executive, presided.

One of the outstanding individuals of this meeting, and a man who contributed his inspiration throughout the entire Conference was Raja Jai Prithvi Bahadur Singh, a Prince of Nepal. His opinion of the World Fellowship of Faiths is quoted from his brief talk :

> This first World Fellowship of Faiths will be recognized as the most outstanding event of the century. What the Economic Conference in London has recently undertaken in the field of practical politics and International Industry, this organization is undertaking in the basic field of human consciousness and conviction—those inner spiritual forces which determine the outward practical activities of individuals, races and nations.

The hour grew late. There was not time to hear even the brief greetings from all the delegates present on this the opening night, so these talks were postponed until later meetings, when all were given a chance to be heard.

What an assemblage! As the sessions continued throughout the weeks, two and three daily, jaded religionists were whipped into thoughtful and unselfish action through the rousing words of the speakers, and every mind and heart attuned to the significance of the Conference. No one could doubt that here were meetings of great importance in shaping the social and religious life of the future, and that the outcome could not be other than International in scope ; and Universal in purpose.

II. Chaos and Cosmos

In introducing His Highness the Maharaja Gaekwar of Baroda, India, who had come to America expressly to deliver the opening address of the World Fellowship of Faiths, Mr. Charles Frederick Weller, General Executive and Chairman for the evening, said :

> The world has long known and honoured His Highness as one of the most progressive of the Princes, ruling a great ancient Kingdom of more than 8,000 square miles, with a population of more than 2,000,000 people. He is reported to be one of the world's richest men. We are especially interested in the fact that he introduced compulsory education into his kingdom twenty-five years ago; that he has developed a special cabinet minister to promote moral education and training among his people; that he is a great philanthropist and social reformer; that while staunch and true to his own Faith as a Hindu, he built a mosque in his State for the Moslems and supports the orthodox Hindus by his fellowship with the untouchables; that he thinks and feels deeply upon religion and holds, with the World Fellowship of Faiths, that a new Spiritual Dynamic must be developed competent to master and transform the world.

Maharaja Gaekwar of Baroda arose amid colourful surroundings. The East and West joined in the Hindu Salute, repeating the words :

> With my heart and my head,
> I salute the soul in you.

On the huge platform were seated representatives from nearly every Faith, Race and Country in the World. In the vast audience of twenty-five hundred people, were many

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

men, citizens of the World. Dark-skinned brothers from other lands; devotees of the arts and students of higher civilizations; scholars registering from America, but hoping to gain as much worthwhile, worldwide knowledge as possible; sophisticated economic leaders (for the Prince is rated a very rich man); religionists broad and fine with an occasional one steeped in orthodoxy almost as solidified as the so-called traditions of the East. This vari-coloured assembly to a man, had come to receive the message of the East, and it must be admitted, the more curious, to know what a prince, a wealthy one, could possibly have to say about Religion in a Changing World, or for that matter Religion in any world.

After the salute, His Highness, opened the Convention with an address, "Religion in a Changing World." In this talk he proved his knowledge of the Chaos throughout the world, but that he too recognized the Cosmos emerging:

I am deeply sensible of the honour you have done me in calling me to open this great Conference. It is, I think, a tribute to my ancient Mother India, truly a Grandmother of Religions: and I am a Grandfather many times, perhaps I may address you in words which come out of a long life's experience.

This is a great time to be alive.

"Once more Mankind has struck its tents: Humanity is on the march," said General Smuts two years ago; and every passing month makes the words more significant. But does mankind know whither it is going?

We are in an age of ferment and chaos--but age of transition and awakening. As Lord Irwin said to us in India, "We need a change of soul." This is true not only in India. Science has united the world, but it is divided socially, economically and politically. Can religion accomplish what is spiritual, and therefore its cultural, unification? Or, to put this in a catchword, "Man has become smarter, can he become more decent?" Can he change the furniture of his mind to suit the new world in which he finds himself? Can he rise to a new scale of values? Can he analyse the farthest planet—can he organize the one he lives on?

He needs religion to inspire and to instruct him—but if religion is not to be a hindrance it must put its own house in order.

May we not say that it needs first "decoding" that the modern man may understand it, and then "debunking" that the modern man may respect it.

Every great religious movement starts by this transvaluation and translation into the vernacular. Buddha transformed Brahminism by emphasizing the human values, and by talking as the people talked. Today we need to re-define much. India has its superb definition of the Godhead—Sat Chit Anand—Reality, Mind, Bliss. But these words are used in so transcendental a sense that all human values become relative. We need to insist that the Absolute expresses Himself in Time and Space, that the world we live in is real, that the mind that knows it is of the same essence as the mind that planned it—the mind of a mathematician and a poet; and still more that our bliss is His bliss, our sorrow His sorrow. God is Reality then, and Mind and Joy; and the world is His garment—His thought, His means of expressing His joy in creation. We blaspheme Him if we call it Maya, Illusion: and I assure you we are not all Shankaras and mystics in India. We have our Materialists even, and many many Realists. If we have no Woolworth Towers and Chicago Fairs, we have Gwallior Forts and Delhi Mosques. If we do not worship the dollar, we talk much of pice. The real practical Indian mind has been perverted by over-subtlety, but our great laymen, Sakyamuni, Krishna, Gandhi, and our humble saints, Kabir, Tukaram, Tulsidas have given us what I believe you call horse-sense, and called us back to reality and to the human values. These are the practical idealists of India.

Our Indian Ethic, great in its recognition of the four stages in life, and of a duty for each class in the community, has been stultified by the emphasis on Maya, by the selfishness of Brahmins, by the hardening of class into caste, and by the dominance of the priestly and the world-denying groups. Today Ethics are asking religion: "What can be more real than Goodness—more saintly than Service?"

The real mind of India is re-asserting itself, and "Shudra" is today becoming not a term of reproach but an honourable title and "Mahatma" implies friend of the poor: "our Great Soul" must be also "Great Heart".

Man must work for mankind *in* the world, not out of it: He must take his place gladly and frankly "at the festival of life", as our poet says.

To do a man's work in an unselfish spirit is to find God, says the Gita.

It is men of such spirit that have built up "This brave New World"; but through self-will—Trishna or Tanha—we are wrecking it, as Gita and Buddha insist.

The men of science, the doctors, the engineers, the social reformers, the religious seers, these are making all things new—fellow-workers with God; but selfishness, race-hatred, narrow nationalism and greed have thrown all into chaos.

Yet a new Cosmos is emerging: God is at work. He is a democratic King, and asks our help. He recognizes no hierarchy but that of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

service. "He that is greatest, let him be the servant of all." He *is* greatest who serves most.

Democracy means also the emergence of the common man, and his rights, the demand of the backward peoples for a place in the Sun. And alike in East and West, tyranny and humbug are challenged, for they deny these rights.

We in Asia see that race-prejudice may yet destroy the Commonwealth, that caste has been so perverted that it has brought India low. Once a matter of economic division of function, it is now a network of taboos, and varying degrees of untouchability are the outcome. All Indian patriots—Brahmins and Kshatriyas leading—must roll away this reproach.

For today the emphasis is on personality, and caste which denies the right to every man to rise to his full stature, began with a ringing affirmation that from the Great-Being's own Person all the castes arose—for mutual service. This Purusha-Sukta is recited daily at every Vaishnavite altar; but poetry has stiffened into prose, and a divine sanction is found for irreligious and immoral taboos. Where the hymn says that Brahmins were the mouthpiece it has been interpreted to mean that they are the brain.

The hymn insists that Society is an organism —and as in the body, one organ is as important as another. Our present rigid caste-system (which has grown up partly as a natural growth but largely as an unnatural one) denies this, and it must go; we too desire that any boy or girl may rise to the highest rank. "Shall the foot say to the hand, or the brain to the heart, I have no need of thee?" There is no higher or lower—all are servants. All over the world religion is being challenged by the developing ethical ideals of mankind; religion that is un-ethical is a curse, not a boon. Yet religion is needed and will survive—for man is incurably religious. If there were no God, he would invent One. He is incurably inquisitive. If there were no First Cause, he would find One.

Religion is more than such quests. It is a cry for life, a yearning for reality, a demand for loyalty. Man needs a simple, strong, sincere and serene faith. He needs a rousing call to forget self, and to triumph over sense.

Christianity calls men to crucify the lower self. But it is paralysed by the snobbery and colour-bar of Christians. It can do much if it recovers its true fundamentals—Love of a loving God, and love of men who are brothers.

We in India affirm that all creatures are one; but we have lost our sense of proportion. We spare malarial mosquitoes, and plague-bearing rats, but we bear heavily on the human family, and do harm to millions of our fellow men. We must pray to be led back from the unreal to the real, from darkness to light, from exaggeration to balance. There is no God higher than the Truth, no Beauty without harmony.

What can true religion do? It is the pursuit of absolute values; and so it can insist that in an age of transition and chaos, certain values such as faith, hope, love, certain great principles such as partnership and self-sacrifice abide. Religion is also the quest for reality and life. It must get rid of shams, and the dead hand of tradition and taboo, if it is to live and to be real. Again it must express itself simply and clearly, so that the wayfaring man and the needy masses see it as bread and not a stone; it must remember the poor and ignorant.

Perhaps the greatest problems of our time are peace and employment. Can religion cut at the roots of war, greed, exploitation, and at the roots of poverty and unemployment? Can scientific and religious men organize this planet as a unity? Can he ration the raw materials of the world in the interests of our common humanity? If so, and only if so, can he achieve peace and set the hungry millions to work?

Our economic and political problems are ethical and spiritual problems. For man is spirit and cannot live by bread alone. What shall he give in exchange for his soul?

I quote these great sayings of Jesus, whom all religions honour: We can all unite in "The Lord's Prayer", in the Beatitudes, and in the parable of the Lost Son. And each religion knows that it too has a word in season, and a contribution to the well-being of personality and of humanity at large. We, in India, remember our ancient and ever-renewed quest for reality and light even when we remind ourselves that we must find it not in some vague Absolute, but in life here and now.

We remember our insistence on Ahimsa—not injury, even as we re-define it, and realize that exploitation and frustration are themselves injury, and that the innocent is one who does good, not merely one who refrains from doing evil.

China, too, with her strong sense of human values, begins to remember the poor man, and to enlarge her idea of brotherhood: not only "all within the four seas," but all men everywhere are brothers. Mandarins and Brahmins no less than capitalists and imperialists have forgotten this human brotherhood. In it lies the solution of most of our problems. We have a common fatherhood. Nature or God has made of one blood all nations, and the religions believe. He is making the world a neighbourhood; we must realize who is our neighbour. Jesus said that he who acts like one is a real neighbour. Buddha said that he who acts nobly is a nobleman. Confucius said that the true gentleman is at home in any society. Today we may learn from all. God is ploughing deep furrows, that the seed may make an effective growth. He is making all things new, that righteousness may flourish and war cease, and the world become one.

You are wise and far-sighted in organizing this Federation of Faiths: let each put its own house in order, and let each bring out of its

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

treasury things new and old for the healing of the nations. What better expresses the spirit we need than the saying of the Chinese Mystic twenty-five centuries ago: Activity without Assertiveness: Production without Possessiveness: Direction without Domination? This is very Christian, and we in India claim that we are by nature akin to the Christian ideal; we also acknowledge that Christ has challenged us to make our religion simpler and better.

You who call yourselves by the name of Christ may also learn from many who do not, not only from the august company of the great Teachers but from present-day Leaders of the Asiatic Renaissance. Let us humbly and in the spirit of partnership combine against the common enemies, Ignorance, Selfishness and Materialism. Religions may differ but Religion is one.

If we are servants of God's creation we are His friends and fellow-workers. In bearing one another's burdens we become partners in His Bliss.

To Him be the Honour and Glory.

III. By What Name?

One of the General Executives of the World Fellowship of Faiths is Kedarnath Das Gupta of India, England, and America. He held an important place in this Conference. His scholarly attitude, as well as the earnestness of his efforts to make the World Fellowship of Faiths a memorable success, was greatly appreciated by everyone present. His vision, his hopes, his plans were so unselfish in their aims and purpose, that we wish to feature Mr. Das Gupta's work in this article.

This man from the East has a wide knowledge of Religions. Through this knowledge, he compiled for use during the Conference, prayers from the eleven leading religions of the World, in addition to an Invocation and a Benediction. This could not help but foster religious study, and one can think of no work done by any member of the Committee that did more to bring about a better understanding of all religions.

We have been told that it is not prayer but the attitude of prayer that is important. One in comparing the prayers compiled from the great Religions of the world—those religions that have stood the spiritual test of centuries—from the view-point of the true religionist, and a believer in equal good to all peoples, might do well to observe the *distinctive resemblance*, rather than the *individual points of difference*. There appears to be little divergence in the greater, underlying principles of Religions. True the Christian religion divides honours with Christ, but God still remains the Father, which to Christianity means the head of the family. I think it was one of India's Great leaders, who in a tribute to Jesus of Nazareth said, "We can all unite in The Lord's Prayer, in the Beatitudes, and the Parable of the Lost Son." Emerson said, "Let a man believe in God and not in names, places and persons." Probably the truly religious can repeat the prayers of all Faiths as if they were his own.

In compiling these prayers, probably Mr. Das Gupta did more than he knew. He brought into unity the souls of those present, and created a theme for each meeting that, regardless of discussion of worldly and material subjects, kept those who participated spiritually attuned.

Many great leaders have said, "*Religions* may differ but *Religion* is one." There can be no monopoly on great truths. They come to us through various channels. That God exists for you in one form, impressing Himself upon your consciousness as a different picture than mine, is not so important. It would seem the important truth is: *That God exists.* I can think of no meetings I have ever attended that brought me so soulfully into the possession of this knowledge, which, it would seem, forms the basic truth of *all* Religions.

The prayers so devoutly repeated at many of the meetings of the Conference, did much to unite the inspiration of *all* Faiths.

We do not attempt to explain the meaning of the prayers. They are simple and direct. Each person probably reads into them the meaning that falls within his own religious experience. One does note similarity.

Invocation

Teach us, O Lord, to see Thy life in all men and in all the peoples of Thine earth.

Buddhist

All praise be to the Lord, the Holy One,
Perfect in Wisdom.
I go to The Enlightened One for refuse,
I go to the Law for refuge.
I go to the Brotherhood for refuge.

Christian

Our Father who art in heaven, hallowed be
Thy name,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Thy kingdom come, Thy will be done on earth,
as it is in heaven.

CONFUCIAN

Oh revere! Oh revere! God is glorious.
Help me to bear this burden on my shoulders.
And show me the glorious virtue and conduct.

HINDU

Let us meditate upon the adorable light
of the Divine Vivifier.
May He direct our minds.

JAIN

Adorable to the Lord, the Destroyer of foes, the Supreme Ruler, the King of those who have attained Victory.

JEWISH

Hear, O Israel, the Lord is our God, the Lord
is One.
Blessed be His Name Whose glorious Kingdom
is for ever and ever.

MUHAMMADAN

There is no Deity but God.
All praise be to God, the Lord of all the worlds.
The Merciful, the Compassionate,
The Master of the Day of Judgment.

SHINTO

All ye men who dwell under heaven!
Regard all beings as your brothers and sisters.
You will then enjoy this divine country,
Free from hate and sorrow.

SIKH

The One Supreme Being whose name is Eternal
Truth,
The Creator, the Spirit, devoid of fear and enmity,
Immortal, Unborn, Self-Existent, the Enlightener,
the Bestower of Grace.
Glory be to Him.

TAO

To know the Eternal is enlightenment.
The Divine Way is the asylum of all things.
The good man's treasure, the bad man's last
resort.

ZOROASTRIAN

Blessed was the Thought, and blessed was the Word, and blessed was the Deed of the Holy One.
Purity is the best gift. Happiness is to him who is pure for the sake of purity.

BENEDICTION

From Unreality lead us to Truth. From Darkness lead us to Light. From Death lead us to Immortality.

Winged thoughts grew out of the strength of these prayers, and were like carrier pigeons flying to the furthermost corners of the earth. They were un-named as to Religion, Race, or Country. They came through the medium of thinking humanity to be hopefully used for the benefit of mankind.

[*Note*—In the next article on World Fellowship of Faiths, written by Ida M. Gurwell for *The Modern Review*, she will write about the un-orthodox groups entering the Parliament of Religions, and tell of their importance, and equalizing influence. "Exit Orthodoxy" will be the title of the next article, "Hostess Chicago" and "To all Intent" being the concluding articles.]

SOVEREIGN BALM

BY VERRIER ELWIN

One night as in my little hut I lay,
With fever burning, lonely and afraid,
There fluttered down a tiny bird of day
Into my hands and on my heart was laid.

Its nest some snake marauding did invade;
And seeking safety, through the dark it came
To the warm light, and lonely and afraid
Put its cold heart to seek my comforts flame.

And when I felt its quivering body near,
So great a peace enveloped me that I
Seemed distantly a loving Voice to hear;
'My child, what meaneth this anxiety?

Lo! not one tiny bird to earth can fall,
Not e'en a hair of all that I have made,
Without My knowledge who regardeth all,
And on My heart thou too art ever laid.'

RURAL RESEARCH IN TAGORE'S SRINIKETAN

By HASHIM AMIR ALI, PH.D.

Introduction

SRINIKETAN or the Institute of Rural Reconstruction established as a branch of the Visva-Bharati—the International University founded by Rabindranath Tagore—has played an important part in the field of rural research in India since the time when the need of such work was hardly recognized in other parts of this country.

The moment one takes a practical step in rural reconstruction, one realizes the paucity of data pertaining to the rural problem and the general ignorance prevailing with regard to our villages. And Sriniketan being one of the earliest experiments in that line it is easy to see how the need of rural research came to be appreciated by its workers long before it had gained the general acceptance which it now enjoys all over India. In fact Dr. Nagen Ganguli who, by his writings and speeches in London, persuaded the British Government to institute the Royal Commission on Agriculture began his career at Sriniketan as early as 1915 and long before Sriniketan had become a public institution. Later, when, by the help of finances from sympathetic English and American friends, Sriniketan became the Institute of Rural Reconstruction, others who took up the work felt the urgency of rural research to an equal degree and did their best towards collecting and publishing data of rural interest. This work has been carried on more or less according to the facilities available at different times throughout the chequered history of the Institution.

The earliest attempts at scientific analysis were those of a young Englishman, Arthur Geddes, who, in 1923, collected a considerable amount of data pertaining to rural sociology and presented it as a thesis called *Aus Pays de Tagore*, to the Montpellier University in the south of France. Unfortunately this work, being in French, has not come to be known to many persons in India. Another worker Mr. Advani, who was at Sriniketan at about the same time, was able to make a similar analysis of some villages in Sindh and he also obtained a doctor's degree from the same university. A little later came Dr. R. K. Das who is now employed in the League of Nations. He too was able to write up a book called *Production in India* from the data he collected while at Sriniketan. And after he was called away to his present more important position at Geneva, Sjt. Kalimohan Ghose, the Superintendent of village work, aside from his other duties, was able to collect and publish data pertaining to two villages, Ballabhpur and Raipur in the neighbourhood of Sriniketan.

In 1931 the need of a more scientific outlook in the analysis of village problems was again felt by those responsible for Sriniketan and two research fellowships were established by Mr. Elmhirst—one for economic research and the other for educational research. That same year came Dr. Harry Timbres, lent to the Institute by the Friends' Society of England, for research in rural health, so that during the last three years a considerable amount of data has been collected, some which has already been published while a great deal is ready for the Press. While much of it consists of detailed facts and figures there are many findings of general interest as well and it is the presentation of such findings by the economic research section that is the aim of the present paper.

The Scope of Rural Economic Research

Now rural economic research is of three kinds. The first kind consists of research in *agricultural production*. Since India at present is predominantly an agricultural country and her villages have come to depend almost entirely upon agriculture, this field of ecomomic research becomes very important. Second is that branch known as the *Rural Survey*. It is considered by some, with considerable justification, that an analysis of production alone does not indicate the standard of living in the villages. And since this should be the most important aim of rural economic research, we should lay more emphasis on a more comprehensive analysis of the economic condition of *village families* and thereby get certain indices to help us in understanding the fundamental economic problem of village life. The third kind of rural economic research is difficult to label with a name. It is contended by some, that mere facts and figures pertaining to village economic life are not sufficient; they present merely the skeletal basis of rural society and are devoid of the human touch: what is needed is the analysis of village psychology, for after all it is not only economic conditions but the human conditions that we want to understand and for any rural work to be successful, it is that understanding which is essential. According to this theory a book like the Late Rev. Lal Behari Dey's *Bengal Peasant Life* throws more light on the rural problem of a hundred years ago than all

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the rural surveys of the twentieth century are able to do on our present day rural problems.

It is difficult to say which of these three kinds of rural research is more important, for one can easily see that all three are necessary. The best thing to do therefore is to try and analyse village life in all these three ways and devote as much attention to each kind according to the facilities available for carrying it on. We shall now try to see what each of these three lines of research have led to at Sriniketan.

Research in Agricultural Production and Marketing

Since the most important agricultural crop for Bengal is rice, considerable attention was given to the economic analysis of that crop and the first three of the Visva-Bharati Rural Studies deal with rice alone. Then comes a study on subsidiary crops of the region followed by one dealing with the post-War fluctuations in agricultural prices.

Rice Yields and Malaria

The first study on rice is perhaps the most interesting. The analysis of rice yields recorded by Sjt. Jagabandhu Pal, a local zamindar, for the past 40 years have brought to light some valuable data and also indicated certain very unexpected tendencies. After working with several thousand figures for nearly six months, the maximum, minimum and average yields obtained for the crop have been established and it is found that even the annual average yield for a village varied from only 3.1 mds. of paddy per acre in 1915 to as much as 29.7 mds per acre in 1898. But while such fluctuations were noted between one year and another the general trend was neither upward nor downward. Subjecting these figures to statistical methods, the fertility of the soil seemed to be constant throughout the 40 years giving an average paddy yield of 16.2 mds. per acre,* and it was evidently the effect of some variable factors that caused annual fluctuations.

But which of the many factors were most potent in determining the yield of rice? Naturally we expected the figures for rainfall, available for an almost equally long period to give us a correlation. But no; neither the figures for the annual rainfall nor the figures for the rainfall of different months of the monsoon taken separately, none of them gave a significant correlation. Either the figures were not accurate or perhaps the amount of rainfall in Bolpur, two miles away, had little effect upon the yield of rice in Bahadurpur, the yields of which our study dealt with. Or, perhaps the yield of rice depends upon the rainfall of particular weeks of the monsoon only. Whatever the causes we could not establish a significant statistical correlation between rainfall and yield of rice in Bahadurpur village.

Then we tried to correlate the health figures for the past 30 years with the yield figures for that period, but with hardly any better results. The number of excess births over deaths, or the number of deaths in the region did not show any correlation with the yield of rice. But finally, the figures that did show a correlation with the yield of rice were those pertaining to the number of *Fever Deaths* in Bolpur Thana. In other words, it is not how many people die, but rather how many *people die of fever that seems to matter* in connection with local agriculture. And this is plausible too, for, death in itself, unless it is extremely widespread, is not likely to affect agriculture. An epidemic of cholera or small pox carries away a large number of people in a few weeks, but that cannot generally be expected to affect the general yield of land. What would affect the general yield, however, would be prolonged illness of a large proportion of the population continuously throughout the cultivation season, for this would tell upon the intensity of care and cultivation bestowed upon the crop. And this is exactly what the number of deaths from fever stands for. When many have died of fever in a particular year, we know that many more must have suffered over a long period, and agriculture must have suffered also.

Some people have before now tried to establish the correlation between malaria and agriculture. Dr. Bentley, the erstwhile Director of the Public Health Department of Bengal, was the foremost worker in this line. In his book *Malaria and Agriculture in Bengal* (1925) he has given many instances where a relation between the increase of malaria and the deterioration of agriculture is quite evident. For example he has shown the connection between the increase of population and the decrease of fallow land in the Dacca Division where there is no fever, and along with it he has shown how in Burdwan Division where there is excessive malaria the fallow land has increased and so on. But this study pointing out the influence of malaria on the *Yield of rice per bigha* over a period of nearly 40 years provides a more conclusive proof and a clearer indication of the deterioration of agriculture due to malaria in this Province. As far as economic research goes nothing more could be expected and it is left for statesmen and governments interested in economic development to realize how their efforts are handicapped by non-economic phenomena and to do their best in overcoming them.

Yields of Different Varieties grown in a Single Village

The second piece of research in agricultural production carried out by Sriniketan during the last two years consisted of finding out the yields

* The details of this piece of research work are given in *Sankhya*, the Indian Journal of Statistics, Vol. 1. No. 2., and also published as Visva-Bharati Rural Study No. 1.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and other qualities of the different varieties of rice grown during a single year in a near-by village. The importance of such a study cannot easily be appreciated. The villagers generally think that they know all about the yields of rice and those to whom Government Forecasts and Reports are at hand cannot see of what use such a survey can be. And yet this study, based upon the measurements of yields from 109 plots, and dealing with 24 varieties adds a great deal of information to what was already known and even contradicts some of the data that were, so far, all that we could go by. For example, it shows for each variety the relative importance in a single village, the husking quality, the points to be considered in its evaluation, the market prices and finally the variations in yield. The average yield for the year in which the study was carried on, was found to be 12.39 maunds per acre, and considering that the average for nearly 40 years was 16.2 mds. per acre and further that large fluctuations from year to year are a common phenomenon, we surmise that this year's crop was, to use the village terminology, a twelve-anna crop.

But, taking even the average of 16.2 mds. per acre as the yield obtained in the region we find that it is far below that of several other places as shown in the following figures obtained from different year-books for 1931-33.

	Yields	
Spain	63.9 mds.	Rough Rice
Japan	36.3	
U. S. A.	21.2	
British India	16.2	Paddy
Coorg	21.5	
Bombay	18.2	
Bengal	15.2	
Chittagong	17.2	
Birbhum	13.8	

In other words while the figures obtained in these two studies more or less corroborate the figures for India as given by Government Crop Reports, they seem to be far below those of some other countries like Spain and Japan for which the figures given pertain to rough rice. Nor can we say that these high yields in those countries are likely to be due to particular varieties and other special facilities such as those of irrigation, manuring, etc., that are not available here; for even under our ordinary conditions of cultivation, in fact in this very year when the general crop was considered below the average, one of the plots yielded as much as 26.25 mds. of paddy per acre, and in the former study we had found that during 3 years 1906, 1922 and 1927 certain plots had yielded even as much as 24 mds. per acre. It is clear, therefore, that while there are enormous possibilities in the way of obtaining higher yields in our country, the average yield of our land is hopelessly low.

Here again the duties of the research worker in agricultural economics end. It is for economic botanists, officials of the Agricultural Departments and rural reconstructionists to see how yield could be increased. But one suggestion might be hazarded. If we could somehow give recognition to those who get large yields of rice—for example, by offering prizes and having annual lists of those cultivators who obtain the maximum yields in each district, etc.,—there is likely to be a greater desire to practise more intensive agriculture than merely the money value of a higher yield is likely to offer.

The Rice Industry

The third piece of research on rice deals with marketing, milling and export. One of the post-graduate students at Sriniketan has studied these phases of the rice industry as seen in the neighbouring town of Bolpur and by bringing together historical data, by determining the sphere of influence which a single industrial centre comes to have, by compiling figures for local consumption, trade and export of rice and finally by giving some details regarding the profits obtaind by rice mills in the area, he has not only been able to present in concise form a fairly thorough analysis of the situation but has also been able to evolve a method which could profitably be followed in similar analyses elsewhere. This study closes with an account of the influence of the rice mills on local economy and also brings to light certain social problems that are arising with the advent of machinery. It has too much of general information to be condensed here, but this too is published as the third in the series of Visva-Bharati Rural Studies.

Yields of Subsidiary Crops

Although rice occupies 95 per cent of the cultivated area in the region of the Visva-Bharati, the money value of the crop amounts to only about 84 per cent of the agricultural produce. The remaining 16 per cent of agricultural wealth is obtained from sugarcane, potatoes, wheat, pulses and some vegetables. Now, with the decline in the market value of rice, the problem of increasing the area under subsidiary crops and introducing new crops becomes all the more important. After having studied the various economic phases of rice cultivation, therefore, a preliminary survey was made for the subsidiary crops and their respective yields were obtained from Bahadurpur village. Aside from giving a general idea of the situation the study showed the great differences between the yields of different varieties of sugarcane. The Coimbatore and Java varieties used by some villagers yielded about 60 mds. of *gur* per acre and the local varieties yielded only half that amount. And yet year after year a large number of people cultivated, or perhaps had to cultivate, the local varieties and deny themselves an income twice as much as they get. This study too has

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

shown a distinct approach to the economic problem of village life.

Post-War Fluctuations in Agicultural Prices

The problem of post-War fluctuations in agricultural prices as applying to India as a whole and to the Indian provinces separately, has already been studied by others. But what seldom interests economists is the existence and characteristics of the same phenomenon as seen in smaller towns and rural areas. To study this side of the problem, therefore, monthly fluctuations in the prices of various agricultural commodities were obtained from several merchants in the town of Bolpur. But by themselves these figures would mean little. They have to be compared with similar fluctuations in the wholesale or retail markets in larger trade centres before they can become significant. Such a comparative study is being carried out in the Statistical Laboratory under the supervision of Prof. P.C. Mahalanabis and will be published in *Sankhya*, the Indian Journal of Statistics as soon as it is prepared. Sriniketan, however, has done its share in the initiation of the study whatever conclusions it might bring out.

RURAL SURVEYS

The second phase of rural economic research, we said, was covered by what is known as the rural surveys. Two such village surveys for Ballabhpur and Raipur had already been carried out before 1931, by Sjt. Kalimohan Ghosh, the Superintendent of the Village Work Department. Seven other village surveys have been completed since but the villages dealt with in these were selected to represent different types. Further since a rural survey, embracing all phases of rural life, would have been too ambitious a project and likely to end in nothing definite, it was considered more advisable to limit the scope chiefly to the analysis of economic data collected from each of the families in the selected villages, and try to ascertain if certain valid generalizations could be obtained regarding the economics of village life in the region.

For this purpose, two of the advanced students who had been given some training in research work were stationed in the selected villages and were asked to fill in the printed questionnaires only after they had themselves become more or less familiar with the people of the village.

Thus we obtained information pertaining to some 447 families distributed in five different villages and three small Santal *bastis*. Of the five villages, the first, Goalpara, is predominantly a Brahmin village; the second, Bahadurpur, is a village in which a fairly well-to-do zamindar resides; the third, though named Islampur, has not a single Mussalman and is in fact a predominantly Sadgop village; the fourth, Benuria, presents a decadent Kulu village; the fifth, Lohagar, is a Mussalman village and the sixth village economic survey deals with three groups of Santals inhabiting the same region. After all these were completed a seventh and last study was made by making a comparative analysis of the data obtained from all those preceding it.

These village surveys, aside from giving some fairly reliable information regarding economic matters such as assets, liabilities, incomes and expenditures of village families, have dealt with certain sociological data as well. The questionnaire was framed so as to get information regarding the number of people per family, the proportion of the sexes, the prevalence of child-marriages, the proportion of widows, the types of famlies, the relation between main and subsidiary occupations, the percentage of literacy among different age groups and other similar details.

When all this mass of data was taken up for analysis and the population classified into economic groups it was found that such groupings on a purely economic basis corresponded remarkably closely with the social groupings according to caste and religion. As soon as we saw what caste a particular family belonged to and noted whether that caste was among the high, middle or low castes of Hindu society or whether he is a Mussalman or a Santal, we could with a fair degree of certainty, indicate in what economic station his family was likely to fall. Considering this close correspondence, there was no way but to analyse village society not as a homogenous whole but as consisting of five heterogenous economic groups. The economic level of the high castes was higher than that of the middle castes. Third in order followed the Mussalmans also with a distinct economic level, but following closely the Nabashaks while the low castes such as Hadis, Domes, Muchies were far below with only Santals occupying a still lower economic position.

SUMMARY TABLE FOR VILLAGE ECONOMIC SURVEYS

General Information	High castes	Nabashaks	Mussalmans	Harijans	Santals	Total
No. of families	55	107	83	166	36	447
No. of people	228	399	373	713	143	1856
No. per family	4.1	3.7	4.5	4.3	4.0	4.2
Per cent of total population	12	20	20	40	8	100
Sex Ratio	111	108	110	101	107	106
Model size of famlilies	2	2	4	4	3	4
Percentage of children	31	33	41	35	34	35
„ of child-wives	22	29	10	34	4	20
„ of widows	41	43	20	20	8	26

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

	High Castes	Nabashaks	Mussalmans	Harijans	Santals	Total
Average No. of gainfully employed persons per family	1.0	1.1	1.4	1.6	2.0	1.4
Percentage of literacy	50	33	18	4	3	19
Percentage of literacy in school-age population	62	42	32	6.5	15	27
School age pop. (actual)	50	84	89	141	28	398
" " in schools	29	35	28	9	4	107
Economic Data						
Average assets (Rs.)	2823	1528	1083	73	76	970
Landless families (percentage)	18	13	25	87	92	49
Average value of land (Rs.)	2220	1340	1098	38	39	825
" " of livestock	97	59	38	15	28	41
" " movables	506	129	37	9	9	104
Average Annual Income	436	236	172	84	76	175
" " Expenditure	479	268	203	90	83	199
" " Deficits	43	32	31	6	7	24
Average Indebtedness	184	183	189	16	5	108
Percentages of indebted families	55	66	76	57	28	60

Now this is not a very remarkable discovery. Caste being in reality the outcome of occupational groupings, it is easy to see how certain occupations pay more than others. In any society, the trades and occupations and professions could be so classified as to give distinctly different levels of income. The difference only lies in this: In our villages we do not have to ask a man's occupation; we have only to know his caste or his religion and we know his economic position.

The extent to which the statement is true will be seen from the figures given in table form. No matter what item you take the figures differ for each of the five social classes according to caste and religion. But these are only a few of the figures. The mass of other tables contained in the seven surveys show that even the cattle of the five classes have different evaluations; the high castes have the highest priced cows, the Santals' cattle are barely animals that manage to stand on their legs. There is difference even in the average price of chickens and ducks kept by one class and another.

While this discovery is not very remarkable the reduction of caste distinctions to a mathetmatical basis has certainly many and widespread implications. The scientific validity of these class distributions are being analysed by purely statistical methods, and if they are found to be mathematically invulnerable, it will mean that we shall henceforth have to think of five classes of village society instead of speaking about the village people in a generic sense.

And this is most important. For, no matter which of the practical phases of rural reconstruction you deal with you find difficulties arising out of this heterogeneity; help rendered to the village does not mean help rendered to all the five classes. In fact what is good for one class is bad for another. If you help the upper classes you make them stronger still against the lower classes: If you help the latter you undermine the power of the upper classes. You try to improve agriculture, but—comparatively speaking—of how much good is that to the Harijans and Santals, when nearly 90 per cent of them have no land? You introduce co-operative credit societies, but how much can the lower classes benefit by them when they have no security to offer? You succeed in establishing co-operative dispensaries—a very necessary and creditable piece of work—but how many from among the Harijans and the Santals can afford to become its members on an equal standing with the others? It is these and other similar questions which people dealing in rural reconstruction should at least keep in mind even if no answers are available for them in our present order of society.

Then there is another problem of sociological interest. The Mussalmans of these villages are converts from among the local inhabitants. From what class of Hindu society have they come? If from the high caste and Nabashak groups, then their conversion has evidently caused a little deterioration in their economic position. But if they were really the low caste Hindus who accepted Islam as a means of raising their social status they have certainly succeeded in a more concrete and lasting sense; for now their economic level is far above those of their former caste brethren. Finally, whether the trend has been one way or the other where is it going to lead? Or has the trend come to a halt long ago? These are interesting questions and restricting our remarks strictly to the villages analysed we might mention that Lohagarh, the Mussalman village, is the only one of the five villages studied that shows any vitality and potential growth. Some of the others present a stationary aspect while Benuria, the village which a century ago thrived on its oil-pressing industry, will probably cease to exist before the present century has come to a close.

These then are a few of the findings from the Village Economic Surveys carried out by Sriniketan. They will be published in the form of Visva-Bharati Village Studies

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Nos. 6-12 as soon as the purely statistical analysis is completed by Prof. Mahalanobis and, we hope, add something to the very meagre data that we have at present, regarding economic aspect of village life.

Studying the village mind

But as has been pointed out studies of agricultural production and rural surveys of the kind dealt with do not exhaust the methods of rural analysis. We are beginning to realize that psychological factors affect economic conditions perhaps just as much as economic conditions affect the psychology of the people. In order to see all the economic bearings of the village problem, therefore, we should also try to analyse the village mind.

The only possible method of getting at a picture of this abstract phenomenon is to portray the thoughts of the people as conveyed in their conversations and revealed in their gestures. That is why Lal Behari De's book *Bengal Peasant Life* and several other Bengali novels whose scenes are laid in the villages really shed more light on village problems than barely statistical analyses. For these stories deal with human beings as such instead of with skeletal abstractions such as those of the economic man, etc.

Still, our present problem being rural *economic* research, such stories do not serve our purpose all in all. What we need, and have in fact tried to do, is to modify the same method to our purposes. All through tne last three years, the students coming in contact with the research section have been asked to write about their villages trying to portray not only the economic but the psychological aspects as well. They had to write either about some villages or about some village personalities. Besides this, the advanced students who went to collect data in the villages were asked to keep diaries, noting in them whatever conversations or incidents there might be of interest. And finally, the village of which Lal Behari De wrote in such detail seventy years ago and gave such a beautiful picture was traced and visited more than once. Tara Krishna Basu, who has played an important part in all of the research work, herein mentioned spent nearly a month in this village and brought back notes that were not only of human interest but showed a picture of village life which is in some aspect more vivid than what is generally found even in good fiction.

All these notes together have been presented in three volumes entitled *Glimpses of Village Life and Problems*, and are awaiting arrangements for publication. It is in these that an attempt has been made to portray the village psychology.

Miscellaneous Studies

Among the few remaining studies, only one needs to be mentioned. As has been said in the beginning there is a great lack of data pertaining to the rural problem. Nor has any method of rural reconstruction been developed sufficiently to obtain general acceptance. That being so, and being closely in touch with an institution whose object was to carry out rural reconstruction, the research section did its best in collecting all possible data pertaining to the region of the Visva-Bharati as a whole with a view to formulating a method and programme of rural reconstruction that could be followed in most other places where rural reconstruction is being attempted. With this aim in view a study of some four hundred type-written pages with many charts, diagrams, tables and maps has been prepared and presented under the title of *The Analysis of a Rural Problem.* This book analyses the rural problem of the region from geographical, historical, economic and cultural standpoints. It embodies considerable information pertaining to education, local self-government, co-operative societies and health work sponsored by the Government, and finally outlines a programme of rural reconstruction, through the Union Boards, which according to the author, Sriniketan should adopt in order that its effects might be real and lasting. And throughout the study its usefulness as an example for similar analyses elsewhere is continuously kept in view.

Conclusions

This then is a very brief account of the rural research engaged in at Sriniketan. In other spheres of activity—where precedents exist and one has merely to follow the trodden path to keep himself from straying on to dangerous or barren grounds—one can go very far. But it is the pioneers in every field whose lot it is to work the hardest, achieve the least and bear the severest of criticism. It is through their mental pain and anguish that ideas take shape. When the work of Sriniketan, either in its research aspect or its reconstruction aspect, is reviewed and when the contribution of Rabindranath Tagore to this phase of Indian life is measured it has to be remembered that both Tagore and his institutions are pioneers in the field of rural reconstrnction in India.

The faith which is to be effective will syawla be a difficult faith, and a difficult faith will always make great and heavy sacrifices necesssry.

PROBLEM OF ADULT EDUCATION IN INDIA

By MANUBHAI PRANJIBAN VAIDYA, M. A., B. T.

THE Adult Educational Movement is inextricably interwoven with the whole of the organized life of the community. Whilst on the one hand, it originates in a desire amongst individuals for adequate opportunities for self-expression, and the cultivation of their personal powers and interests, it is, on the other hand, rooted in the social aspirations of the democratic movements of the country. In other words, it rests upon the twin principles of personal development and social service. It aims at satisfying the needs of the individual and the attainment of new standards of citizenship and a better social order. To teachers interested in the all-round education and resultant progress of the country, the problem of adult education is not a new one; it is not a fad. But the layman will perhaps gape with wonder at adult education,—education for mature, experienced men and women. He is wedded to the belief that education or schooling is meant only for young, tender kids. But in the nineteenth century, a powerful democratic wave spread over Europe, and it was realized that equal opportunities should be given to all for self-expression. The disability due to accident of birth or rank was waived aside; education did not finish when a young boy or girl left the portals of the school or college. It was felt necessary to continue education even in adolescent or adult period in order that general level of culture might rise. Bertrand Russell, referring to the different ideals of education in his book *Education and the Social Order*, says:

"The first ideal considers that the sole purpose of education is to provide opportunities of growth, and remove hampering influences. The second holds that the purpose of education is to give culture to the individual, and to develop his capacities to the utmost. The third holds that education is to be considered rather in relation to the community than in relation to the individual, and that its business is to train useful citizens. Of these theories, the first is the newest, while the third is the oldest."

To remove the hampering influences of old, outworn customs and prejudices, to develop the individual's capacities to the utmost by presenting opportunities, and to train useful citizens by teaching useful subjects to as many of the population as possible, it will be evident that some scheme for adult-education is imperative. If there is any country in the world which stands badly in need of adult-education, it is our motherland India. India stands first in the column of illiteracy. The latest figures for literacy in India are given below, and it will be shockingly clear what tremendous block of illiteracy stands in our way to progress and Swaraj.

Literacy is defined as ability to write a letter and to read the answer to it. The total number of literates in India are:

	1921	1931
India	22623651	28131315
Provinces	18654541	22727571
States	3969110	5403744

Now let us compare the population of India at three censuses, and view the progress or otherwise of literacy in light of population.

	1931	1921	1911
Males :	181828923	163995504	161338693
Females :	171008855	154946926	153817461
Total :	352837778	318942430	315156154

Indian States like Cochin, Travancore, Baroda, and Mysore, are more advanced in literacy than British India. Even in Travancore State, the population has increased by 27 per cent. and the proportion of literacy has fallen from 24.2 per cent. in 1921 to 23.9 per cent. in 1931, though in India it has risen from 7 per cent. to 8 per cent. It seems that of the 35 crores in India, only 8 per cent. is literate. Here we are not discussing the strength of the rural population against the urban one, as well as the problem of female literacy; we reserve for a later stage. Below is given the number of literates per mille (=thousand) for persons aged five and over:

	per mille (1931)
Travancore	289
Cochin	337
Burma	368
Baroda	209
Bombay	108

From the above figures, we can see that illiteracy in India is so huge that it requires immediate and strenuous efforts to combat ignorance. If democracy means the government of the people, for the people, by the people, the people must have correct perspective and right political consciousness. G. B. Shaw, in his famous drama *The Apple-cart* writes that while one day he was passing by the Trafalgar Square in London, he saw hordes of people running in a particular direction. Nobody knew the the cause of that hurry and popular excitement. Shaw feared, some terrible mishap must have occurred. But he found to his great surprise that one cow was scared and that people were madly running after one another without

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

knowing the cause. The elector must know his interests. We are all clamouring for Swaraj, but we need not forget that it is right education which can lead us to the power of self-determination. And it is not education of the young alone but education of the adults also which can stop wastage and carry the country forward.

Thus we see why education for adults is demanded; we have also to know the benefit and scope of Adult-Education before we discuss its methods. We are all teachers. We are keenly interested in the unfolding and expansion of the child's innate powers. This is Child's Era. Attempts are being made on all sides to foster the spirit of freedom in education. We want to respect the individuality of the child. Our efforts in this direction can bear fruit when the home co-operates with the school. May I ask all of you about the nature of co-operation lent by parents to us in our noble task? I fear the answer will not be an encouraging one; the Indian parent has neither the will nor the leisure to look after his child. There are many many exceptions; but the fact remains there. We proclaim at the top of our voices that fear should have no place in child-rearing, and in spite of it, a good many homes still cling to the old custom of the rod or harsh, bullying words. The home undoes what the school does. And here arises the need of adult education.

Let us now take the question of 'wastage' in education. The Educational Report of India helps us a great deal. We know that the number of literates in India was 281,31,315 in the year 1931, and in the same year the number of primary schools in India was 204,384 and the number of pupils was 9,362,748. Thus 74 p. c. of pupils are in primary schools. Generally we mean by literacy the completion of the Primary Class IV. The number of class IV pupils, in British India in 1931 was 998,097; of these 20 per cent will surely leave school and forget what they might have learnt. Here comes wastage. The trouble taken on this vast number is lost; a great deal of man-power is wasted for nothing. There should be continuation-schools and classes to stop the above wastage. Similar is the fate with education of girls, and it is due to early age of marriage, obstinate prejudices and apathy of the people for female education. Report on Education in India says the total wastage involved is about 90 per cent. in case of girls. This is simply unbearable. Let the public be educated; how can ordinary schools stop this rot? It requires intensive propaganda.

Here some one may argue that we should let the seniors severely alone, and concertrate our energy on the budding, rising generation of India. That is partially true. We cannot ignore the present parents and citizens; we have to convert them to our view.

It will be interesting to have some idea about methods and orginazation of adult education movement in other countries.

The World Association for Adult-Education was started in London in 1919, with the purpose of dispelling the melancholy belief that grown men and women have nothing left to learn, and to diffuse throughout all countries, and in every section of societies, the sense of wonder and curiosity, and gift of mutual sympathy and companionship which add so much to the meaning of life. The following figures will give us the idea of expansion of the movement in England.

(1) *Workers' Educational Association.* There are special institutions for workers. There is no rule that coolies should be deprived of education. There is nothing like "Once a coolie always a coolie". Opportunities are given to all to assert themselvs. 2367 is the number of branches of this Association. Nine lacs of people are its members; 38730 pupils had availed themselves of its classes.

(2,3). *Young Men's Christian Association* and *Young Women's Christian Association.* 27000 boys and 69000 adults are the members of Y. M. C. A. 33500 females are the members of Y. W. C. A. Lectures, vacation-courses, radio-programme were arranged. Y. W. C. A. had opened 271 classes for teaching 3 R's only; one—forty classes for (practical) education *i. e.*, domestic science, book-keeping, sewing.

(4). *Women's Association*—It has 4250 branches in villages. Regular classes are held for teaching sewing, cooking, hygiene, poetry, history and music. Members number two lacs and a half. This Association takes a very leading part in village-reconstruction.

(5) *Co-operative Societies*—Social and economic subjects are discussed in meetings; neither the school-buildings nor teachers remain "idle" during vacation; lectures, object-lesson gatherings, religious activities, industrial exhibitions, lantern lectures, baby-weeks, and other items are displaced.

(6, 7). *The British Broadcasting and Dramatic Associations*—A good dramatic performance can reflect as well as mould life; the radio contains, every day, something for the people. In 1930, there were about 185 well-managed radio centres. B. B. C. (British Broadcasting Corporation) is called the *People's University.*

Now, to turn to India. The Educational Report of India says very little about adult education in India. The report devotes some fifteen to twenty lines to it. In 1931, the Adult Education Class at the Teachers' College, Saidapet, continued. There were classes in the Government Arts College, Coimbatore. The report says, non-official agencies in the field were more active than before and their activities included the imparting of instructions in three R's, reading of vernacular papers and library books, lectures delivered on

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

health, sanitation, etc. The report alludes to Seva Sadans. In Bengal a comprehensive scheme for the improvement of Adult Education was sent up to the Government, and it was proposed to enlist the services of central co-operative and rural banks.

Any scheme of Adult Education in India should provide for villages. India is a land of villages. The total urban population of India comes to 33,985,427, *i. e.*, 11 per cent. of the total population. The number of places in Rural Areas in 696,831, and the total rural population of India comes to 313,852,351. Figures will surely show that efforts made to educate city-dwellers touch an infinitesimal minority of the total population in India. Real work lies in villages. "Go to villages and uplift them"—must be the message for graduates in India. The latest Census Report says that two-third of the villages in India have no schools at all, and that 500,000 villages in British India have 200,000 recognized schools. This is the plight of elementary primary education in India. Let the Adult Education Movement in India take stock of the situation and embody two broad lines, one with an agricultural bias for villages, and the other with an industrial bias for cities.

The Village Uplift Scheme of the Government of Bombay and Rural Reconstruction Scheme of Visva-Bharati are worth consideration. In Bombay Mr. Frederick Sykes has inaugurated the vigorous campaign of village improvement. In the Panjab, a rural reconstruction department has been recently organized. The writer in *The Times of India* of December 2, 1933, has drawn particular attention to the importance of education and the Co-operative movement as instruments of rural progress in his able article on "Rural Reconstruction." The inability of the average cultivator to make the best of his opportunities is due mainly to the lack of moral discipline induced by abject fatalism of his outlook on life. The only hope of a radical change in his outlook lies in a more rapid educational advance. Every section of the public should work in harmonious co-operation to raise the level of rural moral and material welfare. There should be improvement of agriculture through research and experiment. The agricultural schools and colleges have a special function in training men for the work of improving agriculture. Let the conservatism of the agriculturists be overcome first; improvements should not be expensive. But what is wanted is propaganda. The campaign has to be designed and carried out by a specialist who understands the psychology of the villagers and knows the ways of appealing to their self-interest. By means of pamphlets, articles in vernacular newspapers, posters, cinemas, lectures and dramas, the message of enlightenment and progress should be given to the villagers.

To remove the huge block of illiteracy a programme as shown below is necessary. (1) Women's Associations, (2) Servants of India Societies, (3) Purity Leagues, (4) Night Schools, (5) Seva Sadans, (6) Co-operative Societies, (7) Dramas, (8) Cinemas, (9) Radio Programmes (10) Fairs, (11) Red Cross Societies, (12) Workers' Educational Associations, (13) Trade Unions (14) Libraries, (15) Travelling Libraries, (16) Child Welfare and Baby Weeks, (17) Educational Conferences, (18) Agricultural and Industrial Exhibitions, (19) Seva-Mandals for Bhils and untouchables, (20) University Extension Lectures, (21) Vacation Courses, (22) Special Literature for Parents and Children. These twenty-two ways of approach to adult education have just figured on the Indian horizon; on their expansion depends the future of adult education, nay, the future of India. Women's Associations such as Hindu Stri-Mandal of Bombay, should be scattered in all towns and cities of the country. It is up to educated ladies of the place to organize and to attract their illiterate sisters. The courses should cover knowledge of three R's, cooking, domestic economy, first aid, home nursing, and subjects for general culture.

The Servants of India Society is also doing useful work; it can open still more centres for the education of backward classes. To turn to Purity League, it should be carefully noted that sexual immorality cannot be dealt with solely by prophylactic measures. Social hygiene is not entirely a matter for the doctors. The League should plan lectures on eugenics, alcoholism, venereal diseases and the hygiene of food and work. The importance of night schools is recognized everywhere, the more the number the better it is for India. Vocational subjects as well as literary ones should be included in the course. Seva-Sadans are meant for homeless widows who can learn some useful arts there. Dramas, cinemas, and the radio appeal nowadays, very powerfully to the public mind; and an educationist should not let go this powerful agency of influencing the public. Let there be better films and plays.

It is up to the Red Cross Society to educate public opinion in matters of hygiene and sanitation. Baby Weeks be celebrated at intervals in different districts. Here, one is reminded of the remark made by the Census Commissioner Mr. Hutton, regarding the importance of birth-control. The problem of birth-control is still a controversial topic; but it is necessary for clinics and Red Cross Societies to impart instructions to those desiring it. We have very few Workers' Educational Associations; it is for public-spirited rich merchants and mill-owners to start schools and hospitals for children of the labourers and for the labourers themselves. Libraries must be up-to-date, there should be separate sections for males, females and children; a nice catalogue-system be introduced. The Baroda State has achieved satisfactory progress in this field.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Neither the buildings of university, the college or the school, nor their staff be allowed to remain idle. Classes for the continuation school may be held there; professors and teachers can give lectures on varied subjects to the public. Last but not the least, publicity bureau is required. It should issue bulletins on adult education, enroll members and prepare the necessary literature both for adolescents and adults.

I have chalked the general outlines of the scheme of adult education and it is for the teachers and the Government of the country to rise to the occasion, and fill in details. Teachers are builders of nations. What is wanted is spirit of service and sacrifice. Let us all imbibe that spirit and contribute our humble mite to dispel darkness of ignorance from our dear, old India.*

* A paper for the All-India Teachers' Federation at Karachi Dec. 1933.

NAZI FOREIGN POLICY

By MAHMUD HUSAIN, D. Phil.
Reader in Modern History, Dacca University

IT is not easy to define and explain the aims and objects of the Nazis. One declared object does not always seem to be consistent with the other. Hitler and his followers claim to be nationalists as well as socialists. The word 'Nazi' itself is an abbreviated form of 'National-Socialist'. But it is extremely controversial whether it is at all possible to combine successfully in one system these two different ideologies, these two different attitudes towards life. To the Nazi intellect, however, the two doctrines do not seem to be at all inconsistent with each other. In fact, the theorists of the 'totalitarian state' take pride in the combination of these two apparently antagonistic political and economic creeds. But if the theory of Hitlerism contains in it, according to some at any rate, certain inconsistencies, it is and has been quite difinite on two questions. The aim of the domestic policy of Hitler seems to be the establishment of a racial state and that of his foreign policy the revision of the Treaty of Versailles. The two objects are by no means independent of each other, for, as we shall presently see, the German recial state cannot be established without the revision of the Treaty of Versailles.

So far as internal politics is concerned, the Nazis are very particular about the establishment of an all-powerful racial state. Curiously enough, however, their German or Aryan race includes in it every German-speaking person, if he or she does not happen to be a Jew. The Nazis talk of the Aryan race but they know that they cannot always afford to follow the principle very strictly, as their own not very tall, black-haired and brown-eyed "Fuehrer", according to their own conception of the 'Aryan' type is any thing but an "Aryan". What they mean is to unify all the German-speaking peoples, including those belonging to the neighbouring States and to bring them under one strong, highly centralized, dictatorial government.

The aim of Nazi foreign policy is the revision or, to be accurate, the total annulment of the Treaty of Versailles. In fact, all Germans are of one opinion on this question. They call it a "dictated peace". And dictated it certainly was.

The main penalties imposed on Germany by the Treaty of Versailles were of three kinds:

Firstly, Germany had to admit that the whole blame for the World War lay on her shoulders, and therefore she had to pay heavy reparations to the Victors.

Secondly, in order that she might never be in a position to repeat the 'crime against Civilization', Germany was disarmed.

The third penalty, for which the excuse was either the alleged mismanagement by Germany of her Colonial Empire or the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized By Arya Samaj Foundation Chennai and eGangotri

adherence to the principle of self-determination was that Germany had to hand over not only her colonies and overseas possessions to the Victors but a considerable portion of her European territory, principally to France, Belgium, Denmark and Poland.

As regards the responsibility for the war Art. 231 of the Treaty of Versailles says :

> The Allied and Associated governments affirm and Germany accepts, the responsibility of Germany and her allies for causing all the loss and danger to which the Allied and Associated governments and their nationals have been subjected as a consequence of the War imposed on them by the aggression of Germany and her allies.

The Germans resent this article perhaps more than any other of this Treaty. They call it in their own fashion "Kriegsschuldsluege" or the war-guilt lie. And any demagogue can kindle the popular passion by a simple reference, however irrelevant it might be, to this 'lie'.

As regards the responsibility for the war it is now generally believed that Germany cannot alone be held responsible for it. Historically speaking, many of the states, if not all, which took part in the struggle share the blame. But the Germans are convinced that in 1914 they were not aggressors in any sense of the term and that they were fighting in self-defence. The mobilization of Russia and France which came before their own is regarded by them as a clear proof of the innocence of their Government. They think that the mobilization of these two countries forced their Government into the declaration of war.

Now if the Germans were not responsible for it, why should they be forced to pay the costs of the war to the Victors ? The Germans naturally resented huge sums of money going abroad every year until 1932. They regarded this payment as wholly unjust and tyrannical, as not only the generation that took part in hostilities had to pay the penalty but two successive generations had to suffer. The Reparations have played an important part in arousing German discontent and therefore in strengthening political extremism. People outside Germany differ about the part which they have played in bringing about the economic crisis from which the world is suffering today, but the German Nationalists have no doubts on this point. From the very beginning they have not only pointed out the injustice done to the German people, they have also emphasized the disastrous effect of such payments on world-economy. Dr. Schacht in his remarkable book, *Das Ende der Reparation*, published in 1929, developed this thesis, and today when as a result of the advent of the Nazis to power he has returned to the Reichsbank as its president, he holds the same view. Dr. Schacht said in that book that Germany would never be in a position to pay huge sums of money prescribed by the Young Plan and if she did, it would mean the ruination of the whole economic order. The Nazis with Dr. Schacht hold that the present economic crisis is primarily due to the payment of huge sums of money as "war-tribute". Happily, however, Reparations today seem to be a thing of the past. They are, let all friends of peace and economic recovery pray, gone never to return. The Reparations disappeared but only after they had done their part in creating great misunderstanding between Germany and the Victors, especially France.

Another penalty imposed on Germany was the reduction of her armaments. The German army was reduced to 100,000 men, her navy was practically gone, and she was forbidden to possess an air fleet for war purposes. But the declared aim of the authors of the Treaty was the reduction and limitation of armaments of all countries and German disarmament was intended to serve as an initial measure for general disarmament. Now Hitler, who represents the views of all Germans on this question, says that it was only on a promise of subsequent disarmament that Germany undertook to disarm. Germany regards it as legally binding on other nations. She takes it as a contract between parties. Germany completed its disarmament in the years immediately following the Great War. After having fulfilled the conditions of the Treaty she now demands of other parties to keep their pledge, and to translate their declared object into practice. But in fairness to the Allies it must be pointed out that German disarmament cannot be regarded as one part of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

contract, the other part of which is disarmament of other Powers. Germany, however, gives quite another interpretation to the whole thing and demands general disarmament. But as there seems to be no response she insists on the principle of equality of armaments. Either reduce your own armaments or allow Germany to re-arm : this is the attitude taken up by the Nazis. Germany is not prepared to watch the strength of her neighbours growing every day while she is bound by the Treaty. The German people perhaps resent the disarmament of their country more than they did the payment of Reparations. Reparations meant a big material loss to the country ; but disarmament means much more. For through disarmament the very existence of the Fatherland is considered to be at stake. Disarmament means that the country of a very proud people is at the mercy of its highly-armed neighbours. The Germans can never appreciate the French point of view on the question of disarmament. The insistence of France on "Security before Disarmament" is regarded as a clear proof of French insincerity. The two possible rivals of France according to the French themselves are Germany and Italy. But France is superior to Germany and Italy. Even the combined strength of these two countries is much inferior to that of France. Apart from her own strength she has got a number of powerful and devoted allies—mostly neighbours of Germany. The fact that none of the probable opponents of France, not even a combination of these opponents, is her equal is a sufficient guarantee of her security. To the German it seems that the insistence of France on security before disarmament has absolutely nothing to do with security. If it is security, it is not the security of their State but the security of their domination.

And now we come to the territorial losses of Germany as a result of the Treaty of Versailles. Firstly, Germany was deprived of her colonies and overseas possessions. This was done because Germany was alleged to have mismanaged her colonial empire. Secondly, she had to hand over the provinces of Alsace and Lorraine to France, Posen, West Prussia, and Upper Silesia to Poland, Sleswick to Denmark and another district to Belgium. This meant more than 60,000 sq. miles. Then the left bank of the Rhine came under the occupation of the Allied Forces for a period of 15 years, but thanks to British efforts the occupation came to an end five years earlier. Again the government of the Saar was entrusted to the League of Nations for a period of fifteen years, after which period the future of the country was to be decided by plebiscite, the people having three alternatives before them—either a return to Germany or incorporation with France or the continuation of the government of the League. Another treaty, the Treaty of St. Germain, prohibited a union between Germany and Austria.

All these provisions are naturally very distasteful to Germans. But the Nazis do not seem to be very sorry for certain territorial losses. It is true that the Nazis are demanding the return of their pre-War colonies, but at the same time it should be remembered that Herr Hitler, like Bismarck, is not at all enthusiastic about colonial expansion. In the racial state of his conception there is no place for colonies. And if he and his lieutenants are asking for a return of the colonies it is not because they are very keen on their return but because German public opinion demands it. At any rate there can be no doubt that Hitler and his chief lieutenants are much more particular about their Eastern territories than about their colonies.

Just as the Nazis are not very particular about the return of the colonies so they are not very keen on the return of Alsace and Lorraine. Somehow they seem to have reconciled themselves with the loss of these provinces. But they are very definite with regard to a change in their Eastern frontiers, which means the return of all those districts which they consider to be German to the Fatherland, and a union with Austria. They are also very particular about the restoration of the Saar. This question will, however, be settled next year by means of a plebiscite and no one need have any doubts about the result. Although the population of this province is predominantly Catholic and it also happens to be a centre of Socialism and Communism—creeds which are being persecuted in Germany—yet it is unthinkable that a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

majority of these people will decide in favour of a union with France or even in favour of a continuance of the *status quo*. It is a good news in this connection that France and Germany have after all agreed on the procedure and arrrangements of next year's plebiscite.

But decidedly the most difficult of all the problems is the revision of the Eastern frontiers in favour of Germany and at the expense of Poland and other States. An incidental but for Germany very important result of the resurrection of the Polish State was the separation of Eastern Prussia from the main land. This was due to the creation of the Polish Corridor in order to provide Poland with a sea port. The Germans bitterly complain against this gross injustice. They cannot allow their Fatherland to be torn into pieces like that. Again, Germans are a growing nation and therefore expansion is necessary. If, however, colonial expansion is considered to be undesirable (because the Nazis are afraid of a deterioration of German "Kultur" and want to establish a compact racial state) then the only other direction in which Germany may expand is towards the East. The Nazi Eastern policy is responsible for the strained relations between Germany and her neighbours, including Russia.

The other thorny problem is that of Austro-German Union. The consolidation of the German Nation cannot be regarded as complete without this union. The Nazis seem to be determined to accomplish it, whatever the cost.

About two years ago almost every German and every Austrian regarded such a union as very desirable. Austria's position as a result of the Great War was rendered impossible. She lost 7/8ths of her teritory and more than 87 per cent of her population. What is perhaps worse is that of her present population of 6,400,000 over two million people live in the capital. Austria with her present meagre resources—she has no outlet to the sea—is not in a position to support such a huge capital, which although decaying is still one of the most important towns on the Continent and is, perhaps, from cultural point of view, only next to Paris. The one solution of the problem which appealed to both the German-speaking peoples was an Austro-German Union. Both the peoples form one linguistic and cultural unit and may be regarded as one nation. The people of both these countries were strongly in favour of such a union before Herr Hitler came to power. And if the schemes of union (including that of Economic Union of 1931) did not materialize, it was because other Powers, especially France, would not permit it.

But since the establishment of the Nazi regime in Germany things have changed. Now Austria, under the strong government of Dolfuss, rejects the idea of union. Every important political party of Austria, Nazis excepted, is now opposed to it. The Catholics and the Socialists are naturally afraid of a Nazi regime. Then there are Austrian Nationalists who want to preserve the independence of their country, for otherwise they apprehend, it would become a dependency of Protestant Prussia. But they know that they cannot avoid a union with Nazi Germany without the support of some powerful State. They have actually found such an ally in Italy. France does not want to see the influence of Italy grow in Central and Eastern Europe—she has her own schemes—but as a lesser evil she would rather tolerate an understanding between Italy and Austria than see Austro-German Union accomplished.

Hitler is aware that the ideal of his 'racial state' which means Austro-German Union and expansion of the Fatherland towards the East is unattainable without the help of some of the more important Powers. He knows that inside Germany he is at liberty to do what he likes—he can persecute the Jews, he can suspend the republican constitution, he can dissolve all political parties and even religious sections, he can suppress freedom of speech and freedom of the Press—but in foreign policy he would be helpless without powerful allies. The countries whose help Hitler seeks most are Italy and Great Britain. The Nazis consider France as their natural enemy with which there can be no permanent understanding. A conflict with Poland, Russia, Czechoslovakia and even Austria also seems to be unvoidable because of the Eastern Policy of the Nazis. In order to combat such a formidable combination Germany must have some allies. To Hitler Great Britain and Italy seem to be such allies. Italy is a "natural" ally of Nazi Germany not only

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

because of the common belief in one political philosophy (!) but also because France happens to be their common enemy. Hitler in spite of the declared policy of national consolidation gave up the cause of the German-speaking people of Tyrol for the sake of this friendship.

The Nazis consider Great Britain as another natural ally of theirs, firstly because of the racial affinity, which they forgot during the Great War, and secondly because they think that England in order to secure a balance of power in Europe would welcome the recovery of Germany. The Nazis argue that Great Britain has always been the enemy of the strongest power on the Continent. Before the Great War it was Germany, now it is France. And in order to crush the power of France Great Britain would naturally welcome an alliance with Germany. Again, Germany is one of the best markets for British goods and therefore her recovery would be economically beneficial to Great Britain.

For the sake of British friendship Hitler must also denounce Indian political aspirations. The position of Hitler as regards India is somewhat this : Germany may sympathize with Indian political ambitions either on humanitarian grounds or for political reasons. In the first case if India were really oppressed by a foreign nation Germany would have been justified in sympathizing with her. But she does not seem to be oppressed. If Indians were really an oppressed people they would have stood up against British authority during the Great War. Oppressed peoples do not help their masters when these are in great danger. So it seems Indians are not an oppressed people, and on grounds of justice Germany need not sympathize with their political ambitions. But sometimes people have to make and keep friendships for political reasons. India as a political ally, however, is of no good. England, more than any other country, is in a position to help the Fatherland. Many a problem of German foreign policy can be solved if there is co-operation between these two "Aryan" peoples. So, as a matter of policy Germany in order to please Great Britain should denounce Indian political aspirations even if they happen to be the declared aim of British policy in India !

Hitler's aim is friendship with Great Britain and Italy. And he was absolutely sure of such friendship before he seized power. But things do not always happen according to calculations. Italy would never allow an Austro-German union which in future is bound to become a source of danger to her frontiers. The attitude of England is still ambiguous. Before the Nazi regime was established there was a widespread sympathy for the German cause in England. But the persecution of the Jews and the militaristic ambitions of the Nazis have brought about a change in the attitude of the English people. There is another thing which cannot be ignored in this connection. It is true that France has come out of the Great War as the strongest power on the Continent and therefore it may be that Great Britain is jealous of her power, but it is equally true that France with her colonies forms an almost self-sufficient economic unit. She is not a very serious competitor of England in the markets of the world. Germany, on the other hand, although today a second rate power, is such a competitor. In 1930, for instance, the exports of Germany exceeded those of England, In these circumstances Hitler's calculations about Italian and British friendship seem to be rather optimistic.

The Nazis have not yet been able to secure the friendship of these two countries. On the other hand, their rise to power has caused certain unexpected changes in the foreign relations of many European countries, which may prove dangerous for Germany. Russia's relations with France, Poland and the Little Entente are now far better than they used to be. Now there is a regular understanding between France and Russia similar to that of the pre-War *Entente Cordiale*. France has forgotten and forgiven Russian desertion of 1917, and the repudiation of debts.

Similarly between Poland and Russia there exist much better relations today, because Hitlerism is their common enemy. Even the rivals in the Mediterranean, Italy and France, have come nearer each other. It is in the common interest of both the countries to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

76436
Digitized by Arya Samaj Foundation Chennai and eGangotri

prevent Austro-German union. Italy does not mind if the Eastern frontiers of Germany undergo a change in favour of the latter. An Austro-German union, however, she would not allow under any circumstances. But France is very particular about the Eastern frontiers of Germany. Poland cannot be allowed to be weakened and Czechoslovakia must remain as it is in order to check any territorial ambitions of Germany. Again, as we have already noticed, Hitler's coming to power is responsible for the strained relations between the two German-speaking peoples, who had been allies for more than half a century. It is no exaggeration to say that about three years back no one could foresee such an estrangement between these two States.

Hitler certainly knows, which perhaps his followers do not, that today Germany stands isolated in the world. She is more isolated than she was in 1914. For in that year she had at least one faithful ally, *viz.*, Austria. Today even Austria has deserted her. Whether or not in 1914 Germany was really "encircled" by enemies, today she is. The Nazis had counted on British and Italian support, as against France. The opposition on the part of France was of course always expected. A German can never foresee a future in which these two countries might live in peace. Every peace with France means but a truce. It is the firm conviction of almost every German that France will never be prepared to see the Reich prosper. Comparing the attitudes of Great Britain and France towards Germany Hitler says in his "*Mein Kampf*":

> England does not want Germany as a world power; France does not want Germany to be a power at all.

With the French there can be no permanent understanding. In every hostile or unfriendly act of every Power German eyes see French influence working. The enmity of France is one of the most fundamental political beliefs of every German,—man, woman and child. The writer of this article, while talking of bad weather—a familiar topic of conversation in Europe—was really surprised to hear from a young boy of fifteen that the nasty wind was coming from France and "what else can we expect from that quarter".

Hitler, as we have seen, had counted on the support of England and Italy as against France. But that support does not seem to be forthcoming. War, however, according to him, is inevitable. Germany will have to fight one day so that justice may be done to her. But Germany is not prepared to go to war just now. A war at present without the support of England and Italy will certainly mean the destruction of the newly made Third Reich. In order to avoid an immediate danger of war Hitler is now trying to conclude treaties with her neighbours. There is already a treaty in existence between Germany and Poland. Too much importance, however, need not be attached to it, as there are fundamental differences between the two countries. Von Papen's visits to Italy have turned out fruitless. Now another agent of Germany, General Goering, this time, is trying to make friends with Jugoslavia and Bulgaria. Both these countries have some ideological affinities with Hitlerism, being now governed dictatorially. Both the countries, however, are too much in need of French support and there is no doubt that they would prefer it to that of Germany.

The only natural ally of Germany at the present day seems to be a far-off island, and that is Japan. This alliance, however, may prove to be of some value only in case of a Far Eastern conflict; otherwise Japan's help cannot be expected.

If there is one conclusion that can safely be drawn from the foregoing pages it is this: The widespread sympathy with the German cause that was to be found in many a country before the establishment of the Nazi regime has disappeared and has given place to suspicion, if not to actual hostility. Today Germany is almost without any friends abroad.

BOOK REVIEWS

BOOKS in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

THE SCIENCE OF SOCIAL ORGANISATION: Vol. I (Second Edition) *By Bhagavan Das, D. L. Theosophical Publishing House, Adyar, Madras. 1932.*

As early as 1909, a series of four lectures on the laws of Manu was delivered by Dr. Bhagavan Das before the 34th annual convention of the Theosophical Society, and published in book-form next year by the Theosophical Publishing Society. A new edition was called for by 1918, but in the years since India had been so full of noise and movement, that Dr. Das was forced to put off *Manu* again and again and at last consented to publish the bulk of the portion that had been already printed off, in a new form and with many additions, though regretting very much that numerous other notes that had been prepared meanwhile could not be utilized in this volume.

Dr. Das first of all explains the basic principle of Manu's code of Life. The Spirit's Entrance into matter and Retirement out of it have a rhythmic swing which are recognised in all systems of thought and religion and are known here by their ancient names, Pravritti and Nivritti, caused by the interplay of the Self and the Not-Self. The three ends of the first half of life are Dharma, Artha, Kama, interpreted in modern terms they are (i) duty, character and active function; (ii) wealth and possessions; (iii) pleasures and sense-enjoyments. These ends are interdependent. The second half of life has its corresponding ends,—bhakti, yoga-aishvarya, and moksha. Dr. Das explains caste as the four vocational classes. The primary debts of life and their repayments, the special appetites or ambitions and the corresponding prizes, the three special ways of livelihood and stages of life, arise out of the three aspects of consciousness and the three qualities of matter.

All these are, however, based on the two primal factors of the world-process, the Self and the Not-Self, each with three attributes and their Interplay. But the problems of life have also to be understood with reference to the World-Evolution; it is the want of this adaptability which is the source of all India's later degeneration. Dr. Das passes in review the different root-races and declares that Manu's laws are for the third and later races, the first two races which have no sex-development being exempted from the operation of any laws in the modern sense of the word. The excellence of Manu's Code is that it provides a basis for all subsequent system of Social Organization and though future civilization may profess to supersede it, the main outlines hold good for all times to come. As a matter of fact if we consider modern problems we shall find that the same old ideas are recurring in new forms, even in the "progressive" West. A spiritual communism rather than an artificial socialism is the aim and purpose of Manu's laws,

Dr. Das then discusses the problems of education in detail. Manu gave it the first place in his scheme of life, and the attitude is significant. Education in the different lines, in the four primary items,—hygiene and sanitation, good manners and morals, tending the fires (culinary and sacrificial) and religion,—is of supreme importance, and Manu may be studied even today for practical guidance. There is a crying need for changing the details but the reader will surely gain if he consults the code for theoretical guidance, and in respect of permanent principles.

The treatment of the questions is throughout full and the author's abundance of illustrations and analogies carries the reader with him; the elucidation of the time-honoured principles is done with enthusiasm which is catching, and the book will provoke thought in those who seriously set about to study the science of social organization. The next volume is expected with eager interest, because the reader feels sure Dr. Das will apply his profound studies, wide experience and enthusiastic outlook to the solution of many-tangled problems that defy solution now.

Theosophi-

GOETHES FAUST: *C. Jinarajadasa, cal Publishing House, Adyar, Madras. 1932.*

Written in the centenary year of Goethe's death, the book dwells on what it understands to be the central point in the best known of his writings, a point generally ignored or misrepresented. The writer thinks that like most great men Goethe himself was unconscious of the message of his book, which embodies one of the greatest principles of occult life.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The glittering concourse of events in the second part of Goethe's Faust can be reasonably explained only on the assumption of the gospel of reincarnations to be true, and that leads us to the belief that redemption comes only through service suffused by the glow of Knowledge, Love, Life and Beauty.

A CHEERFUL ASCETIC AND OTHER ESSAYS: *James J. Daly, S. J., Professor of English, University of Detroit. The Bruce Publishing Company, New York, 1931.*

Father James J. Daly, S. J., is a distinguished writer and critic on the other side the Atlantic, and the general reader had been so long left in ignorance of the quality of his writings. In the present volume, published as a number of the Science and Culture Series under the general editorship of Father Joseph Husslein, we find Father Daly's different essays brought together from different magazines where they had been first published, and the attempt deserves appreciation. The reader is treated to the Catholic point of view which one is so apt to miss in the study of English literature. But in *the intolerent Emerson* one cannot help feeling that the writer has gone a little too far (though undoubtedly Emerson deserves snubbing) and that the tone of this essay is not in keeping with that of the rest of the book. Barring such particular limitations, Prof. Daly's writings abound in delicate shades of thought and expression, rich in humour and understanding. The volume will be thoroughly enjoyed in the reading.

THE RED-RIPE OF THE HEART: *T. B. Krishnaswami, M. A., B. L. Illustrated by Friedrich H. Raccleder. B. M. Press. Mangalore, S. K., British India.*

A number of prose poems unified in mood and sentiment, breathing intense love, ecstatic, "youthful, unthinking, romantic"! The illustrations, thoroughly Indian in design and expression, have an interest of their own, and the language combines gracefulness and an impassioned ring. The book may be expected to be popular with a section of the reading public, delighting in fantasies and rhapsodies.

PRIYARANJAN SEN

NAZARETH OR SOCIAL CHAOS: *Vincent McNabb, O. P., pp. 98, pub. Burns Oates and Washbourne Ltd. Price 1s. 6d.*

Many and various are the cures advocated for remedying the present depression, and the social ills from which society is obviously suffering. In Great Britain, where the majority of the population are living in towns, and where the hand of Time has softened the harsher realities of the past, it is naturally for people to start a "back-to-the-land" campaign. The ideal of the yeoman farmer, cultivating his own land, independent in thought, because he was also economically independent without being burdened by too great riches has always been an attractive picture. Father McNabb is a strong, and skilful exponent of this idea. Unfortunately, whilst it may be true that men are often greedy, and selfish, it is doubtful whether greed and selfishness are the root causes of the present depression. Whilst this book may be useful to some people in Great Britain, it is not likely to be of much help to people in India where the conditions are utterly different.

CONVERSIONS TO THE CATHOLIC CHURCH —*edited by Maurice Leahy. pp. 127, pub. Burns Oates and Washbourne Ltd. Price 3s. 6d.*

Most people who are born in any particular religious organization remain in that organization for the whole of their lives, but a minority change. In this book a dozen fairly well-known people in Great Britain try to state what it was that led them to join the Roman Catholic Church. None of them have anything startling to say and one has the feeling that their advance towards Roman Catholicism was both gradual, and natural. Unless one happened to be personally interested in any of the writers, or especially attracted to the Roman Catholic Church there is little of interest in the book which lacks the inspiration which has made Newman's *Apologin Pro Vita Sua* and St. Augustine's *Confessions* books of universal appeal.

CHRISTOPHER ACKROYD

ORISSA UNDER BHAUMA KINGS: *By Binayak Misra. Published by the author. Viswamitra Press, Calcutta. Pp. 98. Price Rs. 3.*

Many Oriya gentlemen have now directed their attention to historical and archaeological research, the most notable of these is Mr. Binayak Misra. By his contributions published in the various research journals, he has already established himself as an able and impartial scholar. In his present publication Mr. Misra has not only been able to live up to his old reputation, but has also demonstrated what a painstaking worker he is. His book deals with one Orissan dynasty—the Kara-Kesaris, or the Bhauma kings, who ruled over certain portions of modern Orissa in the 8th century A. D. The printing and binding is good, but unfortunately some printing mistakes have been overlooked. The book is also provided with an index and is illustrated. The plan of the work is simple. It is divided into two parts. The first part deals with stone inscriptions and land grants so far discovered. Altogether fourteen epigraphs have been dealt with in this section. Most of these have already been published, but Mr. Misra is to be congratulated on having successfully cleared the mire of Rajguru and others. Four new records, three from Talcher and one from Angul have also been dealt with. The most noticeable feature of this section is the revised readings of the dates suggested by the author. The second part consists of notes on Chronology, extent of the Kara kingdom, Revenue and Administrative systems etc. A mass of miscellaneous evidence has been gathered in these notes and historians, archaeologists, and economists will derive considerable benefit from them. In these notes the author has made an attempt to present as faithful a picture of the times as is possible to do under the circumstances. It is of course impossible to expect everyone to agree with all the views expressed by the author, but these differences of opinion in no way lessens the intrinsic merit of the book. On the whole Mr. Misra is to be congratulated on bringing out successfully such an important treatise.

A. C. Banerji

SIN AND SUCH: *By Jack Woodford. Palais-Royal Press. Rue de Beaujolais Paris. 1.*

The book is one of the series of 'unconventional' books which the Palais-Royal Press has made it its business to publish. We do not know the aims and objects which have prompted the publishers to under-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

take such publications neither are we convinced that any useful purpose is served at all by such books. The author of the volume under review was determined to be tremendously realistic with the result that he has been led sometimes to describe scenes which are revolting to all sense of shame and decency.

There is hardly any plot worth the name in the story. It is only a series of 'affairs with women' each one of which serves as a peg to hang the author's pompous arguments against all conventional standards of moral ideas and customs, specially against the Institution of Marriage and what is generally regarded as Sin. The book reveals an attempt of the author to be highly pedantic and his intense desire to show off his familiarity with the modern currents of psychological thinking; it is full of the free use of such words as Undermind, Unconscious, Sublimation, etc. and almost all the characters of the book seem to be 'psychasthenic' individuals.

One is tempted to agree with what Aunt Nelia said in a discussion of Arts and apply her statement to the present volume, *viz.* that this 'art' of the author is merely an excuse for sinning.

CHARACTER AND PERSONALITY: *Vol. 2. No. 3. March 1934. George Allen and Unwin, Ltd. London.*

This is one of the issues of an International quarterly journal devoted to Psychodiagnostics and allied studies. We have elsewhere (Indian Journal of Psychology) discussed the extreme usefulness of such journals for furthering the studies of the various problems of life from the purely psychological point of view. The contributors to the present number (Pavlov, Saudek and others) are all world-renowned scientists and each of them has something new to say in the present issue about the problems with which they have dealt. The studies of Childrens' Music by Platt and of their Pictorial aptitude by Seeman are very valuable, while the study of Moods by Fisher and of Handwriting by Saudek will interest a larger number of persons than the technical psychologists. The biological study of the personality of Charles Dickens by Fantham is altogether a new venture and we hope that the writer will in the near future take up the study of other well-known personalities by this method.

SURHIT CHANDRA MITRA

SCIENCE IN THE CHANGING WORLD *Edited by Mary Adams, London, George Allen and Unwin Ltd., Museum Street. Pp. 286. Price 6s. Net.*

This little book is a collection of popular broadcast talks on the scientific problems of the day by such eminent men as Thomas Holland, H. Levy, Julian Huxley, John R. Baker, Bertrand Russell, Aldous Huxley, Hugh I'A. Fausset, Hilaire Belloc, J. B. S. Haldane, and Oliver Lodge. The editor states in the preface that this is the first time that an attempt has been made to maintain a continuity in broadcast talks spread over a pretty long period of time. We might call the book a broadcast symposium in a popular style. The book gives in a concise form the latest information on such topics as the aim of science, our place in nature, the economical, scientific and humanistic trends of our civilization, eugenics and biology. In the chapter on "What is Science Prof. Levy has given incidentally certain very interesting descriptions of an aero-dynamics laboratory and has shown the complicated nature of the organization necessary for any scientific research. Prof. Levy has given a very suitable rejoinder to Jeans, Eddington, and others who have misread the philosophical implications of the principle of indeterminacy which looms so large in modern physics. Prof. Levy's views on indeterminacy is perhaps the sanest that I have come across. Superstitions and prejudices of scientific men have been very ably exposed by Prof. Levy. The discussions on the missing link and the evolution of mind will no doubt be appreciated by the lay reader. Aldous Huxley refers to Tolstoy and Gandhi and discredits the slogan "return to nature." The problem of civilization has been examined both from without and from within. Some of the lecturers have stressed the importance of the external factors in moulding our civilization while others have indicated the importance of inner psychological factors. The book can confidently be recommended to the lay reader as a very useful and instructive one.

A THEORY OF LAUGHTER: *By V. K. Krishna Menon, M.A., George Allen and Unwin Ltd. Museum Street, London. Price Rs. 5. Pp. 187.*

The author has critically examined the different theories of laughter proposed by Hobbes, Bain, Baillie, Bergson and McDougall. He has exposed the inconsistencies of the current theories and has pointed out the core of truth that is to be found in each. The author has proposed a theory of his own basing his views on McDougall's conception of the nature of instincts. According to the author laughter is the process of demobilization of surplus instinctive forces after the goal has been realized. The author points out that persons do not really laugh *at* a situation but people feel impelled to laugh only *in* certain circumstances. He has discussed the nature of humour and wit and has given us an analysis of the pleasure we feel in witnessing a tragic drama. Some of the Shakesperian characters, such as Falstaff, Hamlet, Othello, and others have been studied by the author from the standpoint of his own theory. There is no doubt that Mr. Menon has hit upon one aspect of the mechanism of laughter and humour. But the author would not have rushed into print, had he studied Freud's *Wit and its Relation to the Unconscious* along with the books he mentions as he would have found himself forestalled by Freud long before.

THE NEW HEALING: *Wilfrid A. Streeter— Methuen & Co. Ltd., London. Price 7s. 6d. net. Pp. 257.*

Mr. Streeter has given us a very interesting account of the art and science of osteopathy which is popularly known as bone-setting. Bone-setting as a profession has found many advocates in different parts of the world although the regular medical men with their hide-bound conservatism have been slow to recognize the merit of this art. There has been, however, no lack of popular support for the bone setter. The famous controversy regarding Barker, the bone-setter, whom the medical profession persisted in calling a quack and on whom the Kinghthood was conferred by the King as a recognition of his services has been recalled in this book. The main tennets of osteopathy have been clearly indicated by the author in the latter part of his book. The book is well-worth a perusal by medical men as well as the laity.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

MEN AND MEDICINE: *By Dr. Henry E. Sigerist. George Allen & Unwin Ltd. Museum Street, London. Price 12s. 6d. net. Pp. 340.*

It is a well-known fact that the great majority of medical men know nothing of the historical and cultural background of the healing art. The work under review is meant to give the medical student "a much-needed survey of the course he is to follow and of the goal to be attained." The book is an excellent one and treats of the structure of man, the function of different organs, the relation between mind and body, the general nature of disease, its theory and causation, mortality, prophylaxis, the personality of the physician, and other problems from the historical standpoint. It is to be regretted that the author who seems to be so well-posted in the history of medicine knows nothing of the antiquity and achievements of the Ayurveda. Many of the discoveries which the author attributes to the Occident are to be found in the ancient Indian system of medicine. It is time European scholars dealing with the history of the different arts and sciences paid more attention to Indian records.

THE SEXUAL SIDE OF MARRIAGE: *By M. J. Exner, M. D., George Allen & Unwin Ltd., Museum Street, London. Pp. 252.*

The author has sought to give an insight into the factors that make for successful marriage and he has laid particular emphasis on the question of sex. In the words of the author "the purpose of the book is to provide as clear as possible a sailing chart to enable those who are contemplating marriage to avoid the shoals and to help those who find themselves already among them to discover a way out." The book although meant for the lay reader will also no doubt be appreciated by the medical profession. The chapter on sexual mal-adjustment is specially good. By a careful analysis of the data obtained by numerous workers from married couples the author has been able to make out a strong case in favour of marriage. The author is against the too wide spacing of children.

LIFE IN NATURE: *James Hinton—George Allen & Unwin Ltd., Museum Street, London. Price 10s. 6d. net. Pp. 291.*

James Hinton who was born in 1822 and who had a chequered career qualified himself as a medical man wrote many books on philosophical, religious, social, medical and surgical topics. Hinton died in 1875. The book under review is one of Hinton's best works. Although Hinton had his training as a scientist he had the vision of a poet. The book deals with the problem of evolution of life, the morphology of living beings, the vital forces, the law of form and many other problems. There is a learned introduction by Havelock Ellis. Throughout the discussion there is to be discerned a spiritual outlook so rare among the scientists of the present day. The book may be read with profit by those who are interested in the general problems of Biology.

A TREATISE ON BIRTH-CONTROL: *By An Oriental Doctor. Published by Mrs. A. Mathews, Conception Inquiry Office, Kuthi Athode Travancore. Pp. 172.*

We wonder why the author of this book felt shy to announce his name on the title page although the book has been professed to be written by an 'Eminent Doctor.' The internal evidence shows that he is neither eminent nor a medical man. The usual sex topics are to be found in this book discussed in a popular style. I am sorry I have no word of praise for this little volume.

G. BOSE

GERMAN

DAS BRITISCHE ERZIEHUNGSWESEN IN INDIEN: *By Dr. Gerta Hertz. Published by Weidmannsche Buchhandlung. Berlin, 1932.*

The book under review is one of the most thorough and comprehensive treatises on the history of education in India. Though the special subject of the book is the British system of education only the authoress has efficiently and elaborately dealt in the first part of her book with the old Indian systems, Hindu as well as Mahomedan, in all their various aspects. The second part of the book is devoted to the Education system under the East India Company. The conflict between the methods and ideas of the Christian Missionaries on the one hand and the outlook of the British Conservative politicians regarding the object of the education of the natives on the other, has been very ably depicted. The authoress next shows how the liberal view-point, gradually came to stay in spite of Macaulay and others of his way of thinking. How the efforts of the Indian educationists and politicians of wide ideas influenced and modified the occidental view-point has been demonstrated with a thoroughness, characteristic of all German scholars. In the last part of the book the organization of the various types of modern schools and their financial basis have been delineated. How the Universities in the different provinces were founded, and how the number of high schools and elementary schools, technical and industrial schools, special schools for girls and for depressed classes, etc. gradually increased, have all been described, bringing the history up to the year 1929.

In conclusion, the authoress maintains that the British education system in India has been more powerfully influenced by political rather than by purely pedagogical considerations, and this is responsible for the creation of a small class of educated Indians who are for the most part neglectful of their own culture and traditions and are even inclined to look at these with disdain. She calls them the "Babus" or the "Brown Englishmen". She, however, notes with great satisfaction that the purely Indian ideals which were neglected and suppressed so long by the foreign system of education are beginning to reassert themselves. This movement has been greatly furthered by the new orientation of the Indian National Congress.

It is impossible to do full justice to the book in a short review. One cannot but admire the industry and patience of the authoress who has ransacked all possible sources of information, in order to give a thorough and systematic presentation of the British educational system in India. The most remarkable feature of the book is the clear demonstration of how personalities and political situations have throughout dominated the evolution of the British ideas of Indian education.

SUHRIT CHANDRA MITRA

DEUTSCHE LITERATUR: *Reihe Klassik, Vol. 2, Philipp Reclam Jun. Verlag, Leipzig.*

"Deutsche Literatur" is a monumental collection

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of German Literature, published by Philipp Reclam Jun. in Leipzig (Germany.) We possess already excellent editions of the works of German writers, poets and philosophers with interesting introductions in which the editors try to visualize the personality. The present collection follows quite a new plan. It is concerned with the historical development and cultural progress in the ceaseless flow of the German mind. The entire collection will consist of 250 volumes. The plan is, however, not a rigid and inflexible one. It is amenable to changes when these must needs be made.

The present volume (second volume of the Classical Period) is a breviary of the humanistic outlook on life during the German Classical Age. You find herein some of the most important works of German Idealism which trace and explain its growth out of the ideas of the Reformation Period. The doctrine of toleration is symbolized in Lessing's "Nathan". His famous essay "On the Education of Mankind" is the clearest manifesto ever written in favour of the principles of a free theology, and of course against dogmas of every kind.

The creative genius Lessing is followed in this volume by the receptive genius Herder who influenced the development of the mind of the young Goethe, the greatest genius of Germany, in Strassburg so considerably. Herder's speech "On the Death of Lessing" is a dithyrambic hymn, an Adonais in prose, celebrating the great qualities of Lessing as a philosophic thinker and critic. Herder's Dialogues on "God" and his lecture on "The Immortality of Man" enlarge on the great importance of Spinoza regarding classical Humanism and unveils the human aspect in the conception of "The Immortality of Man".

Prof. Ermatinger's introduction sets forth the chief points in this volume in a way that reflects great credit upon the learned Editor. His notes at the end made for a better understanding of the book.

DIE DIONTUNG STEFAN GEORGES: *By Ernst Morwitz. Berlin (George Bondi Verlag), 1934.*

The book of Ernst Morwitz on Stefan George is a very valuable short commentary on the poems of the great German lyric poet, who was gathered to his fathers in Italy only a few months ago. When I asked German Propaganda Minister Dr. Goebbels in July 1933, as to who was the greatest poet of modern Germany, he replied at once, "Stefan George !"

Stefan George was a poet in the best sense of the word. He was the high priest of poetry. His poems are instinct with a wonderful rhythm. He is a master of architectural style in poetry. It is no exaggeration when I say that his fancy "peoples with golden dreams the stagnant air."

Morwitz paves the way to a better understanding of Stefan George, especially for the younger generation of today. He gives us a very interesting analysis of Stefan George's works and explains his poems from the viewpoint of a critic of art, initiating us into the depths of George's poetic genius.

Other useful books for the study of Stefan George's poetical works are "Die Ersten Buecher Stefan Georges" by Eduard Lachmann, "Stefan George und die Blaetter fuer die Kunst" by Friedrich Wolthers and "Stefan George" by Friedrich Gundolf (Georg Bondi Press, Berlin).

P. TARACHAND ROY

DIE GOLDBEWEGUNGEN NACH FRANKREICH IN DEN LETZTEN JAHREN—*Sudhir Sen, pp. 152, Bonn 1933,*

The more one reads certain well-known economists the more one is driven to the conclusion that though they may be very great economists, they are very poor writers of English. It is a pleasure therefore to read an economic study which is soundly reasoned, and clearly written. The book deals with the monetary problems of Germany, and their relation with the gold question. It is not a book for the general public, but is invaluable for anyone who wishes to understand the practical workings of the monetary system in a big country. Dr. Sen has shown himself to be an exceptionally able writer, and a vigourous and clear thinker, and it is to be hoped that his future studies will be of the same high standard.

CHRISTOPHER ACKROYD

SANSKRIT—HINDI—ENGLISH

RIGVEDA SAMHITA *with the Bhashyas: By Sayanacharya and the Marmanusarini Byakhya with notes and annotations by Pandit Durgadas Lahiry. Edited by Vedaratna Pramathanath Sanyal Sarma.*

The book under review is intended to be the first volume of the Hindi version of the Rigveda, edited by Pandit Durgadas Lahiry in Bengali.

The Hindi portion of the book including the general preface is mere translation of the corresponding portion in Pandit Lahiry's own edition.

The arrangement of the portion in Sanskrit is faulty. While the texts given, comprise the first 19 Suktas, there are Sayana's commentaries on 9 of them only. The commentaries, too, instead of being printed separately along with the Riks concerned, have all been printed together, much to the inconvenience of the reader.

The Marmanusarini Byakhya, which constitutes the most important feature of the book, is Pandit Lahiry's own exposition of the Suktas in simple Sanskrit and aims at bringing out the spiritual significance of the Riks. The exposition is interesting but not convincing, being not backed by authoritative texts.

As for example, we are not told how अग्नि could be made to mean ज्ञानदेव in defiance of all tradition.

The get-up of the book is excellent; the printing is on the whole satisfactory, but instances of orthographical errors are not rare.

ISAN CHANDRA ROY

SANSKRIT

SABDARATNASAMANVAYAKOSA OF KING SAHAJI OF TANJORE (*Gaekwad's Oriental Series No. LIX*), *Critically edited with an introduction and index by Vitthalram Lalluram Shastri, Sanskrit Mahavidyalaya, Baroda. With a Foreword by the General Editor, Dr. B. Bhattacharya, M. A., Ph. D. Price Rs. 11-0-0.*

Lexicographical works of which there is a fairly good number in Sanskrit belonging to different periods are not only of immense linguistic interest but a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

thorough analysis and study of them is expected to throw much welcome light on the cultural history of India and her provinces. But such a study of them may be possible only when the texts of them are critically edited and published in a useful form together with necessary indexes. And hence the authorities of the Gaekwad's Oriental Series deserve the hearty congratulations of the world of scholars on bringing out, in rapid succession, two old lexicographical works—the *Kesavakalpadrukosa* and the work under review. There is some doubt with regard to the authorship of the present work as only a prose version of it and none of the two MSS. on the basis of which it has been edited refers to the name of the author. But this does not in any way make the work the less interesting.

Proper care has been taken to make the work useful and handsome in every respect. The text is given in neat bold types and there is an exhaustive index of words—both of those the meanings of which are given as also of those that are used to indicate these meanings. There are only a few omissions of entries in it: under the word देवताभेद (*devatabheda*) reference should be given to p. 347, line 17 as to other pages. A cursory glance through the pages of the book brought to notice several interesting facts. Of local and comparatively later deities of the Hindu Pantheon the dictionary mentions Marici, Vatu, Cāmundā, Bherunda, Śāsta, Śītalā, Sunsiti, Śarabha, Asuri, Sundari, Prishātaka, Viśālāksī and Jambhala. Tārā is referred to as a Buddhist deity (p. 255, l. 6). The word Goraksa occurs but it is not mentioned as the name of the Yogin—well-known among the followers of Nathaism. A number of geographical places, specially places of pilgrimage, and a number of standard literary works are given here. A closer scrutiny is expected to bring to light many other important facts much useful to scholars.

CHINTAHARAN CHAKRAVARTI

BENGALI

KAVYA-PARIKRAMA—*By the late Ajit Kumar Chakravarti. Visva-Bharati Book Depot, 210, Cornwallis Street, Calcutta. 2nd Edition, 1933. Pp. 179. Price* Re. 1-8.

It is a misfortune for Bengali literature that the writings of so illustrious a writer as Dr. Rabindra Nath Tagore have not attracted the attention of worthy critics. Most of the so-called critical works in the market are full of eulogistic effusions but their authors do not give any evidence of critical acumen or intimate insight into the artistic workings of the Poet's mind. Under the circumstances, the present work by a close follower of Tagore holds the field. We welcome this second edition of the book in an enlarged form which was long overdue. We are only glad to add that this exquisitely written book of criticism has been accepted by the lovers of Bengali literature and the Poet. No student of Tagore literature can afford to miss this really helpful work which unfortunately does not cover the whole field. In this edition there are two prefaces by Prof. Khagendra Nath Mitra and Dr. Kalidas Nag.

RAMES BASU

FRENCH TRANSLATION OF BENGALI

LA POUPEE DE FROMAGE: (*Khirer Poutoul) of Abanindranath Tagore adapted from the original Bengali into French; by Andree Karpeles and Amiya Chakravarty; published by C. A. Hogman, 150 Boulevard St. Germain, Paris.*

Madame Andree Karpeles is a renowned French artist who spent her early days in Bengal and who visited Santiniketan later in life, drawing spontaneously inspiration not only from the master-artists of Bengal but also from the simple sublimity and grace of our village-folk. She had already published a remarkable volume, *India and her Soul* an anthology of contemporary Indian thought, much appreciated in Europe. She has published also a translation of Dr. Rabindranath Tagore's *Fire Flies* and of Abanindranath Tagore's *Essays on Art and Anatomy*. And now *Khirer Poutoul*, so well-known and popular in Bengal, has found its beautiful French incarnation, thanks to the devotion and enthusiasm of Madame Karpeles. She is a born-decorator and in every book that she publishes we feel the impress of her genius in illumining the text with flashes of decorative design that fascinate us. No wonder then that she hypnotized, by means of this magic doll of the Bengal village, one of the greatest story-tellers of our age, Selma Lagerlof of the Swedish Academy, who has written a charming preface to the volume. Selma Lagerlof has explored, more than anybody else, the world of super-naturalism hidden behind the folk-tales of her land and she has paid a great compliment to our Indian storry-tellers when she has said that they allow the super-natural element to disturb the simple progression of events only in case of extreme necessity, and even then Hindu super-naturalism might work through any beast or bird or even a long-tailed monkey and not necessarily through the all-powerful and irresistible *fairy*, more or less abstract and super-human. Through this story Selma Lagerlof could feel the exquisite grace and refine expressions of the royal court of India. Above all, she admires Indian wisdom because "it places goodness and fidelity high above youth and beauty."

X

GUJARATI

MANJARI: *Published by Ramu Thakkar, and printed at the Swadhin Printing Press, Ranpur. Cloth Cover, pp. 214. Price Re. 1-4. (1933).*

This is a collection of fifteen short stories, bearing on various domestic and social subjects published at different times in the weekly, *Phul Chhab*. They are very interesting to read, and many of them are told in a very affecting way. We specially commend the story, sarcastically called, "The Happy Prostitute," narrating the life-history of a Hindu girl, widowed at the age of fourteen, and her trials and her fall, till ultimately when she became a convert to Islam and a concubine of Musalman traders, all this because of the rigour of society which would not allow re-marriage, the result being her being driven on the streets. It is a scathing commentary on our ways.

THE WATERS OF DESTINY

By SITA DEVI

VII

SUBARNA woke up early in the morning. She was accustomed to early rising. Besides, the noise of the awakening of the great city, began much before the morning and woke up people who were new to the metropolis. Some such sound woke up Subarna, and she sat up straight in her bed. On first opening her eyes, she did not recognize her surroundings. Everything seemed strange and new to her. The next moment memory returned and she knew where she was. Slowly she came out of her room, on the open terrace and stood looking down on the streets beneath. It was already full of people, and vehicles and cars of different types. Subarna had never seen such things. She had never dreamed that there were so many kinds of people in the world. She had not much leisure in her old life to pass in dreaming and imagining. Oppression and fear crushed her, and her heart had dried up. She toiled like a beast of burden, and suffered silently like one. Her life held nothing but toil and suffering.

Suddenly, within a few days the walls of her prison house had broken down. Subarna did not know what to do with such perfect freedom. She felt herself lost and at her wits' end. Her mind too had become crippled through slavery and she could not even think clearly and coherently. She was a girl of fourteen, but she was ignorant of the world like an infant. On the other hand, she felt herself to be an old woman. She had no joy in life, she was afraid even to hope for better things. She was like a bird which had been set free from its cage after years of captivity and did not know how to use its freedom.

For about half an hour, she stood thus looking down at the streams of people beneath her. Then she returned to her room. She rolled up her bed. She was not accustomed to sitting idle in the morning but here she had no work. She peeped into her father's bedroom, he was still sleeping soundly. Subarna had a small bath-room, attached to her room. Usually there was no water to be had there. But there was an electric pump below, with the aid of which water could be pumped up to the second floor. The servants had seen to it today, knowing that the people above would need water. Seeing drops of water dribbling from the tap, Subarna went in and washed her hands and face at it. Then she gathered all the clothing she had used in the train and took them to the bath-room. She began to wash them, much more at ease now, because she had found something to do.

She was wholly engrossed in her work, but her father's voice made her look up with a start. "What are you about ?" asked her father. "Why are you getting wet so early ?"

"I am washing all the soiled clothing, used in the train, father," said the girl.

"Oh there will be lots more of clothing used in travelling, after this," said Pratul. "How much will you be able to wash ? I shall send them to the laundry. Come away from that damp place."

Subarna could never leave her work half done. She wrung out the clothes she had washed and came out with them. "Where shall I hang them up to dry, father ?" she asked.

A servant had come up with a large tea tray. "Give them to him," said Pratul. "Surya, take them and hang them up somewhere."

The servant put the tray down on Pratul's table. Then taking the bundle of washing he went away to hang them up. Pratul called Subarna to him and asked, "Have you washed your face ? Come and have your tea then."

Subarna looked at him, rather astonished. "But I have never taken tea, father," she said.

"Very well, take something else then," said her father. "Don't stand there like that. Come on."

Subarna had to come and stand by her father, though she had long since lost the habit of taking breakfast in the morning. She had to serve food to every one in her husband's house, before she could touch anything herself. It was generally in the afternoon that she took her first meal. Her mother-in-law did not believe in letting young wives have too easy a time. She hated these modern new-fangled ideas. Her own childhood and early youth had been passed under the tutelage of a very strict mother-in-law, and she was taking it out of poor Subarna, as a sort of reprisal. She believed that this sort of training bore good fruit in the long run. Women could lead easy lives when they grew old, but certainly not in their youth. What was the use of having mothers-in-law else ?

Pratul drew up a chair for Subarna and said, "Sit down. Now, what are you going to take ? Here are bread, butter and eggs. Can you eat these ?"

Subarna turned up her small nose in disgust and asked, "Is the bread made by a Muhammadan, father ?"

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Her father became grave and said, "That is possible; but you must give up these prejudices now. I won't force you to take them on the first day, but try to change your notions. But tell me now what you want to eat. There are some sweetmeats and fruits. You can have them. Shall I order more sweats for you ?"

The fruits and sweetmeats were on the same tray with the eggs and bread. Subarna had objections to taking these too. But she felt that her father was angry. So she drew the plate of sweets slowly towards herself and began to eat them, though tears were starting to her eyes.

When she had finished, her father asked, "Shall I order some milk for you ? You did not take tea."

Subarna smiled. Did her father think she was a baby or an invalid ? "No, no, father", she said. "I do not want anything else. I have taken quite enough." She began to put back the dishes on the tea-tray.

"Let them be, let them be", said Pratul. "The servant will see to these. I am going out now and may be late. What are you going to do all this time ? It is difficult to remain alone in this lodging-house. Will you come with me ?"

"Yes, father", said Subarna, "I shall feel very much afraid, if you leave me alone. The servants will come up and go down all the time. If there had been a maid servant, it would have been otherwise."

"You have reminded me of a good thing," said her father. "I shall try to engage a maid-servant. I won't have to take you along everywhere with me, then." As the servant came up for the tea-tray, Pratul turned to him and asked, "Can you get a maidservant today ? She will remain with my daughter the whole day, and do whatever work there is to do. She may go home at night."

Surya began loading the tray with the plates and cups and answered, "I can do that, Sir. I have a person in mind, I shall see whether I can find her in the market. How much are you going to pay her ?"

"First bring her, then we shall see about the payment", said Pratulchandra. "Get me a paper. Can you read, Subarna ?"

"I can read Bengali, father," said his daughter, rather shyly.

"Bring a Bengali paper too," said Pratul, handing him some money.

The servant went down. "I could have swept the rooms, if I had a broom," said Subarna.

"The servant will do that," said her father. "We must go out very soon. I think I shall have to buy new dresses, shoes, stockings and everything of the sort for you. I wish I had somebody, whom I could consult. I don't know anything about these things, neither do you. I really don't know what to do."

"Then don't buy anything now, father," said Subarna. "First consult someone. Don't spend money needlessly. Don't buy *saris* for me, I have got lots and lots. Mother never wore any of her good *saris*, and they are all quite new."

"All right, we won't buy *saris* then", said her father. "Let me see to the other things. I will have to go about quite a lot these first few days."

The servant brought up two papers, one English, the other Bengali. Pratul pushed the last one towards his daughters, saying, "Read this. You will know all about foreign countries".

Subarna began to read the paper, but she understood very little. She had never heard of these countries, and she did not know what the events mentioned meant. Still she went on as she was ashamed to show her ignorance. After a while she asked, "Have you got any story-book father ?"

Pratul was glad to know that his daughter had a love of learning. "I have not got any," he said. "But the gentlemen downstairs must have got some. Let me see," with these words he went down.

Pratul had the largest collection of books amongst the lodgers, but there were few Bengali books in it. Even those few were not fiction. The other gentlemen did not have much to do with books. They read only the sporting columns of the papers and the cinema notes. Two or three were fond of English novels, but they lent these books to their friends, and as is the custom. they were never returned. So none had any books in their possession. Pratul came back after a long search with some old Bengali magazines and a work of Rameshchandra Dutt. "Turn these over for the present," he said, "when we go out we shall get some more books."

"Oh, these will do splendidly, father," said Subarna. "What's the use of more books ?"

Pratul was rather taken aback at this lack of ambition on Subarna's part. "These few can never do," he said, "you must study regularly now. You are quite a big girl. Did not you read any more after you left your mother ? She taught you only the rudiments."

"I did not, father, I had no time," said Subarna. "I never dared to touch a book there, for fear of my mother-in-law. She would abuse me so. She said it was inauspicious and a woman had no business to get learned. She used to say, "We have no learning, but are we not human beings ?"

"I cannot say that she belonged to a high order of humanity," said her father. "But let that pass now. Bolt the door from inside and read these, while I go out. Don't be afraid, I shall come back within an hour."

Subarna was really feeling afraid but she did not dare to object. As her father went out, she bolted the door from within and sat down with the books. But she did not like reading for long. She put them by, and opening her mother's trunk, began arranging the things

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

within. Tears rushed into her eyes at the sight of the dresses, hallowed by her mother's memory. She put her head down on the trunk and began to weep.

Suddenly there was a knock at the door. Subarna sat up in consternation. Who could it be? She was very much afraid of the servants. She had heard fearsome tales about these Calcutta servants in her village home. She believed them to be capable of every kind of crime. She peeped out through a hole in the door. She saw the servant standing with a woman. The sight of a woman restored her courage. She opened the door and said, "Father has gone out a little while ago".

"I saw Raju's mother in the market, so I brought her along at once. You sit down here, and wait for the gentleman, while I go and finish my marketing. Else the cook will kick up a row."

The servant went down. The woman named Raju's mother came inside. Seeing that Subarna was going to bolt the door again, she stopped her, saying, "Don't do that young miss, I shall sit with you and you won't need any bolts or bars. Is this the first time you have come to Calcutta?"

Subarna sat down on the bed and said, "Yes, this is the first time. Did you use to work here before?"

"Yes, I did for a time", answered the woman, "but it is difficult for a woman to work in a gentleman's boarding house."

"Why?" asked Subarna, rather alarmed. "are not they good people?"

"Oh, I did not mean to suggest that," said the woman, biting her tongue in protest. "They are quite all right, but they wanted a man to fetch and carry for them. So I brought Surya here. He is also from my village."

"In which village do you live?" asked Subarna. "Is it far from our village? My father's house is in the village of Jamral."

"No, my dear," said the woman, "we don't live in that part. Our village is very far from here. We have no railway even, and have to walk. Our legs feel like coming off. The rich people, of course, use horse carriages or palanquins."

Subarna was getting to like Raju's mother. She also was from a village and felt a certain affinity with the woman. The city people were strange, even her own father. Subarna did not dare to speak to them. She did not know what to say. She knew they were not interested in the same things. Subarna, too, did not like their talks. She knew only the simple life of the village, which she had left for ever. Perhaps she, too, would become like these city people in time. The thought gave rise to mixed feelings in her heart. Would she, too, scorn her simple childhood then? It held much sorrow and suffering, still she felt pain at the thought of parting from it. This life was hallowed by her mother's memory. She could never scorn it. There could be no love anywhere to match a mother's love. But she felt a bit of pleasure, too, at the thought of the new life going to begin for her. She would be a real human being and not a slave. She would not have to submit to oppression all the time. She had begun to understand that her life of slavery had deprived her of many rights and privileges, which a human being should enjoy.

Pratul came back after a while. Seeing Raju's mother, he asked, "So it is you? Did not you work here before?"

"Yes, Sir," said the woman, "for what work do you want me?"

"There is not much work to do," said Pratul; "but you must remain here with my daughter all the time and do whatever work there may be. I have to be out pretty often, and there must be somebody with her."

"Certainly, Sir," Said the women, you can have her safely with me. I am working as a servant because I am poor, but I come of a very respectable family. How much shall I get?"

"I shall not keep you very long," said Pratul. "But, for the few days we are here, you will get eight annas a day."

The woman had not expected so much. So she remained quiet. As Pratul sat down to write some important letters she took Subarna to the other room and began to talk to her. The servants had done all the work of the morning, so there was nothing to do just then.

Pratul had no intention of keeping Subarna in Calcutta for long. He did not want her there, because Calcutta was too near and her husband's people might start trouble again. They had sent her away in anger but they were sure to want her back after a while. Pratul was a fairly rich man, and Subarna was his only child. He knew very well that Shribilas would want his wife back pretty soon. But Pratul had taken a vow never to send his daughter to that house of butchers again.

VIII

Subarna had been in Calcutta nearly a week. She had gathered quite a lot of experience. She did not gape at the sight of trams and buses any longer, and she had got accustomed to the sight of strange people, strangely clad. Though Raju's mother was nothing but a maidservant, yet she knew the manner in which the girls of the city dressed and did their hair, as she had worked in many cultured families. Subarna was learning these things from her, though as yet her knowledge was far from perfect.

It was evening. Pratul was shaving in his room, and in the other room Subarna was getting her hair dressed by Raju's mother. She was to accompany her father to the house of a friend of his. Pratul wanted to consult his friend's wife about Subarna.

Raju's mother finished her work and said,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"I have done my best, but it is not very pretty. The girls of the Bose family do their hair very nicely. They don't tie them in braids either."

"But does not their hair come down ?" asked Subarna.

"Not at all, why should it ?" said Raju's mother. "They use such a large number of hair-pins. Those pins too are of many kinds, some are made of celluloid, some of tortoise shell. I did not pay much attention then ; else I would have learnt it all perfectly."

"Have you finished ?" asked Pratul from the next room.

Subarna got up in a hurry and said, "Yes, father, I have nearly finished." She ran into the bath-room to wash her face.

She came out soon, but did not know which *sari* to wear, and how to wear it. Pratul had bought her many new things, but she did not know how to use them. Raju's mother solved her problems for her. "You dress as best you know, my sister. Nobody puts on these English shoes now, they all wear those up-country *nagras*. You also do likewise. Then try to learn from the girls of the family you are going to visit."

So Subarna dressed up simply and started with her father. As she was going down the stairs, her father said, "Speak, when you are spoken to and don't remain silent, as you did the other day. The rules of your mother-in-law do not apply here. Everybody speaks here."

Subarna was really afraid of speaking. She had been taught that a young wife must not speak, even if she is struck seven times, she could never talk freely before people. She had suffered much for not knowing where to speak and where not to speak. If she answered her mother-in-law or her sister-in-law, they used to strike her and if she did not answer any of Shribila's questions, he also gave her a slap or two. Between these two parties, poor Subarna had nearly forgotten how to speak.

They started in a hackney carriage. Subarna looked at the large buildings on both sides of the road and the big shops. What a number of beautiful things ! She wished she could carry them all away. She had got some pretty things for her own now, and she was beginning to understand the joy of possession for the first time.

The carriage entered a narrow lane from the main road. Pratul called out to the man to stop on the right. The carraige stopped before a small two-storied house.

The front door was closed. Pratul knocked and a small boy in Khaki shorts opened it. As he saw Pratul he said "Father has just gone out."

"But aren't others at home ?" asked Pratul.

"Where is your mother ?

"Oh, mother is in the kitchen," said the boy. "Please come in."

Pratul told the coachman to wait and climbed up the stairs with Subarna.

There were only three rooms on the first floor, but these three appeared to be quite crowded. Every room was used as a bedroom, as well as a dining-room. But the flat was neat and clean on the whole.

The boy conducted them to a small room and asked them to sit down. There were two or three chairs and large wooden bedstead, covered with a printed counterpane. Pratul took one of the chairs while Subarna went and sat on the bed.

The mistress of the house came up in a hurry to welcome the guests. "Please make yourself at home," she said to Pratul, "my servant has run away, so I am trying to do everything singlehanded."

"We have come at the wrong moment," said Pratul. "we must be frightfully in the way."

"What a thing to say," cried the lady in protest. "Is not anyone to come to my house, because the servant has run away ? I have just put the rice on to boil, and my little son will look after it. He is a very bright boy and helps me a lot.

"This is my daughter Subarna," said Pratul. "I want to talk to you about her."

"Oh, is this Subarna ?" asked the lady. "You said she was about fourteen but she looks like a child of eleven. Our Amitâ is of the same age but she looks quite grown up."

Subarna got up at a sign from her father, and bowed down to the lady. She patted her on the head lovingly and made her sit down again. "Sit down, my dear," she said, "there is not a single girl in the house for you to talk to. I have got boys only, and they make me so wretched."

Pratul Chandra smiled at her words and said, "You have said something strange for our country. Everyone here wants sons, nobody likes to have daughters."

"That is entirely due to circumstances," said their hostess. They don't want them, because they have to suffer quite a lot on their account. Otherwise a daughter would be most welcome, at least to the mother. I have got four sons, but the house is like a barrack and not like a home. They are out the whole day, and the place remains empty and I feel like flying away somewhere else. If I feel a bit unwell, there is no one who can bring me a glass of water or sit by me for a while. My youngest boy has not yet taken after his brothers, otherwise things would have become impossible long ago."

"You should give lectures on the subject at public meetings," said Pratul. "It might make our countrymen change their views."

"Where is the time for me ?" asked his hostess with a smile. "I am too much occupied with my housework. And every day either the servant or the maid runs away. If I had a grown-up daughter, I would have had some leisure, and my home would have looked

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

beautiful, too. I feel rather envious of you. If I could, I would take away your beautiful daughter."

Subarna was listening to her with wonder. She had never heard such words spoken. She never dreamt that anybody could really desire daughters. From her infancy upwards, she had heard that girls were useless, they came only to torment the parents. It was glad news to her that even daughters were desired, that there were persons who missed them. Subarna felt her heart bursting with reverence for this lady. Why had not God given her a daughter? She remembered her own mother. She had loved Subarna tenderly and had made much of her, yet she, too, had never a good word to say about daughters in general. She too had said that a girl was born only as a punishment to her parents. She loved Subarna, because she was her own child, but she, like others, thought that a daughter was useless. Subarna's aunt, too, had sung to the same tune as long as she had stayed with them. Subarna regarded this lady with amazement mingled with awe. She could never have thought before that there could be such a woman, who actually desired female children.

"If I could, I would at once give her to you," said Pratul. "It would be a great relief to me. I am nothing but a stupid bookworm and know nothing about children and how to bring them up. I want to give her the best of educations. So that she could be perfectly independent, might never have to look to others to support her. But I don't know where to keep her and how to arrange for her education. I am at my wit's end."

"It is really a matter for thought," said his hostess. "Your daughter is too big now to be put to school with small children. She must make rapid progress. I think you had better engage a private tutor for her. After she has made some progress you can put her to school."

"Very true," said Pratul. "She cannot afford to waste any more time. I can get a private tutor for her at once, but where am I to keep her? I don't want her to be in Calcutta for various reasons. I want to keep her in a place, where she can forget everything that has befallen her. I must stay in Calcutta as my work lies here, but I must keep Subarna out of Calcutta. This is a problem which admits of no solution."

Shashadhar Babu, the master of the house, returned at this juncture. "I know some guests have honoured us, when I saw Khoka in charge of the kitchen," he said as he entered. "Is this your daughter?"

This time Subarna got up herself, and bowed down to the gentleman. "Sit down, my dear, sit down," he said. "What is your name?"

"Srimati Subarnaprabha Guha," replied she, with her head bent.

"You are a very modern person," said Shashadhar Babu, "why has your daughter got such an antiquated name?"

"I did not give her that name," said Pratul.

"As you want to change every thing, belonging to her old life, why not change her name too? If you did so, her husband's people would not know her, even if they heard her name."

"That's a good idea," said Pratul. "I had already decided to omit the Guha, and call her Mitra again. I might as well call her something else in place of Subarna. What name would you like, child?"

Subarna felt inclined to laugh. How funny her father was. Can a name be changed for another like dresses? Still if he wanted to change her name, she had no objection. She had no great love for her name. "Give me whatever name you please," she said.

"Then I may give the child a name," said their hostess. "I like the name Suparnâ very much. I had decided to call my daughter Suparnâ if ever I get one. Since I did not, I make a present of the name to your daughter."

"It is a good name," said Pratul. "Nobody will be able to identify Miss Suparnâ Mitra, as Mrs. Subarnaprabha Guha. That is settled then. Now for a place, where she could be safely kept."

"I have a place in mind," said Shashadhar Babu's wife. "You know the people, too, quite well. But it is rather far off."

"I don't object to that," said Pratul, "rather I like it to be far off. What place are you referring to?"

"I was thinking of Delhi," said his hostess. "You can keep your daughter in my cousin's house. There is Amitâ, she will be a good companion for your child. It is convenient in every way."

"Yes, yes, it would be a very suitable arrangement," said her husband. "As you want your daughter to be self-reliant and independent, Delhi would suit you very well. It is a place where the rougher virtues will be more easily developed than in Bengal. Here girls are bound to get rather namby-pamby. I think it is due to the atmosphere. Our Amitâ has already become quite an Amazon. She knows fencing and she can use the stick too. She can drive a car as well. She is a very intrepid young person."

"I want my daughter to be just like that," said Pratul. "If your cousin Taran Babu consents to take my daughter in, I shall be very much obliged. But as he is a widower, and already burdened with the care of a daughter, I doubt whether he will agree to the proposal."

"He will agree for that very reason," said Shashadhar Babu's wife. "He will be glad to get a companion for his child. Amitâ is left too much by herself, and her father is grieved about it. If ever he has to leave Delhi, he does not know what arrangement to make. It is difficult to leave a grown-up girl absolutely alone. If Suparnâ goes there, they would be quite

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

comfortable like two sisters. The house is fairly large, and they have got servants enough, so there is no chance of inconvenience. And there is facility for every kind of education there. Later on, she can go in for any career she chooses."

"I have thought of that," said Pratul, "I think the medical line would suit her best. Women can earn more in that profession. If she can pass her I. Sc., I will put her in the Lady Hardinge Medical College."

"You must write to Taran Babu today," said Shashadhar, "I shall also write to him. I think he will agree. Then, all you have to do is to pack up and start for Delhi. Suparnâ will see a lot of new places on the way."

The name Suparnâ seemed yet strange to the possessor of the name. Still she submitted to this change with a good grace. It was not a worse name than Subarna, rather it sounded sweeter in her ears. If she was to become a new person in every way, she might as well have a new name.

After some more conversation, Pratul got up to go. But his hostess would not let him off without treating him to some light refreshments. "The child has come to my house for the first time," she said, "she must not go away without taking something."

The youngest boy was sent out to get some sweetmeats. Tea was made at home, and everyone did full justice to the good things. Then the guests took their leave. Suparnâ bowed down to Shashadhar Babu's wife of herself. She had taken a great liking to the lady. She had heard that educated women were very wicked. They sat in chairs all day long, dressed as Memsahibs, they ate pork and beef, and such other things. Now she believed these to be wicked lies.

Coming back, she gave Raju's mother a detailed account of her visit. "It is a good arrangement, sister," said the woman. "You will receive education and become a doctor. We have got a lady doctor living in our quarter, she earns heaps of money. She does not care a straw for any man. On the other hand, many men play the sycophant to her for her money."

(To be continued)

THE POINT OF VIEW

(A Review)

By SAROJ KUMAR DAS, M.A., Ph.D.

The Editor is to be congratulated upon the successful compilation of a delightful anthology from the writings of the late Dr. Paul Carus. It is easy to prepare an anthology from the works of a prolific writer of the eminence of Paul Carus; but it is not so easy to compile an anthology designed to elucidate the *point of view* of the writer in question. The title of this volume* is thus a very happy selection and is the most fitting memorial to the versatile genius of so distinguished a thinker.

In tracing the genealogy of this volume the Editor refers incidentally to Dr. Paul Carus who was of the opinion that, "before attempting any full exposition of principles, a man should define his terms" (*Preface*, xiii). That this is an essential pre-requisite of clear thinking and resolute acting, none can gainsay; but it is a prescript more honoured in the breach than in the observance. Accordingly, this injunction gives us a foretaste of "the point of view" of Dr. Paul Carus. As a matter of fact, in assessing a man's contribution it is "the point of view" or "the vision," as William James would say, of the man that counts in the long run. The thoughts of a man that are hailed as genuine novelties in one age are destined to become commonplace utterances in the very next. But along with the absorption of thoughts in the flight of ages, what we do not witness is a corresponding dissipation or disintegration of view-points that have well-marked individualities of their own. These are the legacies that posterity will not willingly let die. That is just the reason why the Platonic point of view has come to stay as a classical inheritance of mankind, while his teachings about 'fixed stars' or 'future retribution' have become matters of antiquarian research. Dr. Carus is thus assured of an immortality devoutly to be wished for by a thinker; for he himself believed that 'a man lives in his ideas,' and consequeutly, "by having an aim that is rooted in eternity, we need not mind the transiency of life." (*Preface*, xi).

We are further informed by the Editor that 'Dr. Carus did not call himself a philosopher. He preferred to be considered a theologian; and although he was often accused of being an atheist, he insisted, that he was an atheist who loved God.' (*Ibid.* viii). This self-criticism or description is as accurate as it is informative, and forms the key-note of the inspired utterances and aphorisms which have been strung together in this volume.

It is in the fitness of things that the main key is struck in the very first section—'God! Man's Highest Ideal' wherein is announced his basic faith—"The God-conception which I deem true might be called nomotheism [which 'recognizes God in the uniformities of nature'] or cosmotheism or also monotheism, but I would prefer to call this conception henotheism (*henos i.e.*, one) but I object to deism, pantheism and atheism." (P. 9). But he hastens to

* *The Point of View.* An Anthology of Religion and Philosophy selected from the works of Paul Carus. Edited by Catherine Cook. The Open Court Publishing Company, Chicago, U. S. A. 1927. Pp. xi+211.

add that 'a personal God-conception is untenable. God cannot be an individual being as we are... That man is made in his image does not justify the pagan habit of making God after man's image' (p. 13). This leads to the kindred topic of 'Soul and Man' (Sec. II). Defining the soul 'as the form of the organism,' he tries to solve the intricate problem of the relation of the soul and the body in an epigrammatic style: "While body is the soul as it appears, soul is the essence of the body as it is in itself." (P. 23). But, then, 'our soul is not our own but mankind's' and modern psychology has been steadily abandoning 'the ego-centric standpoint' (p. 25). In strict keeping with this modern outlook, he scouts the fallacy of imagining 'that there is a certain "I," an ego who does the thinking... There is no ego that produces thoughts, but thinking takes place, and in the process of thinking, thoughts are shaped.' (P. 35). In this context 'happiness' is 'compared to a fraction, the denominator of which consists of our wants and desires, the numerator of their satisfaction' (*Ibid.*) Accordingly, 'by a man's personality we mean a man whose character is clearly determined and well defined.' (Sec. III—'Unity and Personality'.) In Section 'IV Metaphysics,' Dr. Carus in the manner of the positivist warns us against the 'fatal error of metaphysics' which proceeds from 'the reification or hypostatization and substantiation of names' (p. 41). Thus 'metaphysical philosophy conceives the world as a duality; it assumes the existence, first of substance then of predicates with which substance is endowed' (p. 43). With a Lockean emphasis Dr. Carus holds that the 'source of knowledge is inner as well as outer experience; observation as well as introspection' (p. 47); and, further, 'a sensation cannot properly be called true. It is simply a fact,' (p. 48). 'Mind and Morals' form the subject-matter of Section VI. With his characteristic simplicity he believes mind to be 'an appearance of truth'—'an incarnation of God' (p. 51). And 'morality is nothing but the rigidity of the formal laws applied to practical life especially to the relations between man and his fellows.' (p. 55). So viewed "the 'must' of science and the 'ought' of morals condition and explain each other" (p. 54). Hence 'the mystery of being is revealed only to the man who actually *lives* a moral life' (p. 55). Section VII which deals with 'Religion, Theology and Ethics' bristles with so many pointed assertions. Premising that 'Religion refers to the entire man,' Dr. Carus holds that 'every religion is or should be a conviction that regulates man's conduct, affords comfort in affliction and consecrates all the purposes of life' (p. 60). Now, he thinks that 'the dogmatic religions of today are still under the spell of paganism'; for, paganism 'is nothing but a literal acceptance of a symbol or a myth where we ought to seek for the truth that is conveyed to us in the form of a parable' (pp. 66-67). In his opinion "even Christianity, the highest, the noblest, and the most human of all religions, is not yet free from idolatry. Sacrifices have been abandoned, but prayer, adoration and other institutions still indicate the pagan notion that God is like a human being, that he takes delight in receiving honors, and that upon special considerations, he will change his decrees and reverse the order of nature for the sake of those whom he loves." (*Ibid.*) Regarding ethics his idea is that it 'must be based on facts and must be applied to facts,' and consequently 'is always the expression of a world-conception' (p. 71). 'Christ, Christianity and Creeds' form the topic of Sec. VIII. According to him, 'creeds are symbols of faith, not absolute truth'; and Dr. Carus defines his own creed as follows:

"Whereas, divine revelation is the unfoldment of truth;

Whereas, God speaks to mankind at sundry time and in divers manners;

Whereas, Jesus Christ spoke to us in parables, and the Christian confessions of faith are, as their names imply, symbolical books;

Whereas, religion is a living power and life means growth;

Whereas, that is the true light which lighteth every man that cometh into the world; and finally

Whereas, centuries of unparalleled growth have added much to our better comprehension of religious truth;

Therefore, be it resolved that we, the duly elected representatives of this church, declare:

"That we regard all former Confessions of Faith and other formulations of belief in ages past contained in the symbolical books as venerable historical documents which were from time to time, on certain occasions, and for specific purposes, composed by the legitimate and legally appointed representatives of our church,

"That we justify the spirit in which they were written, but deny that they were ever intended to bar out from us the light that a higher spiritual development and the general advance of civilization and science would bring,

"That we bear in mind that the symbolical books are symbols, and that we have learned that a freer scope for their interpretation in the light of the maturest science of our age will do no harm to the essential doctrines of our faith."

This is, indeed, the *Magna Carta* of religious liberalism destined to redeem us from the tyranny of credal and dogmatic religions of today; and we feel ourselves drawn by an elective affinity to this prophet of the Church Invisible.

The remaining six sections of the book deal with such topics of unflagging interest as 'Immortality and the Continuity of Life,' 'Ideas and the Ideal,' 'The Devil and the Idea of Evil,' 'Science and Nature,' 'Monism' 'Form and the Formal Sciences,' 'Philosophy', 'Truth and Love.' It is a pity that we cannot afford to quote *ad libitum* from these sections those characteristic flashes of insight with which the book abounds. As typical examples we select the following gems: 'Your idea of the Devil is your best interpretation of your idea of God' (p. 112); 'Monism is not merely a denial of dualism; on the contrary it is a recognition of dualities and their reconciliation in higher unities' (p. 134). 'The philosophy of a nation is important for it foreshadows a nation's fate' (p. 153). and 'we learn from India's fate how important are our basic-religio-philosophical convictions. The once greatest nation, foremost among all peoples on the earth in learning, literature, science, wealth, war-like power and religious enthusiasm now lies in the most wretched state of helpless dependence. Their one-sided monism led to a dualism and taught asceticism as the highest virtue.' There is at least a refreshing candour about this ætiological analysis of India's 'fate'!

To conclude with his prophetic insight: 'the philosophy of the future will be a philosophy of facts, it will be positivism; and in so far as unitary systematization of facts is the aim and ideal of all science, it will be monism.'

LONDON LETTER

From Major D. GRAHAM POLE

My American Visit

I have just returned from the United States of America and was interested to find there that the recovery from the recent severe Depression is definitely under way. President Roosevelt I regard as one of the greatest living statesmen. He is not afraid to make bold experiments and he is big enough to admit that some of his experiments are not a success and to begin afresh on other lines. There is no doubt he has the whole country behind him. This does not mean that all the big financial people in New York, and especially in Wall Street, entirely approve of him. These millionaires are constantly in a state of fear that some policy that the President may inaugurate may hit them personally, however good it may be for the country as a whole. Wall Street and New York, however, do not really represent the United States; and when Wall Street squeals at some line of policy ordered by the President the plain man further West is inclined to say immediately that the President must be right merely because Wall Street disapproves of his action. It is of course an enormous country with no internal tariff barriers, so that its natural recovery is as certain as anything can be on this planet.

I have stood on the top of the highest sky-scraper in New York, over a hundred floors up, and I have visited Washington and have seen the Supreme Court, the Senate and the House of Representatives in session. After Paris I think Washington is one of the most beautifully planned cities that I ever have seen. You see no sky-scrapers there, but nothing could be more exquisite than some of the buildings, like, for instance, the Shakespeare Memorial building. The parks and gardens, too, were a joy to see. I have no words to express my appreciation of the great hospitality that was showered on me on every hand during my stay in the United States.

I went out in the White Star liner *Majestic*, the largest liner in the world, and came back in the Cunard liner *Berengaria*, only slightly smaller. These ships are great floating palaces with swimming baths, daily cinemas, concerts and dancing on board. They are both ships of well over 50,000 tons and even while it is blowing pretty hard it is difficult to realize that one is at sea.

England Exports Arms And Fighting Men

On coming back to England I find that Disarmament is occupying the attention not only of our own but of world statesmen. How much real wish there is to disarm it is difficult to realize. We in this country continue to export arms and ammunition to anyone who is willing to buy them. Our armament-makers even advertize tanks for sale in German newspapers, although by the Treaty of Versailles these are forbidden to Germany. But, worse still, as was brought out by questions in the House of Commons only ten days ago, we not only sell arms but we even supply men. One hundred ex-officers and ratings of the British Navy sailed about a fortnight ago for South America to man two destroyers recently bought by the Columbian Government. They have signed on for two years and, although none of them are actually on the active list, the First Lord of the Admiralty admitted that some of them are Reservists of the British Navy. They have been sent out to the Columbian Government, with the consent of the British Admiralty, because otherwise, as the First Lord of the Admiralty explained: "I should have been depriving a lot of men of work." (*Hansard*. Vol. 289. No. 96. Col. 1945. 17th May, 1934). There is of course a chance that at any time war may break out again between Columbia and Peru and we seem to be back at the time when Great Britain is prepared to supply mercenary fighters to any part of the world which is prepared to pay for them—whatever the merits of the fight in which they may be engaged. We not only export arms now, but we are prepared to export experts to use these arms.

The Fascist View

We are not of course by any means the only nation supporting preparations for war. Signor Mussolini, in the Italian Chamber of Deputies last Saturday, intimated that £33, 000,000 would be spent during the next six years on strengthening the Italian Air Force and Navy. How far the world has strayed from the idealism of President Wilson that led to the formation of the League of Nations for the purpose of preventing another world war can be realized from the words of Signor Mussolini's speech:

> "War is for man what maternity is for woman. I do not believe in perpetual peace. It is detrimental and negative to the fundamental virtues of man, which only by means of bloodstained struggles are revealed to the full light of the sun."

That speech was made only two days before the representatives of the various nations were to meet at Geneva to discuss Disarmament. Comment would be superfluous.

India's New Constitution.

Another question hardly less important is the future constitution of India. The Joint Select Committee of both Houses of Parliament has now been sitting for a year and it is understood that the Chairman is to submit his proposed draft report to them today. The discussions on that draft are likely to continue until July. Mr. Baldwin has promised to submit the Report to the Conservative party before it comes before Parliament.

When Parliament is opened again by the King about the end of October the chief business that will occupy it for the remainder of the year, and probably for the first half of next year, will be the new Government of India Bill. It is not unlikely that this Bill will not go so far even as the Government White Paper. The White Paper itself has been rejected all over India as outlining an inadequate constitution with safe-guards on every page.

India's Chancellor of the Exchequer will have to find all the taxes necessary to provide for the working of the Constitution, but he will not have control of the spending of more than about 20 percent of the revenue. Foreign Affairs and Defence are entirely in the hands of the Governor-General without any Indian control. If the die-hard element in the Joint Committee has any success in whittling down the meagre provisions of the White Paper, no one can foretell what the results in India may be. Sir John Thompson, who has only recently retired from the Government of india, and who has spent forty years in the Indian Civil Service, and has held some of the highest positions in that country, said in a recent speech as reported in the *Manchester Guardian* :

> "There is a tremendous difference between giving less than they ask for and less than they think they have been offered. The one will produce disappointment ; the other fury. Everyone who knows India knows that there has been little peace in the country for the past twenty years, but if less than the White Paper is given to India I am convinced that we shall have to face something more vehement than we have ever known before. Trade will again have a setback. Great mass movements will revive and we shall be plunged back again into a furnace of turmoil seven times hotter than we have known."

Those of us who know something of India know how true these words are.

Sir John Thompson refers to Mr. Winston Churchill, Lord Lloyd, and other die-hard Conservatives as allies of the Indian National Congress. He would like to see the Government's White Paper proposals go through in the form of an Act of Parliament because, as was clearly pointed out by Labour speakers in the House of Commons when the White Paper was under discussion, Labour does not regard the proposed White Paper constitution as adequate for India. Sir John is perfectly right when he says :

> "And consider another set of probable consequences, another morass in which we may find ourselves landed if the Die-hards have their way and the bill that is to be produced is rejected. It is quite on the cards that that would mean that the next India bill would be a Labour bill, and the Labour party, if they find this India question still unsettled, are bound by their declarations to go a good deal beyond the White Paper. What are you going to do about it ? Astute Indian politicians are beginning to build on the prospect and to pray for the success of the Die-hards, simply because they believe, and believe with reason, that with the White Paper out of the way they stand to get better terms from the Labour Party in a few years' time. That is what I mean when I say that the Die-hards are the allies of the Congress."

At least the Labour Party would try to make the Indian Constitution such that Indians could co-operate and work it without sacrificing their self-respect.

Swallowing Principles

During the last General Election Mr. Ramsay MacDonald assured his constituents that the formation of a National Government would not mean the surrender of important principles. If there was to be any partisan manoeuvring, he would not be their man. So he said.

The Prime Minister apparently does not consider the wholesale clapping on of tariffs to be partisan manoeuvring—although it means his swallowing at a gulp the whole of the Free Trade principles which he had advocated all his life.

The latest partisan pill for him to swallow is the repeal of Mr. Snowden's Land Values Tax—although this had the unanimous approval both of the Labour and of the Liberal Parties. The Tory Party of course has always been opposed to a Land Values Tax—and even in the recent years of the Depression, Land speculators have reaped a golden harvest. Land within a comparatively few miles of the House of Commons has risen in value from about £300 to over £3000 an acre.

The Prime Minister, in reply to protests, says that the Land Values Clauses have been in suspense for years "largely owing to amendments which Mr. Snowden had unwillingly to accept from both Liberals and Conservatives. . . ." It sounds therefore as if Mr Ramsay MacDonald had agreed to the repeal of this tax not in response to the crack of the Tory whip, but because the tax did not go nearly far enough ! . . . Um !

Mr Ramsay MacDonald is never tired of telling us how united every section of the country is behind the National Government. How absurd this claim is has been shown by the tremendous fall in the Government vote in every by-election. But a much more striking comment on their own awareness of their lack of support in the country is before us at present. There is a by-election in Merthyr Tydfil owing to the death of Mr. Wallhead.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Government recently sent a Commissioner to Wales who was supposed to be able to convince the people how good for them a National Government is. Amongst other places he visited Merthyr Tydfil. Now that the by-election is on, not only is a Labour Party candidate standing, but there is also a Liberal, a Communist, and an I. L. P. candidate. The only Party that does not dare to put a candidate in the field is the one represented by Mr. Ramsay MacDonald's so-called National Government ! And the interesting thing is that, although all four candidates differ among themselves, they are all united in their opposition to the National Government which has no candidate to state its case.

Can it be that they are beginning to realize that the country is not really behind them ? Rumour has it that they have realized it for a considerable time and are only too well aware that the day of reckoning they dread is near.

May 29, 1934.

FINANCE AND INSURANCE

Sir George Schuster's Farewell Speech

The Farewell speech of Sir George Schuster at Bombay on May 5, is important from several points of view. In it, Sir George has sought to defend his own financial policy which has been widely criticized as following the 'old-fashioned traditions of sound finance'. Sir George believes that "despite experiment being tried in many countries, the final results would show that old-fashioned methods are the best." We would not enter into controversy whether it is so or not. In the next place, he reviewed at some length the decisions arrived at by the Provincial Economic Conference which met under his Chairmanship in April. In the last portion of his speech, Sir George referred to the "Economic revolution" the world is at present undergoing, and its possible reactions on India. The enormous improvements in the methods of production have led to the inevitable result that consumption has lagged far behind production. The difficulty of marketing is one of the important factors which has led to the tendency towards Economic Nationalism. This latter is not an unmixed evil according to Sir George, who explains that it might be both necessary and beneficial "if used in this phase of increasing production in order that each country might plan for itself a new order in which purchasing power would be better distributed, so that instead of having the great masses of population unemployed, those that were employed might have more lesisure." This puts in a nutshell the case for Economic Nationalism. Whether the great claims made on behalf of this new ideal are justified, it is yet too early to see. So far it has led merely to higher tariff-walls and increasing ill-will among nations. It might be we are passing through a difficult transition period to a new order which will be more stable than the present one. The case of India is in this matter happier than other advanced countries, since overproduction is no problem at all so long as we have such a low standard of living. What Sir George means is perhaps—"Raise your standard of living, and everything will be all right." The difficulty is how to do that.

Many of our economists will no doubt agree with Sir George when he says, "the course of world development does indicate the need for a policy for India which must be something different from past policy in its being more consciously planned and in its general orientation. We have to take account not only of increasing restriction but also of the increasing uncertainty of external markets." With this in view, Sir George says that there ought to be four cardinal features in the Indian policy.

1. Development of the internal market and improvement of the standard of living in India.
2. Utilization of every possible advantage offered by those external markets in which India's position is secure. Sir George here refers to the Empire markets and recommends an extension of the Ottawa agreements.
3. Improvement of India's competitive power in all markets by increasing efficiency of production and grade and quality of produce.
4. Special Trade agreements to secure maximum security in the markets of other countries.

Some of these were dealt with by the Provincial Economic Conference, a bare summary of the decisions arrived at being given below. Planned Economy is a novelty in India and the success of the scheme outlined would possibly lead to greater and more comprehensive "planning" in future.

The Decisions of the Provincial Economic Conference

The immediate steps which have been proposed are as follows :

(i) Development of marketing. Central and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Provincial marketing officers will be appointed who will also conduct marketing surveys, including surveys of animal husbandry products. Special "Commodity Committees" will be appointed on the lines of the Indian Central Cotton Committee, in the first instance with regard to tobacco and oilseeds. The work of Grade Standards will be given special attention. A Dairy Industry Institute will be appointed and provincial dairying committees have been proposed. The Central Marketing Officer has already been appointed.

(*ii*) Co-ordination of Agricultural Production throughout India. A Conference of Directors of Agriculture and Land Revenue Officers will discuss the details of the Crop-planning programme before the next cold weather. Special attention will be given to the problem of overproduction of wheat and rice. To develop overseas markets, Trade Commissioners will be appointed in addition to those who are already appointed *e. g.*, at London, Hamburg and Milan.

(*iii*) Appointment of an expert officer to report on the functions of the Agricultural Credit Department of the Reserve Bank. For measures relating to agricultural debt relief by legislation or otherwise and for the policy of establishing Land-Mortgage Banks, Provincial Governments would be responsible. The expert officer has already been appointed. He is Mr. Darling, I. C. S., who has already achieved fame as a Co-operative expert.

(*iv*) Productive schemes of capital Expenditure. The Provincial governments have been asked to supply concrete schemes which might be expected to be productive. Particular attention was directed to Road Development. The possibilities of Irrigation, reclamation of water-logged areas and of electric power schemes were also discussed.

(*v*) Establishment of a Central Bureau of Industrial Research. It would be attached to the Indian Stores Department. The Government has decided to give a grant for sericultural research and another for the encouragement of the handloom industry. The main functions of the Bureau would be to collect and disseminate industrial intelligence, conduct industrial research, assist industrialists with advice, provide for industrial standardization and to organize industrial exhibitions and conferences.

The Crop "Planning" Conference

It is remarkable that none of our costly Government Conferences produce anything of real constructive value. The delegates go to these conferences to confer, that is, to talk and not to decide. This is inevitable when the "experts" themselves do not know what exactly they are going to do. Like its parent, the Provincial Economic Conference, the Crop-planning Conference has also ended without the evolution of any concrete "plan." The costly palaver of experts has once more produced nothing constructive.

In course of the deliberations, it was discovered that there is no overproduction of rice. It is recommended that before contemplating schemes for the expansion of wheat production the Provincial Government should consider the world situation with regard to the crop. The conference has also come to the conclusion that there is considerable scope for the increase of production of linseed and groundnut. The other important matters considered are the possibility of increasing the growth of Cambodian cotton in Sind and of the expansion of dairy farms and dairy products. As regards the latter, it has been decided to refer the matter to the Tariff Board since it involves complicated issues.

Such are the important conclusions reached, but as regards "planning" itself probably further Conferences will have to be called. It has not been decided by what proportion the production of either linseed or groundnut is to be increased, nor again in what basis the contemplated increase is to be allocated to the various sources of supply. It may be that what the Government understands by "planning" is entirely different from what others understand by the term. This would explain why the demand side of our rural economy has not been considered at all. The problem of marketing including the problems of transportation is at least as important as the problem of controlling the supply. The problem of marketing has however received very scanty attention while the problems of transportation have been severely left alone. It was expected that the problem of Jute would receive some attention but as a matter of fact this has not even been touched upon.

The 3½ p. c. Conversion Loan

The new 3½ p. c. 1947-50 Conversion Loan was announced on May 31 and the list was opened for subscription on June 5. It will be closed when Rs. 32 crores have been subscribed or in any case on June 20. It is issued at Rs. 98-8 per cent, to be repayable at par, and subscriptions may be paid either in cash, Treasury Bills, by 4½ p. c. Bonds 1934 due for repayment on September 15 or by 4 p. c. 1934-37 Loan notified for repayment on August 16. Interest will be paid on the Bond and the loan till the end of July.

When the budget was framed, it was anticipated that the 4½ p. c. Bonds (of which Rs. 15 crores are outstanding) could be paid off without recourse to a loan. But after that it was decided to redeem the 4 p. c. 1934-37 loan for which Rs. 19 crores would be required. It seems therefore that the proceeds of the new loan would be utilized to redeem both of these.

It is also important to note that some way

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

must be found to make up the remittance made to the Secretary of State in excess of the programme. In addition no less than 17 crores of rupees becomes due in June on account of Treasury Bills. It is possible that these will be met from the already slender and cash resources of the Government, but an issue of Treasury Bills on a large scale in near future seems to be inevitable.

Up to June 9, only Rs. 22.19 crores were subscribed and it seems that the total would not exceed Rs. 26 crores unless for some last moment decisions.* This would be unfortunate since the preparation in this case was most elaborate.

All attempts were made to strengthen the gilt-edge market but the psychology of the market did not respond. Probably the market remembers the 1933 episode and is afraid that after the new loan is fully subscribed the Government will do nothing to sustain the price of the gilt-edge. The Intermediates have been suspended since April 26, and the sale of Treasury Bills from June 9. The former means a decrease by about a crore every week. The discount on the treasury Bills has gone down from Rs. 2-5-10 p. c. on April 26 gradually to only 0-15-6 p. c. on May 26. In spite of all these the price of the gilt-edge did not advance beyond 89-4 and that too only temporarily. By June 13, it again weakened to Rs. 88. During the week ending on May 2 there was an addition to the currency to the extent of no less than Rs. 3 crores, yet the gilt-edge showed but poor response rising temporarily to 89 but weakening immediately afterwards. At the same time, the Imperial Bank of India has announced that it is prepared to make advances repayable by instalments spread over a period of fifteen months to any approved applicant who wishes to subscribe for the new Loan. We do not know how far this will attract investors, but let us hope for the best. This is the first financial operation of the new Finance Member and if his expectations are not fully realized it must be, at least to him, a great disappointment.

The Silver Act in the U. S. A.

The Silver Bill has been passed by the Congress. It recalls the Silver Agreement reached on July 20, 1933 at the London Conference by the representatives of sixty-six countries. U. S. A. has been the first country to ratify the agreement. On December 21, President Roosevelt issued a proclamation that the newly-mined silver in U. S. A. would be coined and that the monetary reserve in silver would be substantially increased. This proclamation is of great economic importance since this is the first time after a long period that silver is receiving some attention from the currency authorities outside India and China.

On February 1, an amendment to the Gold Bill to provide for free coinage of silver was defeated in the senate by only two votes. Silver thus came within an inch of being reinstated to its former position as a monetary metal. The price of silver suddenly moved upwards as a natural consequence but gradually receded to its former level.

This defeat by such a narrow margin lent great hopes to the Silver Groups of the Congress. The favourable views of the President towards Bimetallism are well-known and the Silver Group seemed to hope that the President would readily agree to any proposals it might put forward. This, however, was not to be as the latter events showed for the President refused to play into the hands of the silver protagonists. On February 17, the Scrughan Bill was submitted which proposed that the treasury should purchase at least 25 million ounces of silver each month for six months and thereafter 10 million ounces monthly until either the ratio 16 : 1 or a total of 1000 million ounces was reached. An alternative proposal was that the treasury should purchase 4 million ounces monthly until the price-level of January 1926 was reached. In either case the treasury was required to issue silver certificates in exchange of the silver purchased. The Bill was considered by a committee of the House of Representatives under the Chairmanship of Filsinger which recommended that 50 million ounces of silver should be purchased every month by the Treasury in exchange for certificates deemable in gold until the total of 1000 million ounces was reached. In the middle of March, however, the Coinage Committee lent its approval to two other bills of which one authorized the Treasury to pay 25 per cent. above the market price for payment in silver against agricultural imports,—while the other recommended the purchase of 150 million ounces of silver at the market price within four months after the passage of the bill and a further 250 million ounces within a year or until the price level reached the 1926 average. The Administration however refused to support the Bill as it was afraid that stocks from the hoards of the speculators and from foreign centres would flood the market. Mr. Morgenthau however promised the Senate when the two bills came before it (April last week) that he would forward a list of one thousand names of hoarders of silver.

In the first week of May, the President made an important declaration in course of which he said that his objective was to secure world action regarding silver and that he was willing to increase the proportion of silver in the reserve to 30 per cent. of the total metallic reserve, as also to nationalize the silver stocks on the lines of the Gold Act.

After this declaration, the silver Group led a deputation to the Whitehall and as a consequence

* The total amounted to Rs. 25.1 crores on June 30.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the present permissive bill was introduced. This bill makes important concessions to the Silver Group no doubt but being of a permissive character has no mandatory effect so that the Administration has full discretion when to act under the legislation. The President has thus virtually kept all the powers to himself in reserve.

The Bill authorizes the Secretary of the Treasury to take over the nation's monetary stock of silver at the discretion of the Administration, to purchase any amount of silver at price up to 50c. per ounce on stocks held on May 1. He is also empowered to sell silver either if the market price is higher than the monetary value (50c.) or if the monetary stock exceeds 25 per cent. of the total. The Secretary of Treasury is authorized further to investigate, regulate and prohibit the acquisition, import, export or transfer of sliver and to make necessary regulations the transgression of which would be attended with heavy penalties. The newly-mined silver in U. S. A. would be purchased at 64 cents, per ounce, that is, at a much higher price than the market rate.

The Secretary of Treasury is to decide when the Act would come in force and also the purchasing price of silver. There is no obligation imposed on him. The Secretary may issue silver certificates against the silver purchased but even here there is no compulsion. It thus seems that so far as silver prices are concerned, a period of uncertainty lies ahead. So far, there has been no reaction on the silver market, the price at New York remaining steady at 45c. per ounce.

The Treasury has now about 7.75 billion dollars worth of gold, so that the maximum silver reserve would amount to 2.58 billion dollars in value. The value of silver already in the reserve is about 690 million dollars, so that a maximum of 1890 million dollars of silver may be purchased under the bill. At 45 cents per ounce, this is equivalent to 4.200 million ounces.* 4,200 million ounces is twenty-one times the annual world production of silver which is 160 million ounces, and one hundred and seventy-one times the annual production in the U. S. A.

As the total volume of currency in circulation in the U. S. A. is about 3,600 million dollars (Gold and Silver certificates, F. R. and F. R. Bank notes), the Act if followed to its logical end would enable the authorities to encrease the currency by 6,700 million dollars by issuing gold and silver certificates alone and more by issuing notes. But it is most unlikely that inflation would be resorted to in near future. It is also doubtful whether silver certificates by themselves would have any inflationary effect at all since the demand for currency under any particular set of conditions is fixed.

By accepting payment in silver, it might be possible for America to enable her debtor countries to make debt payments with the least disturbance to their monetary structure. But as it is, the Act is one of "domestic subsidization" and most of the silver purchases, if made at all, must be effected in the home market. Thus, the effects of the Act on other countries like China and India are likely to be negligible. On the other hand, if silver is allowed to be imported from other countries, the price of silver is bound to rise leading to serious dislocation of the Chinese currency, for with the rise in the price of silver her exports will fall and imports increase. She may even be forced to go off the silver standard, which is the last thing desired by the silver group. The effect on Indian finances could be too indirect to be of importance. Besides, the higher price would lead to increase of supply without a permanent increase of demand. This means that when the artificial increase of demand ceases, catastrophy would follow on the wake. It would therefore be unwise for the administration to allow the silver price to increase except very gradually.*

SAILENDRANATH SEN GUPTA

DISABILITY BENEFIT—THE LATEST DEVELOPMENT

Insurance aims at achieving the greatest good of the largest number at minimum cost. This explains why brains are unceasingly at work devising schemes calculated to widen the scope of protection that may be afforded by life insurance methods. The Disability Benefit is one of such schemes and an outstanding development of this century. The Canadian Companies introduced a disability clause in 1911 and it was soon adopted in U. S. A. But competition in both the countries led to a too large liberalization of the benefits offered which inevitably resulted in considerable losses. A movement then started for the modification of the Clause and in 1932 majority of the life offices accepted the recommendations of the Canadian Life Insurance Offices Association by (i) withdrawal of income form, (ii) extending the waiting period to six months with respect to the waiver of the premium benefit, (iii) and restricting the interpretation of the word disability.

In the U. S. A. also the general experience has been none too happy and the attitude of the American Life offices towards the disability benefit has undergone a considerable change owing to the increase in fraudulent claims, too liberal an interpretation of the agreement by law courts and recent adverse effects of the depression. In 1930 certain limitations, usually referred to as Standard

* We see no point in assuming a price of 1.29 dollars per ounce only because it is one-sixteenth of the pre-Gold-Act value of gold. Sooner or later the Silver stock will have to be re-valued at the market rate.

* The Bill has recieved the signature of President Roosevelt on June 20, 1934.

Digitized by Arya Samaj Foundation Chennai and eGangotri

Disability Provisions, have been introduced according to which (i) the waiting period should not be more than four months, (ii) the income payments must not exceed one per cent of the face value of the policy, (iii) the income benefits commencing with one per cent and increasing with the duration of the disability should be discontinued, and (iv) disability benefits should not increase if disability occurred after age 60 except in a few special forms of policies. But even the "Standard Benefits" could not prevent the losses from going up and in 1932 further radical changes were introduced. Since then the income form of benefit, which proved so embarrassing to the life offices, has suffered a heavy decline and so far the existing system is working well.

In Italy the waiver of the payment of premiums is most widely in vogue. In some cases temporary disability pension is assured in addition to the waiver of the premiums. Much less in use is the form which provides for the accelerated payment of the sum assured in case of continuous total disability.

The British Actuaries do not encourage the mixing up of disability benefits with life insurance. Thus the disability benefit has a chequered career in different countries, and it was a subject of interesting discussion in the recent International Congress of Actuaries at Rome.

British Life Insurance in 1932

1932 had not been after all a bad year for the British Life Offices. That is the impression one is likely to gather after a perusal of the "Assurance Companies Returns, 1933", just issued by the Board of Trade. The British Companies write foreign business as well but the 'home' business is much larger in volume and in 1932 it was more than eleven times as large as the foreign business. Of the companies established outside Great Britain but doing business in the United Kingdom the Sun Life of Canada headed the list in point of new sums assured. In 1932 the total of the new sums assured was £151,117,345 and the figure below will illustrate the development since 1913 which has been taken as the "base year". The "peak" was reached in 1930 and the decline in figures since then is explained by the exceptional business conditions. The average sum assured per policy is also on the increase and in 1932 it rose nearly to £347.

The growth of the premium income has also been remarkable since 1913. The "peak" here was reached in 1929; it was coming down since then but gave a "look-up" in 1932 when it amounted to £67,866,408. The premiums received are less than 30s. per annum per head of the population,—much more than double of what it was in 1913. It is interesting to note that for Ordinary Branch Life Insurance alone the British people pay premiums amounting to considerably over £1 million per week.

The Life Assurance Fund at the end of 1932 stood at £792,651,130—an increase of £422,465,746 since 1913. About £51 millions were paid in claims during the year. The surrenders which reached the largest proportions in 1930 has dropped by a third, but is still twice as large as in 1929. It is again interesting to note that all payments to policyholders added up, averaged at the rate of over £1 million per week.

Insurance In Germany

"Conditions in Germany were very much better in 1933 than in the past few years," reports the correspondent of a British Insurance Weekly. Life business, recorded by the Association of Insurance Companies in Germany, amounted to 10,810 million Reichmarks in the Ordinary Branch and 2900 million Reichmarks in the Industrial Branch bringing the grand total to 13,710 million Reichmarks as compared with 13,880 million Reichmarks in the previous year. This represents, therefore, a decrease of 170 million Reichmarks in the face value of total assurance. But, the number of policies increased, which showed that a larger number of persons had taken up insurance and the decrease in the aggregate of new business was but indicative of the hard times.

Fire business showed a healthy look-up, and the claims for the year amounted to 71,580,588

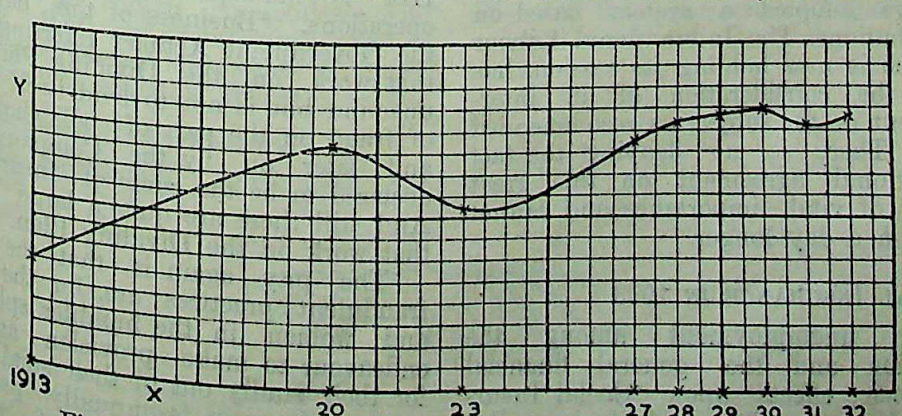

Figure Showing The Progress Of New Sums Assured Since 1913

(2 Units represent one-year on the x-axis
1 Unit represents £ 12 millions on the y-ordinate.)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Reichmarks against 84,677,000 Reichmarks in 1932. Accident, Motor and Third party business could not do very well, but the recent drive of the Government for building up the industry and raising it to the British standard may give a fillip to the Accident, and Motor business in the years to come. Marine and Transport business is not pulling on well owing to dullness in the export trade. Rei-nsurance business was brisk throughout the year.

The Government have come to recognize Insurance as a basic national industry, and the Minister of Economy, who happens to be an Insurance man himself, has recently announced that the policy of the Nazi Government was "to regard insurance as a service for the community and subordinate the companies to the interests of policyholders." Attempts are also being made by the Insurance Associations to impress upon the public the close connection between insurance and every-day life, and to make every individual feel that protection against the destructive accidents of every kind is closely and inseparably connected with his duty to the community. Such a propaganda with Governmentt encouragement cannot fail to achieve the desired results.

Unemployment Insurance

The alarming rapidity with which unemployment figures are growing all over the world, has made the unemployment insurance a burning problem of the day. To the International Labour Organization goes the credit of focussing the attention of the Governments, as early as in 1919, upon the importance of adopting adequate schemes of unemployment insurance. The scheme has been extremely popular owing to its obvious usefulness and the number of workers (insured against unemployment) which was only 5 millions after the War rose up to 42 millions within ten years. In 1919, when the I. L. O. held its first session in Washington, only Great Britain had a compulsory unemployment insurance scheme, but now as many as nine countries have it, while eight others have adopted a system based on voluntary contributions. The International Labour Conference, which is now holding its session, has on its agenda the consideration of an international agreement on the subject as recommended by the I. L. O. There is no denying the fact that an international agreement on this great social problem is of vital importance and cannot be postponed even a day longer.

Social Insurance in 1933

The growing unemployment among the insured population and the general financial tightness had their effects upon "Social Insurance" for which 1932 was rather a bad year. But things were not as bad in 1933. According to the Director of the I. L. O. the picture is somewhat reassuring and distinct signs of improvement are to be noted in various directions. In some countries, registers exhibited increased membership and larger revenue—a feature that was more or less unknown since 1929. But in not a few cases, the benefits have been curtailed. "In spite, however, of any difficulties of the moment," says the Director, "there is no weakening in the belief in social insurance as the most effective method of raising the general standard of health and civilization in a community. Nor is there any reason to suppose that as better times return the systems which have been weakened owing to the financial exigencies of the crisis will not be restored to their former efficiency. Indeed, it may reasonably be hoped that during the coming years the period of restrictions and compressions will have been brought to an end and a new phase of consolidation and extension will take place."

Provident Insurance Societies

In the month of May eight provident societies, each with a flamboyant name, were registered in Bengal alone; and scarcely a month perhaps passes which does not see the birth of half-a-dozen such new companies. These "mushroom societies" are growing with alarming rapidity all over India, and no greater abuse of the Company Law, as it is, could be conceivable. The incalculable harm that these "Benevolent Societies" are capable of inflicting upon life insurance business can easily be imagined. The comparative ease with which these companies can be registered and the scope for running them on unsound and dishonest lines and still keeping well within the law, have been an inducement to not a few unscrupulous persons to start these pseudo-insurance institutions with the dishonest motive of becoming rich overnight by deceiving the ignorant and credulous public under the cloak of benevolent insurance. Many of these societies have no hope of fulfilling their contractual obligations to the policyholders, their capital is scarcely subscribed and the present Company Law is inadequate to curb their mischievous operations. "Business of this nature," remarked the Government Actuary referring to the Societies that work on the Dividing Plan, "is not only unsound but is apt to lend itself to the practice of fraud on the part of policyholders and agents and later on by the Company. It has been declared to be the curse of Insurance in India." And still there are quite a large number societies that work on the Dividing Plan.

The pity again is that the victims of these fraudulent practices are, for the most part, men and women in the humbler spheres of life who endeavour to make provision against old age or for their family out of their small income. About a crore of rupees is annually paid by the public to such societies, many of which by their malpractices serve only to bring the fair name

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of insurance generally into disrepute. A leading commercial weekly has offered a few very useful and practical suggestions to cope with the situation. They are that (i) the word "Provident" should be incorporated in the name of the Society, (ii) at the time of registration, Rs. 10,000 should be deposited and it should be treated as special asset to the policyholders in case of liquidation, (iii) before registration an actuarial certificate as to the soundness of the business is to be submitted, (iv) the Registrar should be authorized to examine and audit the accounts and to refuse to register new companies if he has reason to believe that the promoters have been responsible for the failure or mismanagement of such concerns previously.

Need it be added that it is high time that the Government Actuary should immediately devise measures to save the hapless ignorant public from exploitation by designing persons ?

Non-Life Business and Indian Companies

In insurance business other than life insurance the Indian Companies are slowly but steadily forging ahead. Conditions for business in recent years have been none too happy or favourable, and as will be noticed from the Table the total available business had steadily come down in all branches. But the share of our Indian companies, on the contrary, has continually been on the increase, and in the Fire Business, for instance, the percentage of the total business that was obtained by the indigenous companies, had risen from 14·8 p. c. to 21·9 p. c. during three years ending 1931. In Marine insurance there has been an appreciable drop in the total business, chiefly due to the dullness in trade and commerce, and the share of our Indian companies has dropped from 19·6 per cent in 1930 to 16·3 per cent. in 1931. But in the "Miscellaneous Insurance" business, which includes Motor Insurance, Personal Accident Insurance, Burglary Insurance, Fidelity Guarantee etc, the proportion of the whole written by Indian companies has risen from 23·7 per cent. to 31·1 per cent. Excepting "Motor insurance" no other form of insurance included under this head has reached any appreciable stage of development. It can reasonably be hoped that with improvement in business conditions, the Miscellaneous, particularly the Motor Insurance business, will have a prosperous time.

Table Showing the Progress of Indian Companies in Non-Life Business
(Premium to Nearest lacs of Rupees)

YEAR	FIRE				MARINE				MISCELLANEOUS			
	Non-Indian Cos.	Indian Cos.	Total	Percentage of Indian Cos. to Total	Non-Ind. Cos.	Indian Cos.	Total	Percentage of Ind. Cos. to Total	Non-Ind Cos.	Indian Cos.	Total	Percentage of Ind. Cos. to Total
1929	132	23	155	14·8	57	11	68	16·2	58	18	76	23·7
1930	121	25	146	17·1	41	10	51	19·6	61	26	87	29·9
1931	100	28	128	21·9	36	7	43	16·3	53	24	77	31·1

It is to be particularly noticed that non-life business has developed in India without any assistance from the Government which is not infrequently given in many other countries. The progress of our Indian Companies in this direction owes not a little to the appeal of "Buy Indian" which has induced people to effect insurance more and more with Indian companies. And useless to say that our companies yield to none in soundness, efficiency and, what is more, in prompt settlement of equitable claims.

Hindusthan's New Business

During the year ended 30th April, 1934, the Hindusthan Co-operative Insurance Society Ltd. of Calcutta has written a business of well over Rs. 2 crores and 50 lakhs as compared to Rs. 2 crores in the previous year. This advance of Rs. 50 lakhs in New Business in a year of stress and strain is, indeed, a good record and speaks well of the management responsible for the success. We wish this progressive Indian Company still more success and prosperity in the years to come.

MILITARY AND FASCIST MADNESS OR THE PERIL OF THE ONE-WAY MIND

By WILFRED WELLOCK

GOVERNMENTS are blundering towards another war, and Fascism threatens to engulf the greater part of the world. The former would appear to be the victims of forces they are unable to control.

No one imagines that responsible statesmen want another war, but their mentality is so antiquated that they are unable to resist the influences which are making for war.

Behind the statesmen are certain groups of very powerful people, most of whom, unfortunately, possess one-way minds, It is they who are doing the damage. Among them are the military castes, and the profiteers or Big Business interests.

The former see things professionally, and are so out of touch with the wider aspects of civilization, so ignorant of its needs and possibilities, that they are the very last people who ought to advise Governments. Yet they exercise an enormous influence on most Governments, our own included.

The primary concern of the business people is to have their works running full speed and to be making handsome profits. They think of armaments apart from war, and try to convince themselves that money spent on armaments is a sound investment and a guarantee of national security. The desire for profits blinds them to the real facts, and thus causes them to be as great a danger to the community as the professional military men.

This group, also, exercises an enormous influence upon statesmen, while both groups have great influence with the Press, and are able to secure an alarming degree of publicity, for few politicians are strong enough to combat the combined influence of professional military men, Big Business, and the Press.

The danger arising from this condition—and it is world-wide—can scarcely be overestimated, for even now, by reason of it, most nations—Britain included,—are rushing towards their doom.

In other words, we are confronted with the peril of the one-way mind—the mind that is so carried away by self and class interest that it overlooks the wider national and international consequences of its conduct. The one-way mind is a disease, a species of madness, and ought to be treated as such. But, like most mad men, our modern militarists are not aware of their diseased condition. Although economic, military and psychological conditions have entirely changed within recent years, that fact has no significance for them. Their minds appear to have reached a dead end, and in some cases to have slipped back several centuries. Material abundance, for instance, which makes war ridiculous, does not affect their outlook; neither does the fact that another war would shake civilization to its foundations.

A peculiarity of madness is that its victims become the slaves of a single idea. Our modern militarists, of both varieties, see in every international event a reason for a bigger air force or a larger navy. They will refuse an extra loaf of bread to the industrial outcast, but provide a million bombs with the greatest pleasure. They will scheme like misers to cut down payments to the unemployed, and gloat like demons at the prospect of adding £10,000,000 to the expenditure upon armaments. They are never so happy as when making things to kill people, or getting their countrymen to think about possible enemies and how to destroy them.

Mad men always take themselves seriously, and if by chance they can make others believe in them they become highly dangerous. Now it so happens that these one-way mind groups are highly placed socially, and, as already explained, exercise a considerable influence on affairs. Thus they are able to work up

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

scares and to frighten the public into panic. They are past masters at publicity stage management, and know all the tricks of the trade. Their like play the same role in other countries. Consequently between them they are able to get the peoples of the world intensely afraid of one another, and in the atmosphere thus created to persuade their respective Governments to embark on new armaments programmes. At the end of these mad races all the nations are in the same position relatively as at the beginning, but have the grim satisfaction of knowing that if war occurred they would kill and be killed at double the former rate. In other words, the bigger the armaments' profits, the bigger the casualty lists, or, more per cents more deaths. Moreover this process of expanding armaments takes place in all countries at the expense of the unemployed, of education, working-class housing, etc.

Out of this highly barbaric procedure the unemployed get their mead of excitement, of course, while those responsible for it get their mead of limelight and profit. It is wrong to say that the workers need circuses: what they now need, apparently, is the excitement of witnessing the preparation for their extermination at the rate of, say, a million a minute.

It did seem at one time, however, that certain events would be too much for the one-way mind battalions. But their madness saw them through. They were bold. And, of course, it takes a mad man to be really consistent. The fact of abundance has upset most people, but not the militarists, nor the Fascists. A sufficiency of goods and foodstuffs to satisfy the needs of the entire human race obviously reveals the folly of war. Once the people learned the art of distributing abundance, it would be all up with war, and also with profiteering—and, incidentally, with class domination. The one-way mind people saw that clearly, so something had to be done. That millions were in want, in this and most other countries did not affect them. They also knew that the workers were accustomed to want. Thus they said: "If there is more food than can be sold at a profit, destroy it and produce less, and if there are too many manufactured goods than people can afford to buy, close down the factories." To them the thing was perfectly simple. True there was a minority of the public who rebelled. But the pure breed specimens of the the one-way mind replied: "Don't we own the engines of publicity? What we say, goes, and what we do is accepted as coming from the gods. Don't dilly-dally. Dogs like strong masters, and ignorant people leaders who know."

So they had their way, and strange as it may seem, it was accepted by the people as the way of salvation.

Still there remained a hard core of opposition which persisted in saying that abundance ought to mean freedom from poverty and war. They declared that no such madness as destroying food which people needed, and closing down factories when the needs of the masses remained unsatisfied, would be tolerated in Russia. The reply of the one-way mind to this criticism was that the Soviet leaders were materialists and infidels. To which was hurled the Scriptural saying: "He that feedeth one of these my little ones . . ."

Indeed the unbelievers (in war and poverty) refused to keep quiet. A number of London dockers persisted in saying that the fish which they constantly saw being taken out of Billingsgate and dumped into the sea in order to keep up the price, would allay the hunger pains of their underfed children, just as the half-frozen men in the food queues of New York insisted that they knew of better uses for the surplus coffee and sugar that was causing so much trouble to the City, than burning it.

In due course the body of these unbelievers grew out of all knowledge, and in all lands. This fact was accepted as a challenge by the one-way mind, which furiously objected to any tampering with the "foundations of society". "Civilisation", it said, "was founded on *War*, *Poverty* and *Profit*, and any attempt to change that basis would have to be met with the treatment it deserved, since it was an attack upon religion and all that was sacred. Without poverty there could be no charity, and without Imperialism how could Christianity triumph over heathenism? That the Irish and the Indians hated Britian for her oppression merely exposed the depth of their ignorance. The fact that Britain was wholly impartial in her dealings with other peoples was proved by the fact that she was willing to sell

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

her excellent armaments to every Government in the world, a fact which insured that no matter what enemy Britain might have, British soldiers could reasonably rely on the armaments which ended their lives being of good British manufacture." Indeed the one-way mind never despairs, since it is fortified by the belief that it can never be wrong.

It is quite true that the one-way mind got a little restless when the Disarmament Conference refused to come to an end, as it could not understand why the Imperialist Powers did not tell the world quite plainly that it was impossible for big Empires to be maintained without vast armaments, and thus that disarmament was wholly out of the question. They were rather disquieted at the thought that it has taken the Conference over two years to pluck up courage to tell the pacifists that there can be no disarmament, and indeed that increased armaments are inevitable.

In another direction the one-way mind is perfectly happy. It is consoled to know that those wretched people, who believe in the posibility of abolishing poverty are everywhere being put in their place by strong leaders like Mussolini, Hitler, Dollfuss, Pilsudski, etc. Also it imagines it sees further victories in prospect. It is hoping for victories everywhere—except, perhaps in Russia. Russia is the one fly in the ointment, and it is a very tiresome and threatening fly. It stands for an *idea*, an *idea* that persists in spite of defeat and unspeakable persecution. "But," say the hierarchs of the one-way mind, "wait a little, watch that ring of Fascist Dictatorships around Russia close in and unite, then see !"

The *Idea* has got to be crushed. That is the aim. Immediately after the War it seemed that the *Idea* was going to carry all before it, but it eventually succumbed before the forces in the control of the one-way mind. In the meantime, however, it has gradually spread, and is today stronger than ever, notwithstanding its defeat in many countries. It must spread if civilization is to be saved from the peril of the one-way mind.

The triumph of Fascism signifies the setting up of something quite new in the world—one-way mind States : States with one political Party, one religion, one philosophy, one newspaper, and a one-way mind Dictator at the head of them.

Even God is told to occupy a back seat, since there can be only one Dictator in a State, one person who is infallible.

Freedom, variety, individuality, colour, art, etc., are out of date in the Fascist State ; they contradict the demands of the one-way mind, and so much be crushed out, even if by terror. One thing only does Fascism guarantee : the privileges of the rich, even at the expense of the poor, whose poverty Fascism increases.

When the structure of the Fascist or one-way mind State is complete, we shall have in being the imbecile State : a nation of mad men, every member of which is condemnd to be a Ditto. The intellectual economies which such a State can effect are apparent. Since there is only one political theory, one political Party, one economic policy, etc., there is no need for a multiplicity of books, pamphlets and newspapers. Accordingly in Fascist Germany, Italy and Austria thousands of newspapers have ceased publication, while tens of thousands of books and pamphlets have been burned. There is no need to answer arguments in a Fascist State. That simplifies things enormously, and enables the totalitarian State to shine in all its glory. It used to be said of this country that every child born was either a little Liberal or a little Conservative. Since then Socialists and Communists have been added. But in the Fascist State every child born is a little Ditto.

In the Fascist or imbecile State the cardinal sin is to wink at the *Idea*. The seven deadly sins are the seven degrees of intimacy with the *Idea*.

Anyone proved guilty of originating a non-Fascist idea is declared insane and automatically put into a lunatic asylum.

Where this imbecile State does not already exist preparations are being made for its advent. These preparations are being made within police forces, military forces, and in the Press. The Press is concentrating on the production of the one-way mind by carrying the public from stunt to stunt and so destroying its power of thinking. It converts men and women into racing fans, football fans, cinema fans or what it will. The British public is being led into the one-way mind by means of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

horse-racing, professional sport and startling divorce suits; the French public by means of sporting events, parliamentary crises and financial scandals; the American public by means of bank frauds, banditry and other forms of sensational outlawry.

The process of making an imbecile State being well under way in many countries, the question now is whether it is possible to make an imbecile world. Imbecility has at last become the condition of the continuation of of Capitalism and the maintenance of the privileges for which Capitalism stands. Let the fact be made crystal clear that to defend Capitalism now is to lend a hand, consciously or unconciously, in establishing the greatest monstrosity in the history of civilization—a Fascist State—and eventually an imbecile world.

EXAMINATIONS IN SOVIET RUSSIA

Some time ago the correspondent of *Krasnaya Gazeta* (Red Paper), kamarade Kolcovf described examinations in Academy of Transport, Leningrad, whose students are directors of transport, high railway authorities, directors of factories etc.

—Whose colony is India? was the question.
—Japan—replied the kamarade.
—India? Japanese colony? Kamarade, where is India in your opinion?
—Where? surely on the continent?
—All right, but on which continent?
—Surely in America!
—Does Japan possess any colonies?
—Yes, Kamchatka···!

The lecturer Kamarade changed the subject.
—Where do you think, it is cold now?
—In the North Pole.
—Not exact. Why not at the South Pole?
—South Pole! There no one can bear the heat!
—Where is moderate climate to be found?
—On the other Poles!
—What! How many Poles the Earth has then?
—Eight, kamarade!
—How does the Earth revolve?
—From the South to the North!
—Where is the highest mountain in the world?
—In Italy.
—O Lord! What is the name of this mountain?
—Kazbec!
—The most important city in Greece?
—Lep···no, no, that is Budapest.

When questions in Soviet geography started, no one of the high transport officials was able to point out on the map Donetz basin. One pointed to Norway and Denmark when he was asked to show one of the eight wonders of the world—the canal between Baltic and White Seas. The correspondent discovered the source of the mystery why so often trains directed to the South go to Siberia, and vice-versa.

Bernard Shaw on Sterilization

Germany's move towards the sterilization of the unfit has provoked a world-wide flood of comment. "The stormy petrel" of the theatre expresses his views in an interview, which are reproduced below from *the Modern Thinker*:

It is probable that sterilization of the unfit will be ultimately beneficial to the human race. But nobody is capable of the decisions and judgment involved in the practice. The worst people, physically and morally, quite commonly have healthy and respectable brothers and sisters. To weed out the failures is one thing; to prevent a child from being procreated lest it should prove a failure is another. Only the unfit think it an easy matter.

The real question is whether sterilization is to be a legal operation or not. Is it to be made a felony, like abortion?

Or may potential fathers and mothers have themselves disabled because they wish to enjoy the pleasures of sex without their onerous consequences?

If yes, is the right to be absolute or conditional on the parties having brought into the world a certain number of children?

These are interesting and practical questions. Chatter about "the unfit" and the benefit of the human race is for fools; we know nothing about it.

The Attitude of the Church.

I do not know what the attitude of the Roman Catholic Church is towards sterilization. The Church is full of surprises for people who make what I may call Belfast guesses at its tenets. However there are some actions of the Church that are open to question.

When the music in the Pope's chapel was supposed to require the voices of eunuchs, the Church got round that somehow.

Self-sterilization has been held to be a pious renunciation of original sin by the Church Fathers.

A vow of chastity is an act of sterilization. All priests take it.

As to whether I agree with sterilization as it is practiced in Germany at the present time, I can only answer why Germany? America began the practice. Furthermore, I do not "agree with" any parctice of criminal law at present.

Selective Breeding.

I think the human race is approaching the period when selective breeding will be practiced. However, I hope it will be practiced more intelligently than it is among breeders of horses and cattle. I should hardly let our stock-breeders set the standard. Have you any idea of the proportion of "screws" to Derby winners produced by our horse-breeders? Do you know what rotten milkers our prize cattle are?

However, before we consider the question of whether the race will improve physically and mentally with the adoption of intelligent breeding, I say get rid of slums and poverty, and teach children how to feed themselves as carefully as you teach them to brush their teeth and wash their ears; and then it will be time enough to consider about playing God Almighty with human destiny.

Modern Chinese Painters.

Dagny Carter, though a Norwegian by birth is yet a Cosmopolitan and have keenly studied the arts and paintings of many countries. Her latest discourse on Chinese Painting has appeared in the columns of the *Asia*. Connoisseurs will greatly enjoy the following extracts from the same periodical, which has, as its themes, the age-old traditions of Asiatic culture and learning:

In the field of painting, China has a magnificent heritage from past ages. But for centuries now the dead hand of academic formalism, the tyranny of men who spoke with authority because of their scholarship rather than from any artistic superiority, has had its strangle-hold on China's pictorial art. Occasionally during these five hundred years of China's artistic decadence there have come to the fore men like Tai Chin and Tang Yin, of the Ming Dynasty, who in a swift impressionistic style have broken away from the conventional formalism of their day. Tai Chin's "Breaking Waves and Autumn Winds," in the Freer Gallery, in Washington, is a superb example of this art, so closely related to calligraphy and yet so full of life and meaning. In the mass of mediocre paintings preserved from the Manchu Dynasty one finds also, once in a while, a painting exhibiting this fine sense of life. China's best pictorial art for the past three hundred years has been underrated because of the survival of thousands of paintings sent as gifts to men and women of importance and valued not so much according to their artistic merit as according to the social position of the painter and the recipient. If many of these paintings had been allowed to disappear as nature surely intended that they should, there would have remained a pictorial art showing clearly its noble heritage.

Today what is needed in Chinese art more than anything else, is sound critical discrimination between the work of the amateur and that of the true artist and a courageous independence which will refuse to replace the ancient Chinese standards by methods from the West just in order to be like the rest of the world. The West has something to give to modern Chinese art, but western methods should not be allowed to replace the truly great and enduring in China's own art traditions.

The thousands of men and women painting in China today can, roughly speaking, be said to belong to one or another of four groups. The largest group consists of the old-fashioned painters who in calligraphic and decorative scrolls exhibit more than anything else the dexterous skill of the brush. Such a painter depends on memory and imagination for his inspiration or he contents himself with copying the work of others. Sometimes

this is a commercialized art, but more often it is only an occupation of the gentlemen and ladies of leisure.

Shankar's proposal to America for a dance-lover's tour in India

On the eve of his departure from America Uday Shankar proposed to Mr. William Allen for a dance-lover's tour in India, which has been retold by the latter and has appeared in *The Cunarder*. It contains a brief exposition together with the places of origin and performances of the Hindu art of dancing :

"In northern India, you go to the very humble to find the ancient dance unadulterated by Mohammedan and other foreign influences," Shankar explained. "In the South you find the dance held in greater esteem by the educated and still close to the great old tradition which is the heart of all Oriental dancing.

"Dancing has been to India what the cathedral sculptures and stained glass windows were to medieval Europe—the most fundamental of educations. Together with the story-tellers, the dance groups (accompanied by music and singing) have taught merchant and peasant the lives of the gods and heroes of antiquity. I believe the more important dances were once seen throughout all of India. But now they have found refuge in far-flung spots, waiting like seeds in storage to be set out once again to grow. Much of this dancing depicts struggles between forces of good and evil. And like the stories and dramas America most enjoys, our Indian dances show the triumph of the righteous, approximating a 'happy ending.' Still other dances of India are less directly linked with religious and ethical thought. They are closer to the folk dancing of Europe's simple farmers, gay ring-around-the-rosy festivals in which the whole village joins. But even these are in a sense religious, having undercurrents of gratitude for the coming of the rains, or for harvest time."

No sight in northern India is so beautiful in a way we can all thrill to as the dancing of the *Garba* in the villages north of Bombay. The simple villagers choose moonlit nights which give that sense of dreamland so necessary to plunge spectators into the spirit of a dance. Round and round, with long broad-bottomed skirts, the women dance, singing all the while. Sometimes they balance polished brass turns on their heads. Or keep time by striking sticks, each dancer striking hers against that of the next in the circle. In some localities men and women join in the dance, in others some of the girls dress up as men. There is usually a baby lying in the centre of the circle, to symbolize little Krishna to whom these dances are dedicated.

These dances of Gujerat, the native region of Gandhi, are based on legends of the god Krishna's boyhood on earth. The story goes (recalling uncannily that of Christ) that the king of a long-vanished kingdom, fearing fulfilment of a prophecy, ordered the baby killed. But somehow the child was smuggled away and substituted for the new-born child of a cowherd. So the boyhood of the god Krishna was spent gaily with peasant girls and boys watching the cows graze, or playing a flute while the girls danced round him. These gay shepherd dance-games called *Rash Lila*, are part of the celebration of spring. They are seen in villages in Katiawar, and near Ahmedabad, Baroda and Surat on the way north from Bombay. You will find them too in varied forms at Brindaban near Agra, at Benares and in many other parts of India.

But before going further north to Shankar's native Rajputana, lovers of the dance wisely strike out westward from Surat to visit the world-famed painted caves of Ajanta and sculptured temples of Ellora. Shankar took great pains to search out poses of the ancient dance art in these vast frescoes and chiselled surfaces. Dancing was so intimately a part of old India's religious and everyday life that mural paintings like these not only suggest the rhythms of dances but actually show dance scenes. To visit great collections and monuments of Indian plastic arts without keeping in mind the atmosphere of music and dance in which they were created is to lack the key to their enjoyment. The whole surface of a temple wall, painted or carved, is likely to seem excessively adorned and chaotic to the static onlooker. But evoke to your static tourist an Indian dance, fusion of grace and austerity, of jewelling and simplicity, and he will grasp the swing of the thing he is looking at. The same laws of rhythm and beauty are obeyed by Indian arts; the laws are most easily understood by way of the dance.

As the most warlike of Hindus, the Rajputs naturally love dances in which sword play enters. One of Shankar's most popular numbers here in America was based on that warlike tradition. Simkie, his woman partner in the dance, appeared in classic Rajput costume and the only music was furnished by those extraordinary subtle drums of Rajputana.

The most "important" perhaps, of dances still seen in Udaypur and Jaipur is of the type depicting the life of Rama, a reincarnation of the god Vishnu who came to earth to reform the morals of the people and preach the way through his own example as a king without reproach. It is given in the Ram Lila festivals in the fall. The Ramayana, one of the ancient India's two greatest epics, tells the story that the dancers of Rajputna interpret so vividly. These dances have some local political meaning since it is usually the local Big Man, the rajah, or perhaps the richest of the local Four Hundred, who takes the role of the perfect king Rama. And you are likely to find the most socially prominent woman dancing under the halo of Sita, the most beautiful and devoted wife of Indian mythology.

In these cities, and in the fabulously beautiful vale of Kashmir yet further to the north, it is easier than elsewhere to see dancing. Yet, owing to this cheap modern demand and the loss of Hindu symbolism due to preponderance of Mohammedan influence in the past four centuries, this most accessible dancing is also the least worthy. These dances by Nautch girls are usually on the same plane as our own cabaret midnight shows. The rolling of eyes has its place in making a traveler's life enjoyable, and there is plenty of attractiveness in hip action. But to Shankar and the real searcher for India's ancient tradition the Nautch girls are as poor art as they are good amusement. One fine thing they do reveal however—remarkable movements of the feet and of the bell-encircled ankles.

There is Manipur, a very lovely valley up toward the Himalayas and toward Burma in the greatest tea-raising region of India. Its dancing is acclaimed as the finest in all northern India—not much softness—much discipline, powerful movements, masculinity—close adherence to the austere non-sensual laws of the past when dancing was considered given man by the gods, for divine purposes.

Since Manipur takes time to reach, it is comforting to know that the Nobel Prize winning Indian poet, Tagore, employs Manipur people in his school some four hours by train from Calcutta. There they teach the students, making no concession to modern youth in their thorough slow disciplining of muscles and minds.

In Puri, pilgrimage centre on the coast south of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Calcutta, you find faint echoes of the Hindu religious dances of antiquity. During the festival in June when the god Juggernaut and his sister and brother are drawn slowly along in huge chariots, a temple follower dances in front of each image, in the prow of each tremendous cart. As he moves mechanically, vaguely repeating gestures that meant great things to his ancestors, he sings songs that make the crowds of pilgrims laugh. Bananas and Jack-fruit and custard apples are tossed by the devotees up on the chariot as offerings to the god. The dancer eats them. He makes you impatient to go south past Madras to Tanjore and the Malabar coast where Shankar promises you the very finest dancing to be found in India today.

Tanjore to many an American is nothing but the home of cashew nuts. Or the most beautiful of southern Indian temples—with possible exception of nearby Madura. To Shankar and all dance-lovers it is one of the few places where the ancient art of the religious and dramatic dance is preserved unadulterated. Not to whoever wishes and not for money, but to those only who pass rigid tests of Brahmin blood and of knowledge of the old texts the ancient art is passed on. The very stubborn orthodoxy of these southern Brahmins has saved many cultural treasures, including the dance.

In Tanjore there still exists the institution of the *deva dasi*, the girls dedicated to service to the temple god through dancing. Efforts are being made to stop this for moral reasons but Shankar discovered their dances to be among the loveliest and purest sights in the world.

But the finest of all classic dancing is found in Malabar, that wierdest and least traveled region of all India, perhaps the Egyptians' Land of Ophis, perhaps even the land from which came the Queen of Sheba. In spite of being the region to which Romans and Alexandrian Greeks brought gold to exchange for spices, in spite of having given asylum to Jews and Syrian Christians for fifteen or more centuries, and having been the part of India first visited by contemporaries of Columbus in search of cloves and cinnamon. Malabar remains the most orthodox, intransigently Hindu part of India.

"You may not find the comforts and good motor roads of the rest of India here in Malabar," Uday Shankar tells us, "but you will be fully consoled by their dancing of the *Tandava Nrittya* in March or April."

"When I saw the Shiva or *Tandava Nrittya* dance in Malabar," Shankar explained, "there were no curtains, no stage effects, no artificial lighting. A huge bonfire in the centre of the tent made up for all of that. For a long time before the performance, music played, putting spectators and players in the mood of the great dramatic dance. Specially trained men took hours in painting the faces of the dancers as carefully as they would vases. When actual dancing began, the dancers were already in a trance, immersed completely in their roles. The dance lasted from six in the evening till six in the morning, always intense, each dancer and musician playing his role so that you felt you were taking part in a vast struggle between the gods of Nature's forces. That was a sight worth going round the world to see."

Romain Rolland on Lenin.

Lenin, more than any other individual, symbolized the proletarian revolution. There was no escape in illusion for him. He carried this sense of the real into his theories of art. He knew the treachery of the bourgeois artist. In the hour of decision the lackey of the existing social order would always be on the side of the killers. Lenin, the man of action, correlated the laws of society and its rhythm and saw the inevitable onward march of humanity. These are the opinions of Romain Rolland regarding 'Lenin, the artist and man of action.' The following extracts from *The Modern Thinker* will throw further light on the subject:—

Lenin and Tolstoi.

Lenin commented on Leon Tolstoi as follows:

"It may seem at the first glance strange and artificial," said Lenin, "to link the name of Tolstoi with that of the Revolution, from which he very evidently turned away. But our Revolution (of 1905) was an extremely complicated phenomemon; in the rank and fine of its participants and leaders there were many social elements which did not understand what was happening and averted themselves from the real historical tasks posed by the development of events. In this sense, the divergent ideas of Tolstoi are a veritable mirror of the contradictory situation in which the historic activity of the peasantry of our revolution found itself. The originality of Tolstoi and his ideas in general express justly the varied phases of our revolution in as much as they reflect the revolution of the peasant bourgeoise and the revolt of the critics of capitalist exploitation, the denunciation of the violences of the state and the comedy of the courts, the glaring contrast between the increase of riches which go hand in hand with the conquests of civilization and the increase of misery and barbarism which grow with the tortures of the working masses. And surmounting this we have the preaching of the "Saint-Tolstoi Idiot" for non-resistance to evil by violence.....reflected the hate born from sufferances, the ripened desire for a better future, the desire to liberate himself from the past, the immaturity of dreams, the lack of political education, and the weakness of the revolutionary desire. These historic economic conditions show the preparation necessary for the struggles of the revolutionary masses and their lack of preparation for such a struggle. The Tolstoian doctrine of non-resistance to evil was the most serious of the causes which led to the defeat of the revolutionary campaign."

This judgment of Lenin which applies to a great artist of a definite epoch can be verified with other masters of other epochs especially the pre-revolutionary epoch of our 18th century France. It is exactly that which happened, as professor Daniel Mornet, at Sorbonne, in his researches of thirty years in the intellectual origin of the French revolution shows. Not more than Tolstoi, did Montesquieu, Voltaire, Rousseau, Diderot, and the Encyclopedists understand what was going to happen and of which they were nevertheless the heralds. They have done nothing more than to translate (not without errors) in a striking form, thanks to the force of reason and eloquence which they owed to the mastery of their profession, the people of their time, and follow with them, confusedly, the slope over which all of the 18th century was dragged. But they were far from suspecting where this slope was to lead them and if they perceived it is probable that they all (with the exception of the adventurous Diderot) would have dropped to the rear. The 19th century Frenchmen did not clearly see the next stage, where the entire development of history would change its course and set out fatally, as Lenin perceived it.

For the historian of literature, the interest should be to precisely discern that which the Rousseaus, the Diderots, and the Voltaires were aware of without

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

thoroughly understanding. It is the sketch which Lenin with his brusque and comradely frankness drew of a writer whom he loved which exposed how Leon Tolstoi genially denounced the lies and the offenses of the social state, but how in the face of revolutionary action, which was the inequitable consequence, protested with fear and anger, shouting 'No," taking refuge in mysticism which wished to stop the progress of the sun by denying it.

NORMAL ORDER OF HISTORY IS REVOLUTION.

This phenomenon is found in a smaller degree and with less passion in the large majority of artists who see the pit, the abyss which it is necessary to jump, but who from this perspective grow dizzy and sever their allegiance. To re-establish their fragile, shaken equilibrium, they bend backward out of the wave which sweeps the epoch, into the " moral " order, the established bourgeois order which reassures them against that which they have seen and which they did not wish to see,—into the conventional and ordered life.

It is here that the intelligence of a master of action like Lenin, by its exceptional logic, which makes of his thought and action not a petrified block, but a fluid stream, identifies itself with the life of the current epoch and with its elementary laws.

No one better than Stalin in his *Sketches of Lenin*, has brought to light the singular trait by which Lenin distinguished himself, his perpetual contact with the elementary forces which manifest themselves in the masses. He never ceased to keep in constant contact with these forces and nothing was able to make him lose his strong confidence in their creative powers. Stalin quotes this striking remark made by Lenin during a conversation in which a comrade, who was afraid of "the chaos of the Revolution," declared that " after the Revolution, the normal order ought to be established." Lenin sarcastically retorted: " It is unfortunate when people who pretend to be revolutionaries forget that the most normal order of history is the order of Revolution."

And Stalin adds: " This profound faith in the elemental forces, which was characteristic of Lenin, gave him the power to control these forces and direct their flow into the channels of the great Proletarian Revolution."

The greatest gift of the man of action, which is also the objective of the man of science, is to penetrate to its essence the elemental, uncover its hidden forces, laws and currents, that he may harness and direct them for the benefit of mankind. To Lenin this was likewise the supreme rule in art. If the majority of artists have been too weak to accept it, the great ones have always unconsciously practised it. Leonardo da Vinci, one of the greatest geniuses of all times, adopted as his guiding principle that one must " Assimilate oneself with the forces of nature, transmute them in one's mind."

Thus the great artists, the Leonardos and the Tolstois espoused the living forms of nature. And the masters of action, the Lenins, correlated the laws of society and its rhythm, the vital clan which directs and supports the everlastingly onward march of humanity.

The Sedition Bill.

The following address on the introduction of the Sedition Bill to be an Act of Parliament by the Rev. Ethel Kay which has been reproduced in *The Inquirer* may be of great interest to us, who are also undergoing hardships in the name of such laws :—

WHAT type of literature might be considered seditious? Would the writings of Tolstoy, Shaw, H. G. Wells, or Gandhi, and other utterances of great souls in the cause of peace, be considered seditious literature? Would they have to be carefully removed from our bookshelves if the Bill became an Act of Parliament? Then there is a book, possessed by everyone, that is the Bible, which certainly contains some dangerous passages, such as " Do violence to no man." Surely that was seditious instruction to give to soldiers. There is also the Sermon on the Mount, which was often found inconvenient during the Great War, and was carefully avoided by many Church leaders in consequence. Would it once again have to be carefully deleted from our Bibles in case the whole should be considered seditious literature? These are important questions which face us and cry out for our consideration and decision, even now, while we are as yet in possession of liberty to discuss such subjects.

If the Bill were to become an Act of Parliament, probably a large number of people would immediately awake to the fact of the loss of their liberty; but now is the time for vigilance, if we are to preserve our cherished freedom. It seems to me that all lovers of liberty, and all workers in the cause of peace, should regard it a solemn duty to do whatever is in their power to prevent this measure from becoming law; for it would interfere with work for disarmament, peace meetings, League of Nations Union work, and all efforts on the part of those educational bodies which are working for the abolition of war as a means of setting international disputes.

—

The British in India.

Mr. R. Page Arnot in a leading article in *Indian Forum*, a periodical published in London, the first issue of which has reached us, has dwelt upon the following aspect of the British rule in India :—

As the cotton industry of Lancashire, the classic industry of capitalism, grew and developed, it destroyed with its machine-made goods the cotton industry of India, shattered the old Indian village system and created problems for which capitalism has found no solution. Trade followed the flag and the flag followed trade. The expansion of the market developed into the systematic exploitation of India, and eighteenth century adventurers gave way to the modern scientific plunders of India. The armed forces of British capitalism secured the market as a dependency and now the rule of the British in India rests upon the disarmament of the mass of the population. By this means, and by this only, in the last analysis, is it possible for the " Sahibs " to hold down with their relatively small armies the 350 millions of India?

The apologists for British rule will declare that this has been a happy century and a-half of progress; that the British have brought untold blessings to the masses of India. Each year there is published a report on the material and moral progress of India, in which this imperialist propaganda is annually repeated. It is this imperialist propaganda which is taught in the schools, both in English schools to the children of the English working class, itself exploited by the imperialists, just as it is taught in the schools of Bombay, Calcutta and Madras. In Britain it is like an axiom of geometry or a tenet of religion to declare that India has greatly benefited by the beneficent effcts of British rule. There are even those in India who sycophantically proclaim the blessings of British rule and there are even those in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Britain, in the working-class movement, who swell the sound of the brass trumpets of imperialism. Already thirty years ago, at the International Socialist Congress, Mr. Ramsay MacDonald pointed to the future of the colonies under the beneficent rule of capitalism; but in reality he was pointing to his own destiny as Prime Minister of the Labour Government that threw 60,000 political prisoners into the British gaols in India. Indeed, the Labour Party, which in 1904 was in favour of "the civilising mission of capitalism," was able to show, when a score of years had passed, that its leaders were the agents of imperialism both within the Labour movement and for the purpose of oppressing the masses of India.

Actually the whole propaganda of imperialism is false through and through. The rule of the British for 150 years has brought disaster to India. The whole of their extravagant show of alleged facts and figures about beneficent British rule in India is completely overthrown by one significant fact, that in the forty years between 1881 and 1921 the expectation of life of the average Indian had fallen from round about 30 to a little over 23. The increasing misery and poverty that has been the lot of the working class in the European countries in the last fifty years has proceeded at a still more rapid pace in the degradation and pauperisation of the masses of India under British rule.

For actually, so far from having a civilising mission, British capitalism in India has been anything but progressive in its results. It has allied itself with the ruling strata, with the feudal lords, the trading and the money-lending bourgeoisie, and thus perpetuates all the pre-capitalist forms of exploitation.

The rule of the British has been carried through by force and fraud, and this double method is particularly to be seen in the history of the last fifteen years from the declaration of self-government as the "goal" in 1917 up to the Round Table farce of the last year. The great mass movements of revolt called for the intensive use of both methods; thus the movement of 1919 to 1922 was met on the one hand by the carrying through of the Montague Chelmsford reforms, and on the other hand by the massacre of Chilian-Wallah Bagh. Again, the movement of 1928 onwards to the present time was met both by the promise of Dominion status and the Round Table Conferences as well as by tanks, machine-guns and bombing aeroplanes, the imprisonment of scores of thousands, the knout and the gallows.

—

Dance as a Spiritual Expression

We are day by day degenerating the youthful upspringing impulse of truth and beauty and we shall not be happy as a great nation, until we regard all arts as manifestation of Divinity—mourns Ruth St. Denis in the *Message of the East*. While paying a tribute to the religious fervour of Oriental dancing, this 'itinerant minister of the Gospel of Beauty' pleads :

> Dancing is the divine impulse of spirit to move rhythmically, proportionately and perpetually, but in order that the dance may attain its rightful place among the arts, and may serve humanity as it should, dancers must change their emphasis from the material to the spiritual. Havelock Ellis says: "If we are indifferent to the art of dancing, we have failed to understand not merely the supreme manifestation of physical life but also the supreme symbol of spiritual life."
>
> The dance compositions of the future will be built on divine themes instead of on the human longings and egotism that have given birth to much of the so-called art of the world. But as yet the dance has not yet come to its own high place among the arts.
>
> Have we not all of us a deep-seated ideal of art that somehow it should be related to Divinity? Do we not feel that there is inner relationship between the priest and the artist? We do realize that the artist serves at the Alter of Beauty, while the priest serves at the Altar of Truth, but between these two is a great gulf fixed. In a word, we think of Truth *and* Beauty, of Religion *and* Art when we should behold the blending of these two in the Beauty of Holiness.
>
> The world is shrinking day by day. It is time that we became aware of its fuller truth and beauty, and that our hearts, as well as our minds, be made to respond to the timeless wisdom of the eastern half of this planet.
>
> The Oriental dance has survived because it was the expression of a great religious consciousness. As the most highly perfected expression of religion in dance form, it reserves conscientious study by the spiritual dancers of today. Because they are a historical fact and an ancient inspiration, I feel every young person of today would be wiser and happier for having learned the dances of the Orient. I find nothing gives the student the feeling of dedication, humility and meditation more quickly than to take part in some of these Eastern dance classics. So powerful is the religious motivation in the Orient that even love-dances have a dignity, a reticence and formalized beauty that is uplifting.
>
> The present love of Oriental color and design is, I think, traceable to the influence of the higher forms of Oriental dancing. And all these fashions and interests, seeming externals are symbols of a great spiritual reality, a changed attitude toward life, a new freedom, a higher harmony, the prelude to a better understanding of the Self, of our own people, of foreign peoples, and of the imminent Divine in all.
>
> World Peace needs all the rhythm and pageantry of the dance on its side to triumph over the tinseled pomp of war; we need courage, patience, charity and infinite self-sacrifice to right the wrongs of economic maladjustment. The world is left ill and hungry from its banquet of materialism and crying for spiritual food.

—

Where Stands the U. S. A.

While all the great powers are discussing how peace and order can be maintained and war be averted, U. S. A. shows great war preparedness in the plea of her national defence. The following from *World Events* will throw light on the ways of her preparations for the Armament race:—

Military spokesmen frequently complain because of American unpreparedness and the relative lag in our national defenses as compared with those of other countries. The following figures may be worth considering:

In 1930, the world spent 63 per cent more on armaments than in 1913; in 1930 the armament budget of the United States was 197 per cent greater than in 1913 and recent appropriations will raise this percentage higher. In 1920 the National Guard included 1,939 officers and 47,019 enlisted men; in 1930, the War Department appropriations carried provisions for 190,000 national guardsmen including 14,371 officers. The organized reserves have grown from 68,283 in 1920 to 118,175 in 1929. At present over 140,000 young men of school and college age are enrolled in military training units and rifle clubs in nearly 400 schools and colleges each year. The War Department has assigned about 1,650 pro-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fessional military instructors to handle these students. In 156, or more than a third, of these units 82,410 cadets, or over half of the total, are enrolled upon a compulsory basis. (Statistics from the Committee on Militarism in Education.)

—

Co-operative Movement in Africa

In a meeting held recently under the auspices of the Royal Society of Arts, Mr. Strickland, late of the Indian Civil Service, has dwelt upon the history of the Co-operative movement in Africa, which has appeared in the *Society's Journal*. At the outset he traces the origin and development of the movement as follows :

The organization of co-operative societies was first undertaken a century ago in England and in Germany. The English movement was slightly the older, and assumed, as was natural in an industrial and urban country, the form of consumers' shops through which the less wealthy classes of the towns sought to obtain for themselves the benefits of good quality and moderate prices. Development in Germany was principally among the peasantry, who endeavoured by group-action to secure on better terms the requirements of their agricultural business and to sell their produce at a better price. One of the most urgent requirements of the farmer was, and habitually is, credit; hence the credit society or village bank.

These two types of Co-operation were multiplied throughout Europe, and soon extended to Asia. The credit society was there highly popular, the peasant farmer of Eastern Europe and of Asia being in the hands of usurious moneylenders, whether in consequence of undeserved misfortune (failure of crops, live stock epidemics, etc.) or of his own folly and extravagance. Other kinds of Co-operation were not forgotten, but in Asia at least, credit societies predominate. European influences of every description, good and bad, now permeate Africa; and just as the troubles of the European small farmer were aggravated, and those of the Asiatic peasant largely created, by industrial changes and by the revolution in thought and practice to which these changes have given rise, so the African native farmer finds his agricultural stability upset, his village crafts destroyed, and the outlook of his children, if not his own, completely transformed by the opening of new markets, the invasion of mill-made goods, and the subtle reactions of Western education and Western example. He stands puzzled and distressed, seeing his old landmarks swept away in a flood of new luxuries and new beliefs, clinging with one hand to the doorpost of his shaken village home, reaching out with the other towards the perilous delights into which he is tempted to plunge. My task is to consider how far the co-operative method, which has proved so valuable to those Europeans and Asiatics who follow it might, may help the African too to readjust himself in an altered world, and what shape the co-operative society should take to suit his peculiar circumstances.

The Howard League for a Charter for Prisoners.

The Howard League for Penal Reform demands an International Convention to establish a minimum of humanity and decency in the treatment of accused and the convicted persons. This will try to minimise inhuman cruelty to prisoners, both political and criminal, which many amongst us had the hard lot to experience. The following editorial of *The Howard Journal* will be much appreciated by all philanthropists :

The need for an International Convention to establish a minimum of humanity and decency in the treatment of accused and convicted persons grows more acute and more urgent. Rarely does a week pass without our reading reports, which we cannot dismiss lightly, of brutal cruelty to prisoners, both political and criminal. We all tend to exaggerate them or minimise them according to our nationality or political views.

Meanwhile we write in no spirit of self-righteousness. Only too recently have we been touched on the raw by the courteous surprise and pity expressed on the face of a Swedish gentleman when in reply to his question we said, "Yes, we *do* hang people in England. Yes, we *had* hanged a boy of 18 in England last year." Thus might a South Sea Islander, who has learnt better, admit to a visitor from a less barbarous country that his tribe was still given to cannibalism.

So it is not open to English people, after the miserable exhibition of delayed trial and savage sentences at Meerut, to be superior towards other States which keep untried prisoners in custody for long periods. The only redeeming feature about Meerut is the drastic revision of convictions and sentences by the High Court on appeal, and the strong criticism by the Chief Justice of the conduct of the prosecution and trial.

We are not blind to the truth that the state of the courts and prisons in any country depends mainly on public opinion in the country itself. But an agreed international standard would be a pillar of strength to enlightened people in all states and would help to raise the standards everywhere. It should require that every accused person be given public trial with bona-fide legal representation within six months; that torture and "third degree" he abolished together with brutal punishments such as the death penalty, flogging and solitary confinement in dark cells; that prison conditions include proper diet, light, heat, ventilation, occupation, letters and visits from relatives. It is impossible to elaborte the subject here, and it is unnecessary. An excellent basis for such a convention is contained in the Standard Minimum Rules of the International Penal and Penitentiary Commission. These Rules have been revised to cover more fully the case of the unconvicted prisoner, and as we write they are being submitted to the League of Nations. We hope that the League of Nations will seize the opportunity thus offered and that the Standard Rules may be circulated to all States Members with the blessing of the Assembly, and that a real effort may be made to secure their acceptance in theory and practice.

If any Government dare not act justly and humanely to its lawbreakers, whether criminal or political, it confesses to a weakness which will spell disaster. Brute force may induce sullen submission, but it makes neither honest men nor good citizens. A man may, for fear of pain, bow down in the house of Rimmon—he will not worship save from that inner compulsion which never comes from fear.

—

First Pan-Asiatic Labour Conference in Ceylon

Unionism is a development of the post-War period. All the weaker countries of the world have formed such federations to defend their rights from mighty agressors. This policy is even pursued in Asia and endeavours have been made in quite recent years to establish such

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

organizations throughout the country for a united solidarity. The first Pan-Asiatic Labour Conference held its session last month in Ceylon. In an editorial the 'Young Ceylon' comments :

The first Pan-Asiatic Labour Conference held a successful session this month in Ceylon. It was attended by Delegates from Japan and India and thus the first step has been taken to acquaint Ceylon with the progress of Labour ideals in other lands. We trust that the inspiration of this session will give a fresh impetus to Ceylon Labour movement to be more zealous to its ideals and its aims. With the steadying influence of the Pan-Asiatic Congress the movement in this country ought to develop in securing to the worker in Ceylon benefits which his fellow enjoys in other lands. Labour conditions in Asia generally and in Ceylon particularly have not received the attention of both the experts and the special Committees of the International Labour Office. If the movement in Ceylon is to prosper and benefit from the conventions set up at the International Labour Office it is essential that Ceylon should seek representation at the International Labour Conference. For, despite our Labour movement, Labour as such has made very little progress and the lot of the average worker is both insecure and unpromising. Introduction of schemes of social insurance has not yet been urged even by the Labour Leaders. Associations with outside agencies are of little value unless such association brings with it an urge to improve local conditions. While we welcome the association of Local Labour with other kindred movements in different parts of Asia as also with the International Labour Office it is imperative that the movement locally should resurrect itself from a creepy feeling of respectable complacence. If the May Day celebrations which Mr. A. E. Goonesinghe organised is an index of his Labour outlook it is a sorry reflex of what a great movement should be. The mamoth procession and the all-night carnival may be permitted, both have their uses. But these two items cannot bring any attention to the movement or any recognition to the manifold claims of Labour. In this country, Labour is unorganised, undisciplined and unharnessed to a great struggle for the realisation of its undoubted rights. The May-Day celebrations afford an opportunity for Labour to discipline themselves into different Trade Unions, develop leadership within its own ranks, evolve schemes of mutual benefit and self-aid and put forward concrete proposals for better wages profit-sharing and nationalisation of industrial enterprises. In such endeavours labour must organise itself, receive inspiration from within, plan campaigns of action. It is in these directions that Labour in Ceylon must be organised if it is to become,—instead of what it is now a vastly disintegrating force,—a powerful harbinger of human contentment.

—

Belgium's Fight Against Peace Work

Belgium is raising a heavy loan in order to construct fortifications along her eastern frontiers, so that she may prevent invasion and the return of the sorrowful hours of 1914 and thus render impossible any armed incursion of her territory. In the face of the Disarmament Conference, which is doomed to failure, she pleads that she has done nothing but has simply followed the footsteps of her mighty neighbour, France. M. E. Van Diest gives an account of the same in the *Unity*:

After a press campaign carried on for weeks, the Belgian government recently began the raising of a loan of 1,500,000,000 francs, of which 700 to 800 millions are expected to be used in the construction of fortifications along the Belgian-German frontier. In 48 hours' time the loan was covered by the large banks of the country and a Technical Council of Fortifications was at once created. This Council, presided over by the Minister of National Defense himself, has settled in final form the apportionment and use of the funds devoted to insuring the defense of the frontier.

That is what the important papers have sensationally announced to us, adding that we are menaced by war, that German armaments have actively increased, and that if we wish to escape danger we must adopt solely and absolutely France's line of action: to fortify by concrete fortifications, armed with the most approved guns, our eastern boundary from Limbourg in Holland to the Grand Duchy of Luxembourg, in order to join the line of defense that France has constructed all along Alsace and Lorraine as far as the Swiss line.

A considerable portion of the Belgian press, thus, is paid off by the munitions and armament magnates, just as were Roumanian journals for the scandalous Skoda arms works affair.

It is a curious coincidence that simultaneously with this campaign, another crusade assuming an altogether different character openly appears: the introduction by the Minister of War of a bill aimed effectively to prevent all anti-militaristic work or propanganda. Everything of pacifist tendencies will be repressed without mercy. It would require positive courage to express pacifist convictions, all the more since war resisters are to be cruelly punished by several years' imprisonment and loss of civic rights. It is even said that relatives and friends of conscientious objectors will themselves be subjected to repressive attention.

The defection of Einstein has seriously increased defeatism in the ranks of the peace organizations. Official right-wing Socialism, which is powerful in Belgium, is chauvinistic, while the left wing which devotedly directs the members of parliament, Spaak and Marteaux, is handicapped. A White dictatorship to all intents and purposes has ruled Belgium for several months, and the situation is certain to become difficult for those sturdily opposed to war. The fight against war that many have carried on for years, while not lost, has been set back and daily runs the danger of disintegration. The struggler for peace still echoes the cry of his friend, Andreas Latzko, the Austrian author: "I know that a day will come when all will think as I do . . .!"

INDIAN PERIODICALS

The Flouting of Indian Public Opinion By The Capitation Tribunal

Dewan Bahadur A. Ramaswamy Mudaliar, M. L. A., in a valuable article in *The Indian Review*, criticizes the decisions of the Capitation Tribunal, constituted in London to consider army questions between Great Britain and India, as follows :

The Tribunal did not accept the decision of the Government of India, and have calculated that a nine months' training would be fair to both the parties. It is curious that this period of nine months has not been suggested by either of the contending parties, and there are no reasons assigned by the Tribunal why such a period should be accepted.

Sir Shadi Lal and Sir Shah Muhammad Sulaiman, the two Indian Judges, of the tribunal have both dissented from this recommendation of the majority of the Tribunal. They point out that this very issue has been considered by no fewer than five Committees or Commissions, and that the verdict has been, either expressly or impliedly, in favour of the shorter period. In 1861, the Tulloch Committee, which considered the question of capitation rate, adopted, for purposes of calculation, a period of 4½ months only for the infantry. In 1872, the Seccombe Committee held that India was liable to pay charges for six months' training. The same conclusion was confirmed in 1875 by the Bouverie Committee. The question was again examined by Lord Northbrooke Commission in 1892, and, after elaborate calculations, that Commission also adopted the period of six months as a legitimate period of training. The Welby Commission in 1900 again fixed the charges on the basis of six months' training, in spite of the War Office's claim for a longer period. I have already referred to the fact that the dissenting minority of that Commission did not accept this view, and that the Marquess of Salisbury was compelled to suggest the appointment of a Tribunal to decide the issue. This period of training for six months was accepted by the War Office for many years, and as the Indian Judges point out, several high military authorities, including Lord Kitchener, Sir Beauchamp Duff, Lord Rawlinson and Sir Philip Chetwode, held that a period of six months' training is adequate in the case of men required for India. The Government of India have repeatedly declared, in their representations to the War Office, that even if it takes longer than six months to complete the training of a soldier, they are prepared, and indeed would prefer, to take recruits with only six months' training and complete their training in India in accordance with Indian requirements.

In 1926, the British Government compelled the Government of India to pay a consolidated amount as capitation charges on their own basis, and the result of the nine months' training, which the majority of the Capitation Tribunal have held to be necessary, is that, in substance, the amount fixed by the British Government in 1926 must continue to be paid. In effect, it means that the Award of the Tribunal on the capitation charges has been, practically, entirely against the case of the Government of India. It is necessary to realize that a claim put forward by the Government of India, in the first instance, for a total exemption, and, alternatively, for a great reduction in the charges —a claim which has been pressed for over sixty years by military authorities and by Viceroys and in a series of dispatches from the Government of India—has been found to be completely baseless by the majority of the Tribunal. The entire claim of India, so far as the capitation charges are concerned, has been dismissed by the three Judges. And this is the decision over which the Indian Legislature has been asked to enthuse itself.

—

Christian Missions and the White Paper

The White Paper proposals have given rise to misapprehensions in the minds of some Christians in India. The editor of *The National Christian Council Review* rightly observes :

It would appear, from statements that have found their way into the public press, that there is uneasiness in certain Christian circles lest, in the event of the White Paper proposals coming into effect, the safety of the Ark of the Covenant in India may be endangered. That is a fear we do not share, and for these reasons. We cannot believe that under *swaraj* India will depart from her traditional religious hospitality, a tradition that has done much to establish her good name with the outside world. Political changes are not necessarily religious revulsions. Christianity can no longer be regarded as an alien Faith, for the Church of Jesus Christ has been long domiciled within the Indian realm, and all good citizens are mindful of the services she has rendered. None now will gainsay her right to remain, and few will question her claim to practise the faith she holds. The fortunes of Christian Missions are the fortunes of the Christian Church in India. By common resolve the great principle of religious liberty is to be upheld in the future State, and we who bear the Christian name have no reason to doubt the sincerity of that resolve. There is the further consideration, that Christianity is not the only self-propagating religion in India that claims a fair field and no favour for its ministry: Islam, Sikhism and Hinduism, in some of its aggressive forms, make the same claim. It is, therefore, to the interest of all to stand by the doctrine of religious equality, and this in itself is a safeguard against discrimination. Then it is well to remember that Christianity has achieved some of its greatest triumphs in Native States, where the powers that be have been either Hindu or Muslim. These are all re-assuring things: but beyond them lies the genius of Christianity itself. It has the grace of perseverance. It depends neither on the frowns nor the favours of governments, although it is sensitive to both; it stands for the indefeasible right of the human spirit to worship God as conscience dictates, and, while it fully recognizes the right of the State to lay down and administer laws for the good of the common weal, which it gladly obeys, it reserves to itself the right of private judgment when religious and moral issues arise; it will always respect the cardinal rights of others;

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it recognizes that it cannot always have its own way, but when difficulties arise and defeat threatens it will not abandon the field. The best safe-guard for Christian Missions is Christianity itself, humbly and loyally lived.

—

How to Save European Civilization

M. Julien Benda, a leading French critic, asks in a paper in *The Aryan Path*: How are we to save the European Civilization? He himself answers:

By restoring, notably amongst the younger generation, amongst the students, the feeling of this universalism of intellectual function and of cosmopolitanism of mind. For that, it is especially necessary, as I have pointed out in my *Discours a la Nation Europeenne*, to raise the product of the intellect above that of the feelings, the works of science and philosophy above those of pure literature; because the intellect is universalistic while the feelings are much less so; because the value of a scientific work exists, or for the most part tends to exist, independently of individual genius and of the *language* in which it is written, whereas the work of the man of letters is, so to speak, indissolubly linked to this vehicle; because the work of the intellect is translatable whereas that of the man of letters is not, or is at any rate very far from being so to the same extent. We must restore to credit such phrases as Renan's: "All those things which make up literary taste, charm, poetry, amusement, may be clothed in local form; *but science, like the mind, is uniaue.*" This return to the honouring of the mind in so far as it is universal, overlooking any particularities which it may offer, will be difficult, if I am to judge by the fact that the best brains, those apparently most eager to rebuild European civilization, appear to be refractory, even unconsciously refractory, so deeply have they absorbed the doctrine of the nationalization of mind. A little while ago, I was reading some pages of a French savant, whom I had believed completely exempt from this influence, the lamented Charles Pfister, Dean of the Faculty of Strasbourg. This professor, having just indicated the excellent works which the German savants had recently produced on the history of Alsace, considered it his duty to express the hope that France would not allow her neighbours "to monopolise" the study of this subject, and declared it to be "the duty" of the French University of Strasbourg and of the learned societies of the city "to mount guard on the Rhine." But what, I ask, is this idea of "monopolising" doing here? And the "guard on the Rhine"? The learned societies, whether French or German, have the duty of *mounting guard on the mind* and, from the moment that good works are composed on the history of Alsace, a true priest of science need not worry whether they be the work of Frenchmen or Germans. In the same way, while on a lecture tour in Scotland a year ago, I heard a professor of the University of Edinburgh, during a banquet celebrating the memory of the great poet Dunbar, make his compatriots feel ashamed because the best editions of Dunbar are made by Germans. As if the important thing for this minister of the intellect ought not to be that good editions of Dunbar exist, not that they are not the work of his compatriots! Such nationalism of mind must be absolutely removed if we wish to return to a conception of the intellectual universalism which, once again, is for me the primordial condition for the resurrection of European civilization.

Food and Drink in Ancient India

In a thesis in *Man in India* Prof. Joges Chandra Ray, M. A., writes:

In the time of Kautilya meat and fish formed items of daily diet. Fresh fish was apparently insufficient to meet the demand, and dried fish, perhaps salted and smoked, was consumed. Certain birds such as the peacock, parrot and *maina* were held sacred; and *gone*, waterhen, Brahminy duck were excluded from the table. It is curious to note that Kautilya a shrewd and accurate observer, believed in the existence of 'matsya,' sea-animals, having resemblance with the elephant, horse, ass, and man (II. 26). Such aquatic animals were not killed for food. There were large forests, not very far off the town, where mrigapasu quadrupeds, were hunted after. Amarakosa gives a list of these, which belong to many families. The King had flock of sheep and goats, droves of swine, and herds of cattle and buffaloes. The latter were meant for various purposes, one of which was to supply meat. Oxen were bred and probably fattened for the shambles (II. 29). Susruta describes beef as "pure." Yajnabalkya in his Dharmasastra (200 A. D.?) enjoins the offering of beef to Brahmans learned in the Vedas when they come as guests (I. 100). Visnu Purana (II. 15) tells us that if one feeds Brahmans on the day of Sraddha with beef, the souls of deceased parents remain satisfied for eleven months. Kautilya refers to the custom (IV. 3), and the ceremony of Vrisotsarga, letting loose an ox at Sraddha, had its origin in this old precept. The fixing of a sacrificial post and the offering of four extra calves show what the intention was. Manu (III. 267) enjoins the feeding on the day of Sraddha of Brahmans with meat and offering them some intoxicating drink, and permits the killing of birds and quadrupeds for the performance of sacrifice and the eating of meat if the animal has been offered to a god. Female animals were never permitted, and one would naturally select a sound animal. The goat was usually the pasu, the sacrificial animal, and so was Krisnasara, which is a goat.

—

Prison Reform

Mr. Pankajkumar Mukherjee, M. A., B. L. offers, among others, the following suggestions for the reform of prisons in India in *The Calcutta Review*:

For the sake of rehabilitation or socialization, the prisoners ought not to be kept absolutely outside society. People with an intellectual ability and of social habits ought to be allowed to come in the prisons and to talk with their inmates. Because the prisoner ought not to get an opportunity to think that he is an outcast he must be trained to think that society will again welcome him if he only reforms himself. Means ought to be adopted through legislation by which the criminals can avoid that sort of mental degeneracy. Society, on the other hand, is to be moulded so as to guide and sympathize with the criminals like the diseased persons returning from the hospital.

Regarding the aim of the penal treatment Mr. Jose Almaraj, President of the Supreme Council of Social Defence and Prevention in Mexico, says that the aim of penal treatment is not intimidation but cure; regeneration and re-adaptation. The Indian Penal Laws ought to be framed upon the said principles of Jose Almaraj.

The compulsory system of work in prison stands as an obstacle to the realization of the new ideals of penology. The link of compulsion in jail work can be eliminated by two processes. In the first place, the system of remuneration may be introduced, and in the second place, the system of allotment of task by qualified supervisors may be enforced to do away with the idea of compulsory work. Two benefits are derived from the system of payment for work to the prisoner. They would not think

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as a drudgery to serve and so an initiative to work would be given to them by such system. They would get a training to work and to earn in prison-life which they may profitably use when they would come back to society. One of the best means of socialization is the system of payment for work in prisons.

Arguments can also be put forth from the financial point of view. The prisoners might contribute to the penal administration by maintaining themselves. In the penal system of Italy it has been ascertained that the prisoner maintains himself out of the remuneration he receives from service. In England there exists no legal provision for payment to the prisoners. The system of remunerating the prisoners had its origin in the Continent. In Swiss cantons the prison authorities determine the payment of the different prisoners. France has a system of indirect payment, *i.e.*, once a sum is credited in the name of the prisoner, he will receive that for good. The new Italian Penal Code has made it obligatory to pay the prisoners. The Penal Code of U. S. S. R. goes even further than the new Italian Code by giving prisoners the right to sue the state for sums due to them. Now it can be suggested that Indian Penal Law ought to recognize this system of payment in both the financial and psychological aspects. The system of payment is required to be made obligatory instead of dependisg on the whims of the authorities in charge.

—

The Military Burden on India

The following occurs in an article by Mr. F. G. Pratt, C. S. I., I. C. S. (Retd.) in *The Hindusthan Review*:

The following figures shew the percentage incidence of defence expenditure upon net revenue in Great Britain and the Dominions:

India	33.7
Great Britain	23.6
Australia	3.7
Canada	3.7
New Zealand	5.2
Union of South Africa	3.1
Irish Free State	6.8

India in spite of her poverty has to bear a burden relatively heavier than that of Great Britain and ten times heavier than that of Australia, which has no land frontiers and is protected by the British Navy. Her expenditure on the Army has risen from £20 millions before the War to £91 millions at the present day. India has been called the Achilles heel of the British Empire.

—

Natural Resources of Karnatak

Karnatak is rich in natural resources. We take the following from *The Mysore Economic Journal*:

The Nature has been exceptionally generous and bounteous to the people of Karnatak. Under its surface there are vast stores of mineral wealth which await the special and enterprise of its sons and the persistent tap of the prospector's hammer and pick. It has within its borders such valuable metals as gold, iron, manganese and asbestos. Limestone and clay deposits are common and can supply suitable raw material for cement and ceramic industries. A porcelain factory has just been started in Mysore and Mangalore tiles have already earned a wide reputation for their quality.

Magnificent water power is available in several parts of Karnatak. Converted into electric energy this will do much for industrial progress. Besides several rivers, which are and can be advantageously dammed both for irrigation and the generation of power, we have the highest water-fall in the world at Gersoppa which has yet to be harnessed for the service of the Karnatakas. Large sums of money have already been invested by the enterprising Government of Mysore in the construction of huge reservoirs of water and hydro-electric schemes which will considerably help the industrialization of that part of the country.

Karnatak is exceedingly rich in forest wealth. Its virgin forests are among the largest in extent in India and are a great source of wealth. Not only they are great for constructional and cabinet timbers, bamboos and pulpwoods they contain, they are of immense importance in supplying fuel, in the absence of coal. The trees, that are of greater economic value, are those that give the world the famous sandal and eucalyptus oils. Mysore Rosewood, Ebony, Red Sandal and Cedar and Kanara Teak are famous and have won for themselves places in the timber markets of India.

Karnatak with an ideal climate and rich soil offers to the farmer the widest choice of industry. The whole field of agricultural endeavour is open to him. There is practically no species of commercial crop, not to speak of food grains and oilseeds, that cannot be grown to perfection either under natural conditions or through irrigation. Cotton of good staple is being grown on the black soil of Dharwar, Belgaum and Bijapur Districts. The sandy soil of coast districts produces tobacco. The sugarcane cultivation is rapidly extending particularly in Mysore, where the development of irrigation is a big feature of its agricultural progress. Mysore and Mercara coffee has been famous and is largely exported with Nilgiri tea to foreign countries. The possibilities of extending the cultivation of fruit trees are amply demonstrated by an European planter who owns an extensive orchard near Bangalore and grows a variety of the choicest fruits, including seedless oranges, apples and grape fruits. Cocoanut is extensively grown mainly in the coast districts and the Western Ghats produce such rare spices as arecanuts, cardamoms, pepper and cinnamon for the markets of the world. The insignificant cashewnut of Kanara of which Mangalore has now a profitable export trade with America, has shown to Karnatakas what wealth Karnatak can draw from the more prosperous nations of the world by the export of a part of its surplus produce either raw or manufactured, if only necessary enterprise and capital are forthcoming.

—

Rural Welfare Work

Prof. Nripendra Chandra Banerji, M. A., has given us a useful scheme of rural welfare work for Bengal in *The Bengal Co-operative Journal*. He says :

The three great lines of attack should be *Disease*, *Debt*, and *Illiteracy*, the three great scourges that ravage the countryside and take so much toll of the strength and efficiency of the peasantry.

If a Rural Welfare League could be immediately started *under non-official auspices* as a central body in Calcutta with district branches, it could spread its tentacles all over the province, provided the district executive helped the movement with advice, encouragement and gave it the necessary 'good character' certificate. Otherwise in these police-ridden times, every organization would practically be still-born.

This League might utilize the co-operative workers, the colleges and the schools, the district boards and municipalities, and the village union boards; it might very

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

well have His Excellency the Governor as Patron and the Rural Development Commissioner and the District Magistrates as Vice-Patrons; but it will have its own offices and its own executive.

Government might at once employ a few hundred University men to popularize the ideas of rural welfare in definite areas: they might easily act as Government supervisors over non-official rural welfare activity.

Thana by thana, to combat the triple evils of Disease, Debt and Illiteracy, should be immediately started—

(a) *Health-Centres*, which would do intensive health propaganda work in villages under their control.

(b) *Debt Conciliation Committees*, which would work incessantly to ease the strain between debtors and creditors, and

(c) *New Type Village Schools*, which would train villagers in the art of self-help and give them ideas about co-operative farming and co-operative marketing to begin with.

All these three organizations should be organically inter-connected and worked by a co-ordinate group of workers.

The work is big enough to arrest the attention and engage the energies of various classes of people—lawyers, doctors, engineers, school-masters, businessmen, farmers and traders.

The *health-centre* workers might requisition the services of honorary physicians and persons of both sexes trained in first-aid and nursing; cultured women who have taken lessons in maternity questions might open maternity welfare centres in this line of activity.

Elementary lessons in sanitation and hygiene, about healthy food and drink might easily be given by the health workers.

Magic lantern lectures with illustrative slides suitable to village needs and interests accompanied with practical demonstrations as to how to keep village homes including the kitchens and bathing ghats clean, how to drain off all surplus accumulation of water, how to deal with garbage and refuse might be a prominent feature of this work.

The treatment of disease would be left to the hospitals and dispensaries; the prevention of disease by the imbibing of cleanly habits would be the objective.

The *Debt-Conciliation Committees* might have a representative personnel comprising landlords and tenants, money-lenders and debtors; the object would be to arrange a sliding scale of debt-payment by easy instalments, to avoid the necessity of protracted and ruinously expensive legal proceedings, to make an end by peaceful negotiation, of fancy rates of interest. This is a matter in which patriotic lawyers might easily be useful and settle matters amicably between parties.

—

Women Doctors and Maternity Work in Bombay

Women doctors have played an important part in maternity work in Bombay. Mrs. Dadabhoy, M. D. (Lond.), writes in *The Journal of the Indian Medical Association* :

The credit goes first to a woman doctor, Dr. Elizabeth Frances Hoggan and secondly, to an American business gentleman Mr. Kittredge. In 1882 Dr. Hoggan wrote an article in the *Contemporary Review* that there is a need of a new medical department in India to be managed by women on the same lines as the then existing Civil Medical Service. Inspired by this article Mr. Kittredge thought that the only way of placing female instruction and relief on the right basis would be to bring thoroughly competent experienced women from Europe and America. With this object in view he collected subscriptions from the public with the help of a Parsi gentleman, Mr. Sorabji Shapurji Bengalee. Meantime in 1883 a philanthropic gentleman, Mr. Pestonji Hormasji Cama came forward with an offer to build a hospital for women to be managed by women only. In the same year the authorities of the Grant Medical College and the Bombay University were approached to open their doors to women on the same status as men. In the same year Mr. Kittredge left for England in order to secure the services of a suitable medical woman to inaugurate this scheme. Through the recommendations of Dr. Garnett Anderson he was able to persuade Dr. Pechey to come to India. Miss Pechey arrived in Bombay in 1883. In 1884, a temporary dispensary for women was opened in Church Gate Street and also a small temporary hospital for women in Khetwady. At the same time another woman doctor Miss Charlotte Ellaby was brought from England to act as a junior officer to Miss Pechey. In 1886 the present Jaffer Suleman Dispensary was opened and in the same year the Cama and Albless Hospital buildings were completed and the patients were transferred here from Khetwady.

In the year 1883 the Grant Medical College first started training non-matriculated women and granted certificates after a three years' course of study. The first women to take this certificate were a Parsi lady Miss Malbari and an Anglo-Indian Miss Bradly. Miss Bradly did a large amount of work amongst the poor and had a hospital of her own for women.

The first matriculated woman to take diploma of the university after a five years' course of study was Miss Walker Sharp, who worked later at the Cama Hospital as a second physician. In the second year batch the Freny Cama was the first Indian woman who took the same diploma with honours, and worked under Dr. Pechey at the Cama Hospital for about two years or so. The the number of matriculated women in training increased to ten in the year 1889. Most of these women on passing their examination and obtaining diploma, devoted themselves solely to the practice of Midwifery and soon gained the confidence of their women patients. Some of these are still with us now known to most of us here.

—

Popular Religion in Bihar

About popular religion in Bihar Mr. Sarat Chandra Mitra, M. A., B. L., writes in *Quarterly Journal of the Mythic Society* partially as follows:

In Bihar the *Barham Daitya* or the spirit of a Brahman who has met with a violent death, often becomes the tutelary deity or *dihwar* of the whole village. The worship of this godling is usually carried on under a tree, very often a banyan tree (*Ficus indica*), which he is supposed to reside in. The trunk thereof is besmeared with vermilion and *a mound of earth is erected*, on which are placed clay figurines of horses or elephants, and offerings are presented of flowers, betel-nuts and the like. The worship is performed by a special priest called the *Bhakta*, who is not necessarily a Brahman; and sometimes he is inspired by this deity and utters prophecies which are implicitly believed in by the devotees.

Then, again, the district of Gaya is intimately connected with the rise and spread of Buddhism. Here Buddha, the great founder of Buddhism lived for a long time and promulgated the tenets of his religion. As the result of this, the district of Gaya is rich in Buddhist remains, namely, Buddhist images, *chaityas* or small shrines and other relics. The Hindus of this part of Bihar have appropriated these old images and *chaityas* and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

bedaubing them with vermilion, have conferred on these the names of some deities of animistic origin who are unknown to the orthodox Brahman priesthood. These new-fangled godlings and goddesslings, under new designations, are now worshipped and prayed to by the Hindus, especially of the lower classes.

On this point, Mr. L. S. S. O'Malley says:—

"Images of Buddha and other Buddhistic images and *chaityas* are found in temples of all kinds, under trees and in the open air in all parts of the district (Gaya), and are treated as different deities, *lingas*, etc. Such images have been enshrined in hundreds of temples, in temples of Siva, of Mahadeva, of Visnu, of the Sun, of Sitala, the goddess of disease, and others. Hundreds of *chaityas* have similarly been set up in *Sivalayas* filling the places of *lingas*. But this is simply because these images and *chaityas* have been found lying about and have been utilized by the Hindus as images of their own deities or as the *linga* of Mahadeva. They are worshipped by the ignorant Hindus, not as Buddha or as Buddhistic emblems, but as their own gods and symbols.

Then again, in North Bihar, especially in the district of Champaran, the Hindus have appropriated the famous Edict-pillars erected by Asoka, the great Buddhist Emperor of India, dubbed them with Hindu names and worship them with Hindu rites.

—

Education in India, 1927-32

The following appears in *The Young Builder*:

The tenth quinquennial review of the progress of education in India in 1927-32 has been published by the Educational Commissioner with the Government of India. The report shows that the percentage of literates in the various provinces at the end of the five years, under review, was as follows:

	Male population	*Female population*
Madras	9.5	3.1
Bombay	9.08	2.83
Bengal	8.30	2.32
United Provinces	5.30	0.72
Punjab	8.82	1.85
Burma	6.81	3.01
Bihar and Orissa	5.15	0.67
Central Provinces	5.07	0.85
Assam	6.88	1.5
N. W. F. Province	5.7	1.2

League Enquiry Report on the Traffic in Women and Young Girls

Sri-Dharma writes editorially:

The report of the League of Nations Enquiry Committee on the Traffic in Women is interesting reading and is of special importance to all these organisations that are solely employed in rescue work in India. The special points of interest are (1) the need for collaborated efforts between all organisations and private associations as well as official authorities. No one who has any experience of the work would fail to realise that this would lead to a great deal of improvement in the work which is often difficult and delicate and needs the help and co-operation of all concerned. (2) The emphasis that is being rightly put by universal international organisations on the need for employing women officers in every department where the question is to be actively dealt with. The tone of the work would distinctly improve if suitable women, after receiving adequate and proper training, were employed to carry out the delicate work that needs so much real understanding and sympathy to be really effective. (3) The need for International Conventions with regard to this question so that what has been achieved in one country to save their victims may not be made null and void merely by crossing the borders of one country into another. It is obvious that this will offer those who ply this infamous trade an easy and painless opening for merely shifting the scene of their activity. (4) The need for the removal of the licensed brothel which is the cause that keeps this trade in a flourishing condition and makes unnumbered victims of its greed, miserable and degraded, we must all work for a speedy removal of this horrible criminal institution from every self-respecting country till it will be completely wiped off the face of the earth. We are sure that the opportunity that the League offers for international discussion and enquiry into this question will day by day offer new solutions for the removal of this evil.

—

Printing as a Profession

Mr. A. Gilbert, Printing Specialist, writes in *Careers*:

Printing offers a large scope to the young man with small capital to start for himself, he is required to see the needs of various phases of business and to be able to produce printing that is compelling, attractive and useful and yet peculiar to the subjects it is applied to.

This is a study in itself and calls for an appreciation of type faces, paper, inks and colour of cover papers, etc., and these qualities can only be obtained by experience plus a natural ability to get that experience quickly.

The best office to learn in is one that covers most branches of printing and thereby offers more scope to obtain a general knowledge of the business.

It should always be borne in mind that print is a necessity and callings that fall in that category are the first to benefit by increased trade and the last to be influenced by depression.

—

Smelting—a Dying Indigenous Industry

K. C. P. summarzies a valuable paper by Dr. F G. Percival on Smelting, one of our indigenous industries in *The Mayurbhanj Gazette*. Dr. Percival writes:

"At various times within the last ten years, I have seen furnaces in the Feudatory States of Mayurbhanj, Keonjhar and Bonai and also in the Singbhum District, but none of them is in operation within seventy miles of Jamshedpur.

"The Industry is still in full activity in the more remote parts of the Feudatory States of Orissa, and I have recently obtained photographs of smelters at Gonua in Bonai State, and also at Jodapaint in Keonjhar State, near the iron ore proper of Joda, owned, but not yet mined, by the Tata Iron and Steel Co., both places being about 100 miles from Jamshedpur."

Dr. Percival then quotes from the Geological Survey of India a passage regarding the beliefs of smelters in Garhwal (U. P.) who are locally known as *lohars*. They are "regarded as belonging to an upper section of the low caste *doms*. They regard as the founder of their caste one Kaliya *lohar*, who is supposed to have supplied the Pandavas with their fighting weapons, and he is now propitiated with an offer of five pieces of charcoal."

But at Jodapaint in Keonjhar State the smelters are *Kamars* and locally known as *Pentis*. They are said to be of a higher origin than those of *Garhwal*.

"Joda village is inhabited by Bhuiyas, a sturdy hill tribe that has the hereditary right of installing the Raja of Keonjhar on his *gadi* on his accession. Hindus take water from the Bhuiyas and their touch is no defilement."

INDIANS ABROAD

By BENARSIDAS CHATURVEDI

Indians abroad Directory 1934

We must heartily congratulate Mr. S. A. Waiz, compiler and editor of the *Indians Abroad Directory* for the second edition of this excellent production. In this edition figures and other details concerning Indians overseas have been brought up-to-date and new chapters have been added. As a reference book on the subject it is unique and indispensable for every newspaper office and also for those who are interested in the problems of Indians outside India. Merchants who want to have trade connections with their compatriots abroad will find this book very useful. It is priced at Rupees five and can be had of the Imperial Indian Citizenship Association, Sohrab House, 235 Hornby Road Fort, Bombay.

Wanted a bigger history of the Satyagraha Movement in South Africa

The importance of the Satyagraha movement that was carried on in South Africa by Mahatma Gandhi and his followers in 1906-1914 has not been realized fully in this country. There are some books on this subject in Gujrati, Hindi and English but they are not quite complete. Of course, the Gujrati book of Mahatma Gandhi

The late S. Nagappen,
who died after release from the Johannesburg Prison Road-Camp as a Passive Resister.

Widow and Sons of Selvan, a free labourer, shot dead during the strike. The eldest son, Antonimuthu, received three bullet wounds.

leader of the movement, is the most important document on this subject but as Mahatmaji has to summarize the whole thing in a small book he had to leave out several details and these ought to be supplied by a new historian. Swami Bhawani Dayal's Hindi book was also a useful publication and it ran into two editions but what we require now is a bigger history written from a different point of view. To make it more interesting and more inspiring we must collect cases of a large number of individuals sacrifices and sufferings. At a farewell speech in Johannesburg in 1914 Mahatma Gandhi said that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

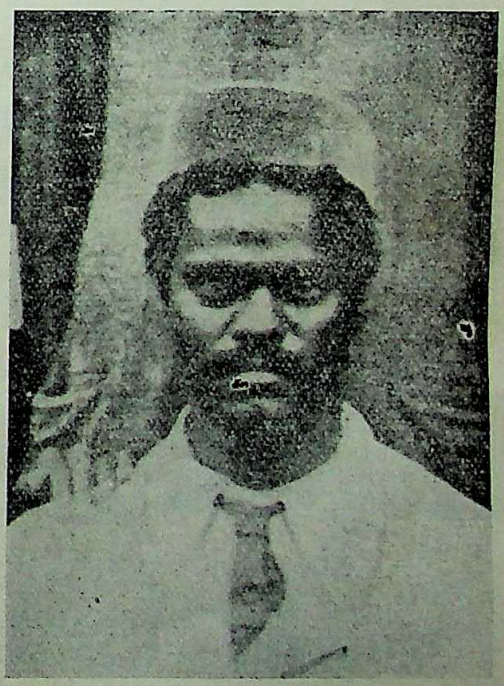
Digitized by Arya Samaj Foundation Chennai and eGangotri

it was Johannesburg that had given Valiamma, that young girl, whose picture rose before him even as he spoke, who had died in the cause of truth. Simple-minded in faith, she had not the knowledge that he had, she did not know what Passive Resistance was, she did not know what it was the community would gain but she was simply taken up with unbounded enthusiasm for her people—went to jail, came out of it a wreck and within a few days died. It was Johannesburg again that produced a Nagappan and Naryanswamy, two lovely youths hardly out of their teens who also died. He and Mrs. Gandhi had worked in the limelight ; those

Widow and Orphan of Pachiappan, an Indian Striker on the Coast, shot dead during the strike.

others had worked behind the scenes, not knowing where they were going, except this, that what they were doing was right and proper and if any praise was due anywhere at all, it was due to those three who died. They had had the name of Harbat Singh given to them. He (the speaker) had had the privilege of serving imprisonment with him. Harbat Singh was 75 years old. He was an ex-indentured Indian and when he (the speaker) asked him why he had come there, that he had gone there to seek his grave, the brave man replied "What does it matter ?

The late Soorzai, with his wife and child. Soorzai was one of the Strike victims.



The late Naryanswamy, who was deported to India as a Passive Resister and who died at Delagoa Bay after being hunted from Port to Port in South Africa by the Union Government.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I know what you are fighting for. You have not to pay the £3 tax but my fellow ex-indentured Indians have to pay that tax, and what more glorious death could I meet ?" He had met that death in the jail at Durban. No wonder if Passive Resistance had fired and quickened the conscience of South Africa !

What we want now are full details of the sacrifices of individuals like Valiammas, Nagappens, Naryanswamies and Harbatsinghs.

Such a history will serve a necessary background for a more important history of the Satyagraha movement in India. Unfortunately no serious attempt has ever been made to write this history. It was on Sept. 7, 1910 that Tolstoy wrote to Mahatma Gandhi :

"And so your activity in the Transvaal as it seems to us, at this end of the world, is the most essential work, the most important of the work now being done in the world, and in which not only the nations of the Christian but of all the world, will unavoidably take part."

So not only from Indian point of view but from international point of view also the work of compiling a bigger history of the Satyagraha movement in South Africa deserves to be taken up in right earnest by those who are interested in the subject and who are qualified to do justice to it.

INDIAN WOMANHOOD

Miss Vishini Jagasia

The 73rd birthday of Poet Tagore was celebrated by Rabindranath Dramatic and Literary Club, Karachi, on 13th May. This annual event is looked forward to as a festival of song, dance, mirth and merriment. The cup for musical competition for girls was won by Miss Vishini Jagasia, who is seen in this picture with her trophy. This little child of 12 years of age has already won for herself the appreciation of film directors and critics by her excellent acting and singing in her maiden picture, *Prem Pariksha*, which is now running. Miss Vishini Jagasia has been gifted with a most melodious voice and has acquired considerable mastery over the technique of Indian classical singing.

GLEANINGS

A Glimpse of the Japanese Woman

I wonder whether there is in the world any fair sex like the Japanese woman who values the family she marries into more than the one of her birth; so faithful to her husband; so respectful to her parents and so devoted to her children. Not only in the feudal age but even at present there are many weaker sex who calmly commit suicide to save their family honour. They do not do it for their personal fame, but for the honour of their family.

A Japanese woman is trained to keep house. Nevertheless in case her labour out of her family is required, she dares to undertake any difficult task. The fact that peasant women labour from early morning till deep into the night demonstrates this fact. In Japan there are some laborious occupation in which the fair sex work harder than men. Such is the fisher-women who dive deep into the sea to gather shells and sea weeds. This occupation, though very hard and dangerous, is almost confined to women.

Miss M. Shimpo, who was fourth in the javelin throw at the World Olympic Games held in Los Angeles

Physically, therefore, a Japanese woman is nearly equal to man. Let us now turn to their cultural achievements. Contrary to what foreigners would believe, Japanese women showed a great deal of cultural achievements more than

Costume of a well-to-do class lady of the Fujiwara era going to pay homage to a shrine

1,000 years ago. At that time those who undertook secretarial work at the Imperial Court were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

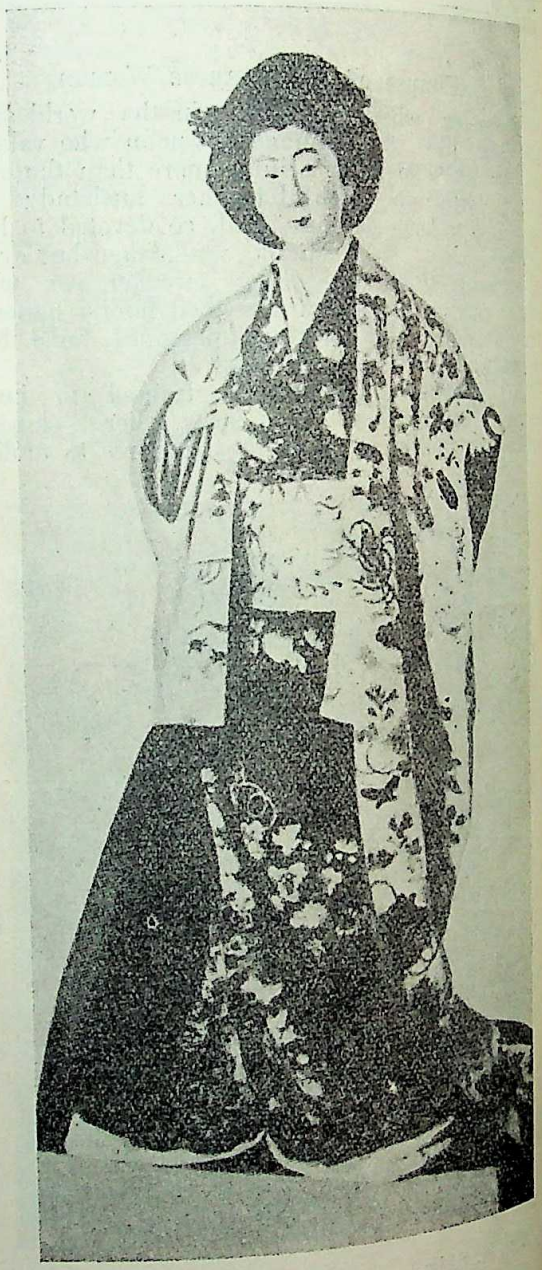
Digitized by Arya Samaj Foundation Chennai and eGangotri

mostly women. They recorded what the Emperors had done or said in privacy, and some of those records are precious heritages of the Japanese nation as "Inner Court Tidings". Furthermore in some period of our history composition of "waka" or a short poem of thirty one syllables was one of the most important accomplishments of the women. Men and women of that age all exchanged their poems, and the women in court were invariably poets. A great deal of the diaries, fictions and jottings written in the course of this period have been transmitted to

Miss H. Machata, who won the second place in the 200 meters breast stroke at the World Olympic Games held in Los Angeles

us, and those which were written by women equal, if not surpass, those composed by men. The most famous of all among them is the "Story of Genji" written by Murasaki Shikibu, and the "Makuranososhi", a collection of jottings by Seishonagon, both of whom were court women. These two works are the best classics in the history of Japan and have been translated into foreign languages. In the time of Murasaki Shikibu there was no female novelist of fame in any other part of the world. I wonder, even in the histories of all other countries, whether there had been any women who had written such valuable classics as the "Story of Genji".

So much for literature. In the dramatic circle there was, in the Ashikaga era more than four hundred years ago, an actress called Izumo-no-Okuni. She appeared on the stage and played the so-called "Okuni Kabuki" which laid the corner-stone of the present "Kabuki" play of Japan. In the same period there was no woman in the world who had appeared on the stage. In art and literature Japanese women demonstrated, from long time past, their talents.



Woman in Her Best.
A doll representing the custom of the Tokugawa era (1603—1867)

At present Japanese women have more or less been set free from their families, and are given opportunities to show their abilities. Let us take only the examples familiar to foreigners. The late Miss Hitomi on the track and field and Miss Maehata in swimming demonstrate what

Girl tea-leaves pickers and Mt. Fuji

"Fishermen" by Utamaro (1754-1806)
The woodcut is a masterpiece of the artist and represents women fishing ear

Japanese women can do in such sports. Their appearance may seem accidental to the foreign-eye but there were many fair sex in Japan in the past who demonstrated their prowess in fencing and jujitsu. Especially in water, the existence of fisherwomen from time immemorial justifies the appearance of the world's champion in the present day acquatic sports.

From an article by Kenkichi Ichishimah in "Dai Nippon"

Arab and Jew in Palestine

Arabs and Jews were friendly in the pre-War period, and despite the intermittent outbursts of violence they still are so today. If, in the cities, social intercourse between Arab and Jew is very limited, in the rural districts there is much give and take between them. In 1929, when they were called on in the name of their religion to attack the Jews—who had allegedly destroyed the Mosque of Omar—they refused, dissuaded Arabs from more distant villages from joining in the attack, gave themselves up to Jewish neighbours as hostages or helped them in other ways.

In 1921 the Sheikh Abu Kishik had directed a strong attack against Petach Tikvah, one of the largest and oldest Jewish colonies, for which he was later sentenced to fifteen years' imprisonment. At the intercession of the Jews, he was set free after swearing that he would thenceforth live at

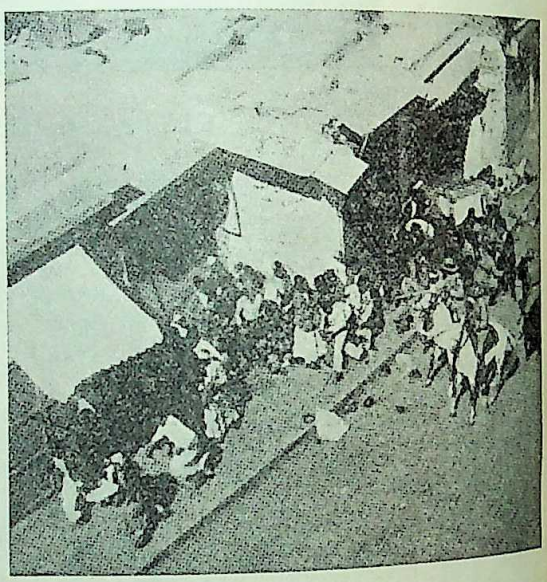
Demonstration.
The Arabs demonstrating against Jewish immigration into Palestine, October 27, 1933.

peace with them. In 1929 he sent word that he and his followers would abide by his oath, despite the fact that the Moslem Supreme Council had sent for him and offered to absolve him from it if he would again attack the Jews. He would do so, he said, only if he saw with his own eyes that the Mosque was destroyed.

A scattered crowd, with hats, fezzes and wreckage.

This single episode indicates the delicacy and complexity of Arab-Jewish relationships. Economic advantage, personal good will, political interest : all come into play. One Arab group may be satisfied ; another is not. The Jewish mode of penetration is entirely peaceful. Immediately after the War attempts were made, in the familiar oriental manner, to buy off Arab opposition, but those who were purchasable kept raising their price and the incorruptibles maintained their position. In the past ten years Jews have been relying on the economic benefits they have brought to the country, reinforced by personal contact, to gain the good will of the Arab population.



Riot.
Arabs being charged by British mounted police.

The mandatory power, England, has tried to play the part of peacemaker. As such, it effectively preserved public order between 1921 and 1929 and cut down the hitherto popular trade of banditry, but it did not prevent the massacres of 1929 and had to have recourse to arms to control the Arab demonstrations of 1933. As peacemaker, England has satisfied neither those Arabs who want a voice in the governmen or who want a tighter restriction on Jewish immigration nor those Jews who expected it to lend more active aid to their colonization. —*Asia*

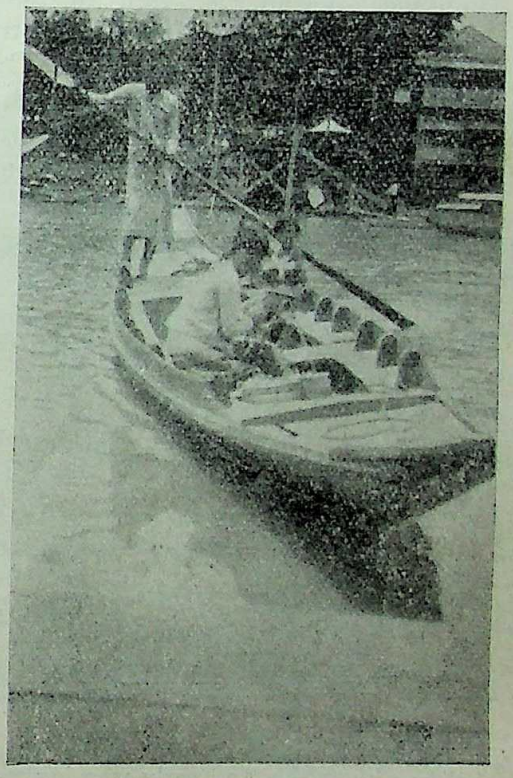
SIAM PAST AND PRESENT

Historical and Descriptive

By LANKA SUNDARAM, M.A., Ph.D. (Lond.)

SIAM is the brightest jewel studded in the centre of South East Asia. Rich in natural resources, it extends over an area of more than two lakhs of square miles, one thousand miles in length and four hundred miles in breadth at its widest point, and with a coast line of one thousand three hundred miles of very great maritime importance. According to the latest figures, it has a population of over eleven millions, which draws a comparison with that of the State of Hyderabad. Ninety-eight per cent of the population is Buddhist in religion, Islam claiming about five lakhs and Christianity only fifty thousands. The ethnological basis of the population is very hard to analyse. India's quota to the ethonological amalgam of Siam is clear and understandable. The Mongolian impress is notable from the large number of Chinese resident in the north-eastern portions of the country and, more than that, from the vivid Chinese features of the people, particularly as regards the angularities of the Siamese nose and eyes. It would take the ability of an expert to distinguish between a Burman and a Siamese, but for the differences of a sartorial character which exist between these two neighbouring races.

The Epic period in India is believed to yield fruits in the field of Indo-Siamese synthesis. Place names and ritualistic observances are very similar in these two countries. Rajburi, Prachinburi, Aranya-pradesh and, more important than all these, Ayudhia bring to our mind memories of ancient India. It is even emphasized that the horses selected for the *Asvamedh* sacrifice in which Lava and Kusa, the sons of Rama, figure prominently actually touched Ayudhia in Siam. This is in consonance with the fact that Ayudhia was the capital of Siam till 1767 when an invading Burman army completely razed the city to the ground, and that the *Asvamedh* sacrifice was intended to be at once a festival and a triumphal march through neighbouring capitals. There is no doubt that in the pre-Buddhistic period India's influence upon and quota to Siam in the fields of culture and religion have been remarkable, traces of which are to be found in that beautiful country even at the present day.



The Siamese spouse and family returning home after shopping from one of the numerous villages flanking the Siam river

But it is as the most important seat of Buddhism that Siam holds our interest from the historical standpoint. It is on record that the Buddhist supremacy of Siam was reached not until a tremendous series of battles of religions was successfully concluded in favour of the doctrine of the Buddha during the early centuries of the Christian era. If we accept the evidence supplied by the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

frescoes of Angkor Wat in Cambodia, the eighth, ninth and tenth centuries witnessed great commotion all over South East Asia and in the process succeeded in bringing about a certain amount of religious toleration. I have seen the idols of Rama and Sita in the Buddhist temples of Ayudhia and a complete scenerio of Ramayana and Mahabharata enriching the beauty of the Temple-palace of the Emerald Buddha in Bangkok. No doubt the latter dates to comparatively recent times, but it is hard to determine the age when this "fusion" of Buddhism and Hinduism was wrought as is evidenced from the remains at Ayudhia. In any case, the point is clear that the Buddhist period is rich in historical associations between the Mother Country and Siam. While Buddhism in the Mother Country is reduced to very minor dimensions, it is thriving in the "colony" as the state religion professed by almost the entire population.

The Siamese housewife honouring the Buddhist *bhikku* with food. And early morning scene.

Historical Background

The beginnings of the Christian era witnessed a Mom-Khmer invasion of Siam and it is from this intrusion that Siam was brought out of her seclusion as far as outward contacts were concerned. At that time the eastern Menan basin was a province of the Khmer Empire; the western portion an appanage of the Mons; and the present Malay peninsula under the suzerainty of the Kingdom of Palembang in Sumatra. The Thai race were then in the Yunnan province of China, where they founded the powerful kingdom of Nan Chao. It was during the thirteenth century that the Thai established themselves permanently in Chao Phya and the Mekong Valley of Siam.

The first historical Siamese dynasty was established at Sukhodaya by Rama Khamheng (Phra Ruang) who conquered the whole of the Menam Chao Phya valley and the Malay Peninsula as far as Ligor. By about the fourteenth century the Sukhodaya period gave place to the Ayudhia domination. It is since the establishment of Ayudhia as the capital of Siam that the regular history of the country may be said to begin.

The most noteworthy periods in the history of Siam are as follows: the period when Sukhodaya was capital, 1257-1350; the period when Ayudhia was the capital, 1350-1767; and the present period since the establishment of Bangkok as capital. Three dynasties ruled at Ayudhia and it was during this period that foreign contact with the country was first established. Louis XIV attempted diplomatic conversion of the king and the people of Siam and it was in the latter half of the seventeenth century that a Greek named Constantine Phaulkon, under the title Chao Phya (His Excellency) Vichayen, became a powerful minister of State during the reign of Phra Narai. These two incidents led to the displacement of the ruling dynasty and cost the king his crown. Continued Siamese-Burman rivalry led to the final fall of Ayudhia on the 7th April 1767, the destruction of that illustrious town and the loss of all historical records relating to the fortunes of the Kingdom of Siam prior to that date. Phya Tak meets us as the restorer of the sovereignty of Siam with Bangkok as capital, but he could not found a dynasty.

The present dynasty is called the Chakri dynasty and had six kings in unbroken succession. They are as follows: Phra Buddha Yod Fa Chulalok, 1782-1809; his son, Phra Buddha Loes La Nobhalai, 1809-1824; his brother, son Phra Nang Klao, 1824-1851; his brother, Phra Chom Klao (Mongkut), 1851-1868; his son, Phra Chula Chom Klao (Chulalongkorn), 1869-1910; his son, Phra Mongkut Klao (Vajirayudh), 1910-1925; and his younger brother, Phra Pok Klao, the present reigning

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sovereign King Prajadhipok. The previous occupants of the throne are officially known as Rama I to VI.

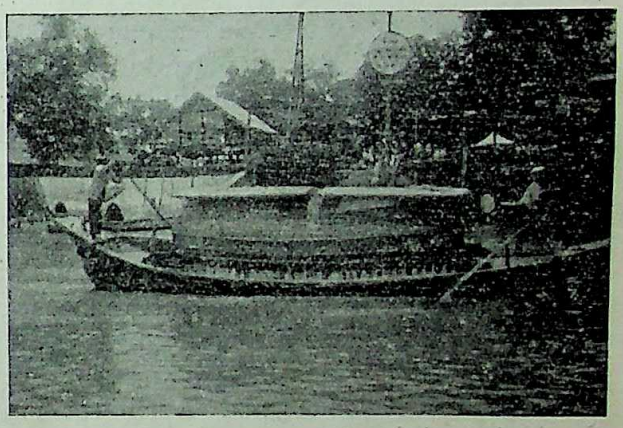
Foreign contacts were first brought into prominence under King Mongkut. In fact, the beginnings of extraterritoriality were first adumbrated during his regime. But it is King Chulalongkron who became the most famous sovereign of the Chakri dynasty. It was in his reign that an all-round progress in the life of the nation and the work of government was first witnessed. Feudalism was gradually done away with; debt slavery was abolished; the judicial system was reformed; education of the people was improved; railway construction was definitely planned; the army and the navy was reorganized on efficient modern lines; opium eating and gambling were brought under control. But it was during his regime also that the last clippings of the territory of Siam were effected by France. The blockade of Bangkok in 1885 was but a prelude to the cession to France of the feudal territory of Cambodia in 1905. Today Cambodia is an appanage of the French colonial system as one of the five units comprising the flourishing Asiatic French colony of Indo-China.

The fifteen years which comprise the reign of the late sovereign are notable for remarkable changes in the polity of Siam as an independent State. The extraterritorial and diplomatic grip of foreign powers upon Siam remained unbroken, but it was towards the end of his reign that attempts were projected for the ultimate abrogation of the extraterritorial system. Siam's entry into the World War in the cause of the Allied and Associated Powers brought about several important results, towards international recognition of the independence of the country and opened up the gates for a stream of intercourse with the rest of the world. The rich virgin resources of the country are now operated by several foreign syndicates, the means of communications modernized and rendered useful. The Menom river was successfully bridged at Bangkok. The foreign expert worked out numerous reforms in the currency of the country, besides systematizing administrative framework and procedure available in the country. In fact, the reigns of the last two sovereigns and the present king are remarkable for the modernization of the life and government of Siam.

The reign of King Projadhipok, the present sovereign, will go down to history as the most outstanding example of oriental absolute monarchy giving place to popular control without any bloodshed. I will deal with it in a further article.

Siamese Life, Art and Architecture

It is in the field of arts and crafts that Siam occupies a unique place in the Orient. The artistic genius of the nation refuses to be suppressed, despite change of dynasties and a long series of alien impacts. Their pastoral life is a guarantee that the artistic genius of the people does not show signs of decay.



Something to remind us of the Venetian *gondola*. A river scene in Siam.

Unsophisticated, more or less law-abiding, under the wholesome influence of the religion of the land; simple in their wants; vastly traditional in their beliefs, the Siamese pride themselves in their native habits and customs.

The principles of Buddhist religion permeate the life and work of the Siamese race. The spiritual genius of a race in any part of the world is reflected in their festivals, and in this direction Siam has unique record. It would be obviously impossible to catalogue all the Siamese festivals, which reveal the daily life of the people, but the following list cannot be ignored:

The *Wishakha Buja* commemorates the birth, inspiration and death of Lord Buddha, all the three of which events occurred on the fifteenth of the waxing of the full moon of the sixth lunar month.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The *Khao Purim Pansa* and *Ok Pansa* festivals mark the beginning and the end of the Buddhist lent, during the rainy season.

The *Thot Kathin* in which the entire nation, including royalty, takes part during October, when monastic robes are presented to the *Bhikkus* for the ensuing year. The Royal processions by land and water during the festival afford us real glimpses of Old Siam.

The *Phrabad* (is it *prabhat*?) pilgrimage to the sacred footprints in important shrines all over Siam is an equally important festival.

The *Magha* festival in February is the festival of All Saints in Buddhism.

Loi Ching Chah, or Swing Festival, takes place on the 7th and 9th of the waxing of the second Siamese lunar month. It is a Brahmin ceremony and apparantly a harvest festival.

The *Raek Na* which commemorates the ploughing festival, takes place in May and marks the commencement of the ploughing of the fields. This is also a Brahmin rite, and is one of the oldest religious ceremonies existent in the country.

The tonsure and cremation are also conducted largely in accordance with Brahminical rites. The tonsure is in the fourth month and cremations take place in the dry weather.

The *Krut Thai* marks the new year in the Siamese lunar calendar and April 1st is the beginning of the Siamese official year, while *Chakri* day on the 6th April commemorates the accession of the present dynasty.

For one from India these festivals and and others in Siam bring memories of the legion of ceremonies which the home country indulges in year after year. The most amazing thing is the almost punctilious adherence by the Siamese people of model festivities in the land of the Aryans. The nomenclature is almost identical in both the countries; the ritual is more or less parallel; the dominance of Brahmanism is observable, even in this Buddhist country of the Asiatic continent. How indelible is the part played by Bharatavarsha in making Siam what it is today!

The artistic genius of a race is best expressed in its architecture. Siam is an outstanding example of this dictum. Wherever you go in Siam your eye meets with quaint old structures, big and small, beautifully decorated and well laid-out. It is not only the cities of the country which excel in this regard. Even out-of-the-way villages and hamlets abound in examples of rare architectural beauty and artistic and decorative excellence. The village temple, the village communal hall, the headman's cottage —all these and many other structures illustrate the artistic economy of the race. Nothing is drab; nothing unthought out; nothing monotonously uniform. There is variegation in beauty and beauty in variegation.

But it is in Bangkok that one witnesses a plethora of artichecural gems. I have been over a large part of the world, but never was I more dazzled than when I went through the amazing series of edifices comprising the Royal Palace in Bangkok. It is impossible to describe all the buildings in this stately group, but emphasis on the following is needed.

The *Grand Palace* of Bangkok is actually a walled town covering an area of over a square mile. In this group of buildings the following deserve mention: the *Wat Phra Keo*, the Royal Chapel, *Dusit Maha Prasad*, *Amarindr Vinichi* and *Chakri* halls serving as halls of audience. *Dusit Maha Prasad* is a rare gem of modern Siamese architecture and was originally used as a Coronation Hall, but since the death of King Rama I it was not used as a Coronation Hall on account of the fact that the urn containing his late majesty's ashes was exposed in that hall. In *Dusit Maha Prasad* is a stone hewn in 1292 by Rama Khamheng, King of Sukhodaya and used as the coronation stone as well as royal seat. The *Chakri* palace is designed after the plans of a British architect and built in the style of Italian Renaissance and, in my opinion, disturbs the architectural symphony of Siam.

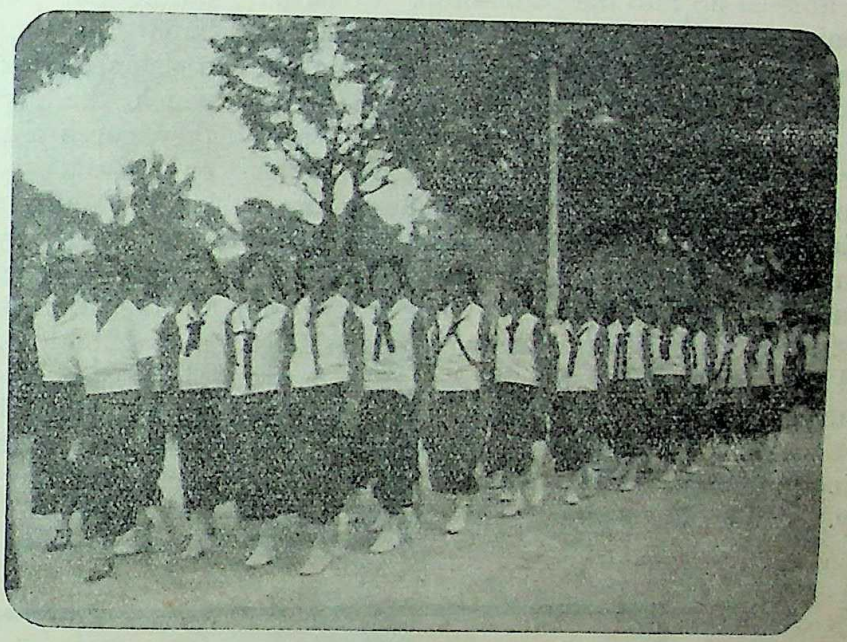
The *Wat Phra Keo*, otherwise known as the Royal Chapel, the Temple of the Emarald Buddha and Sri Ratana Sasdaram Temple, has been singled out for separate mention and discription since it is the most beautiful collection of buildings even in the magnificent series represented by the Grand Palace. Built in 1785 after Bangkok superseded Ayudia as the nations's capital, it has been the pet child of every successive monarch and as such maintained in great trim. But for a close scrutiny I would not have realized that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it has a history of a century and a half behind it,—such is its freshness of decoration and freedom from decay.

Royal patronage has been uniform in preserving this beautiful group of buildings. From Rama I to the present King Prajadhipok every sovereign of Siam added to and enriched the buildings and the beauty of *Wat Phra Keo*. The image of the Emerald Buddha itself is a marvel of design and workmanship. My guide, a member of the Royal Household, lent to me by the Home Office, went into raptures in explaining to me the details and history of this image. The Emerald Buddha is the symbol of Buddhism in the land. But what struck me most was the urbanity with which people ushered themselves into the presence of the Emerald Buddha. I was hesitating to enter the chapel with my shoes on and actually began to undo them, when my guide gently called me to proceed without any compunction. I was told that it was found necessary during modern times to allow the diplomatic corps and other dignitaries from foreign lands to walk into the presence of the Emerald Buddha with their shoes on whenever the King has to invite them in for official ceremonial purposes.



Siamese girl guides on Parade. Part of the popular rejoicings in Bangkok after the revolution.

As has been already stated, the walls of the chapel and the surrounding buildings are richly decorated with scenes from the Ramayana and the Mahabharata. The precincts of the *Wat Phra Keo* contain numerous other objects of interest such as giants, bronze images of horses, elephants, oxen and monkeys of good modern workmanship. One is constantly reminded of the Hindu pantheon in Indian temples as he goes through these structures in Bangkok, and led wondering whether Buddhism has not undergone a process of evolution. I have been in Ceylon, Cambodia and other Buddhist countries and visited Buddhist centres in India, but I was never struck with modernism in these places as was the case when I was in Bangkok.

We have to take note of other important Bangkok temples, even though we cannot detain ourselves with a full description of the same. The *Wat Phra Jetubon* was built in 1793 by King Rama I and contains several of the statues collected from the ruined city of Ayudhia. The *Wat Sudat* was projected by King Rama I and completed during the reign of Rama III and renovated by King Chulalongkron. The most conspicuous feature of this building is its double roof, something unique in Siamese architecture. The *Wat Arun* supplies the most significant landmark in Bangkok in the shape of its high tower, measuring seventy-four metres, which commands a panoramic view of the entire city and the harbour. The *Wat Benchamabopitr* is the most recent construction in Bangkok during the regime of King Chulalongkron, built with choice materials, including Italian marble and Chinese glazed tiles, and represents the beauties of modern Siamese architecture. On the whole, Siam offers the visitor a plethora of artistic gems. Though the exterior suggests affinity with Chinese modes of construction, the interior and the entire spirit of these edifices bear ample testimony to the inspiration which India has lent to Siam.

A few more of the peculiarities of the Siamese race must be noted here. The courtesan flourishes in Siam to a degree not

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

easily heard of in other countries. The Siamese women are uniformly "Eton-cropped." The unwary visitor may unwittingly jump to the conclusion that this method of adjusting the coiffure is due to modern Western influences. This is not so. The story goes that during the Siamese-Burman wars of the middle ages, the people of Siam felt it necessary to draft their women folk also into battalions for service on the western front. Partly to cover up this fact and make the Siamese amazons look like men soldiers and partly for the sake of efficiency they had their ladies' hair dressed up into the "Eton-crop." Samson Agonistes would have wailed at this vandalism, especially when the plaids of the fair sex was concerned. But today this historical accident has been sedulously perpetuated. I believe there is some truth in this story. It is for the following reason. The average Siamese dress both for ladies and gentlemen is almost identical, but for the fact that the ladies' blouse betrays their sex. They uniformly turn up their modest *Dhottar* through their thighs and fasten it up at the back, in the same manner in which the Indian peasant does. Of course, the influence of the West is being gradually felt in Siam at the present day. The "three-piece suit" which made the modern western "flapper" what she is today is gradually catching the imagination of the unsophisticated Siamese wench of yesterday. The Boy Scout and the Girl Guide movement of the recent times has also added to this growing modern tendencies in Siam. Even Her Majesty Queen Rambhai has set the seal of approval upon modern tendencies in the sartorial sequences of Siam. The influence of the Palace upon feminine fashion in Siam has been recognized to be supreme. And there is a feeling that Siam is now attempting to achieve what Japan has achieved during the past sixty years. Whatever the import of these tendencies may be, the fact remains that it is a most picturesque scene which the civilian population present when they march past during any national ceremony or festival.

With a rich historical past, with potential natural resources, with the artistic genius sedulously preserved, Siam is bound to come to the forefront of Asiatic States within a measurable distance of time. The reign of the present King is very important since it was during the past two years that the "revolution" has remarkably changed the *format* of the Siamese structure.

NOTES

Latest British History of India condemns Separate Communal Electorates

Indian students of political literature are aware of the condemnation and criticism of separate communal electorates to be found in the Montagu-Chelmsford Report, the Report of the Indian Central Committee and other official publications—in spite of which, however, they continue to find favour with the bureaucracy. In fact, the White Paper has proposed a larger variety of separate electorates, on the basis of the British Government's Communal Decision, than those which exist now or were ever demanded. Therefore, the fact that a work on Indian history, written by two British authors and published by Macmillan and Co., in May last, points out the evils of and condemns separate electorates need not rouse any hopes of their early disappearance. Nevertheless, it is interesting to find Mr. Edward Thompson and Mr. C. T. Garratt writing in their book on *Rise and Fulfilment of British Rule in India* as follows on the subject:

> The Muslims specifically demanded separate electorates, and the Hindu leaders conceded the principle in the 'Lucknow Pact' of 1916. Their effect was wholly bad. It is not only that they have led Indians to organize along sectarian lines, for this was probably inevitable, and caste grouping occurs even within the Hindu constituencies, but the system throws up the worst type of pugnacious fanatic, who loves 'to prove his doctrines orthodox by apostolic blows and knocks.' The feeling that great changes were going to take place and the prospect of some actual transfer of responsibility and control over appointments, have combined to rouse all the meaner political passions, especially in those provinces, like Bengal and the Panjab, where the two communities are nearly equal in number. Middle class unemployment and a family system which elevates nepotism into something like a virtue, have also helped to embitter the politico-religious struggle. A further and very grave disadvantage of the communal electorate is that an alteration in the parties can only occur through wholesale proselytism or through differences in the birth-rate. And both sides are stirred to new missionary enterprise, when the reward is not only a soul but also a permanent addition to one's voting strength. The activities of the Arya Samaj amongst the poor Muslims and the various Mohammedan bodies amongst the lower caste Hindus, have aroused the greatest bitterness. The politicians get all the support they need from an irresponsible press, while ill-feeling amongst the educated classes is kept alive by scurrilities like the *Rangila Rasul*.

We do not know whether the authors intend to suggest that nepotism is a failing peculiar to Indians, or that the community to which the writer of *Rangila Rasul* belonged was alone responsible for scurrilities, or that the Indian Press has a monopoly of irresponsibility. But otherwise on the whole Messrs. Thompson and Garratt are quite fair and just in their criticism of separate communal electorates.

The passage quoted above may, however, produce in the reader's mind the wrong impression that the demand for separate electorates *originated* with the Muslims. We have repeatedly shown that it did not originate with them. This has been shown in Major B. D. Basu's *India Under the British Crown* also, from which a few sentences are quoted below:

> A deputation of the Mahomedan leaders, therefore, waited on the Viceroy on the 1st October under the leadership of the Aga Khan. The deputation pointed out that the position of Moslems "should be commensurate not merely with their numerical strength but also with their political importance and the value of the contribution which they made to the defence of the Empire." It also claimed provision for the election of Mahomedans by special Mahomedan electorate. —P. 424.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

After quoting from and commenting on Lord Minto's reply to the deputation, the author writes:

> The late Maulana Mohamed Ali said in the course of his Indian National Congress Presidential Address that this Mahomedan deputation was "a command performance," which means that the deputation was got up at the suggestion of the authorities. This statement appears to be confirmed by the following passage in Morley's *Recollections*, vol. ii, p. 325:
>
> "I won't follow you again into our Mahometan dispute. Only I respectfully remind you once more that it was *your* early speech about their extra claims that first started the M. (Mahometan) hare."

Other corroborative evidence, and that too from official publications, is also available. For example, the following passages are to be found in the *Report of the Indian Central Committee*, published by the Government of India:

> "58. It was at the time of the Morley-Minto Reforms that the claim for communal electorates was advanced by the Muhammadans, *inspired by certain officials*." (Italics ours. Ed., *M. R.*) P. 113.

Again:

> "66. It is often said that we must adhere to the promise made by Lord Minto's Government to the Muhammadan Deputation that waited on him in 1907-8. We will not bring forward the fact, which is now established beyon ddoubt, that there was no spontaneous demand by the Muslims at that time for separate electorates, but it was only put forward by them at the instigation of an official whose name is now well known." P. 117.

These two passages are taken from the Memorandum by the Hon. Sir Sankaran Nair, Chairman of the Indian Central Committee—a Hindu, the Hon. Raja Nawab Ali Khan, member of the Committee—a Mussalman, and the Hon. Sardar Bahadur Shivdev Singh Uberoi, member of the Committee—a Sikh. There is no criticism or contradiction of the statements made in these passages either in the body of the Report of the Indian Central Committee or the Minutes of Dissent submitted by different members, Muslim and non-Muslim.

Therefore, there appears to be no doubt that the device of the separate communal electorate can rightly claim British parentage.

"Terrorism in Bengal is the Same As Ever"

Bombay, June 17.

"Terrorism in Bengal is the same as ever." This is the gist of a conversation which a representative of *The Times of India* had with Mr. Stevens, District Magistrate of Midnapore, who sailed yesterday by the *Mantua* on seven months' holiday.

Mr. Stevens remarked, "The leaders' appeal to the terrorists is all talk, which does not cut much ice." He seemed to suggest that a strong Government was the only means of putting down terrorism.

"How do you find Midnapore now? Have the people sobered down? Has terrorism shown signs of subsiding?" inquired the *Times* reporter.

"No, not a bit. It is the same as before," replied Mr. Stevens.—*United Press.*

Perhaps the opinions of Mr. Stevens represent the opinions of British officials and non-officials in Bengal and in India in general. If the "leaders" could turn successful detectives and bring all terrorists, bound hand and foot, to the police, perhaps that in their opinion—and that alone—could have "cut ice." But then that would imply that the executive and the police were sinecurists and that the people were able by themselves to tackle the most difficult job and were, therefore, fit for self-rule. As, however, in the official view, the people of India, including their leaders, have no capacity for and are not fit for self-rule, it is no wonder that no achievement relating to terrorism, that can "cut much ice," stands to their credit.

Mr. Stevens "seemed to suggest that a strong Government was the only means of putting down terrorism." The districts of Chittagong and Midnapur have been practically under Martial Law for years; and latterly Darjeeling, too, has been under it. The liberties of the people, particularly of the younger generation, have been greatly curtailed. In fact the whole of Bengal has been under the operation of panicky emergency legislation for years. The possession of arms with intent to murder and attempt to murder has been made a capital offence, and already some men accused of such offence have been executed. Perhaps this is not 'strong' Government. But what is? If 'strong' Government were defined as that Government which would succeed in eradicating terrorism, that would be arguing in a circle, and there would be no definite and fixed standard of governmental 'strength.'

And perhaps, to the horror of Messrs. Stevens and Co., it would be found that "Government of the people for the people and by the people" was the strongest for the purpose! Would the prescription contained

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in the following passage satisfy Mr. Stevens and men of his views ?

"The only way to rule India is the way Orientals understand, is by stern reprisals, and, when needed, strong force. They would understand if a list of a hundred leading Congress-wallahs was prepared and they were made hostages for the safety of British subjects. For each brutal assassination the next Congress name on the list would be shot, and so on."—*Saturday Review*. (London), May 12, 1934.

The prescription combines the qualities of brutality, simplicity and futility, though it is based on false assumptions.

Compulsory Education Not a Success in U. P. !

According to the British assistant director of public instruction in the United Provinces of Agra and Oudh, "compulsory primary education for boys in U. P. does not appear a success." But the system of compulsory free universal elementary education has been a success in all free countries where it has been worked under the direction of its nationals, who wanted it to succeed and were determined to make it a success.

Austrian Independence and Dependence

Hitler and Mussolini, it has been officially stated, have decided to preserve the independence of Austria—and, of course, her dependence on Hitler and Mussolini. But if the two dictators fall out, on whom must she depend and of whom must she be independent ?

The Research Institute of Visva-bharati

The Research Institute of Visva-Bharati is the highest department of Rabindranath Tagore's university at Santiniketan. It carries on researche on various Indological subjects and helps advanced students to do so under the guidance of its principal, Pandit Vidhusekhar Sastri. He himself teaches Vedic and classical Sanskrit, different branches of Indian philosophy, Pali, Prakrit, the Avesta (scripture of the Zoroastrians or Parsis) to some extent, and Tibetan. He combines in himself the depth and accuracy of knowledge of the old type of pandits and the broad outlook and capacity for research of Western Indologists, having received his training in various branches of Sanskritic learning under the most distinguished pandits of his time in Benares, and having carried on research work for years with such European colleagues as Dr. Winternitz of Prague, Dr. Sylvain Levi of Paris, Dr. Sten Konow of Norway, Dr. Lesny of Prague and Drs. Carlo Formici and Giuseppe Tucci of Rome, etc. He is a Sastri of the Panjab University. Besides possessing an accurate knowledge of Sanskrit literature in general, he has made a special study of Mimansa, Vedanta, Vedas, Pali, Prakrit, Buddhism, Jainism, and Philology.

His knowledge of the Avesta enables him to undertake and guide comparative studies relating to the Indian and Iranian branches of the Indo-European family. Much Indian literature is extant in Tibetan and Chinese in translations into those languages. In some cases, where the originals existed in India, Pandit Vidhusekhar Sastri was able to compare them with the translations and discovered various readings, and where the originals had been lost here, he could re-translate the Tibetan and Chinese versions into Sanskrit, because of his possession of the knowledge of Tibetan and Chinese. His knowledge of English, French and German enables him to acquaint himself with the researches made by English, American, French and German Indologists. He has initiated and trained students from different parts of the country in Tibeto-Sanskrit studies. In addition to Indian students he has had students from Ceylon, Burma, China, Japan, Mongolia and Germany. Students under his personal guidance have obtained the Ph. D. degree and the Premchand Roychand Studentship of the Calcutta University.

The depth, accuracy and extent of his scholarship have been recognized by the Universities of Calcutta, Dacca, Benares, Allahabad, Agra, Panjab, etc., by their making him an examiner in the highest examinations in such subjects as Vedic and Classical Sanskrit, Pali, Prakrit, Linguistics, Indian philosophy, Indian vernaculars, etc. He is the author or editor of many books known to savants, and has contributed many original papers in English, Hindi and Bengali to different journals of high standing and commemorative volumes in India and abroad.

As the new session of Visva-bharati begins this month, it is to be hoped that research students will join the Research Institute in time. Only a few students can be taken. Pandit Vidhusekhar Sastri, having been in Benares for years as a pupil of great pandits, can speak Sanskrit with correct pronunciation fluently ; so even those advanced students of Sanskrit who cannot speak and understand Bengali, Hindi or English, but can speak and understand Sanskrit, can profit by his instruction and guidance.

Lady Tata Memorial Trust Scholarships

The Trustees of the Lady Tata Memorial announced the award of the following scholar-

ships for the year 1934-35 on the 18th June last on the occasion of the third anniversary of the death of Lady Tata.

Indian Scholarships

Indian Scholarships of the value of Rs. 150 per month each for scientific investigations having a bearing on the alleviation of human suffering.

1 Mr. Har Dayal Srivastava, M. Sc.

To study Anatomy and Life-history of Helminth Parasites of Man and Animals, under the direction of Prof. D. R. Bhattacharya, D. Sc., Ph. D., and Dr. H. R. Mehra, M. Sc., Ph. D., Department of Zoology, University of Allahabad, (Second year's award).

2. Mr. Sudhendu Kumar Ganguli, M. B.

To study Chemotherapy of Anti-malarial Drugs, under the direction of Lt.-Col. R. N. Chopra, M.A., M.D., I.M.S., Professor of Pharmacology, School of Tropical Medicine, Calcutta, (Second year's award).

3. Mr. Nirode Chandra Datta, M.Sc., A.I.I.Sc.,

To study the role of Tin in Nutrition and the Effect of Body of Mineral Contamination of foodstuffs during cooking and storage, under the direction of Prof. V. Subrahmanyan, D.Sc., Department of Chemistry, Indian Institute of Science, Bangalore. (Second year's award).

4. Dr. M. V. Radhakrishnarao, M.B., B.S.

To conduct clinical and pathological investigation of Decompensated Portal Cirrhosis and allied diseases, under the direction of Prof. T. S. Tiramurti, M.B.C.M., Department of Pathology, Andhra University. (Second year's award).

5. Mr. Madhab Chandra Nath, M.Sc.

To carry out Chemical and Biological Analyses of Proteins of Indian Foodstuffs under the direction of Dr. K. P. Basu, D.Sc., Bio-chemist, Dacca University.

6. Mr. Atma Ram Rajavanshi, M. Sc.

Researches into Actinotherapy in the Prevention of Metabolic Diseases under the direction of Prof. N. R. Dhar, D.Sc., F.I.C., I.E.S., Chemistry Department, Allahabad University.

7. Mr. Basheshwar Das 'Kochhar,' M. Sc.

To conduct Syntheses and Pharmacological studies of Anti-malarial Compounds of Quinoline group, under the direction of Prof. S. S. Bhatnagar, D.Sc., Department of Chemistry, and Lt.-Col. D. H. Rai, M. A., M. D., M.R.C.P., Professor of Pharmacology, Panjab University.

8. Mr. Samant Keshao Mahableshwar, M. Sc.

To elucidate the Constitution of Ergosterol, under the direction of Prof. I. M. Heilbron, D.Sc., F.R.S., Department of Chemistry, University of Manchester.

9. Mr. Kedar Nath Gaind, M.Sc.

To synthesize new Compounds possessing local Anæsthetic properties, under the direction of Dr. P. C. Guha. D.Sc., Department of Organic Chemistry, Indian Institute of Science, Bangalore.

10. Mr. Yelandur Venkanna Srinivasa Rao, M.Sc., A.I.I.Sc.

To study the Proteins of Indian Foodstuffs, Chemical and Biological analyses, under the direction of Prof. V. Subrahmanyan, D.Sc., Department of Bio-chemistry, Indian Institute of Science, Bangalore.

Foreign Scholarships

International Scholarships of the value of £400 per annum each for research in diseases of the blood with special reference to leucaemias.

Of the eight scholarships awarded to foreigners, two of the recipients are of British nationality, two Danish, one French, two German, and one Russian.

Acceptance or Rejection ?

The British Government have not asked the people of India or any organization or organizations representing them to say whether the White Paper or the Communal Decision is acceptable to them. On the contrary, they profess to believe that these two interrelated things have the approval of the vast majority of Indians. Hence the importance of the Indian people or of any sections of them expressing disapproval of the White Paper including the Communal Decision lies mainly in contradicting this British official profession of belief and in possibly convincing the foreign public that the British assumption is wrong. Congressmen and the Liberals have all along condemned the White Paper and the Communal Decision. The Hindu Mahasabha has condemned the Communal Decision and to some extent the White Paper also. The communalist view is the preponderant one in the Muslim community. The Communal Decision is acceptable to the majority of Mussalmans who are communalists, if not also to many Nationalist Mussalmans. The only fault they find with it is that it has not given them *all* that *they* wanted. They want improvements in the White Paper, because if more power is thereby transferred from British to Indian hands, it will not be a transfer to the Hindu majority, who have been reduced to the position of a minority, but to a majority of which the Mussalmans will form the most important Indian group.

Taking the Indian people as a whole, it is correct to say that the White Paper, including the Communal Decision, is not acceptable to the majority of politically-minded Indians—nothing can be said of other Indians, one way or the other. But such is the power of British propaganda and the power of the British Government and news agencies to prevent the truth from being conveyed and published abroad, that most probably the foreign public including the British public continue to have exactly the opposite idea of Indian public opinion. Still we must all go on publishing

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the truth in India and abroad to the best of our ability.

Our rejection of the White Paper and the Communal Decision can have no practical value so far as British action is concerned. Of course, it is not unthinkable or unimaginable or impossible that our rejection of these abominations may influence British action. But what is most probable—nay, almost certain—is that the present British ministry will give effect to them as they are: only, owing to the British Die-hard compaign against the White Paper proposals, more safe-guards may be added to them, making them still more reactionary and anti-Indian and anti-democratic than they are.

If, believing that the majority of politically-minded Indians are against the White Paper, the British Government dropped it along with the Communal Decision, no true Indian Nationalist, whatever his religious persuasion or political creed, would shed a tear for it. Not that India's political condition is at present satisfactory; but it would be worse under the White Paper constitution.

If the majority of politically-minded Indians supported the White Paper, that would supply Sir Samuel Hoare with a weapon to fight Mr. Winston Churchill, and to save the White Paper from the onslaughts of the latter and his fellow die-hards. But we do not want that abomination to be saved. So just as we do not want to help Mr. Winston Churchill and his gang, so we do not want to help Sir Samuel Hoare and his caravan.

Congress Working Committee on the White Paper and Communal Decision

For convenience of reference the authorized report of the Congress Working Committee's resolution on the policy of the Congress regarding the White Paper proposals and the Communal Decision is printed below:

The Congress Parliamentary Board having asked the Working Committee to enunciate the Congress policy regarding the White Paper proposals and the Communal Award, the Working Committee declares the Congress policy as follows:—

"The White Paper in no way expresses the will of the people of India, has been more or less condemned by almost all Indian political parties and falls far short of the Congress goal, if it does not retard progress towards it. The only satisfactory alternative to the White Paper is a constitution drawn up by a Constituent Assembly elected on the basis of adult suffrage or as near it as possible with power, if necessary, to important minorities to have their representatives elected exclusively by electors belonging to such minorities.

The White Paper lapsing, the Communal Award must lapse automatically. Among other things, it will be the duty of the Constituent Assembly to determine the method of representation of important minorities and make provision for otherwise safeguarding their interests.

Since, however, the different communities in the country are sharply divided on the question of the Communal Award, it is necessary to define the Congress attitude towards it. The Congress claims to represent equally all communities composing the Indian nation and, therefore, in view of the division of opinion, can neither accept nor reject the Communal Award as long as the division of opinion exists.

At the same time it is necessary to re-declare the policy of the Congress on the communal question. No solution that is not purely national can be propounded by the Congress. But the Congress is pledged to accept any solution which, though falling short of the national view-point, is agreed to by all parties concerned and conversely to reject any solution which is not agreed to by any of the said parties.

Judged by the national standard, the Communal Award is wholly unsatisfactory, besides being open to serious objections on other grounds. It is, however, obvious that the only way to prevent the untoward consequences of the Communal Award is to explore ways and means for arriving at an agreed solution and not by an appeal on this essentially domestic question to the British Government or any outside authority."

Neither Accepting Nor Rejecting Evil

When Abraham Lincoln became president of the United States of America, he became theoretically the supreme representative of the slave-holding Southern States of the Union as well as of the anti-slavery Northern States. But, because the States were "sharply divided on the question of" slavery, did he say, "in view of the division of opinion," that he "can neither accept nor reject" slavery? Did he neither try nor un-try to liberate the slaves? History tells that he struck a blow and freed the slaves. No cause espoused by anyone who dared, if need be, to be in the minority of one with Truth and Right on his side, has ever failed.

When Pandit Iswar Chandra Vidyasagar was convinced that child-widows ought to be married, did he say, "in view of the division of opinion" on the subject, among Hindus,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

child-widows should neither be married nor remain unmarried ?

When Mahatma Gandhi was convinced that untouchability was an evil, did he say, "in view of the division of opinion" among Hindus, Harijans should be allowed neither to enter nor to not-enter the temples, neither to use nor to un-use public roads, schools, wells, etc. ? Did he refuse either to drink or to not-drink a cup of water offered by a Harijan ?

These are not, of course, cases parallel to the Congress neither accepting nor rejecting the Communal Decision. We mention them only to remind the public that on numerous memorable occasions sitting on the fence has not made for the progress of humanity. There is this much of resemblance between slavery and the Communal Decision that, as the United States of America could not possibly have remained *united* and become and remained really *free* if slavery had not been destroyed, so India cannot possibly become and remain *united* and cannot possibly become and remain *free* unless the Communal Decision is upset. That decision is not only the result but would also be, if not unsettled, the cause of the perpetuation of our slavery. That decision is objectionable not merely because it gives Hindus less seats than they are entitled to on the basis of population or any other basis, but also because it is anti-national, anti-democratic, makes for the disruption and disintegration instead of the unification and solidarity of the communities and classes inhabiting India.

Therefore, Congress as a *national* organization ought to condemn and reject this *wholly* anti-national decision in unequivocal terms, even at the risk of having a smaller number of Hindu, Muslim, Christian, Sikh or other adherents. In the long run it is not number but strict adherence to right principles which tells.

We hope, therefore, when Congress meets next at Bombay, the question of the acceptance or rejection of the Communal Award will be allowed to be brought forward for consideration. We are rather hazy about the proposed Constituent Assembly and are not disposed to wait for it. And, may we add, that an *essentially*, even if only partially, national constitution cannot be expected from a Constituent Assembly which is probably to be formed in part by separate election of minority representatives.

We know the Working Committee of the Congress has neither the powers nor the responsibilities of the Congress. So we do not blame it for not making a definite pronouncement on the Communal Decision.

The Congress Working Committee's Resolution

We do not know whether the Working Committee of the Congress refrained from accepting or rejecting the Communal Decision because of its lack of power to do so. But the main reason which appears to have weighed with them is that if they condemned the decision outright, Muslim Congressmen would have no chance to enter the Assembly. Hence to give them a chance, the Working Committee have adopted a non-committal attitude. We shall be glad if this attitude helps Nationalist Muslim candidates for the Assembly. But will it ? In any case, the Nationalist Muslims should feel grateful to the Working Committee for the friendly gesture made towards them by temporarily shelving principle.

Had the Working Committee rejected the Communal Decision outright, communalist Muslim candidates could have told their electors (all Mussalmans, mostly of the communalist variety, and supporters of the Communal Decision), "Do not vote for Muslim Congressmen, for Congress has not accepted but has rejected the Communal Decision." In spite of the Working Committee's non-acceptance and non-rejection of the decision, Communalist Muslim candidates may, however, *now* tell their constituencies, "Do not vote for Muslim Congressmen, for Congress has not accepted the Communal Decision. It is true that it has not rejected it either. But those who are not definitely *with* us are *against* us." Is there much practical and effective difference between these two probable exhortations to Muslim constituencies on the part of communalist Muslim candidates for the Assembly ?

Nevertheless, we shall be sincerely glad if the appeals of Mr. Sherwani, Mr. Asaf Ali and other Nationalist Muslim leaders are largely responded to by Muslims and if in consequence

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

large numbers of Muslims become loyal members of Congress and Nationalist Muslim candidates succeed in entering the Assembly. The strength of the Nationalist group in the coming Legislative Assembly depends on the success of the Nationalist Muslim candidates to some extent. If they can outnumber the Communalist Muslim M. L. A.'s—if in any case the Muslim and non-Muslim elected *Nationalist* M. L. A. 's combined can clearly outnumber any other elected groups combined, that would be some definite and tangible proof of the true fact that Nationalists represent the majority of politically-minded Indians, even according to the voters' rolls prepared by the bureaucracy, and that therefore Nationalist condemnation of the White Paper is really practically entire India's condemnation.

But if the Nationalist group in the Assembly be not as large as Congressmen of the Swarajist mentality anticipate, the Working Committee's non-committal attitude on the communal question would prove fruitless. There are other reasons why the Working Committee's compromise dictated by expediency may not be of practical advantage. The Hindu Mahasabha leaders had already warned the Congress leaders that if the Communal Decision were not rejected by them, the Mahasabha would bring forward its own candidates to contest the seats open to Hindus, and Mr. Aney has said that the Democratic Swaraj Party in Maharastra had agreed to cease to be a separate party and to join the Congress on the understanding that the Communal Decision would be rejected. Now that it has not been rejected, it would be open to both the Mahasabha and Democratic Swaraj Parties to run their own candidates. It is not yet known what they would do. Should they actually do so, and should some of their candidates be not staunch Nationalists it would further weaken the Nationalist position in the Assembly. These two parties may, however, conclude that as the Congress Working Committee has not aecepted the Communal Decision, they need not set up their own candidates, on the charitable principle that those who are not definitely against them are with them. But if they do set up their own candidates, there will be no harm if these persons be staunch Nationalists.

The opinion expressed by the Working Committee on the White Paper is unambiguous and expressed in language free from vehemence. In the abstract, a constitution drawn up by a Constituent Assembly would be a satisfactory alternative to the White Paper constitution. But as we have already said, we have no clear idea of what that Assembly would be and when and by whom it would be convened, nor how its decisions would be given effect to.

The words, "with power, if necessary, to important minorities to have their representatives [to the Constituent Assembly] elected exclusively by electors belonging to such minorities," seem somewhat ominous as conceding to important minorities exclusive separate election of representatives to the Constituent Assembly as a right. From this concession, would not the embodiment in the constitution itself (to be framed by the Constituent Assembly) of the right of separate election to legislatures follow naturally as a corollary ? If minorities can have the "right" of separate election of their representatives to the Constituent Assembly, why can they not have such a "right" as regards legislatures ? Does the Congress or does it not hold joint electorates and joint elections as essential features of a *Nationalistic* constitution ?

"The White Paper lapsing, the Communal Award must lapse automatically."

Not necessarily. For, it is only with regard to the Communal Decision that Sir Samuel Hoare, cross-examined by Sir N. N. Sircar, said that "Government had said their last word" ; that is to say, though other parts of the White Paper might be altered, the Communal Decision was a "settled fact." Of course, in politics there is no settled fact—other settled facts have been unsettled. But the unsettling has required long and strenuous and immense struggle. Hence, the words of the Working Committee's resolution, "The White Paper lapsing, the Communal Award must lapse automatically," appear rather too easy-going. All the parts of the White Paper do not so hang together that either all of them must be scrapped or all of them must be kept intact. It is quite feasible to scrap some, keep others intact and alter the rest. And how is the White Paper going to

lapse, what is the exact meaning of this lapsing, and who is to bring about this lapse and how? We confess we do not understand all this. The White Paper proposals are not a house of cards to be blown down by a Working Committee resolution or by an adverse resolution carried in the next Legislative Assembly.

> "The Congress claims to represent equally all communities composing the Indian nation and, therefore, in view of the division of opinion [on the Communal Decision], can neither accept nor reject the Communal Award as long as the division of opinion exists."

Here the Working Committee expects something as improbable, if not impossible, as the British Premier and Ministry *seemed* to do. The latter demanded an agreed settlement as a solution of the communal problem. But as the so-called delegates to the so-called Round Table Conference (for which the British Government had selected as "representatives" of the Muslim community only inveterate communalists and also from the Hindu and Indian Christian communities some inveterate communalists as their "representatives") could not, as was natural under the circumstances, arrive at and present such an agreed solution, Mr. MacDonald gave his Communal Decision, miscalled an Award.

Of course, Mr. MacDonald wanted an agreed solution, from persons many of whom could never possibly agree, knowing full well that there would not be any such agreement and that, therefore, he would be able to impose his will on Indians under the plea that, as they had failed to agree among themselves, he had to give his decision perforce. On the contrary, the Working Committee really want an agreed solution from motives of the sincerest patriotism. We shall be delighted if their optimism justifies itself. But without in the least pretending to be prophets, which we certainly are not, we doubt whether a time would come—at least in the near future—when "the division of opinion" on the Communal Decision would *completely* disappear from among *all* the different communities. So the Committee may have to keep up their non-committal attitude for an indefinite length of time. In the present state of the human group-mind it is too much to expect that those who have got an excessive advantage would willingly give it up or that those who have been humiliated and deprived of their just dues, which they had earned too by their ability, public spirit, sufferings and sacrifice, and who had been deprived of facilities for serving their country in due measure, would willingly submit to such humiliation, injustice and deprivation.

We are fully conscious that Congress has to tackle a very difficult problem and we recognize that Congress leaders are making sincerely patriotic efforts to solve it. Perhaps an *absolutely* national solution is not at present feasible. But the solution which, though falling short of the *fully* national view-point, should be acceptable to the Congress must possess at least the minimum of the essentials of a nationalistic solution. Perhaps the leaders would cogitate and deliberate to determine this essential minimum. May it be hoped that this minimum will include joint electorates? Mahatma Gandhi fasted, unto death if needed, partly to bring about joint election of representatives by "depressed" and "upper" class Hindus. But now he appears to be prepared to give up the principle of joint election by Hindus, Muslims and others, for saving or securing the (nominal?) adherence to the Congress of a small number of Muslims.

In July, 1931, the Congress Working Committee, while deviating to some extent from pure nationalism by accepting the principle of reservation of seats for minorities, did not give up joint electorates. Is there going to be a still greater departure from nationalism pure, unadulterated and undiluted?

> "... the only way to prevent the untoward consequences of the Communal Award is to explore ways and means for arriving at an agreed solution and not by an appeal on this essentially domestic question to the British Government or any outside authority."

We fully appreciate this self-respecting attitude. Moreover, if the communities concerned can produce an agreed alternative to the Communal Decision, Mr. MacDonald is pledged to accept it—though imperialist politicians do not consider their pledges inviolable. So, if any Indian party appealed to the British Government, an agreed solution would strengthen the appeal. Hence, we are in favour of trying to have an agreed solution.

But we are afraid, Congress leaders in their anxiety to secure surface unity may be led to accept an alternative to the Communal Decision between which and that decision there may be as much difference as between tweedledum and tweedledee.

By "any outside authority" perhaps the League of Nations is meant by the Congress Working Committee. But that authority, perhaps anticipating the attitude of the Congress Working Committee, has already neither accepted nor rejected the Communal Decision!

The Communal Decision and the Next Legislative Assembly

Congressmen are not the only Nationalists in the country, though it is undoubtedly true that the Congress has a far larger number and proportion of sturdy and self-sacrificing Nationalists than any other organization. So it is likely that the next Legislative Assembly will have some Nationalist members—Hindus among them, who are not Congressmen and hence not bound to carry out Congress mandates. It may be taken for granted that some Hindu non-Congress Nationalist M. L. A. will move a resolution condemning outright or calling in question and proposing amendments to parts of the Communal Decision. Will Congress M.L.A.s support or oppose such a resolution, or will they remain neutral?

Pandit Malaviya and Mr. Aney's Resignation And "Withdrawal" Thereof

Pandit Krishnakant Malaviya, who had accompanied his uncle Pandit Madan Mohan Malaviya to Bombay and has returned to Allahabad, being interviewed by a press representative *re* his uncle's resignation of membership of the Congress Parliamentary Board and withdrawal of the same later, said:

It was not correct that Pandit Madan Mohan Malaviya had withdrawn his resignation. He said that Mahatma Gandhi, the Congress Working Committee and the Parliamentary Board had undertaken to reconsider the objections raised by Pandit Malaviya and Mr. Aney to the resolution relating to the Communal Award. Pandit Malaviya objected to the use of the phrase withdrawal of resignation, saying that his convictions remained the same and if he was not convinced even in the end he might have to resign.

Pandit Krishna Kant Malaviya said that on account of Pandit Malaviya's objections, the resolution relating to the Communal Award will be reconsidered at Benares, when it would be open to Mahatma Gandhi to convince Pandit Malaviya and to Pandit Malaviya to convince Mahatmaji about their respective viewpoints on the subject.

As the letters of resignation of the two leaders are not before us and as their objections to the Congress Working Committee's resolution on the Communal Decision are to be reconsidered at Benares, the matter must remain undiscussed for the present.

The Congress Socialist Party

Both Mahatma Gandhi and the Congress Working Committee have expressed pleasure at the rise and existence of a socialist party among Congressmen, objecting, however, to their programme of class war and confiscation of private property, as that implies violence. In reply, Mr. Jai Prakash Narayan, organizing secretary, all India Congress Socialist party, says in the course of a statement to the press:
